The Committee appointed three years ago to present business to the Conference, reported as follows:—

Your Committee on Business recommend,

1. The appointment of an individual to prepare and read to the next session of the Conference an essay on the subject of the Lord's Supper, exhibiting the design and import of that ordinance, and also the Scripture doctrine as to what is required of those with whom we partake of the same.

2. The appointment of a person to prepare and read to the Conference, at its next session, an essay defining the application of discipline to churches in their relations to each other and the Associations and Conference with which they stand connected.

3. That this Conference should either reconsider and revoke their former action on the subject of Secret Societies, or devise some measure to induce, if possible, the churches to conform their course in regard to that subject to the sentiment of this body above alluded to.

4. With respect to the case of Pardon Davis, now in the Penitentiary of Louisiana, the Committee recommend the passage of the following resolutions:

(1.) *Resolved*, That this Conference deeply sympathizes with Pardon Davis, now imprisoned in Louisiana for the alledged offense of assisting slaves to escape from their masters; and especially as he is compelled to work on the Sabbath and attend Catholic service on the first day of the week or Sunday, contrary to his conscience and convictions of duty to God.

(2.) *Resolved*, That this Conference recommends that the petition recently published in the *Sabbath Recorder* be so altered as to embrace the two particulars embraced in the preceding resolution, and that the same be as speedily and extensively circulated for signatures as practicable, and forwarded to the Governor of Louisiana for the relief of Bro. Pardon Davis from the unlawful and unconstitutional violation of his religious rights, under which he is now suffering.

The Report of the Business Committee elicited considerable discussion—particularly that part of which relates to Secret Societies, and that which relates to Pardon Davis. The first item of the report was adopted, and N. V. Hull was appointed to write the proposed essay on the Lord's Supper. The second item was adopted, and Eli S. Bailey was appointed to write upon the subject of Church Discipline. The third item, relating to Secret Societies, was amended by substituting the resolutions, adopted by the Conference in 1849, as follows:—

Resolved, That this Conference is conscientiously of the opinion, that Secret Societies are necessarily—in their organization fundamentally, and in their influence practically—adverse to Christianity; and therefore most earnestly and solemnly entreats the churches and members of this denomination, by all the motives which Christianity inspires, to dissuade their brethren from all connection with such Societies.

The fourth item, relating to Pardon Davis, was modified in some respects. The first resolution on the subject was adopted. The second was discussed at length, and the following substitute was adopted:—

Resolved, That the case of Bro. Pardon Davis be earnestly remembered by this denomination at the Throne of God's Grace, for his support while in, and his early deliverance from, prison.

D E. Maxson presented the following resolution, which was adopted after interesting remarks by several individuals.

Resolved, That this Conference recommends to the members of all the churches to pray earnestly to God for the immediate emancipation of the millions of enslaved men and women in our beloved country, and that every brother conform his actions to such prayer.

The Committee on the State of Religion made a report, which was adopted, and will be found in connection herewith.

A paper was brought before the Conference by the delegates of the Scott Church, calling attention to the losses of Dea. John Maxson in connection with publications and other denominational objects. The subject was referred to a Committee, who made a report, (which is not now before us,) embodying the facts, and recommending that a subscription be circulated to raise a fund to reimburse Dea. Maxson. The report was adopted; and it was understood that the delegates of the Scott Church would take in hand the matter of circulation a subscription.

Geo. B. Utter was appointed Corresponding Secretary for the ensuing three years.

The Educational Committee made a report of their efforts on behalf of that object. Most of the facts reported by them have already appeared in the *Recorder*; and we therefore give place here only to the report of the agent to collect funds, and the subsequent action of the Committee.

Report of the General Agent.

As your General Agent, I would respectfully submit the following report:

I entered upon the duties of the agency on the fourth of last December, commencing in the Eastern Association. The form of subscription adopted was as follows:

Subscription for the Seventh-day Baptist Education Society.

We the undersigned hereby subscribe the sums set opposite our names towards the permanent fund of the Seventh-day Baptist Education Society, provided, one hundred thousand dollars shall be subscribed, and a like ratio for whatever sum less than that amount is subscribed. The subscriptions thus made shall be subject to the conditions and provisions of the constitution of the Society, adopted by the Committee of the General Conference, September 15, 1854.

The subject was, generally, very cordially received by those to whom it was presented; but several grave difficulties were found to be in the way of complete success. The subject had not been sufficiently agitated—not sufficiently before the minds of the people. The leading and controlling minds of the denomination had not, as a general thing, committed themselves, publicly and decisively, to the measure; but, perhaps, the greatest difficulties were the financial embarrassments resting upon all departments of business, and the question of location being undetermined.

After presenting the subject to several of the eastern churches, it was thought best for the agent of the Eastern Association, Bro. A. B. Burdick, to take the subscription in the Rhode Island churches, in the spring or summer, when it was hoped money matters would be easier. It was accordingly thus arranged. I returned by the way of DeRuyter, and it was agreed with Bro. J. R. Irish to assume the agency of the Central Association, and perhaps some other portions of the denomination.

These arrangements became necessary from the hard times, and also from the fact that the expenses of the agency could not be borne by a single individual; for it was found, upon trial, that there had been no adequate plan provided for supporting an agent. After getting fairly engaged in the agency, I found myself uneer the necessity of leaving it and returning to my accustomed pursuit in order to procure the means for prosecuting the agency.

I endeavoted to do something in the Western Association, but the undetermined state of the question of location prevented my accomplishing much. I went to Wisconsin, with the intention of presenting the subject to the churches there; but sickness and death in my family prevented my accomplishing anything whatever.

I have obtained subscriptions to the amount of *twenty thousand dollars.* My charges for services, with expenses of travel, are *two hundred and fifty dollars.* I have received *one dollar.*

Brethren J. R. Irish and A. B. Burdick report that they have done nothing in their respective districts. Your Agent, in conclusion, would remark, that owing to the various circumstances mentioned, as much as desirable has not been accomplished; yet it is believed that the people have a heart for the work, and will respond nobly to the call for money, and that, with reasonable time and proper persevereing efforts, the fund proposed for the endowment of the Denominational Institution can be raised.

J. M. Allen, General Agent.

In respect to the resolution of the Committee calling upon the churches to express their opinion in regard to the college location, the following churches voted on the question: Pawcatuck, Waterford, Nile, 1st Genesee, Independence, Amity, Scio, 2d Genesee, 3d Genesee, Hebron, Hartsville, Richburgh, 2d Alfred, 1st Hopkinton, Plainfield, 1st Alfred, Greenmanville, Scott, New Market, with the following results—for Alfred, 690; Plainfield, 51; DeRuyter, 11; Wisconsin, 4; Waterford, 3; Potter's Hill, 3; Milton, 2; Nile, 2; Scio, 1; Watch Hill, 1; Albion, 1.

The following resolution was adopted by the Committee:

Resolved, That as the votes given on the question of the location for a Denominational College and Theological Seminary make a majority for Alfred Center, N. Y., (though the vote altogether is not deemed equal to the importance of the subject,) the Conference waive any further action on the subject, except to recommend the organization of an Educational Society upon the Constitution presented by our Educational Committee, and advise that the Society so formed have the entire management of the subject committed to it from this time, with a due regard to the vote of the churches.

The next meeting of the Conference was appointed to be held with the 1st Church in Alfred in September 1858 A. B. Burdick was appointed to preach the Introductory Discourse; Henry Clarke alternate.

REPORT ON THE STATE OF RELIGION.

Your Committee to whom was referred the religious condition and interest of the churches, would state, that so far as we can learn from the limited means within our reach, we are unable to make any really definite report, but would respectfully submit the following:

It seems that many of the churches have enjoyed general peace and a very pleasant state of religious feeling since your last convocation, while a few have been less happily circumstanced. We rejoice, however, that even *these* express a strong determination to abide in the faith of the Gospel. It appears that there has been a small diminution of members in some of the churches, which may be somewhat accounted for from the fact of a more exact revision of their records, and of removals to other sections of the country. On the whole, we are of the opinion that there has been an increase of members and interest. We are also of the opinion, that while the denomination has greatly advanced in wealth and knowledge, it has not made an equal advance in real piety of heart, love to God, and Christian fellowship. Since it is a fact, that the great work of the Christian, as an agent of the Saviour, is so to live and labor as to bring the subject of religion before the minds of men in a manner calculated to impress them deeply with its importance; and as it is admitted, that there is very much in the new excitements of the day to prevent sober thought—a fact which cannot fail to awaken the sympathies of every Christian, and especially every christian parent—we would therefore, in view of the dangers arising from such a source, urge upon the serious consideration of the members of the churches the importance of careful, daily, christian conversation and instruction by parents, connected with the reading of the Holy Scriptures and family worship, seeking so to connect the whole, as to secure among the young the development of a religion of principle, rather than a religion which consists in mere excitement of human sympathy and feeling.

C. M. Lewis
A. W. Coon

The Missionary Society.

The Twelfth Annual Meeting of the Seventh-day Baptist Missionary Society was held on Fifth-day, commencing at 10 o'clock, A. M. It was opened with the usual exercises of singing and prayer; after which the President stated that Thomas E. Babcock, who was last year appointed to preach the introductory discourse at this meeting, was detained by sickness. As no alternate was appointed, the Society proceeded at once to business.

The Treasurer presented his Report, showing that during the past year he had received from ordinary sources, including the balance on hand at his previous report, $3339.32; and that he had paid out $2367.17, leaving a balance in hand of $972.15. The Report also showed that a settlement had been made with the executors of the estate of Benedict W. Rogers, and that the Treasurer had received from that source property valued at eighty thousand dollars. Cash to the amount of $665 had been received from that property, of which $90 had been paid in expenses connected with it, leaving a balance in hand of $575.

The Annual Report of the Board was presented and read by the Corresponding Secretary. It gives a detailed account of the operations of the Board and its missionaries during the past year. As nearly all of the facts connected with the Society's missions are familiar to the readers of the *Recorder*, through the letters which we have printed from time to time, it is not necessary here to repeat them. It may be well, however, to suggest, that a perusal of the connected statement which the Report of the Board furnishes from year to year, would serve greatly to deepen the interest in our missionary operations; and we question whether a more profitable exercise for a Sabbath meeting in each of our churches can be be arranged, than the public reading of such a statement would be. Besides giving a connected history of the Board's missionary operations, the Report furnishes an account of the steps taken in arranging the Society's interest in the estate of B. W. Rogers.

The Report of the Board closed with a recommendation, that the Society in appointing its officers should so select them as to make the Board truly a denominational organization, including representatives of all the different sections in which our people are located. On a motion to adopt the Report, this subject was quite extensively discussed—some expressing the opinion that such an arrangement was important, and others expressing their preference for the present arrangement, which locates most of the active members of the Board in the vicinity of New York. The question was finally referred to a Committee, who recommended no other change than the election of eight additional Vice-Presidents, so as to give a majority of the officers resident in the State of New York, which would enable the Society to become incorporated under the general law for the purpose.

The Committee on Resolutions reported a series, the discussion of which occupied a large part of the afternoon of Fifth-day. We print them below, simply remarking, that they were all adopted except the ninth, which was laid on the table. They were as follows:—

Resolutions.

1. *Resolved*, That the history of missions evidences at every step in their progress, that the work is a work of self-denial and increasing toil.

2. *Resolved*, That the West is a very interesting and promising field for missionary labor, and that its claims upon this Society for such labor are among the first.

3. *Resolved*, That we regard the Palestine Mission as having a large claim on our benevolence, and that our missionaries there are entitled to our sympathy and continued support.

4. *Resolved*, That our Mission in China gives promise of much good, and calls upon us to re-inforce it, as early as suitable persons can be obtained to devote themselves to this important work.

5. *Resolved*, That our connection with efforts to bring to Christ the outcast Jew, and to give aid and direction, as we may be able, to the millions of China, just rising from the long sleep of ages in paganism to the light of God's Holy Word, calls upon us to purify ourselves from all sin, that God may use us as instrumentalities in this work of extending and honoring his own truth.

6. *Resolved*, That we regard monthly collections for missions as the most efficient means of raising funds, and earnestly invite all our brethren in all the churches to adopt this method in contributing to the support and increase of our missionary enterprise.

7. *Resolved*, That in an enterprise so great as ours, in which such interests are involved, we need divine wisdom to guide our counsels; we therefore urge the importance of a faithful and full observance of the monthly concert of prayer.

8. *Resolved*, That we request the leaders of all the congregations in the denomination to read the Annual Report of the Board before their congregations, with a view of extending a knowledge of the condition and wants of our missions, and of increasing an interest therein.

9. *Resolved*, That the Board be directed to keep the property received from the estate of Benedict W. Rogers invested as may seem best, and use only the interest thereof for missionary purposes, until specifically directed by the Society.

The report of the Nominating Committee was called up, and after some modifications was adopted. The following persons were appointed officers of the Society for the ensuing year:—

President—David Dunn.

Vice-Presidents—W. B. Maxson, Eli S. Bailey, H. A. Hull, N. V. Hull, T. B. Brown, J. R. Irish, Randolph Dunham, Wm. M. Rogers, John Maxson, Benjamin Maxson, H. H. Baker, T. B. Stillman, S. S. Griswold, Wm. Dunn, A. B. Burdick, Ephraim Maxson, J. Croffut, John Whitford, J. M. Allen, Frederick Chase, B. F. Langworthy, Nicholas Rogers, L. Crandall, James Summerbell.

Corresponding Secretary—James Bailey.

Recording Secretary—Geo. B. Utter.

Treasurer—A. D. Titsworth.

Directors—John D Titsworth, Clarke Rogers, Isaac S. Dunham, Isaac D. Titsworth, Erastus P. Clarke.

Auditors—Isaac S. Dunn, C. S. Titsworth.

The next meeting of the Society was appointed to be held with the 1st Church in Hopkinton, R. 1, on the fifth day of the week before the second Sabbath in September, 1856. William B. Maxson was appointed to preach a missionary discourse at the next anniversary of the Society; N. V. Hull, alternate.

An account of the preceedings of the Tract and Publishing Societies, we are compelled to omit till next week.

Editorial Experiences.—At a public dinner lately given by the conductors of the *Patriot* and *British Banner* newspapers, the Rev. Dr. Campbell referred to the experiences of an editor:—"There are some pitiable little things to be encountered in journalism, as well as elsewhere. Something, perhaps, is sent for insertion so late that it reaches the office on the morning of publication, just when going to press, or when already there is more matter in type than can be admitted, and whole columns must stand over. The communication—a trifle, it may be—does not appear. Immediately, they write, by return of post, expressing great surprise and prodigious disappointment, and, perhaps, order the paper to be discontinued. Now, this certainly is not encouraging; but it is very small, and utterly contemptible. At other times, some sentiment is advanced which does not please a subscriber—and the offence may proceed from his own ignorance of the real case—and he becomes indignat that the editor should vent opinions contrary to his. 'Is this to be endured?' he says. 'I will not stand it! Send in my account.' These are the things by which thoughtless men illustrate their own folly, and degrade themselves. When they give up the paper, they think forsooth, they have done something manly. They have merely turned their back on a friend who deserved other treatment. The loss is all their own. However, these are the exceptions; such follies only occur twice or thrice a year."

OBSTACLES TO BENEVOLENT MOVEMENTS.

Every evangelical pastor, I suppose, finds, to his regret, much to hinder the progress of benevolence in the church. Wherever this exisis its influence will be felt. I take it for granted that every pastor labors for the promotion of benevolence in his church—that he makes himself a voluntary agent among his people in collecting their contributions for the support of the institutions of our denomination. If he does not do this, either directly or indirectly, he is not doing the work of a pastor. Sometimes, yea often, this opposition arises from the lack of information. People will feel for an object in proportion to their interest in it; and they cannot be interested in an organization in regard to which they have not been fully instructed. Then, in order to overcome this difficulty, we ought to be able to keep our people well informed on matters pertaining to our benevolent movements. If those who have in charge these matters cannot publish to our people the proceedings of our different benevolent organizations, it seems to me that it would be well to adopt some other measures, by which the members of our churches may learn of the doings of the denomination.

Another obstacle in the way of benevolent movements is the position of certain men who have attained to the sole and permanent aristocracy of the church, in having the honorable title of *deacon*—men who love themselves more than they love the cause of God—men who cannot teach and will not learn—men who are determined to have their own way, let the consequences be what they may. They are covetous, illiberal, narrow-minded, and in every way unfitted for a leading position in the church. There is no such thing as deposing them, for they have been placed there by the church. They consider it a part of their religion to oppose every benevolent movement, and to openly abuse every one, pastor and brethren, who refuse to work with them, or to bow meekly to all their notions. When the subject of giving comes up, they "don't know about this," and, instead of leading on in every benevolent enterprise, their influence goes against it. They are not forward to lead the church in every good work, and if for shame sake they contribute, we cannot rely on their prayers. A man will not pray for that in which he has no heart. At our missionary and monthly concert meetings, they are not present, and they seek no opportunity to learn the demands of benevolence, and always feel like complaining when such a demand is made.

And still another difficulty in the way is the lack of proper discipline. Many unite with the church supposing they can do just as they please about doing anything. This they consider altogether optional; if it is convenient, and they feel disposed, they will do something, if not, they will do nothing. Supposing an association is to be formed for the purpose of erecting a building, building a railroad, a ship, or to perform any other object, will those concerned do as they please about bearing a part of the labor and expense, and still expect to share in the profits? No, indeed; men of the world do not act upon this principle. And yet the church of the living God has those among its members who have never paid a cent towards its support. They will go to the house of God, warmed and made comfortably at the expense of others, sit down to the Lord's table from month to month, and enjoy that holy institution while others pay the expenses; they and their families enjoy the spiritual labors of the man of God, without bestowing of their temporal things in return. These things ought not so to be, and so long as they are indulged in—so long as all enjoy equal privileges in the church without bearing the burdens equally according as God has prospered them, the question will be, "What has that man done?" Let consistency mark the movements of the church and these obstacles to our benevolent movements will soon disappear.

A Church Member.

EVIDENCES OF PERSONAL RELIGION.

The last feature of personal Christianity noticed, was a supreme regard to the glory of God. The next, and growing out of this, is *conformity and submission to the will of God.* For it follows of course, that a Christian wishing to glorify his God and Saviour will be desirous of occupying that precise position which will best accomplish the end. The individual may have many misgivings as to the fact of his being in that position, but this does not affect the desire itself—that remains the same, with a readiness to change when duty demands. There is a principle of selfishness in the human heart, which would induce to take steps for personal advantage, gratification, or honor; but there is a mightier principle yet, that governs and impels to such a course as heaven directs. The renewed soul says, I am not my own, but the Lord's, let him do with me as he pleases. He is aware of his incompetency to judge as to what is best and most likely to answer effectually the end of his being and his conversion, and hence he waits at his heavenly Father's feet for instruction and gives himself up to his directions. So far as divine revelation is concerned, his mind is made up to follow all its requirements so soon as he discovers them, whatever tradition or a host of the fathers may say, and as to his entire life he wishes that it may all be consecrated to the service of God and in that precise way he shall direct. The will of God is studied by the guide of providential indications and the word of truth, in the spirit of prayer and dependence on the Spirit. Nor is there a movement made in life, not a connection formed, not an enterprise entered into, without carefully consulting what is right in the sight of God. If this is true, a divine change is demonstrated, for all this is directly opposed to all the feelings and wishes of unrenewed nature. This trait of Christian character is a very important item in the list of evidences, as it implies the existence and exercise of love to God, faith in his word and character, and a likeness to himself. So far as human happiness is concerned, it is of the greatest importance to ourselves; for if we have our wills absorbed in the will of God; and commit all our interests into his hands for time and eternity, we have nothing to fear or disturb; we have set our foot on the Rock of Ages, and have no occasion for alarm from the changes and revolutions of time, the rage, and hatred and schemes of men or devils. Our times are in his hands, and it is enough; our ways are directed by him and he will lead us right. Let good or evil come, he will bring good out of it and give us such consolation in the experience of evil as shall constrain us to say he hath done all things well.

Another evidence to be adduced is a *termination of mind to spiritual subjects.* The mind is brought back to purity of thought, desire and affection by the renovating energy and grace of the divine spirit, so that we are no longer carnally minded, which is death, but spiritually minded, which is life and peace. The soul now lives in a new element, seeks new objects and finds in everything something for spiritual thought and improvement. In a state of degeneracy the mind has no taste for divine things, sees no beauty and feels no interest in them and hence they are neglected, or, if brought up before them, quickly dismissed. To the Christian mind they are often present, always desired, and ardently cherished. The Christian walks abroad in creation amid his Father's works, and they all afford instruction and pleasure. He reviews the various dispensations of Providence and tries to make all occasions of improvement to himself and others. The national and political changes and revolutions abroad in the earth are topics of deep interest to him, not in a worldly sense, but as they have, and are likely to have, a bearing on the cause and kingdom of Christ in the world. Amid the business of life, with its numerous engagements and various pursuits, the mind reverts to some spiritual subject. When alone, it seems to be shut up in a kind of sanctum sanctorum, into which no one can enter but himself and and his God. The seasons of vacancy of thought and feeling afford no satisfaction, but are occasions of regret, and he looks forward with delight to that state of being where the mind with all its powers will be engaged in the contemplation of things divine without ceasation or weariness.

Geo. R. Wheeler.

RELIGIOUS INTELLIGENCE.

The Nashville "Christian Advocate" gives a general recapitulation of the minutes of the Methodist Church South, from which it appears that the nnmber of effective traveling preachers is 1942; local preachers, 4359; white members, 428,511; making an aggregate of 603,303, which is an increase during the year of 23,778, and which is only 180,055 less than the aggregate membership of the M. E. Church, that being 783,358. Two conferences decreased slightly in membership during the year—viz: Kentucky, and the Indian Mission.

There are now in Australia, in connection with the Methodist church, 116 regular clergymen, besides a number of native assistant ministers; 19,897 members, of whom 7190 are Europeans, and the remainder native converts in New Zealand, the Friendly Islands, and Feejee; 80,000 attendants upon the ministry, 442 churches, and 39 other preaching places.

The old Lutheran church in the Grand Dukedom of Baden continues to be severely persucuted by the predominant "United Church." The three pastors who have declared their secession are forbidden from exercising any ministerial act. A baptism is fined 10 florins the first time, 25 the second time, and 40 the third time. The fine for a confirmation is 15 florins.

The Rev. Dr. Thompson, of this city, delivered an address recently, at Amherst College, in favor of "a unity of origin and species of the human race, as the only foundation for Christian missions, and efforts to convert the world." He based his argument on history, natural science, philology and the Bible.

The Rev. Dr. Lathrop was a man of genuine piety, but much opposed to the noisy zeal that seeks the praise of men. A young divine who was much given to enthusiastic cant, one day said to him—"Do you suppose you have any religion?" "None to speak of," was the excellent reply.

Sir M. Montefiore carries with him to Jerusalem the product of a subscription, for his co-religionists, amounting to some 4 000,000 francs. Amongst other favors which he obtained while at Constantinople, was a firman authorizing the establishment of a Jewish hospital at Jerusalem.

A new daily paper is to be established in this city very soon, intended as the special organ of the Protestant Episcopal church. The proprietor is Mr. Hecker, who at present owns the "Churchman," the ultra high-church organ.

General Intelligence.

The Burlington Disaster—Verdict of the Jury.

After thirty-six hours of deliberation, the Jury at Burlington has rendered a verdict. The findings are eleven in number. The first declares the deceased did not die natural deaths. The second sets forth the names of the victims. The third discloses the exact location of the casualty; and the circumstance, that the killing was in consequence of the cars running backward. The fourth avers that the cause of the cars leaving the track, was their contact with horses, driven by Dr. J. F D. Heinaken; and the fifth declares that due diligence was not used by that gentleman. The sixth convicts a half-dozen highly respectable witnesses of false swearing, by finding that the Engineer did not blow his whistle as he should have done. The seventh exonerates the conductor from blame, notwithstanding it was in evidence that he had absolute charge of the train, and was backing it at the rate of twenty miles an hour at the least. The forward brakeman is found censurable in the eighth. The ninth reiterates the fourth and fifth, by returning to Dr. Heinaken, and finding him responsible primarily for the collision. The tenth pronounces the speed of the train in backing, "unsafe and inexpedient;" the conductor being in entire control of the train—and being discharged of all blame. The eleventh recommends some alteration in the Company's time-table—reducing the probability of such accidents.

California News.

By the arrival of the George Law we have California news to the 18th ultimo—seventeen days later. There is no news of any importance.

The chapter of crime is longer and more varied than usual. In addition to the ordinary number of deaths by violence, we have an interesting description of the discovery of a bogus gold dust manufactory—the details of the murder of six Americans by a band of Mexicans, at the village of Rancheria, in Amador County, and the subsequent lynching of the perpetrators of the foul deed—the reported slaughter of some miners by the Indians, and other casualties of less note, such as boiler explosions, fires, and suicides.

J. C. Woods, late resident partner and manager of the affairs of Adams & Co., is said to have secretly left San Francisco on the 9th ult. for Australia, having previously alledged that he was going to the Atlantic States.

The Northern Light has also brought us news of the Central American expeditions. Walker has turned up again, in despite of all the dark forebodings to the contrary. When last heard of he was at San Juan del Sur, with 56 of his own men and 170 of the Democratic army under Mendez. He was displaying his old energy—endeavoring to raise recruits, with indifferent success, among the California passengers. Kinney's party was still at San Juan del Nord. The Colonel had concluded a contract for the Shepard grant of thirty-five millions of acres of land on the Mosquito Coast, which he confidently expected would be confirmed by the Nicaraguan Government. His envoy, John L. Nelson, had returned, after a successful mission to the capital. A newspaper was about being started to chronicle the Colonel's deeds.

We have dates from Hong-Kong, *via* San Francisco, to the 28th of July. Further successes against the insurgents at the North are recorded. The vengeance taken by the Imperialists upon their enemies in frightful to contemplate. The accounts say that there had been, on an average, more than two hundred persons executed in Canton daily for the fortnight previous to the 16th of June, and the prisons were not cleared even then. The San Francisco Herald states that Mr. Silas E. Burrows, an American gentleman, just returned from China, was an eye witness to the execution of thirty-five hundred rebels who were taken prisoners in the battle near Canton in the month of March last. There were signs of returning trade and prosperity in Canton.

European News.

The U. S. Mail Steamer Atlantic arrived in New York on Thursday last, bringing news to date of 25th August.

No further events had occurred in the progress of the war, consequently the advices by this arrival are wholly occupied with details of the recent bombardment of Sweaborg, and of the Russian attack on the Tchernaya lines, or, as it is called, the "Battle of Traktier Bridge." We have full particulars of the Sweaborg bombardment, but only partial details of the Crimean affair. Finland papers say the Russian loss at Sweaborg was no more than 40 killed and 160 wounded, while the allies had no loss of life. Ample as the dispatches are they do not convey a clear idea of how much of Sweaborg has been destroyed, and of how much remains. Two English steamers have been trying the range of their guns against Riga. In the White Sea the allied cruisers continue to destroy the carrying-vessels and stores of fish and grain along the coast. In the Sea of Azoff the British have blown up the sunken ships at Burdiansk, and have burned the suburbs of that town. Before Sebastopol affairs are quite unchanged; as they seem to be at Kars. The loss of the Russians killed and wounded on the Tchernaya is not much short of 4,000 men, while the French own to 1,000 and the Sardinians to 600. Later estimates may modify these figures.

There is no reliable information on the subject of negotiations. "Private letters" and "rumor" are busy in circulating reports, according to which the accession of Spain to the Western Alliance is complete, and the adhesion of Denmark and Sweden all but ratified. Austria, according to the same loose authority, has already submitted a new project of peace, and will soon express herself decidedly for the Allies. Further, there is talk that the Allies will permanently occupy some portion of the Turkish territory, and will reconstruct the map of Italy. There are other reports still more franciful, but all may be safely distrusted.

Queen Victoria's visit to France, where she was received with much ceremony and rejoicing, formed a great topic of conversation.

Rev. E. M. Dodd and wife, and a young Armenian, have left this city for missionary labors in Smyrna. Com. Vanderbelt gave them a free passage across the ocean.

Accident on the Providence and Stonington Railroad.—A serious accident occurred on the Providence and Stonington Railroad, three miles below the town of Kingston, on Monday evening of last week, caused by the removal of a rail. The Boston train which came through Providence at 7 1-4 o'clock, had reached a bridge at this point, when it encountered an obstruction on the track. The bridge is 20 feet wide, and 15 feet long. It is supposed that a rail was here taken up, as a similar act was once before performed at the same place. The baggage car and the two second-class passenger cars were completely demolished. Several persons were very seriously injured. The accident occured at 8 1-4 o'clock in the evening, the train running at a fare rate of speed. The concussion was sufficiently violent to throw three of the first-class cars off the track. The two forward cars (assigned to deck passengers) were badly smashed, and those who were in them were much injured. The engine, tender, sprinkler, two deck cars with crates, two second-class cars, and six first-class passenger cars, with between four and five hundred passengers, were all thrown off the track, except two rear passenger cars. The two second-class cars were thrown across the track and completely demolished.

Flour in New Hampshire.—For several years past, the Eastern States have depended almost entirely upon the West for their flour; but this year they undertook to raise their own, and with very gratifying success. An old farmer, who has recently traveled extensively in Sullivan and Grafton counties, assures us that he never saw such crops of wheat in New Hampshire. We hear similar reports from other quarters, and have seen some beautiful fields ourselves. It may be thought, perhaps, that all the wheat New Hamphire can raise will not affect the market price of flour; but when it is considered that for five years past it has produced next to none, while this year it will supply one-half its population, the effect must be felt; and if the other New England States have done as well, the aggregate influence upon prices must be quite perceptible. Flour must come down, and will come down, as soon as the new crop is fully available. [Manchester Democrat.

The Reign of Art.—In this wonderful age, Art lays her master touches on almost every thing. The ceilings over us and the carpets we tread on, are hallowed by Art. Art winds the railway through the mountains and the mud; makes her machines of wood and iron, to act as if with knowledge and annihilates space with lightning tamed down to the tutelege of a boy. Nothing is too lofty for her touch and nothing too humble. A new proof of this old conviction, has just fallen under our notice, in the shape of a Cathartic Pill, from the Laboratory of that world renowned Chemis. Doct. J. C. Ayer.

If we understand the subject, he has carried that article to the farthest perfection of which it is capable. Instead of employing Drugs in its composition, as we have always thought the necessary and only way, he has with consumate skill extracted the virtues of the medicine to be employed and combined them alone in their purity together. The composition is then mixed and rolled by machinery and steam power into a speroid pill which is wrapped in an envelop of gelatine, for protection from the effects of weather or time, and then thickly coated with sugar, to serve as its passport over the palate. Notwithstanding all this labored perfection they are offered to the Public at less than one cent each. However humble the department, we think this may be safely characterized as the consumation of Art in its line. [Morn. News Balt.

SUMMARY.

The steamer James Adjer arrived at New York on Wednesday morning from Sydney, N. S., with the Telegraph Excurtionists all well. We learn by her that about 40 miles of the sub-marine cable had been payed out when a heavy storm came on in consequence of which the cable was obliged to be cut in order to save the bark on which the remainder was. The nature of the bottom where the cable lies is such that the Company gave up all hope of recovering it and consequently the remainder was landed at Sidney and the whole abandoned to the underwriters. The terms of the Insurance were that the underwriters were to be holden until the whole cable was securely laid provided certain conditions were complied with. As these conditions were strictly followed the Company will be no losers excepting in the delay caused by the accident.

Counterfeit five dollar notes of the Ocean Bank of New York City, extremely well calcutated to deceive are in circulation. They may be detected by noticing the figure "5" on the left hand upper end. In the genuine notes there are three faint lines drawn around the shading of the figure. On the spurious only one. The scroll work at the extreme of the end piece strikes the border of the counterfeit, while there is some space between them in the genuine.

A dispatch dated St. Louis, Tuesday, Sept. 4, says: The *Squatter Sovereign* of Aug. 28, nominates Mr. Atchison for the next Presidency. It denies the rumor of an intention to annex Platte County, Mo., to Kansas. Says that Kansas is deprived of aid from its Southern allies because it has become a prey to the North. It expresses a hope that the next National Congress will be the last.

A dispatch dated Troy, Wednesday, Sept. 5, says: The State Convention of colored men to-day adopted a platform, in which it was resolved to give the ear of our Legislature, and of our fellow-citizens generally, no peace until they shall wipe from the statute book the Anti-Republican property qualification. A suffrage association for the State was organized.

In the neighborhood of Boston, on Wednesday morning the thermometer was down to 40, and in one instance 36 degrees. On Saturday, Aug. 25, there were snow flakes falling at St. Johnsbury and Danville, Vermont.

The two chief towns in the territory of Minnesota are ascertained by a local census just taken, to have the following population. St. Paul, 5,000—St. Anthony, 2,500. This is a handsome increase over the last enumeration.

The latest reports from Norfolk and Portsmouth represent the fever as decreasing. We trust the news is correct. A few more weeks of such a pestilence would depopulate those doomed cities.

It is stated that the British Government has not relinquished the recruiting system in the United States, but on the contrary has a large number of agents employed for the coming Winter, who are expected to induce many poor workingmen to visit Canada under promise of employment. The recruits on reaching Halifax are said to be cheated of half the promised pay and imprisoned and flogged for grumbling.

A Philadelphia newspaper of the date of Jan. 10, 1798, is the authority for the following:—"Died at New London, Mr. John Weeks, aged 114. He married his tenth wife when 106; she was only 16. His grey hair had fallen off, and was lately renewed by a dark head of hair; a new set of teeth had made their appearance, and a few hours previous to his death he ate three pounds of pork, two or three pounds of bread, and drank nearly a pint of wine.

Buffaloes in innumerable numbers are ranging over the prairies only fifteen miles west of Fort Riley, in Kansas. With a spyglass from a hill, they can be seen grazing as far as the eye can reach. Settlers who had located in the vicinity with herds of cattle had been compelled to remove for the want of grass, which had been consumed by the animals.

One of the census-takers in Boston lately reported that he had found a colored female, who, it was stated to him on good authority, had reached the almost incredible age of one hundred and ten years. She is generally known among the colored people of that city as "Mother Boston," some of her neighbors making her to be one hundred and twelve years of age. An investigation brought to light the following facts: She was born in Boston, and was a slave, and is, probably, the only person living who was born a slave in Massachusetts.

Mattoon, a little wide-awake town upon the Illinois Central Railroad, at the crossing of the Alton and Terre Haute road, 174 miles from Chicago, is an illustration of the rapid growth of towns upon the prairies. Last April, there was not a stick of timber upon the ground. It has now a large hotel, where every comfort may be enjoyed, and the frame of another was raised lately. In addition to these there are a post-office, dry-goods store, two groceries, and other stores going up.

Towards the end of the year 1813, Buffalo was a village of a few hundred houses; it was burnt to the ground by the English, and the inhabitants fled before the enemy. In 1835, it contained 15,661 souls. In the year 1840, the city had 17,323 inhabitants; 29,773 in 1845; and in 1850, 42,251. The population has increased more rapidly within the last five years, and now amounts to nearly 75,000.

A Hartford paper tells a story of an American who deposited one hundred dollars in the hands of an Englishman, for which he was to receive twenty-five dollars per month until Sebastopol was taken. This was on the first of November last, and the American has received his twenty-five dollars per month ever since that time. One hundred dollars could hardly have been better invested.

A dry goods house, in Boston, have adopted an excellent plan of making their clerks honest and industrious. It is the custom to divide the profit that accrue from the business, over a certain per centage, among the employees, pro rata, according to the amount of their salaries. This division is made semi annually, in February and August. The amount divided last month was $5000.

Indiana, it is said, bears off the palm for big apples. One was exhibited in that state lately measuring eighteen inches in circumference, and weighing a little over two pounds. It was a good cooking apple. The grower has some half dozen of the trees, the grafts of which he received from England, under the name of "King Pippin," some six or seven years ago.

Three ladies were lately drowned at Swan Island, in the Kennebec River. It seems that a Miss Richards had gone in to bathe, but got beyond her depths; that on seeing her danger, a Miss Dumaresq, of Roxbury, Mass., ran into the water to attempt her rescue, but was also sinking, when Mrs. Dumaresq also rushed in, and all three were drowned.

The Medical Examiner states that there is a little boy in Pennsylvania, aged nearly three years, who weighs 98 pounds, and is fattening at the rate of six pounds in seven weeks! He is well proportioned, being three feet high; 36 inches round the chest; 40 round the abdomen; upper part of arm, 10; wrist 7; upper part of thigh, 20; ankle, 12.

A gentleman in Boston has determined, during Barnum's "baby show" in that city, to exhibit some of the choice infants of the colored race, so that the citizens can have the opportunity to determine whether or no the color has any effect on the intellectual organization of mankind.

A few of the Cayuga Indians, residing on the Cattaraugus Reservation, have revolted, deposed the old chiefs, and declared new ones in their places. They allege in their public manifesto that the chiefs have been plundering the people of their annuities, &c.

The Cincinnati Gazette estimates the aggregate surplus of the agricultural produce for 1855, at $60,000,000. This is equivalent to full sixty millions of grain, and half a million of tons of hay greater than the production of last year.

Mr. S. W. Dudley, or North Guilford, Ct., found a turtle in his meadow, a few weeks ago, which he marked in 1820 with his initials. When found at that date, it bore letters "C. R," date "1785." The latter date is still distinct.

The newspapers state the subscriptions for the relief of the yellow fever sufferers in Virginia amount to upwards of $62,000. In addition to the amount of money, large contributions have been made in goods, provisions, &c.

In Bedford village, on the banks of Lake Champlain, the water froze two inches thick last week. It is reported that nearly half of the oat, potatoe, and buckwheat crops were destroyed in St. Armand's, and towns of that vicinity.

A quantity of old cheese is one of the best things to eat when distressed by eating too much fruit, or food of any kind. Physicians have given it in cases of extreme danger.

The new law, allowing colored children to attend the public school, went into operation in Boston on Monday last, when many of them attended with the white children.

The present is the four hundredth year since the introduction of the art of Printing. The first book ever printed with a date, was issued in 1455. Nine years after, the Koran began to be publicly read at Constantinople, and at the same time the Bible was sent forth by the Press to the people, commencing its flight, which has been greatly accelerated in our times, destined to bear the glad tidings to all the families of earth.

The medical profession of New Orleans, after having been discussing for several years the origin of the yellow fever, which has desolated that city, is now of the opinion that it is not imported. On this question the faculty stands in the proportion of eight to two. The disease is therefore, of local origin.

Since the first appearanne of the cholera in Florence, early in June, there have been some 3,500 cases, in a population of 120,000, the deaths being about 80 per cent. The mortality is thus far mostly confined to the masses of poverty and wretchedness; though strange to say, the per centage is greater among the poor of the hills and valleys of the neighborhood than in the city.

Before the new Congress has finished its work, we shall have Minnesota asking for admission into the Union. The late census shows that its population almost comes up to the required number, and that this flourishing territory already numbers fifty-five thousand inhabitants. St. Paul, the capital, has over five thousand inhabitants.

Dr. Smith, Mayor of Boston, in an address at a Ladies' Exhibition in Boston, said:—"That the little girls he knew when a boy, who used to climb trees and fences with the boys, and who were called "Tom-boys" by their mothers, were now, wherever found, leading women in society, with strong, healthy bodies and minds."

A dispatch dated Milton Falls, Vt., Friday, Sept. 7, says: During an altercation at Fletcher yesterday, between two men named Chase and Fulton, the former was stabbed and knocked down by the latter, and died almost immediately afterwards. The quarrel was in reference to a whipping which Fulton had administered to Chase's son, for taking a melon from his garden.

A dispatch dated Charleston, Wednesday, Sept. 5, says: At the Coroner's inquest on the death of the Captain of the ship Ariel, the Jury found a verdict of murder against Nicholas Wheaton, the First Mate, and now acting Captain of the vessel, and Henry Girard and George Anderson, the apprentices.

A dispatch dated Vermont, Wednesday, Sept. 5, says: Returns from about one hundred towns indicate the reëlection of General Royce, by ten to fifteen thousand majority. The House of Representatives will be Republican and American by ten to one.

The New York "Medical Times" says that seven young and fair looking women may be daily seen at the New York Hospital, following the physicians and surgeons on their rounds, and are present at all operations on males and females.

Mrs. Foster Ervay, residing in Newfield, Tompkins county, N. Y., on Sunday morning gave birth to four fine children, three girls and a boy. The weight of each was five pounds to a fraction. Dr. Sherwood reports the mother and children as doing well.

There were twelve hundred and nineteen emigrant passengers landed at Castle Garden, in New York last week, bringing with them money to the amount of $94 571. Thirty passengers in one ship had over $11,000.

Since the year 1810, according to the records of Boston, thirteen persons have died there, after reaching the extreme age of one hundred years and upwards—the oldest person deceased being one hundred and eight years.

Major Heirman, the Chippewa Indian agent, left St. Paul, Minnesota, on the 30th ult., with $50,000 in his pocket, the whole of which he is to disburse in Uncle Sam's annual payment to that tribe.

It is stated that the managers of the Lowell mills are actively engaged in securing all the help that offers, and are putting every spindle and loom into motion as fast as they can find operatives to run them.

Within thirty days, there were shipped from Boston to San Francisco, 7,440 barrels of sugar, 4,758 half barrels, 1,151 packages, 120 kegs, 150 boxes, 20 hhds.—in all, 13,889 packages.

The Richmond "Despatch" speaks of a pamphlet just published in that vicinity, which estimates that, within the last 40 years, 61,664 slaves have escaped from the South, or 1500 annually, and that the total loss is $27,740,800.

A young man was recently tried in Baltimore, for assaulting a young girl, of thirteen, and kissing her. He was her music teacher. The court sentenced him to sixty days imprisonment, and $32 fine.

A porcupine of some twenty-five or twenty-eight pound weight, was killed in the highway near the residence of John K. Smith, in Chester, Mass., on the 16th ult., by an Italian statue pedler and two boys.

The mayor of Vicksburg, Miss., at the request of the ministers and congregations of the different Christian sects of that city, has appointed a special day of humiliation, fasting and prayer.

New York Markets—Sept. 10, 1855.

Every Reader

WILL PLEASE NOTICE THE ADVERTISEMENT headed *The Great Book of the Year*, and send for a full descriptive Catalogue of all our Illustrated Works.

☞ To the *uninitiated* in the great art of selling books, we would say that we present a scheme for money making, which is far better than all the gold mines of California and Australia.

☞ Persons desirous of selling any one Work alone, and canvassing a certain section of country, or several Counties, will please confer with the subscriber, who will cheerfully answer every letter, as far as possible, on the day of its reception. Address,

ROBERT SEARS, Publisher,
181 William-st., N. Y.

MARRIED,

In Shiloh, N J., August 30, by Eld. W. B. Gillette, Mr. Albert R Jones to Miss Sarah Jane West, daughter of Clement West, all of Shiloh.

In Clarkville. Madison Co. N. Y., Sept the 5th, by Eld. Joshua Clarke, Dr. L W. Denison to Miss Julia E. Franklin, both of Clarkeville.

In Leonardsville, N Y., by Eld. Wm. B. Maxson, on the 1st inst., Mr. Benjamin P. Chusbro to Miss Louisa Ashley, both of Utica, N. Y.

DIED,

In Newport, R. I., August 10th, after a lingering and painful illness, Mrs. Phebe More, aged about seventy years. She was an African. In her youth she embraced the religion of Christ, and became a member of the Seventh-day Baptist Church in Newport, where she remained a member and continued to exemplify the religion she professed till her death. She was a woman equally distinguished for dignity of personal bearing and manners, strong judgment and constant humble piety.

In Plainfield, N, J., August 3d, after a short illness, Angelina Matilda, daughter of Thomas and Caroline Randolph, aged five years and eleven months. It is no doubt a wise arrangement that these strokes that fall so heavily on afflicted and bereaved families should not be equally felt by others, for if such were the case the whole race would be in continual mourning.

"Yet when the first wild throb is past,
Of anguish and despair,
To lift the eye of faith to Heaven,
And think our child is there;"

is a solace which more than compensates for the want of a wider sympathy from the world around. L. C.

In Woodville, (Richmond) R. I., Sept. 1st, Mercy Wilbor, widow of Fones Wilbor, aged 48 years.

LETTERS.

"June Clifton," Enoch J Davis, W B Gillette, B Matthias, S Davison, Martha Saunders, Ruth Yearance, A C Spicer (Gen Agent is absent—will probably return about the 1st of October, when your request will be attended to,) Grove D Clarke, J Clarke, Geo P Maxson.

RECEIPTS.

☞ The General Agent of the Publishing Society expects to attend the anniversaries at Brookfield, and the meeting of the North-Western Association at Berlin, Wis. It is hoped that subscribers for the Society's publications in those regions will take advantage of the occasion to pay up. The residents of other regions, also, who are indebted to the establishment, are respectfully requested to be prompt in their payments. The current volume is now one-quarter completed, and subscriptions for the year are considered due.

FOR THE SABBATH-SCHOOL VISITOR:

Grove D Clarke, Walworth, Wis $5 00

WILLIAM M. ROGERS, Treasurer.

The Virginia Association.

The Seventh-day Baptist Virginia Association will hold its next annual meeting with the Seventh-day Baptist Church at Lost Creek, Harrison Co., Va., commencing on the fifth day of the week before the fourth Sabbath in September, 1855, at 10 o'clock, A. M. Opening discourse by E. Bee; A. Bee, alternate.

J. F. Randolph, Secretary.

The North-Western Association.

THE Seventh-day Baptist North-Western Association will hold its ninth Anniversary with the Seventh day Baptist Church at Berlin, Marquette Co., Wisconsin, on the fifth day of the week before the fourth Sabbath in September, (being Sept. 20th) commencing at 10 o'clock A. M. Eld. Z. Campbell is appointed to preach the introductory discourse; Eld. J. M Todd alternate. H B Lewis, Rec. Sec.

New Market Seminary.

This Seminary will re-open on the 12th of September, with Mrs. R. H. Whitford, as Preceptress.

This Institution is located in a pleasant section of country, and has a commodious and well arranged building and is designed to furnish every facility and advantage to the student found in other institutions of this class.

Board for students may be had in families at one dollar and seventy-five cents per week, where all their wants will be kindly cared for. Tuition from $3 to $5 per term, according to the studies pursued. Music, with use of Piano. $10 00.

I. H. Dunn, Sec. of Board of Trustees.

New Market, N. J., August 26, 1855.

Magnificent Floral Gift.

SUBSCRIBERS to the "CHRISTIAN DIADEM" for 1855, are entitled to a splendid steel engraving, the ☞ LILLY AND THE ROSE PERSONIFIED, being given *gratis* to all old and new subscribers who send us only ONE DOLLAR, by mail or otherwise.

Six Copies for Five Dollars.

The Diadem is a strictly moral and religious work—designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address Z. P. HATCH, Publisher. 9 Spruce street, New York. May 24—3m.

State of New York,

SECRETARY'S OFFICE, Albany, August 25, 1855.—To the Sheriff of the County of New York: Sir—Notice is hereby given, that at the General Election to be held in this State on the Tuesday succeeding the first Monday of November next, the following officers are to be elected, to wit:

A Secretary of State in the place of Elias W. Leavenworth;

A Comptroller in the place of James M. Cook;

An Attorney-General in the place of Ogden Hoffman;

A State Engineer and Surveyor in the place of John T. Clark;

A State Treasurer in the place of Elbridge G. Spaulding;

A Canal Commissioner in the place of Frederick Follett;

An Inspector of State Prisons in the place of Darius Clark;

A Judge of the Court of Appeals in the place of Addison Gardiner;

All whose terms of service will expire on the last day of December next.

Also, a Judge of the Court of Appeals in the place of Charles H. Ruggles, Resigned;

Also, a Justice of the Supreme Court for the first Judicial District, in the place of Edward P. Cowles, whose term of office will expire on the last day of December next;

Also, a Senator for the Third, Fourth, Fifth, and Sixth Senate Districts, in the place of Thomas J. Barr, Thomas R. Whitney, Mark Spencer and Erastus Brooks, whose term of office will expire on the last day of December next.

COUNTY OFFICERS ALSO TO BE ELECTED FOR SAID COUNTY.

Sixteen members of Assembly;

A Sheriff in the place of John Orser;

A County Clerk in the place of Richard P. Connolly;

Four Coroners in the places of Robert Gamble, Joseph Hilton, Hieronymus N. Wilhelm, and William O'Donnell;

A Comptroller in the place of Azariah C. Flagg;

A Street Commissioner in the place of James Furey;

A Commissioner of Repairs and Supplies in place of Bartholemew Purdy;

Two Governors of the Alms House in the place of Patrick Henry add John J. Herrick;

City Inspector in place of Thomas K. Downing.

A Counsel to the Corporation in place of Robert J. Dillon;

Two Justices of the Superior Court in the place of Wm. W. Campbell and Murray Hoffman;

A Justice of the Marine Court in place of Chas. E. Birdsall;

A Police Justice for the Sixth Judicial District in the place of Geo. W. Pearcy;

A Judge of the Court of Common Pleas in the place of Lewis B. Woodruff.

Yours respectfully,
E W. LEAVENWORTH, Secretary of State.

Sheriff's Office New York, August 28. 1855.

The above is published pursuant to the notice of the Secretary of State and the requirements of the statute in such case made and provided.

JOHN ORSER,
Sheriff of the City and County of New York.

☞ All the public newspapers in the county will publish the above once in each week until the election, and then hand in their bills for advertising the same so that they may be had before the Board of Supervisors, and passed for payment. Sep—13.

Farm for Sale.

THE House and Farm lately owned and occupied by James Hubbard, in Scott, Cortland Co., N. Y., are now offered for sale, on reasonable terms. The House is a large two-story house, nearly new, and well arranged to accommodate a large family. The Farm consists of about thirty-six acres of good land, most of which is under good cultivation and is well watered. There are about fifty trees of choice grafted fruit in good bearing condition. It is situated in an industrious and moral community, enjoying all the advantages of schools, meetings, and markets, necessary to make it a pleasant home.

Apply to A. D. C. Barber, or J. N. Pratt. 4t–9.

Farm for Sale,

CONTAINING about 100 acres, with a fair proportion of woodland, a small orchard of grafted fruit, and a comfortable dwelling and outhouses. It is situated about four miles north of Westerly, R. I., and within a mile of each of the flourishing manufacturing villages of Potter-Hill and Ashaway. There are several other manufacturing establishments near, affording a ready market, in the immediate vicinity, for every species of produce. It is convenient to the first Hopkinton Church, as well as to the very excellent male district school.

It will be sold with or without the stock and farming implements, and possession given the ensuing winter or spring, if desired. To those wishing to secure a quiet home in an enterprising neighborhood, and surrounded by such comforts as can only be found in an old settled and thickly populated country, this affords an opportunity seldom offered. For terms and other particulars apply to the subscriber on the premises, or address John E. Potter, No. 15 Sansom-st., Philadelphia, Pa. Benjamin Potter, Ashaway, R. I.

To Persons out of Employment.

The Great Book of the Year!

From the Editors of the Philadelphia Post.—"We think we may safely pronounce this to be the most thorough and valuable work on the Empire of Russia that has yet appeared in the English language."

From the Editor of the American Philadel. Courier.—"Truly a valuable Work—the great Book of the day."

Send for one copy and try it among your friends.

WORK FOR ALL AND, WORK THAT PAYS,

In selling, in every County in the United States—our new work on the "RUSSIAN EMPIRE," and other popular PICTORIAL WORKS. Terms, Catalogues, and Canvassing Circulars, forwarded free of postage, on addressing, ROBERT SEARS, Publisher, 181 William-st., New York.

☞ SEND FOR ONE COPY. Single copies of the Work on "RUSSIA," (the most elegant and useful Volume of the Year,) carefully enveloped in stout paper, and forwarded at our risk and expense to any Post-Office, on the receipt of the Retail Price, Three Dollars. Early application is necessary to secure the most beautiful and perfect copies.

☞ PERSONS WISHING TO ACT AS AGENTS, and do a safe business, can send for a specimen volume, and a well-bound Subscription Book, (price of both $3 25, sent free of postage,) and obtain from one to two hundred subscribers, to be delivered at a certain time to be agreed on, say in thirty or forty days from the time of signing. Address as above. R. S.

Ahead of all Competition.

In press, and will be published on the 20th of September.

FLEETWOOD'S LIFE OF OUR LORD AND SAVIOUR JESUS CHRIST, together with lives of the Holy Apostles and Evangelists, and a History of the Jews. The whole carefully revised with additions by the Rev. Joseph Belcher, D. D.

Determined to furnish agents and their patrons with books of sterling merit, we are about issuing, in connection with our popular History of all Religious Denominations, a new edition of the above fine old work. It will contain about 700 pp. uniform in size and type with the latter, and will be handsomely illustrated by engravings. Copies have been procured from England and Scotland, and carefully collated by the above eminent divine, with those published in this country. Many fine omitted passages have thus been restored, the manifold mistakes of successive printers have been corrected, and we shall now have the pleasure of placing in the hands of canvassers *the most correct edition in existence of this admirable work.* For terms and other particulars address either of the

Michigan Southern Railroad Line.

TRAVELERS for Chicago, St. Louis, Kansas, and all points West and Southwest, can obtain through tickets, and all information concerning routes, fare, &c., either by the New York and Erie Railroad, or the New York Central Railroad, by application at the Company's Office, No. 192 Broadway, corner Dey-st., to

JOHN F. PORTER, General Agent.

Central Railroad Company of New Jersey.

NEW YORK, SOMERVILLE, EASTON, &c. *Spring Arrangements*, commencing April 2, 1855: Leave New York for Easton by steamers RED JACKET and WYOMING, from Pier No. 2 North River, at 8 A. M., 1 and 4 P. M. For Somerville, (way,) at 5.30 P. M.

The above trains connect at Elizabethtown with trains on the New Jersey Railroad, which leave New York from foot of Courtlandt-st. at 8 A. M., 1, 4 and 5 P. M.

Returning—leave Phillipsburg (opposite Easton) at 6 and 9.45 A. M. and 3 P. M.; Somerville (way) at 6 A. M.

New York and Elizabethport.

Leave New York at 8 and 10 A. M., 1, 4 and 5 P. M.

Leave Elizabethport at 7.15 and 9.10 A. M., 1, 3.15 and 6 P. M. JOHN O. STERNS, Superintendent.

New York and Erie Railroad.

ON and after Monday, May 7, and until further notice, Trains will leave the pier foot of Duane-st., New York, as follows:

Dunkirk Express at 6 A. M. for Dunkirk.

Buffalo Express at 6 A. M. for Buffalo.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Accommodation at 12½ P. M. for Port Jervis and intermediate stations.

Rockland Passenger at 3 P. M. (from foot of Chambers-st.) via Piermont, for Suffern and intermediate stations.

Way Passenger at 4 P. M. for Newburgh and Otisville and intermediate stations.

Night Express at 5½ P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5½ P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c., and with first-class splendid steamers for all ports on Lake Erie.

D. C. McCALLUM, General Sup't.

Miscellaneous.

The Present Condition of Russia.

From the London Times, Aug. 4.

Sated with battles and sieges, and finding nothing very remarkable in the manner in which the war affects our own resources, we naturally become the more anxious to lift the hitherto impenetrable veil which separates us from the interior of Russia, and to inquire how the enemy bears the privations and evils of a long blockado and all the miseries that ever follow protracted war. We have presented ourselves to Russia and to Europe in our working suit, and been careful to put every thing in a point of view rigorously fair, while Russia is always dressed out in her best, and keeps seriously in the background whatever does not tend to raise the opinion of her invincibility. The Provinces and Governments vie with each other in what the Invalide Russe is pleased to call voluntary contributions—that the whole country is animated by a spirit of the most exalted patriotism—these, and such accounts as these, are all that we can expect to reach us from a country where the blacking-brush of the censor ranks among the most approved means of government.

We have therefore great reason to be grateful to the conductors of "Blackwood's Magazine" for having admitted into its pages the narrative of an English subject for many years resident in Russia, who left that country only at the beginning of the present Summer, and who details with much apparent good faith the results of his own personal observation. These revelations ought to make us feel how much we owe to our insular position, and how much to our enlightened system of taxation, which enables us to raise whatever sums we need in money, instead of having recourse, like Russia, to the ruinous expedient of taking our taxes in kind. Whatever the Englishman has to pay leaves him still a perfectly free agent, whereas the system of forced labor prevailing in Russia strikes the sickle out of the hand of the reaper on the very day of harvest, robs the plow of its oxen, and dissipates in a few hours the Winter supply of food for the whole of a village community. The estate of which the writer speaks contains about 40,000 acres, is cultivated by 1,300 serfs, produces linseed, corn and wool, and yields its proprietor about £6,000 a year. Last year this estate produced 1,500 quarters of linseed, worth in ordinary times about the same quantity of wheat, upon which a loss of £500 was sustained; a considerable quantity of wool, upon which there had been a loss of £200; and a large amount of tallow, upon which there has been lost about £200; so that in this way alone the proprietor has lost, through the single agency of our blockade, more than £2,000 out of £6,000. This was only an indirect effect of the war. We next come to the conscriptions. Of these, there were two in 1854, and there has already been one in 1855, each of 12 in a thousand males; so that the owner of the estate has already lost the labor of 47 able bodied men, and spent £376 in fitting them out for service, at the rate of £8 a head. In the Spring of 1854, this same estate was required to make a voluntary contributions of 40 oxen to feed the army, and five wagons, with a pair of horses and a driver to each, to be returned at the end of the war. The estate had also to furnish 1,000 poods of biscuit, the pood being equal to 18 pounds avoirdupois. The next demand, was for ten wagons, with a driver and a pair of horses to each. Twenty pair of oxen were required to transport the biscuit, and again a larger number late in the year; but for this last service the proprietor compounded by a payment of £90. In April of the present year twice the quantity of biscuit was demanded, and the unfortunate peasants, who have to carry it a thousand miles, must be absent during the whole of the brief Russian Summer, and only return home to starve during the long Winter for want of the harvest which a paternal Government will not permit them to gather. For these services there is no payment, and the issue of a species of Government paper, which was taken in payment of taxes, has been stopped. The villages which lie on or near the line of march are plundered by the soldiers who pass through them, and the stock of food laid up by these unfortunate people for the supply of Winter is devoured by these unbidden and hungry guests. The tailors and bootmakers are called upon to clothe the soldiers, for which they receive mere nominal prices, curtailed by the peculation of those through whose hands they pass. Money is disappearing from the south of Russia, and the paper circulation is taking its place. Every thing seems to show that the resources of the country are overtasked by the struggle which she has provoked, and that even without any very brilliant success in the field a mere dogged continuance of the measure we have already adopted must bring this mighty empire to terms.

It is impossible to read without a sigh the narrative of the cruel and grinding oppression to which a nation universally described as naturally gentle and inoffensive, is reduced by the pressure of war, but our regret may be moderated by the reflection that this sharp discipline is absolutely needed, if we are to cure the Russian people of the lust of conquest and the dream of universal dominion. Wild and criminal as were the plans of Nicholas, we believe that in planning and executing them he was only too faithful a representative of the opinion of his people, who are just in that stage of semi-barbarism in which the instinct of patriotism takes the form of a desire for foreign dominion. The Russian nation will not again, we apprenend, be so eager to seize the terrttories of their unoffending neighbor, or inflict upon him those calamities which have recoiled so signally on themselves.

Melancholy also must be the condition of the landed proprietors, exposed as they are to the burdens we have enumerated, in addition to their ordinary contributions to the revenue and the vast deductions from their income occasioned by the blockade. The tax-paying powers of the country must already be seriously impaired, and will in a short time be destroyed, by a system of exaction, which seems peculiary leveled at the most productive industry, and destroys all the hopes of the future, in order to satisfy the craving emergencies of the present. When we compare with these things the singular buoyancy of resources which France has just exhibited by offering to her Government a loan four times the amount of that income which Russia claims to possess even in time of peace—when we consider that the war has neither crippled our commerce, embarrassed our trade, depressed our industry, disordered our finances, nor, in fact, done any one of those things which the peaceful seers of Manchester and the infallible prophet of the West Riding predicted, we are amazed at the cowardice which, under such circumstances, can counsel a dishonorable compromise, and the short sighted folly which can lead men calling themselves statesmen to forego a position so advantageous, and results apparently so certain, in order to give a triumph to an enemy vainly struggling against the toils in which he is taken, and to enact over again, to the disgrace of England and France, the same miserable self deception which saved Russia and ruined Turkey at Adrianople in 1829, by a peace obtained by the defeated party under false pretences.

Extra Genesee Flour.

Those accustomed to looking over reports of market prices, cannot fail to have noticed that the tiptop price of flour has always been set down against the brand "Extra Genesee." There is another fact connected with this brand of flour that may have surprised some persons, especially those who have had occasion to buy a barrel for home use. Two months ago we reported "most grades of flour a little lower," and almost every week since the same report has been made. The aggregate of these declensions amounts to more than $2 a barrel on common brands; and yet within two weeks it has brought $12 50 per barrel. The reason for this is that a large number of families will use nothing else. "Extra Genesee" they must have, whatever be the price, and the supply of this brand having been limited, the fortunate holders have been able to obtain their own price.

Now what is this "Extra Genesee?" A number of years since, the best flour was undoubtedly obtained from wheat grown in the Genesee Country, embracing a dozen or more counties in Western New York. The superior character of this flour was owing, in part, to the excellent miles in that section. This fact having become known among the Eastern consumers, this flour acquired an established reputation, which it has retained long after there were any real cause for the distinction. Bakers, and those who use large quantities of flour, have been aware of this, and it is seldom that we see the flour unloaded at their establishments marked with the practically obsolete brand. Equally good flour, is now obtained from wheat grown in Canada, Ohio, Michigan, Indiana, Illinois, and Wisconsin. But the great majority of families still cling to the old brands as the only one in which confidence can be placed.

The truth is, not one-fourth of the "Extra Genesee Flour" sold in this market is made from Genesee wheat. As there is more champagne wine sold in New York City alone than there is produced in the whole country where that wine is a native, so there is at least three times more Genesee flour sold than is grown in the whole Genesee country proper. Much of this brand of flour comes from the extensive mills at Rochester, but it is well known that those mills derive their principal supplies of wheat from the Western States and the Canadas, and in this case Genesee flour means that made (not grown) in that country or rather upon the Genesee River.

We have seen thousands of barrels of flour coming down the Western Lakes—especially Lake Erie—branded "Extra Genesee." "From pure Genesee wheat," "Extra Superfine Genesee," &c. Any one going through the flour stores in this city will occasionally find on careful examination, evidence that the original marking of barrel heads has been erased and a new one added. We once carefully washed off from the head of a flour barrel, a blue label, neatly printed in gilt, and found that it covered the manufacturer's mark of a mill in the interior of Ohio. The original branking iron had burned into the wood too deeply to be "planed" off, and so it was covered up.

A lot of the finest flour we ever saw was made in the western part of Central Virginia—we knew the man who grew the wheat and had it ground—and yet that flour sold for thirteen shillings less per barrel in this market than an inferior quality which chanced to have the right marking. Men raised in the very centre of the Genesee wheat country, and considered excellent judges of flour, find no difficulty in getting the very best flour at from $1 50 to $3 less than the current prices paid by their neighbors for a poorer quality of "Extra Genesee."

The finest, whitest flour is that which contains the greatest proportion of starch, but such flour is not by any means best adapted to supplying the laboring man with the elements of muscle or power. The dark Southern flour usually abounds in gluten—a substance more nearly resembling human muscle; and the man who is obliged on Saturday night, from the scantiness of his weakly earnings, to send home a barrel of dark Southern flour, may console himself with the certainty that his low price flour will yield himself and family more of the needed nourishment than that which would have left thirty to fifty per cent. less of his hard earned money for other necessities.

Our advice to the mass of flour buyers is to cease to attach so much value to the outer marking upon flour barrels. If not sufficiently experienced yourselves to judge of the quality, go to a reliable dealer and buy flour warranted good. If your bread is not as white as starch, it may taste quite as well, if you are assured that is fully as nourishing, and remember at the same time that it costs a great deal less money; though if you throw away your partiality for a particular brand, you will in three times out of four get flour equally as good for much less money.

These suggestions are more important this season, as there has been so much grown wheat the present harvest, that the bona fide "Extra Genesee" will doubtless be scarce, and continue to command a high price, for the reason above given, viz: that there are enough private consumers who will have it, to keep it above its real value, as compared with other brands. [Times.

Brutality on the Duke of Sutherland's Estates.

The *Northern Ensign* (Scotch paper) has the following:—

In a small house in Tubeg Skerray, in the parish of Tongue, lived a Highlander and his wife, within less than a quarter of a mile of the house in which they were both born and brought up, and which their fathers still occupied as tenants under the Duke of Sutherland, Mr. Robert Horsborough being factor. Shortly before the occurrence which our contemporary relates, William M'Kay's wife was confined of her fourth child, and was still in bed, and unfit to be removed from it. But on the 26th of June, a neighbor informed M'Kay that a party of law officers were coming to turn himself and family out. The husband hastened to the house to inform his wife, and of course, console her. In an instant the messenger-at-arms, with his party, were at the door; their speaking was heard by the poor woman, and she began to tremble; cold perspiration covered her body all over; the officers came in, and soon cleared the house of every article of furniture; and lastly, the wife, and her newly-born babe, must be turned out too. The mid-wife remonstrated, but in vain. The law officers said they would be required to execute their commission. The poor woman was, in spite of every remonstrance, doomed to be removed. These executioners of justice had, they said, their instructions—but, may it not be said, wanted the tenderness which would suggest to them the delicacy and danger of interfering with a woman in such a state. They surrounded her in the corner in which she lay, laid hold of the sheet or covering which was under her, carried her out of the house, and placed her on the ground at a distance, and sped back to the work of demolition; divots and cabers were thrown in all direction; the hatchet cut down the couple-tree, and in a very short time the roof of the hut disappeared, and so did its destroyers. They had more work of a kindred nature to perform that day. In an agony of feeling, the husband ran off a distance of five miles to procure medical aid, while his wife, with her new born infant, lay on a little straw upon the ground; and it was not till night that, by the kindness of her poor neighbors, she and her children were deposited in an empty barn. We cannot, except in some of our English poor law cruelties, recall such a circumstance which has occasioned us deeper indignation than the incidents of this painful narrative, nor one which demands stricter investigation. In the former, we have, indeed, had cruelty in its worst possible form as far as the acts themselves are concerned. We can understand the workhouse official, snatched perhaps from starvation by the salary he receives, and eager to recommend himself to his employers by an economizing use of his functions, committing acts of inhumanity at which one feels horrified. But that such things can take place under the eyes of the Duke of Sutherland, fills us with as much astonishment as pain. It is not many months since the ladies of England appealed to their sisters in America on behalf of the poor blacks, imploring them to exert their influence to put an end to the deplorable and shocking system of slavery; and the first name which the signature to that appeal bore, was the name of the Dutchess of Sutherland. Will that women look at home and think of poor William M'Kay's wife, carried in a sheet out of her hut, and laid trembling on the ground, with her new born infant in her arms? Will she speak one eloquent word of remonstrance in favor of the poor whites who have the misfortune, at this moment, to have their holdings on her husband's estate.

The Influence and Dignity of the Press.

The London *Times*, which undoubtedly stands at the head of the press of the civilized world, thus speaks of the vocation of an editor:—

"We confess we are sensitive for the dignity of our order, and proud of our vocation. We should no more dream of confounding the limits of public duty and private courtesy in our own case or in our present pursuits, than we should if employed in a state office, or charged with the responsibilities of judicial decision. What can it signify to any man who devotes his time and ability to journalism, as it is called, whether the door of this or that grandee be opened to him or shut against him? The mistake lies in exaggerated notions of individual dignity.

"We know no rerson why the Marquis of Carabus should give himself any trouble to secure the private friendship of a political writer more than he would in the case of an author who had written a successful comedy, or of an advocate who had made a good appearance at the bar. The best advice we can give to the more irritable among our brethren is to have a loftier notion of themselves and their vocation. Let them feel assured that in this country—the home of untiring and well directed energy—there is no more honorable calling followed, no honester bread eaten, than that of the man who, without one thought of pleasure or displeasure of living man, undeterred by apprehension, and unallured by greed or ambition, in all truth and conscience devotes his mind to the daily discussion of public affairs in the columns of the leading journals. We may venture to say that we know as well as most men the advantages and drawbacks of such a career."

Russian Women.

Mdlle. Frederika Bremer has abstained for some time from literary labor, that she may better devote herself to the works of charity. In a report addressed by her to the Ladies' Society of Stockholm, we find the following:

"The most interesting accounts from ladies' associations abroad pertain to Russia. We know little of our Eastern consin—that immense empire of sixty million inhabitants. We have been told that they are barbarians—that the women—creatures without a soul, count for nothing, and these notions have found readier credence amongst us for the reason that no woman's voice has spoken on the other side in self-defence. These millions of women have remained mute—mute as the Russian dungeons, or the mines of Siberia. From time to time some act of devotion on the part of a Russian wife, a daughter, or a bride, who, having followed him whom she loves into exile, supported him and died for him, has reached our ears, but even such recitals but rarely. Meanwhile, we knew that these women were Christians, and often have I asked myself—are there not among them some souls devoted to the interests of suffering humanity, to destitute and helpless youth; some women whose activity is all love and kindness, as amongst the nations of the West? And when I read in our journals that a great numbers of Russians killed in the sanguinary battle of the Alma carried upon their breasts portraits of women—a wife, a lover—then I exclaimed, "O, truly are the Russian women worthy of respect and affection; worthy to be loved until death!" Immediately afterwards, I was put in possession of the following circumstantial details relating to female beneficence in Russia. (A list of ladies' societies in Russia is then given.)

"The events of the last year have given birth to many new charitable institutions, amongst them the order of the Sisters of the Exaltation of the Cross—an order founded by the Grand Duchess Helena, with the view of caring for the wants of the sick and wounded in the military hospitals. Every Russian woman, without religious distinction, can be admitted into this order, if she possesses the repuisite moral and physical conditions, and also certificates of good conduct. She takes a vow of chastity, obedience, patience, and abnegation. This order includes persons of every class. Sixty-eight of the number have lately left for the Crimea, their expenses being entirely defrayed by the noble and charitable princess who founded the institution.

"It is especially in the time of actual war and suffering that the Russian women display the rich treasures of patriotism and piety which lie hidden in their souls. Their devotion and their sacrifices for the wounded and the other victims of war know no bounds, and in Crimean hospitals they lavish their attentions with equal solicitude upon compatriots and enemies.

"We have long known the women of the West and their active benevolence; we have all of us lately been filled with rejoicing by the pious pilgrimage of Miss Nightingale and her thirty-seven companions. Why shall we not also interest ourselves in in the lives and charity of our Eastern sisters? Why shall we not be equally pleased to see sixty-eight Russian women transport themselves to the bloody fields of the Crimea, to exercise there their mission of devotion and piety? Why not congratulate ourselves upon finding companions and associates in our work of love in the East as well as in the West? Let us, then, thank the Russian women for the noble example they are giving us; let us send them sisterly greeting, and attempt to tread in their steps."

Anecdote of the Duke of Wellington.

The Duke of Wellington was well acquainted with his Bible, and valued it. Many years ago, when Sir Arthur Wellesley, a brother officer was speaking sneeringly of the Bible, and ridiculing the idea of it being a revelation from God, when he abruptly said, "S——, have you read Paley's Evidence? If you have not, I advise you to read them. I once thought as you now think, but I read Paley, and am convinced." That officer afterwards became one of the holiest men in the British army, and thanked the Duke of Wellington for his timely reproof. You may have heard me speak of my visit to Walmer Castle, and observing that a number of the books in his bed-room library were on divinity, and by the most evangelical writers. On a little round table, close by his plain iron bedstead, were always to be found four apparently well-handled books. One was the Book of books, the Word of God; another was Leighton's Commentary, on St. Peter; a third, Howe's Living Temple; and the fourth, Baxter's Saint's Rest. Who could desire better books for the soul of such a man? and he kept nothing for mere show—the books were for use, not ornament. The following is illustrative of his kindness and humanity: "Early in the morning after the battle of Waterloo," says Dr. Hume, "on entering his room, he sat up in his bed, while I reported to him the calualities that had come to my knowledge. He grasped my hand, and seemed deeply affected; I felt the tears falling fast on my hand, and looking up, I saw them coursing in furrows down his dusty cheeks. He suddenly brushed them away with his left hand, and in a voice tremulous with emotion, exclaimed, "Well, thank God, I know not what it is to lose a battle, but it is painful to gain one with the loss of so many of our friends."

Strange Activity of an Insane Woman.

There is a woman in Whitney, who for the past ten years has been insane. It is not fully known what the cause was that led to this very peculiar state of her mind. About eighteen years ago she lost her husband, but since that time she has performed the duties of her household with as much care as is common—cooks, washes, does all the household work without assistance or guidance. But unlike most women she spends no useless time in-doors engaged on the nicer kinds of lacework, or even at the toilet. She has a work to do, and all her energies are given to it. As soon as the dishes are washed and furniture set in order, she lights her pipe and starts for the field.

About six rods from her house are two small hills, which she is at work in leveling. They are about 12 feet high, and on the top contain nearly a quarter of an acre. During the past ten years all her leisure moments have been thus occupied. Early in the morning, with her hoe and crowbar—which are the only tools she uses—she starts for these hill-tops, and there works till night. She carries the small stones to the foot of the hill, rolls the large one, and hoes the dirt down. In this way she has lowered one hill more than six feet, and the other four and a half.

The work she has performed is said to be more than any one man in this town could have done in the same time with the same tools. The stones alone she has carried to the foot of the hill would now require the labor of five men and four oxen, two months to remove. Notwithstanding this immense and continuous labor, she enjoys at this time the very best of health. When in the house about her work, she is perfectly rational, never destroys anything, and is guilty of no cunning tricks, such as crazy people generally are. She uses her son's wood to heat up large rocks which she cannot remove without breaking, then pours water upon them, shelling them into small pieces to enable her to carry them into the valley.

Bangor (Me.) Mercury.

Romance of War.

"I know," writes a Crimean correspondent, "that in England a great number of young ladies believe the 'tented field' to be surrounded with romance, and some older people fancy, perhaps from their experience of cricket matches, laying of foundation stones and flower shows, that a tent is a cool, airy, and desirable Summer residence. I like popular delusions—they make a great many people happy and contented—but feel exasperated by this one in particular, and wish the public was encamped out here for about three days. I should like to see them on their backs on the ground, panting like hard-pressed stags, watching the grass dry up before their eyes, the haze rising from the glassy surface of the sea, the air like the air of a bake-house, and darkened by millions of flies, which break the awful noontide silence by a confused hum and buz, and would settle on their nose and ears with maddening pertinacity—the water hot, the ground hot, wine hot, beer hot, boxes hot, bed hot, writing impossible, reading impossible—nothing to do but to wait and to suffer. And when at last the evening came and they stepped out to breathe—the thermometer, after all, would only have fallen about ten degrees, and dinner would be ready—to see them too sleepy and too exhausted to eat, and then go to bed hot to pass a hot uncomfortable night, and recommence on the morrow, would afford me melancholy pleasure."

New England Meeting-Houses.

After the year 1700 the meeting-houses in New England were plain wooden structnres, in most cases without any steeples. The windows were glazed with a diamond-shaped glass, the walls unplastered, and the interior without any means of heating. Through the storms of winter the congregation shivered with the cold during the public worship. About one hundred and fifty years ago, in the interior of one of these rude edifices, upon the Sunday, could be seen the families of New England.

The men were dressed in the fashion of the age. They wore broad-brimmed hats, turned up in three corners, with loops at the side; long coats, with large pocket folds and cuffs, and without collars; the buttons either plated or of pure silver, and of the size of a half dollar; shirts with bosom and ruffles, and with gold and silver buckles at the wrist, united by a link; the neckcloth or scarfs, of very fine linen, or figured stuff, embroidered, with the ends hanging loosely. Small clothes were in fashion, and only reached to the knee, where they were ornamented with silver buckles of liberal size; the legs were covered with long grey stockings; the boots had broad white tops, with tassels, though shoes were some worn, ornamented with straps and silver buckles.

The woman had black silk or satin bonnets, gowns extremely long-waisted, with tight sleeves, or else with very short sleeves, with an immense frill at the elbow. Females at this time wore high-heeled shoes. The ministers wore large gowns and powdered wigs.

A Cheap Disinfector.—Prof. Nash, of Amherst College, gives the following formula for making home-made Chloride of Lime:

"Take one barrel of lime and one bushel of salt dissolved in as little water as will dissolve the whole; slack the lime with the water, putting on more water than will dry slack it, so much that it will form a very thick paste; this will not take all the water; put on, therefore, add a little of the remainder daily until the lime has taken the whole. The result will be a sort of impure chloride of lime, but a very powerful deodorizer, equally good for all out-door purposes with the article bought at the apothecary's and costing not one-twentieth part as much. This should be kept under a shed or some out-building. It should be kept moist, and it may be applied whenever offensive odors are generated, with the assurance that it will be effective to purify the air, and will add to the value of the manure much more than it costs. It would be well for every farmer to prepare a quantity of this, and have it always on hand."

Hardening the Constitution.—Men talk about "hardening the constitution," and with that view, expose themselves to summer's sun and winter's wind, to strains and over efforts, and many unnecessary hardships. To the same end, ill-informed mothers souse their little infants in cold water day by day; their skin and flesh, and bodies, as steadily growing rougher and thinner, and weaker, until slow fever, or water on the brain, or consumption of the bowels, carries them to the grave; and then they administer to themselves the semi-comfort and rather questionable consolation, of its being a mysterious dispensation of Providence, when in fact, Providence had nothing to do with it. He works no miracle to counteract our follies.

The best way I know of "hardening the constitution," is to take good care of it, for it is no more improved by harsh treatment, than a fine garment or new hat is made better by being banged about. [Jour. of Health.

American Tamarinds.—Wm. M. Singleton, Esq., of Winchester, Va., has suceeded in obtaining a fine growth of Tamarinds from seeds procured at a confectioner's shop. One of these trees, eight years old, and measuring six inches in diameter, last year perfected fruit of a quality quite equal to that imported. In addition to its value for fruit, it is a most beautiful ornamental tree, having a rapid growth, symmetrical form, and beautifully delicate foliage.

This tree is worthy of a trial upon the Western prairies. The seed may be sown either in Fall or Spring, in drills about four inches apart, and covered with two or three inches of light rich soil. It is preferable to sow late in the Fall, in order that the hulls may be acted upon by the frost. When the shoots are about three feet high, they may be transplanted to the sites where they are to remain permanently. A handful of tamarinds from a fruit store will supply any one with seeds for a trial.

Progress of Momonism.—Twenty-five years ago the "Prophet" Joseph Smith organized the Mormon Church with six members. At the present time the Church in Utah Territory contains three Presidents, seven apostles, two thousand and twenty-six "seventies," seven hundred and fifteen high-priests, nine hundred and ninety-four elders, five hundred and fourteen priests, four hundred and seventy one teachers, two hundred and twenty-seven deacons, besides the usual ratio of persons in training for the ministry but not yet ordained, and four hundred and eighty-nine missionaries abroad. During the six months ending with the beginning of April last, nine hundred and sixty-five children were born in the territory of Utah, two hundred and seventy-eight persons died, four hundred and seventy-nine were baptized in the Mormon faith, and eighty-six were excommunicated from the church.

The entire number of applications under the Bounty Land Law of March last, up to the present time, is 209,800, of which 10,700 were filed in August. During the same month 8,700 warrants were issued. The entire number issued is now 24,000.

New Steamboat Line for Albany and Troy.

From Pier 15, foot of Liberty-st., at 6 P. M

STEAMER RIP VAN WINKLE, C. W. Farnham, Commander, Monday, Wednesday and Friday, at 6 o'clock, P. M.; steamer COMMODORE, L. Smith, Commander, Tuesday and Thursday, at 6 o'clock, P. M., and Sunday, at 5 P. M.

Fares: Saratoga, $1 50; Moreau, $2 15; Fort Edward, $2 15; Whitehall, $2 75; Castleton, $3 10; Rutland, $3; Burlington, $4; Rouses Point, $5 50; Montreal, $7 50.

These Boats will arrive in Albany or Troy in ample time to form connections with all the Railroads, North, East or West, enabling passengers to reach Montreal and tintermediate points the same day.

These Steamers are of the first class for strength and speed—well known favorities of the public—having been thoroughly overhauled during the past winter, and offer every accommodation that can be desired by either freighter or traveler.

Through tickets can be obtained on board the boat for Saratoga, Moreau, Fort Edward, Whitehall, Castleton, Rutland, Burlington, Rouse's Point and Montreal.

The Northern Freight Express will give Bills of Lading to all points as above named. Shippers who desire it, can have time receipts, by applying at the office on the Pier. A. A. DYKEMAN.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.*, and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been, and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

THE SPIRIT:

THE HOLY SPIRIT, THE SPIRIT OF GOD, AND THE HOLY GHOST—WHAT ARE THEY, AND WHAT ARE THEIR OFFICES?

An Essay read before the Bible Class at Albion Center, Aug. 11, 1855, by C. A. Burdick, a copy of which was requested by the class for publication in the Sabbath Recorder.

The subject which the class had under consideration several weeks, and upon which I was requested to prepare an essay, is in my estimation as difficult to treat with any degree of assurance, as it is interesting and important. In my opinion, the nature of the Holy Spirit and its *modus operandi* in the conversion of the soul cannot be entirely comprehended by us—in our present state of existence, at least. Under this conviction, it is with a feeling of embarrassment that I approach the subject. To attempt to say what the Holy Spirit is, and to define its offices and relations to man I feel is treading on solemn ground. I feel, also, that I am wholly inadequate to the work; but I have examined the subject as closely as my time and ability would admit, and must beg your indulgence while I state the convictions and impressions at which I have arrived. In treating the subject, I hope you will pardon me if I do not confine myself exclusively to the ground which the class went over. I shall examine the subject under three general divisions.

1. I shall inquire whether the terms Spirit, Holy Spirit, Spirit of God, and Holy Ghost, are synonymous.

2. What is meant by these terms?

3. What are their offices, and relations to man?

1. *Are the terms Spirit, Holy Spirit, Spirit of God, and Holy Ghost, synonymous?*

I shall try to show that they are, at least in many instances. I will not, however, affirm that they may not in any case be used with different significations. But I have not yet seen them used in any connection from which I can infer that they are in any sense distinct from each other; and I have examined about one hundred and seventy passages of Scripture, in which one or more of the four terms occur. It will be sufficient under this head, to compare a few of these passages, to determine whether they mean the same thing.

In Acts 2: 4 we read, "And they were all filled with the Holy Ghost, and began to speak with other tongues as the Spirit gave them utterance." Here it will be observed, that the terms Holy Ghost and Spirit are both used in the same connection. This wonderful display of the power of the Holy Ghost, it will be recollected, occurred on the day of Pentecost. The prophet Joel, in predicting this out-pouring of the Holy Ghost, used the term Spirit, instead of Holy Ghost. "And it shall come to pass in the last days, saith God, I will pour out of my Spirit upon all flesh, and your sons and your daughters shall prophecy," &c. Acts 2: 17, 18. I quote the passage from Acts instead of directly from Joel, because it is quoted there by Peter in explanation of the remarkable conduct of the disciples upon that occasion, whom some of the bystanders charged with being drunk. It is found in Joel 2: 28. Again, Acts 5: 3, "But Peter said, Ananias, why hath Satan filled thine heart to lie to the Holy Ghost?" But in speaking to Sapphira he said, "How is it that ye have agreed together to tempt the Spirit of God?" Verse 9. The Comforter is called, by Christ, both the Holy Ghost and the Spirit of Truth. "And I will pray the Father and he shall give you another Comforter, even the Spirit of Truth," &c. John 14: 16, 17. Compare this with verse 26. "But the Comforter, which is the Holy Ghost, whom the Father will send in my name," &c. I will next call your attention to two or three passages to show that the Holy Ghost and the Spirit of God are alike the accompaniment of prophecy. "For the prophecy came not in old time by the will of man, but holy men of God spake as they were moved by the Holy Ghost." 2 Peter 1: 21. Compare Num. 24: 2. "And Balaam lifted his eyes, and saw Israel abiding in his tents according to their tribes, and the Spirit of God came upon him, and he took up his parable," &c. Also, 1 Sam. 10: 10. "And when they came thither to the hill, behold a company of prophets met him, and the Spirit of God came upon him, and he prophesied among them."

We have now examined the terms Spirit, Spirit of God, and Holy Ghost. The term Holy Spirit remains yet to be noticed. I have not found any passages in which it is used in connection with either of the other expressions; it is not, therefore, so easy to prove that it is synonymous with them. But I have not seen any mention of it where its character or offices are inconsistent with those of the others. The Spirit is spoken of as being given to the believer, to abide with him, and to lead him into all truth. John 14: 16, 16: 13. That the Spirit here spoken of is the same as the Holy Ghost, we have already seen. The Holy Spirit is also spoken of as being given to them that ask for it, and we must infer that it is given for our guidance. "If ye then being evil know how to give good gifts unto your children, how much more shall your heavenly Father give the Holy Spirit to them that ask him?" Luke 11: 13. "Cast me not away from thy presence, and take not thy Holy Spirit from me." Ps. 51: 11. Webster defines "Ghost" thus: 1. Spirit; the soul of man. 2. The soul of a deceased person; the soul or spirit separate from the body, &c. Hence it is thought by some that the words Holy Ghost should have been rendered Holy Spirit. But enough under this head.

2. *What is meant by these terms?*

I would waive this part of the subject altogether, were it not that it forms so important a part of the question which was referred to me. I shall not attempt to define the nature of the Holy Spirit. I should consider such an attempt presumptuous, for it would be presuming to comprehend God—at least, one attribute of his character. I can only say that these expressions, if synonymous, are names given to the third person in the Trinity, as appears from 1 John 5: 7. "For there are three that bear record in heaven, the Father, the Word, and the Holy Ghost; and these three are one." Now whether they *always* refer to the third person in the Trinity, I will not attempt to say. If then the Father, the Word, (or the Son,) and the Holy Ghost are one, it follows that to try to tell what the Holy Ghost is, is to assume to tell what God is. I think we should be satisfied, in our present state of being, to know that God, in the person of the Holy Spirit, is present with us, pleading with the sinner to lay down his arms of rebellion, convicting his conscience of sin, pressing the divine truth upon the heart, and —when the sinner's attention is arrested and his heart opened—taking up his abode in him to encourage, counsel, and direct him safely in the path of obedience. But I will leave this point to older heads than mine, and pass to the next division.

3 *What are the offices of the Holy Spirit?*

The Holy Spirit is represented in the character of an Inspirer, a Teacher and Guide, a Comforter, an Intercessor, a Sanctifier, and a Witness. Perhaps other offices may be assigned to him; but these and what I understand to be his relation to the unconverted soul, will be sufficient for me here to consider.

1st. An Inspirer. It was through the influence and by the direction of the Spirit that the prophets and apostles wrote and spoke. 1 Sam. 10: 10. "And when they came thithhr to the hill, behold a company of prophets met him, and the Spirit of God came upon him, and he prophesied among them." 2 Pet. 1: 21. "For the prophecy came not in old time by the will of man, but holy men of God spake as they where moved by the Holy Ghost." Many passages might be quoted from the New Testament, showing that the apostles were inspired by the Holy Ghost. But I will only refer to Acts 2: 4, 19: 6.

2d. A Teacher and Guide. It appears to be an office of the Holy Spirit to interpret the will of God to those who seek his influence, to enlighten the mind upon important points of doctrine, and to act as a spiritual guide. "But the Comforter, which is the Holy Ghost, whom the Father will send in my name, he shall teach you all things and bring all things to your remembrance, whatsoever I have said unto you." John 14: 26. "For the Holy Ghost shall teach you in the same hour what ye ought to say." Luke 12: 12. "Howbeit, when the Spirit of Truth is come he will lead you into all truth." John 16: 13. "But as it is written, eye hath not seen, nor ear heard, neither hath it entered into the heart of man, the things which God hath prepared for them that love him. But God hath revealed them unto us by his Spirit, for the Spirit searcheth all things, yea the deep things of God." 1 Cor. 9: 10. The remainder of the chapter here quoted from dwells upon the same subject.

3d. He is also represented as a Comforter. "And I will pray the Father, and he will send you another Comforter, that he may abide with you for ever; even the Spirit of Truth." John 14: 16, 17. "But when the Comforter is come, whom I will send unto you from the Father, even the Spirit of Truth which proceedeth out from the Father, he shall testify of me." John 15: 26.

4th. An Intercessor. "Likewise the Spirit also helpeth our infirmities; for we know not what we should pray for as we ought; but the Spirit itself maketh intercession for us, with groanings which cannot be uttered. And he that searcheth the hearts knoweth what is the mind of the Spirit, because he maketh intercession for the saints according to the will of God." Rom. 8: 26, 27.

5th. A Sanctifier. "Elect according to the foreknowledge of God the Father, through sanctification of the Spirit, unto obedience and sprinkling of the blood of Jesus Christ," &c. 1 Pet. 1: 2. "That I should be the minister of Jesus Christ to the Gentiles, ministering the gospel of God, that the offering up of the Gentiles might be acceptable, being sanctified by the Holy Ghost." Rom. 15: 16.

6th. A Witness. "And hereby we know that he abideth in us, by the Spirit which he hath given us." 1 John 3: 24. "The Spirit itself beareth witness with our spirit that we are the children of God." Rom. 8: 16. "And we are his witnesses of these things, and so is also the Holy Ghost, whom God hath given unto them that obey him." Acts 5: 32.

Finally, I believe that the office of the Spirit in relation to the unconverted, is to present divine truth to the mind, to urge the claims of God upon the heart, to convict the soul of sin, and to lead the rebel back to God. And here I think many err in supposing that the Spirit is to do the whole work of conversion, that the heart is entirely passive, and that God in his good time will bring it into a fit state to be regenerated, and consequently that it is of no use for the sinner to try to become a Christian until God shall bring his power to bear to convert the soul. I look upon this as a dangerous error, one that involves the ruin of many souls. I believe that the unconverted heart is passive in receiving the drawing influences of the Spirit, but that it must be *active* in exercising repentance and faith before it can experience regeneration. To establish the contrary, is to take away man's free agency. I should like to expand this portion of the subject, and sustain my position upon this point by Scripture, were it not that my essay is already sufficiently long. In conclusion, I would say, that I have derived interest and, I trust, profit, from the examination of this subject, although I may have failed to afford you either in its presentation.

COLLEGES IN THE UNITED STATES.

Statistics of public schools are to be had without difficulty. They are brought forward prominently in the annual messages of Governors, are condensed continually for newspapers, and are scattered broadcast over the nation in essays on education. But the statistics of American Colleges are less common. We shall endeavor, therefore, partially to supply the deficiency.

The number of colleges in the United States is one hundred and eighteen, an average of nearly four for every State. Of these, fourteen are in New England, thirty-eight in the Middle States, thirty-six in the South and South-western States, and thirty in the West. The oldest is Harvard, at Cambridge, Mass., A. D. 1636; the next, William and Mary, at Williamsburg, Virginia, which dates from A. D. 1692; and the third, Yale, at New Haven, Connecticut, which was established A. D. 1700. Of the principal colleges in the Middle States is that at Princeton, New Jersey, originated A. D. 1745; the University of Pennsylvania, A. D. 1755; Jefferson College, at Canonsburg, Pennsylvania, A. D 1802; Mount St. Mary's, at Emmetsburg, Maryland, A. D. 1830; and the University of Virginia, A. D. 1819. In the West, the most flourishing college is the University of St. Louis, founded A. D. 1832.

The number of students in these one hundred and eighteen colleges, is about twelve thousand. The largest number on the roll of any one college, in 1854, was 466, the number attending, the University of Virginia. The number at Yale, however, was nearly as great, being 443. Harvard had 339, Princeton 225, the University of North Carolina 270, and Brown University, at Providence, Rhode Island, 252. The largest library belongs to Harvard, which college has 98,000 volumes; Yale has the next largest, containing 54,000; and Brown University the next, 32,000; Bowdoin, at Brunswick, Maine, has 28,000; Dartmouth, at Hanover, New Hampshire, 31,000; Georgetown College, at Georgetown, District of Columbia, 24,000; and the South Carolina College, at Columbia, 22,000. Several of the Western Colleges, considering their youth, have splendid libraries. Thus Marietta College, in Ohio, has 14,000 volumes, the students' libraries, as well as those in the college library proper, are included.

The cost of education varies at different colleges. At Harvard, the total expenses of room rent and truition, are ninety dollars annually; and the cost of board is from seventy to ninety dollars in addition; making an average, with washing, wood, and lights, of two hundred dollars. The expenses at Yale, averaged in a similar manner, may be estimated at about the same sum, as may also those at Princeton. Bowdoin, Dartmouth, Brown University, Amherst, and Williams, are cheaper, ranging from one hundred and twenty-five to one hundred and fifty dollars. The University of Virginia costs each student about one hundred and twenty-five dollars; while that of the Western Reserve costs less than one half, or only about one hundred.

In these estimates, clothing, books, and pocket-money are not included.

Besides these, one hundred and eighteen colleges proper, there are forty-four theological schools in the United States, about seventeen law schools, and about forty medical ones.

STUDY OF SCRIPTURE.

Melville, a distinguished English preacher, makes some judicious remarks on the proper study of the Bible:

We say not that the study of Scripture should exclude other studies, or be substituted for them. Natural philosophy is not to be learned from Scripture nor general history; and we would not have such matters neglected. But we say that scriptural study should be at once the ground-work and companion of every other; and that the mind will advance with the firmest and most dominant step into the various departments of knowledge, when familiarized with the truths of revelation, and accustomed to walk their unlimited spreadings. If parents had no higher ambition than to make their children religious, it is thus we apply our subject to those among us who are parents or guardians. But it applies to all We call upon you all to observe that, in place of being beneath the notice of the intellectual, the Bible is the great nourisher of the intellect. We require of you to bear away to your homes, as an undeniable fact, that to care for the soul is to cultivate the mind. And therefore be ye heedful—the young among you more especially—that ye be not ashamed of piety as though it argued a feeble capacity. Rather be assured, forasmuch, as revelation is the great strengthener of reason, that march of mind that leaves the Bible in the rear, is in advance, like that of our first parents in Paradise, towards knowledge, but at the same time towards death.

EXPERIMENT IN MANNERS.

In the year 1821, I made, in London, in a spirit of wager, a very decisive and satisfactory experiment as to the effect of civil and courteous manners on people of various ranks and descriptions.

There were in the place a number of young Americans, who often complained to me of the neglect and rudeness experienced by them from citizens to whom they spoke in the streets. They asserted, in particular that, as often as they requested directions to any point in the city towards which they were proceeding, that they either received an uncivil and evasive answer, or no answer at all. I told them that my experience on the same subject had been exceedingly different; that I had never failed to receive a civil reply to my questions—often communicating the information requested; and that I could not help suspecting that their failure to receive similar replies arose, in part at least, if not entirely, from the plainness, not to say bluntness, of their manner in making their inquiries. The correctness of this charge, however, they sturdily denied, asserting that their manner of asking information was good enough for those to whom they addressed themselves. Unable to convince them by words of the truth of my suspicions, I proposed them the following simple and conclusive experiment:

Let us take together a walk of two or three hours in some of the public streets of the city. You shall yourselves designate to me the persons to whom I shall propose questions, and the subjects, also to which the questions shall relate; and the only restriction imposed is, that no question shall be proposed to any one who shall appear to be greatly hurried, agitated, distressed, or in any other way deeply pre-occupied in mind or body, and no one shall speak to the person questioned but myself.

My proposition being accepted, out we sallied, and to work we went; and I continued my experiment until my young friends surrendered at discretion, frankly acknowledging that my opinion was right, and theirs, of course, wrong; and that, in our passage through life, courtesy of address and deportment may be made both a pleasant and powerful means to attain our ends and gratify our wishes.

I put questions to more than twenty persons of every rank, from the high-bred gentleman to the servant in livery, and received in each instance, a courteous, and, in most instances, a satisfactory reply. If the information asked for was not imparted, the individual addressed gave an assurance of his regret at being unable to communicate it.

What seemed most to surprise my friends was, that the individual accosted by me almost uniformly imitated my own manner. If I uncovered, as I usually did in speaking to a gentleman, or even to a man of ordinary appearance and breeding, he did the same in his reply; and when I touched my hat to a livered coachman or waiting-man, his hat was immediately under his arm. So much may be done, and such advantages gained, by simply avoiding coarseness and vulgarity, and being well-bred and agreeable. Nor can the case be otherwise. For the foundation of good-breeding is good nature and good sense —two of the most useful and indispensable attributes of a well constituted mind. Let it not be forgotten, however, that good-breeding is not to be regarded as identical with politeness—a mistake which is too frequently, if not generally committed. A person may be exceedingly polite without the much higher and more valuable accomplishment of good-breeding. [Dr. Caldwell.

Education.—Education should follow nature and aid it. How does nature proceed? It acts slowly, and developes itself moderately in the different periods of the child's age. Nothing forced; nothing violent; nothing precipitant. Thus ought education to be. The soul of the child is not an empty vase, which receives passively what is destined to fill it. It contains a fruitful germ, proper to be developed. It has in itself a force and energy to assimilate to itself the principles which come from without. It is by the exercise of the natural faculties that they develop their highest degree of perfection. The mother commences the development. The father and the teacher continue it. Social education finishes it.

Physical nature reaches this end slowly but surely. It is not always so with the education of the child. Deplorable causes sometimes interrupt it. But education has, over nature, this advantage; that man is submitted to its influence at nearly every period of his life, when physical nature has finished its work upon the body at perhaps twenty years of age. But one capital point should never be lost sight of. It is this:—If a young man has been badly raised, he will not resist, after he has reached the age of man, the trials of life. If his education has not solidly formed his character, settled his heart, enlightened his spirit, and his conscience, like furious tempests, these trials will overwhelm him. [J. B. Angeliz.

Not too Late to Commence.—As it is never too soon to do good, so it is never too late to amend. I will, therefore, never neglect the present, nor despair of the time past. If I had been sooner good, I might, perhaps, have been better; if I am longer bad, I shall, I am sure, be worse. That I have stayed a long time idle in the market-place deserves reprehension; but I am late sent into the vineyard, I have encouragement to work:— "I will give unto this last as unto thee."

[Warwick.

AUTUMN MUSINGS.

The Autumn time! the Autumn time!
How softly steals its footsteps on!
How gently fades the summer's prime,
And dims her glories one by one!
The days are bright, and calm, and clear,
It seems yet summer time to me;
But ah! a change is round me here,
In faded flower and crimson tree.

The Autumn leaves! the Autumn leaves!
How gorgeous in their golden sheen!
And yet 'tis but death that gives
Their glowing hues for simple green.
Oh! spirit of the frozen North!
Oh! mocker of our summer dreams!
Why com'st thou to blight our earth,
And hush the music of our streams?

The Autumn winds! the Autumn winds!
Ye come once more with plaintive song;
Ye breathe a dirge to saddened minds,
As softly low ye sweep along.
We're sighing for the faded bloom
Of dying summer's beauty fled,
Like mourners wailing o'er the tomb
Of young and loved ones, early dead.

The Autumn rain! the Autumn rain!
Its sound falls sadly on my ears,
And coursing down the window pane,
The pearly drops seem gushing tears.
Each pale sad flower hath caught a gem,
Which trembles in its loving eye,
Then fallen from its withered stem,
It lays its cheek down low to die.

And yet I love thee, Autumn time!
I love the blessing thou dost bring;
Though thou hast not the merry chime
That thrills the soul in joyous Spring.
'Tis sweetly sad—'tis sadly sweet—
To gaze upon this solemn scene,
Nor would I, if I could, retreat,
Where naught but vernal bloom is seen.

A SETTLED MINISTRY.

Frequent ministerial changes are an evil of immense magnitude. This evil exists in the American churches, and is on the increase. To arrest it should be the steady aim of Zion's friends. The following excellent remarks are from the *Puritan Recorder*:

A pastor's office pre-supposes permanency. A stranger that comes and goes hither and thither cannot be a pastor. An "everlasting candidate" with one foot on the ground of his labors, and the other in the stirrup for a new journey to a more inviting field, is not a pastor. The pastor is a settled minister, abiding with the flock that he feeds, till some imperative voice of Providence calls him away from them; and, ordinarily, the voice of Providence is something more clear than a prospect of having a wider field for one's talents and influence. There are few positions of pastoral labor so confined as necessarily to hide a minister's talents under a bushel. Such are the channels for the transmission of thought and influence, that every minister, who has talents fitting him to occupy a commanding position, already *has* such a position. He makes the station which he occupies, to become a center of influence. No metropolitan congregation can make a great and good man of one who is neither great nor good.

"Pigmies are Pigmies still, though perched on Alps"

Edwards was not indebted for his greatness to his position, either at Northampton, or among the Stockbridge Indians, where he wrote his immortal works. Nor was Bellamy indebted to the little town of Bethlehem for his fame or power for good. It was not the greatness of the congregation in Newport which made Hopkins great, unless, indeed, he was starved into his greatness. Neither did the narrow dimensions of the town of Franklin contract the mind or influence of Emmons. Men of this calibre have never found it necessary to change their place. It is smaller men who need a great place to give them importance.

The dismission of a good minister without a necessity, or an evident call of Providence, either in his occasions, or those of the people, involves a damage which is rarely compensated by his finding a field of greater usefulness. Such a change involves a loss of that knowledge which the minister so much needs, of the wants of his people. By many years of intercourse with a people, a pastor acquires a knowledge, that he could not get by any amount of information conveyed by another. It is a knowledge gained by observation upon individual character, to which he is constantly adding through the whole course of his ministry. If his heart is in his work, his mind is upon the spiritual interests of his people, and is approaching towards a complete knowledge of what their characters and circumstances require. A new pastor, for want of this slowly acquired knowledge, must give a more general and indefinite character to his preaching. He must preach more of what applies to men in general, and less of what applies to his own people in particular. This difficulty is like that of a physician, who is called to prescribe without a knowledge of the idiosyncrasies of his patient.

SCOLDING IN THE PULPIT.

A lady correspondent of the New Orleans *Christian Advocate* complains of the preacher for scolding his hearers in the pulpit. She says: "He has a way of talking which anywhere but in the pulpit would pass for scolding. This is not common; it is only now and then; but very marked. I suppose he does not feel well, or the subject in hand gets entangled. His fine forehead frowns and wrinkles. Around his mouth there are curling and sneering, and almost ill-natured expressions. What he says is hard and harsh. His eye, so beautiful and persuasive when growing with love or moistened by a tear for poor sinners, looks on us as if he was outdone, and didn't care if we go to the bad place."

This is a painful picture to study, even in print. It must be still more so in reality. The pulpit which exhibits it will always be unpopular, and richly deserves the dislike it never fails to invoke. The minister, who, with frowning brow and stern expression, hurls harsh denunciations on his hearers, hoping to benefit them hereby, must be sadly ignorant of human nature. He does not understand that the door of access to the human spirit cannot be forced by the blows of angry denunciation; and that the only effect of such attempts upon it, is to force the naturally perverse mind to lock itself up more closely, and to retire within its most inaccessible defenses. Even a church will become soured, disgusted, and back-slidden under a scolding ministry. It cannot be otherwise while the constitution of human nature remains what it is. It must be that the manifestations of the preacher's mind will beget manifestations in the hearer kindred to his own. If he is angry, harsh, and denunciatory, they will feel angry, harsh, and stern, too. Certainly they will not, cannot be reformed under such a ministry. It is not in the nature of things to expect it. If a minister would be successful, love must reign supremely in his pulpit. His mission is a work of love. When unfolding the judgments of God against the transgressors, he should speak in tones of tenderest affection. When his lips give utterance to the woes which hang like clouds big with destruction over the wilful sinner's head, he should do it with pity in his heart and tears in his eyes. By thus combining the strictest fidelity to truth, in the severest aspect of his nature, he will retain the respect and confidence of his hearers, while he unlocks their prejudices and throws open the gateway of their hearts for the entrance of his Master.

[Zion's Herald.

INCIDENT IN A STAGE-COACH.

I recollect, in another journey, three persons entering the stage, while we stopped to change horses. One was an old man nearly eighty years of age, with white locks and stooped shoulders; the second a middle-aged woman, with a discontented countenance, and querulous voice; the third, a fair, delicate youth, about sixteen, very fragile in appearance.

They were strangers to each other and not of the same party. The aged man had not been seated five minutes, when he commenced a conversation with a gentleman next him, interlarding every few sentences with an oath, calling on the name of the Deity in the most profane manner, and in a short time showed himself a scoffing infidel. The gray-headed old man, on the verge of the grave, whose actions in time would decide his state in eternity, was pouring out such horrid blasphemies, that our very blood was chilled. There were twelve passengers, all remained silent, till that delicate boy, who had waited for those older than himself to speak, laid his thin white hand upon the arm of the old man, and in a mild sweet voice, said:

"My aged friend, have you any one that is dear to you, any one that you love and reverence?"

"A strange question, my boy; do you think that I am without ties in the world?"

"Would you permit me then to ask, would you like to hear them abused or spoken of unkindly?"

"That I should not," he answered, "nor would I permit it."

"I know," replied the youth, "that I am but a boy, but do not be offended when I say you have spoken in such a manner of one I love, the best friend I have, that my heart has been deeply pained!"

"That cannot be, for I know no one you love; you are an entire stranger to me."

"Ah, sir, it is the great God, whom I have been taught from my infancy to love and reverence; that holy sacred name you have used in the most unhallowed manner. It may appear presumptuous in me to speak to the hoary-headed one, but permit me to say, there is a God, not only of mercy, but of justice, and who will not spare the guilty. The sands of your life are nearly run out; what will become of your immortal soul? It is appointed unto man once to die, and after death the judgment; from that trial there is no escape —are you ready for it? Examine the Bible for yourself." Then drawing from his pocket the inspired volume, and placing it in the hand of the old man, he continued, while tears of feeling stood in his eyes, "May God, in his infinite mercy, enable you to see and believe the important truths revealed in its pages!"

The old man gazed intently into the young speaker's face. His color rose, I knew not whether from shame or anger, till he said, with a quivering voice and deep emphasis, "I thank you, boy; you have given me a good lesson, which I hope I may never forget. I will read the book. I had a religious mother, but alas! I heeded not her instructions!"

The rest of the journey he remained perfectly silent, deep in thought. Indeed a solemn stillness was upon all, for the young disciple of Christ had made an impression for good, upon more hearts than one, and in after years, fruit sprang from that short, but faithful sermon in the stage-coach.

Only a few months, and that pious youth was gone from earth, his spirit reposing with the blest; and no doubt one of the brightest gems in his glorious crown, is the turning of that infidel old man from sin to holiness.

Thoughts of Heaven.—If heaven doth not enter into us by way of holiness, (said Mason,) we shall never enter heaven by way of happiness. If you would lay up a treasure of glory in heaven, lay up a treasure of grace in your hearts. If your souls are rich in grace, they will be rich in glory. The more you do for God in this world, the more God will do for you in the world to come. As heaven is kept for the saints by Christ, so they are kept for heaven by the spirit. In heaven all God's servants will be abundantly satisfied with His dealings and dispensations with them; and shall see how all conducted, like so many winds, to bring them to their haven; and how even the roughest blasts helped to bring them homewards. How can we expect to live with God in heaven, if we love not to live with Him on earth? If thou lovest to worship God here below, God will take thee to worship Him above. Thou shalt change thy place, but not thy employment. Heaven is a day without a cloud to darken it, and without a night to end. We would be seated in the heavenly Canaan, but are loath to be sacrificed with the briers and thorns of the wilderness.

"YOU KNOW I MUST LIVE."

So pleads the Rum-seller. His employment impoverishes the community, sends desolation into families, corrupts the morals of society, and hurls souls by thousands into a drunkard's hell. Good men expostulate, and entreat him to desist from such a wicked calling. But his reply is, that he has no other way of procuring a subsistence. Himself and his family depend upon the avails of his business for their bread. "And," says he, with an air of confidence, as if no successful answer could be offered, "you know we must live."

So pleads the Sabbath-breaker also. So earnest is he to accumulate property, that he will not respect the day of rest, to keep it holy. To cease from work, every seventh day, would be time lost. True, it is well for those to lay by their work who can afford to do so, but he is a poor man. He is just beginning in life, and he must make the most of every opportunity. At all events, he must not be expected to keep the Sabbath holy, at all times, and under all circumstances. Occasions will arise, now and then, which render it important to work, Sabbath or no Sabbath. His harvest is not secured, and it may take injury if it is not gathered. The river is in good stage for rafting his lumber, and unless he seizes the opportunity, he may lose his chance altogether. An opportunity for making a very advantageous bargain opens on the Sabbath-day, and unless he embraces it promptly, he will not be so well off, by a number of dollars. Or it will not promote his business interests so well, to keep the Sabbath, as to keep the first day of the week; and so he disregards what the Law of God says, in order that he may do well for himself in the things of this world. "For," says he, "you know I must live."

But stop a moment. We do not know any such thing. We are not quite sure that you ought to live. It is not perfectly obvious, that there is any necessity for it. Perhaps, the world would be better off, if you were dead. If you can live so as to be a blessing to your fellow-creatures, and to the glory of God, we are ready to admit that it is of some importance to have your life continued. But if your example is to be an injury to mankind; if your rum-selling, your Sabbath-breaking, your cheating in trade, or what not, is to be kept up from day to day; if you can find no way of carrying on your business but by breaking God's law; if you cannot accumulate property without setting at nought the institutions of heaven;—the sooner you die the better. And if you look at the thing in the light of God's word, you will be of the same mind.

There was a good man, of old, who said, "To me to live is Christ, and to die is gain." Phil. 1: 21. As though he had said, 'I have no other object in living but to serve and honor Christ. When I can do nothing more towards this object, I shall wish to die; for to die is gain.' Paul felt that his life was not his own, and that he had no right to dispose of it in any other way but that which would be most conducive to the end for which he was created and redeemed. As Paul felt, so ought every body to feel. He that makes it the great end of life to grow rich, and enjoy himself, is any thing but a Christian.

Suppose it were even so, that by rigidly keeping the Sabbath, at all times, and under all circumstances, or by rigidly refusing to engage in any employment which dishonors God or works injury to man, you were reduced to the point of starving; would that justify you in breaking the Sabbath, or in undertaking such God-dishonoring business? If God, in His providence, requires you to starve, is it not your duty to starve? If His providence is so ordered that you cannot possibly obtain enough, in an honest way, to keep off hunger, is it not your duty to endure hunger? Do not say, that to starve to death, under such circumstances, would be so much like committing suicide, that you would lie under the guilt of self-murder. If God *require* you to do what would issue in death, it is no more suicide than the slaying of Isaac would have been murder, had Abraham carried it into effect. If it is as you say, therefore, that you cannot adhere rigidly to righteousness as enjoined in God's law without starving, then starve; and, in so doing, you will glorify God, and save your own soul.

Of course, if under the circumstances supposed starvation itself is to be braved, much more is it one's duty to endure evils of less magnitude. The man who pleads that he cannot do strictly right in all things, because it would cut off his facilities for business, or would keep him in a very *uncomfortable* condition through life, has not learned the first rudiments of Christianity.

But is it true, that to do strictly right would imperil one's interests, to the extent imagined? We do not believe that any one was ever left to starve for his righteousness. David had never seen such an instance, in his day, (Ps. 37: 25,) and the promises of Gospel afford ample guaranty that the thing will never occur. Try the experiment, see whether God will forsake you. Why, how distrustful you are! How much you act like an infidel! You dare not wait till the Sabbath is past, to transact your business, lest the Providence of God take away your opportunity. What kind of a God do you suppose Him to be? You seem to think that he will not stand by you, unless you break His laws.

Yet you must live, you say. Yes, and you must *die*, too. Do you ever think of that? T. B. B.

OUR ANNIVERSARIES.

The Tract Society.

The American Sabbath Tract Society held its 12th Annual Meeting with the 1st Church in Brookfield, N. Y., on Sixth-day morning, Sept. 7, commencing at 9 o'clock A. M.

After the usual introductory exercises of singing and prayer, the President (N. V. Hull) spoke somewhat at length on the object which the Society is seeking to attain, and the principal obstacles to its success—particularly of the difficulty of bringing men to risk their prospects of success in the world in order to conform to what most of them regard as a *positive* commandment.

The Treasurer then read his Annual Report, from which it appears that comparatively little has been done by the churches, during the past year, to enable this Society to prosecute its labors. Only about $400 had been contributed for the object, most of which had been expended in the distribution of Sabbath publications, and in employing a colporteur and lecturer part of the year.

The Annual Report of the Board was read by the Corresponding Secretary. It sets forth in detail the efforts of the Board to carry out the directions and wishes of the Society. Steps have been taken to secure four new Tracts upon subjects named at the last annual meeting of the Society. One of these Tracts has been written, and referred to a Committee for revision, with a view to its publication. Three others are in preparation. Eld. Lucius Crandall was employed several months within the year to travel in the service of the Society, lecturing on the subject of the Sabbath, distributing publications, &c. Extracts from his journal are embodied in the Report; also, extracts from several letters received by the Corresponding Secretary, going to show that the publications of the Society are being read, and find here and there persons who are disposed to receive and obey the truth as set forth in them.

On a motion to adopt the Report of the Board, interesting remarks were made by several persons, among whom were J. P. Hunting and J. Croffut, (recent converts to the Sabbath,) and J. R. Irish.

H. H. Baker introduced a resolution, urging the Society to adopt more active and efficient measures to secure a general circulation of its publications. In advocating the resolution, he set forth a plan by which he is endeavoring to bring the claims of the Sabbath to the notice of ministers of the Gospel, through tracts sent to them by mail. The resolution was also advocated by S. S. Griswold, and adopted.

A resolution was introduced, and discussed at considerable length, recommending that the Board employ a General Agent, whose whole time shall be devoted to the interests of the Society, in lecturing, distributing tracts, keeping the churches informed of the plans of the Society, making collections, &c. The resolution, slightly modified, was adopted.

Two or three other topics occupied the attention of the Society in the course of the meeting; but our notes in relation to them are so imperfect, and the time at our command is so brief, that we shall have to omit for the present any notice of them.

The next meeting of the Society is to be held with the 1st Church in Hopkinton on the First-day following the second Sabbath in September, 1856.

The Publishing Society.

The Sixth Annual Meeting of the Seventh-day Baptist Publishing Society was held in the afternoon of Sixth-day, Sept. 7th, and was, like all the other anniversary meetings, well attended.

The Treasurer's Report showed that at the commencement of the Society's financial year, in June, 1854, there was 90 cents cash in the Treasury—that he had received within the year $3,297 62, and paid out $4,078 76—and that there was a balance against the Treasury at the close of the financial year June 6, 1855, of $780 24—a result which is attributed in part to the pecuniary embarrassment so common last year throughout the country.

In connection with the Treasurer's Report, a Report was presented by the Auditors. They were last year instructed to accompany their report this year with an apprisal of all of the property of the Society at its cash value. In order to facilitate their work, the Board last spring instructed the General Agent to make a complete inventory of property, accounts, liabilities, &c., to be submitted to them. It is a lengthy document, and will be printed in connection with the Annual Report of the Board. It must suffice here to state that the property and accounts of the Society, according to the apprisal of the Auditors, are worth $4,066 98—that the only liability of the Society is the balance against the Treasury of $780 24. The fund derived from memberships is estimated at $1,801 93. The estimated value of the assets, over the liabilities and fund, is $1,484 81.

The Annual Report of the Board gives a complete and encouraging account of the Society's operations during the past year. The facts embodied in this Report are of course familiar to the constant readers of the *Recorder*, and do not need to be enumerated here.

At the annual meeting of the Society last year, a Committee was appointed, consisting of George Greenman, David Dunn, and Perry B. Maxson, "whose duty it shall be, as soon as practicable, to meet in the city of New York, and examine thoroughly the financial operations of the Society since its organization, and the position of the General Agent in relation thereto, and give to the General Agent and to the Board certificates of the result of their investigations, and make a full report of the same to the Society at its next anniversary." This Committee presented a Report to the Society, which was referred to a Committee, consisting of J. R. Irish, Eli S. Bailey, D. E. Maxson, P. L. Berry, and C. M. Lewis, to consider and report what action should be taken by the Society in the premises. In due time they made a report, which was adopted, as follows:—

"The Committee appointed to examine the Report of the Committee of Investigation in relation to the financial transactions of the General Agent, report: That they find a majority and a minority report, each a lengthy document, showing that a thorough examination was made by said Committee, establishing beyond a doubt the financial ability and integrity of the General Agent. Further, we are of opinion, that the points of difference in the Reports do not in any sense impeach the General Agent. But as the documents are lengthy, and we can see no real benefit in their publication, but rather the gratification of a morbid inquisitiveness on the part of readers in relation to private and personal differences, we therefore recommend, as the only proper alternative to publishing both Reports, that no further action be taken in relation to said Reports, only to keep them filed and sealed in the archives of the Society."

The next meeting of the Society was appointed to be held with the 1st Church in Hopkinton, R. I., on the Sixth-day before the second Sabbath in Sept. 1856.

☞ The foregoing is written in the confusion of a crowded steamer on Lake Erie, and without opportunity to re-examine the documents referred to. We believe it is correct as far as it goes, and hope it is sufficiently complete to give an idea of the proceedings of the meetings in question. Before dismissing the subject of anniversaries, and in connection with them, we may as well say—

1st. A letter from the Mill Yard Church, London, designed for the Conference, has come to hand since the meetings. The facts embodied in it will be embodied in the Minutes of the Conference, and the letter itself, or portions of it, will probably soon appear in the *Recorder*.

2d. The Conference appointed Geo. B. Utter, James Bailey, and H. H. Baker, a Committee to prepare for the Minutes a statement showing, as far as possible, the locations of Sabbath-keeping societies or individuals where no church has been organized. Such individuals, and some person connected with each society of the kind, are requested at once to forward the necessary information to the chairman of the Committee, in New York.

3d. The Minutes of the Ohio Association for two or three years past omit the statistics of three churches from which reports used to be received. Will brethren Simeon Babcock and Eli Forsythe send us the facts necessary to make the Minutes correct in this respect?

"STANDARD OF EXTRAVAGANCE."

In an article under this head, from the pen of Bro. Brown, which appeared in the *Recorder* of August 23, the following statement is made:—"The facts of the case show, that persons of all classes are disposed to avail themselves of as many of the good things of this life as they can; they dress as well as they can; they ride in as good carriages and drive as fine horses as they can; and if one does not go as far as another, in these respects, it is not because he considers it intrinsically wrong, but because, in view of all his circumstances, he cannot afford it."

When I read this statement, my heart was pained to think the standard of piety was so low among professed Christians as to warrant such an assertion. It seems to me such persons as are here described can have no proper sense of the responsibility which rests upon them as the disciples of Christ, or of the solemn accounts which, as the stewards of God, they must soon render to an impartial Judge. I regard all such persons as referred to it the statement quoted, whatever may be their relative position in society, whether rich or poor, whether holding official stations in the church, or occupying the place of private members, as sadly deficient of one important element in the Christian character, at least. Self-denial is wanting, or if exercised at all, only in a very limited degree. They may be very religious in a certain way, but it may be said of them, in the language of Christ, "One thing thou lackest." The important requisition of self-denial which Christ demands of every disciple is not regarded. They prefer self-indulgence to the exercise of self-denial, and are more anxious to gratify themselves than to glorify God. They may contribute, to promote the cause of God, what may be considered liberal by a backslidden church; but it is with them as it was with some in the days of Christ—they cast into the treasury of the Lord of their abundance, but within such limits as to give full scope to self-gratification. The self-denying poor who may give but little, may be approved of Christ, as was the poor widow who cast in her two mites, while those others may fall into condemnation as a consequence of failing to do what was required at their hands. Some of these, perhaps, may be giving five hundred dollars a year to promote the cause of God, and hence may congratulate themselves as doing much for Christ, and may be puffed by others as being men of great liberality, and yet it may appear at a future day, that God had a claim upon them for the cause of benevolence, equally valid with that of any human creditor, for a thousand dollars a year, instead of five hundred, but which was never cancelled because it would encroach upon their habits of self-indulgence, or limit to a certain extent the augmentation of their capital. Others, of less capital, of whom less is required, may have incurred equal guilt from the same cause, by failing to do for Christ according to the measure of their obligation. I did not take my pen to write an essay which might occupy a column of the *Recorder*, but to sketch a case of moderate self-denial which came under my own observation.

I have known a brother in Christ, poor and embarrassed with debt. He declined acting as solicitor in a tract society, because he was unwilling to ask others to do for an object to promote which he could not make even the smallest contribution. With respect to himself, he regarded the claims of his creditors as paramount to the calls of benevolence. He was strictly honest and had, for a succession of years, met, with rigid punctuality, his annual engagements. The thought occurred to his mind that he had met the claims of his creditors from year to year, although indulging in the free use of tea and coffee in his family, and that by practicing self denial in the disuse of these articles he might save something for the cause of benevolence, and at the same time meet, as heretofore, the annual claims of his creditors. Prompted by the love of Christ and the interest he felt in his cause, he resolved on practicing self denial in this respect. Having the sympathy and approval of a benevolent wife and the sanction of his family, he immediately carried his resolution into effect. Appropriating the money thus saved to the cause of benevolence, he soon found himself with the means of doing more to support the gospel at home than he had formally done and a balance left to contibute to the tract society, the missionary society, and other benevolent organizations. From this point in his history, there was a marked improvement in his religious character. He could now do and persuade others to do in the work of benevolence. Having commenced the practice of self-denial, that he might augment his means of usefulness, it was exercised in various ways and with happy results. He soon became an efficient laborer in the cause of benevolence, accomplishing more, perhaps, by the influence he exerted on the minds of others in prompting them to do, than by his own contributions, which, however, reached a point worthy of imitation, considering his circumstances. He learned by experience that his happiness, as well as usefulness, was promoted by giving, to promote the cause of God, what was saved by acts of self-denial. I often sat by his bedside during his last sickness, and was edified and instructed while he conversed, with deep emotion, about the doings of those societies which were organized to promote the cause of truth and righteousness in the world. It was evident, as the time of his departure was approaching, his heart dilated with the spirit of benevolence. I do not forget, even after the lapse of more than twenty-five years, the expression of his languid eye when he conversed with me in regard to the influence which ought to be exerted in society in order that Christians might properly understand, fully realize, and actually do their whole duty in promoting the cause of the Redeemer in the world.

In conclusion, I will say that, while the calls of benevolence are so pressing, we have something else to do with our money besides emulating each other in dress and equipage. We have no right to regale ourselves in the lap of self-indulgence while our missionaries in Palestine and China are compelled, for the want of adequate funds, to forego the enjoyment of what we consider the necessaries of life; and are so straitened in a pecuniary point of view that they are defeated, in a great measure, in the accomplishment of the object of their missions. AZOR ESTEE.

ANNIVERSARY OF THE AM. BIBLE UNION.

The Sixth Anniversary of this body will be held in the Meeting-house of the First Baptist Church in the city of New York, corner of Broome and Elizabeth streets, on the 4th and 5th of October. The usual business meeting, at which officers and managers are chosen, will be held at 9 o'clock A. M. on the 4th. The public exercises will commence at 10 o'clock, and meetings, beginning at such hours as may be agreed upon, will be held for the two days, or longer, in the morning, afternoon, and evening. Attention will be given to the accommodation of the friends of revision from abroad, who may be present, and they are requested to register their names at the Bible Union Rooms, as early as practicable, after their arrival in the city. Among the speakers who may be expected to be present are Rev. Messrs. D. R. Campbell, LL.D., President of Georgetown College; George W. Eaton, D.D., Theological Instructor in Madison University; Isaac Errett, Warren, O.; I. N. Hill, Albany; W. G. Howard, D.D., Rochester; N. V. Hull, Alfred; T. Gracchus Jones, Norfolk, Va.; A. Maclay, D.D., New York; W. K. Pendleton, Professor in Bethany College; C. P. Sheldon, Hamilton; Q. H. Trottman, Hertford, N. C.

CORRECTION.—In the report of the doings of the Missionary Society, published in the *Recorder* of last week, an error occurred which should be corrected. The sentence—"The Treasurer also showed that a settlement had been made with the executors of the estate of Benedict W. Rogers, and that the Treasurer had received from that source property to the amount of *eighty* thousand dollars," should have read—"and the Treasurer had received from that source property valued at *eight* thousand dollars." Our apology is, the very great hurry in which we were compelled to get the "forms" ready for the press prevented our reading the proof as carefully as it should have been done—much of the report of the proceedings having been received at the office after the time when the paper should have been on the press.

ANNIVERSARY OF THE A. B. C. F. M.

The American Board of Commissioners for Foreign Missions held its Forty-sixth Anniversary meeting at Utica, on Thursday last, Hon. Theodore Frelinghuysen presiding. There were about two thousand persons present from abroad. The Treasurer of the Board read an abstract of his report, by which it appears that the receipts from all sources during the year have been $310,427 77, and the expenditures $318,893 18, which leaves a balance against the Treasury of $8,465 41, and makes the present indebtedness $20,507 90. The first annual report of the "Turkish Mission Aid Society," recently formed in England, has been received, from which it appears that £1,854, (about $9,000,) have been raised by that Society, and most of it paid over to the Missions of the American Board in Western Asia. Four corporate members of the Board have died during the year, viz.: Rev. Robert H. Bishop, D. D., of Ohio, Thomas Fleming, Esq., of Pennsylvania, Hiram H. Seelye, Esq., of New York, and Gabriel Tickenor, Esq., of Ohio. Rev. Nathan Dole, editor of the *Journal of Missions* and *Youth's Dayspring*, and seven Missionaries, and five Assistant Missionaries, have also died. There have been sent out during the year nineteen Missionaries and assistants, male and female, and there are twenty-nine more under appointment. 211,300 copies of the *Missionary Herald*, 357,000 copies of the *Journal of Missions*, 320,500 copies of the *Youth's Dayspring*, 16,700 copies of the *Extra Journal*, 6,000 copies of the Annual Report, and 3,006 copies of the Annual Sermon, have been issued during the year. The following gives a summary view of the operations of the Board:—

Number of Missions, 29; number of Stations, 120; number of Out-Stations, 59; number of ordained Missionaries, (six being physicians,) 155; number of Licenciates, 8; number of Physicians not ordained, 7; number of other Male Assistants, 16; number of Female Assistants, 202; number of Native Preachers, 46; number of Native Helpers, 236; whole number of laborers connected with the Missions, 665; number of Printing Establishments, 11; pages printed last year, (in part,) 25,822,780; number of Churches, (including all at the Sandwich Islands,) 115; number of Church Members, (do. do. last year,) 26,806; added during the year, (excluding those at the Sandwich Islands,) 635; number of Seminaries, 11; number of other Boarding Schools, 19; number of Free Schools, (412 supported by Hawaiian Government,) 787; number of Pupils in the Seminaries, (80 do.,) 429; number of Pupils in the Boarding Schools, 594; number of Pupils in the Free Schools, (10,705 supported by Hawaiian Government,) 20,555; whole number in Seminaries and Schools, 21,587.

ROMISH OPPOSITION TO RAGGED SCHOOLS.—A new Society is being established in London, which promises to be a formidable antagonist to the beneficial efforts of the many institutions which have for their object the social and physical religious welfare of the people. It is under the patronage of Dr. Wiseman, with all his titles, legal and illegal. Its name is the "Catholic Industrial Institution for the Prevention of Vice," by which last term, as defined in their prospectus, they mean Protestantism. The point of Protestant agency which this Society proposes to counteract are stated in the prospectus to be four in number, namely:—1. "The first means of proselytism we may mention is the Industrial Schools." 2. "The Parochial Workhouses." 3. "A third, and even more dangerous means, is the multitude of Ragged Schools." 4. "A fourth, means of perversion is the employment given to poor Catholic boys, by which they may gain money in the public streets; and these are generally connected with the system of the Ragged Schools."

THE LAST OF LUTHER'S LINE.—A paragraph has been going the rounds of the press stating that the last lineal male descendant of Luther had been received back into the Romish communion. It appears, however, says the *Recorder*, that there now resides in Bedford, Pa., Mr. John Luther, a lineal descendant of the great Reformer of the eighth generation; and his family consists of himself, wife, three sons, and one daughter; he has also five brothers and one sister residing in Saxe Coburg, Germany, all with families. There is also one family of the descendants of his great forefather in Saxe Coburg, and a number of families in Bohemia, Germany; a family also in Harrisburg, Penn. They are all, both in this country and Germany, connected with the Lutheran branch of the Protestant Church, and it is not known that one of them has ever become connected with the Romish Church.

TRACTS AMONG THE HEATHEN—Major General Alexander, late Adjutant General of the Madras army, recently made the following statement at a missionary meeting in London: "A particular friend of mine who was engaged in the Burmese war, a man of missionary spirit, made an excursion towards the the eastern frontier, in the neighborhood of the Assam country, and there he found a population of some 14,000 or 15,000 people of the Border tribes, who, sometime about the year 1827, I believe, had picked up a few tracts, and the slight knowledge to be derived from them of the truth. They were professing what they knew, and were anxiously waiting for a day when God in his providence should open a way for teachers from the West to come and proclaim to them the full gospel of Christ."

LIVING IN THE DARK.—The *American Messenger* tells of a colporteur in North Carolina, who found in one quarter nearly one-third of the families he visited destitute of all religious books except the Bible, and more than one-sixth without the Word of God, visited two families in one day, one of which consisted of seven persons, all grown, none of whom but the father could read; the other had been keeping house eighteen years, and but one member of the family could read. Neither of these families ever had a Bible. He also visited another family, where the mother was eighty-seven years old, had kept house sixty years, and brought up nineteen children, but never had a Bible.

THE FIVE POINTS MISSION—The New Five Points House of Industry, New York, is nearly completed, and will be a fine brick building, fire-proof, and in all respects adapted to the wants of the Mission, with a chapel, school and work rooms, dormitories, &c. The cost of the building and ground will be $30,000, including $11,000 paid for the latter. It is about 55 by 100 feet, and will have a height of six stories. It stands on the spot formerly known as "Farlow's Court," which was occupied by a wretched class of people, and according to the landlord, often contained 600 inmates. It will probably be finished by the first of December.

RELIGIOUS INTELLIGENCE.

One of the most interesting objects in the British camp before Sebastopol is the sappers' church. It is built wholly of siege apparatus, but these are neither injured nor unfit for their ultimate purpose; on the contrary, the the materials are so arranged that they are only in store, as it were, ready for use as soon as required. The articles employed in the construction have been scaling ladders, gabions, facines, timber ready cut and shaped for gun platforms, a few planks, and some pieces of rope. Two scaling ladders, locked into each other at the top, form, at certain intervals, the columns which separate the aisles from the body of the church, and bear the roof.

St. Paul's church, Knightsbridge, England, having shown signs of a tendency towards Rome, especially in the matters of flowers and colored altar cloths, the Bishop of London was sent for to pacify the controversy growing out of these innovations. The bishop decided that the flowers might be tolerated upon the altar, but not so as to form the figure of a cross. As to altar cloths, he thought the variety of colors too great, and limited them to a red one for ordinary use, and a blue one for lent. This was intended as a peaceful compromise; but now the parties are warmly contending as to which side the bishop favors.

There were more than two hundred tents on the ground at the Methodist camp-meeting lately held at Edgartown, Mass. A bell was rung at five o'clock in the morning, to arouse the sleepers from their slumbers, and summon them to the work of preparing for the devotions of the day. At nine o'clock preaching commenced at the stand, and conference meetings followed. Dinner was served at twelve; preaching and inquiry meetings at two and seven, and quiet was commanded at ten P. M.

It is expected that preaching in the open air will become quite common in England. The Bishop of Winchester has recently recommended all his clergy who are able to go out of their churches and preach to the people in the streets, at suitable times; and Canon Miller has declared his belief that it is the only way of getting hold of the minds of the multitude. An "open-air mission" has been formed in London, having for its object to employ working men to preach, paying them a small sum for each sermon.

The new dogma of the "immaculacy" has been celebrated in Germany with greater solemnities than was expected. It was known that a majority of those dissenting Episcopal votes, which decided either the expediency of defining this new dogma, or the authority of the pope in such a matter, belonged to Germany. Had the decision been left to a council of Catholic Germany, there is said to be no doubt they would have declined proclaiming such a dogma.

The Methodists of Canada West, at their late meeting made two important changes in their church policy. They have consented to extend the period of a minister's residence on a circuit from two to five years, in any case where a request to that effect emanates from a quarterly meeting of the circuit. They have also consented to admit an equal representation of clerical and lay members of the annual district meetings of the convention.

In various parts of South Wales, the emissaries of the Mormonites are most active in propagating and spreading the doctrines of the Latter Day Saints, and among the laboring population they have been indefatigable in urging the odius practice of polygamy. Among the miners and colliers of the iron and coal districts of South Wales the tenets of this sect find pecular favor.

In the town of Liberty, in Texas, a fine of $25 is imposed upon every man who utters an oath in the presence of a woman. It would be still better if the punishment were extended to those who commit the offense in the presence of their children. To any one who has a son or a daughter, it is painful to pass along our streets, and witness the profanity and obscenity which tender childhood is compelled to hear.

The recent report of the Moravian brethren states that they have at present sixty-nine missions in thirteen different countries, in which are employed many missionaries, male and female, and 212 brother converts. Their last station was formed in 1853, among the Chinese in Mongolia. A large number of these stations defray their own expenses, and for the rest only $9,000 per annum are required.

Archbishop Hughes has given public notice that he has no time to answer the numerous letters addressed to him from various quarters, by those professing to be well disposed towards him and his Catholic fellow-citizens. The letters generally have reference to the charges brought against the bishop as being inimical to the civil and religious liberty of this country.

The British Church Missionary Society raised, during the last year, some $180,000—its stations being among the Indians of their own land, also in western Africa, China, northern India, among the Chinese gold diggers of California, and the Catholics of South America. The Christian Knowledge Society, during the past year, raised $450,000.

The receipts of the American Home Missionary Society last month amounted to $15,320, of which $13,080, or more than five-sixths, were contributed by the Congregational denomination. The receipts for the last four months have been $46,363.

General Intelligence.

European News.

By the simultaneous arrival of the Africa at Halifax, and the Arago at this port, we are in possession of one week's later intelligence from Europe. The war news is quite unimportant, and almost destitute of interest, Nothing more attempted in the Baltic, and "affairs before Sebastopol still unchanged." We have no indication as to when the next bombardment will be commenced, nor even any authority for believing that it will ever be renewed at all.

The papers contain many interesting details of the recent battle of Traktir Bridge, on the Tchernays, but few new incidents.

General Simpson and Pelissier both furnish reports. They say the Russian attack was a deliberate effort to raise the siege of Sebastopol, and if the Russians had succeeded in holding the heights on the Allies' side of the river, they intended further to attack the Allies from four points, namely: A main attack on Balaklava, another on the British camp, and another simultaneously on the extreme right and left of the French lines. Documents found on the body of a Russian General indicate this.

General Pelissier calls the French loss 17 officers killed, and 53 wounded; 172 men killed; 150 missing, and 1,160 wounded. The Sardinian loss was 250. The loss of the Russians was 3,000 killed, and 5,000 wounded, including 1,600 wounded prisoners in the hands of the French, and 200 in the hands of the Sardinians. The Turks were not engaged.

The Russian report admits great losses and three generals killed. It attributes the loss to the too great impetuosity of the right columns of attack. The Russian troops engaged had just arrived in the Crimea.

Omar Pacha definitely takes command in Asia, and would leave on the 21st for Trebizonde. Osman Pacha has command of the Second Division, and the troops will be conveyed in English steamers to Trebizonde.

The Allied Fleets have retired from before Cronstadt, and have taken up another position. A dispatch stating that gun boats were returning home, led to the belief that the campaign had closed; but it now appears that sixteen ships or gun-boats returning were those which have been disabled.

The *Nord*, Russian Journal, says: Omar Pasha freely expressed himself at Constantinople that the Allied Commanders—especially General Pelissier—were humbugs, and that he should twice have lost his army if he had followed their advice.

Five hundred Highlanders had embarked on board the steamer Hansa, at Liverpool, for Malta. On board of the Great Britain, Cavalry were about to embark.

☞ A Paris rumor is that we may expect from day to day to hear of the involuntary abdication of Queen Isabella, and of important events to Spain.

The King of Denmark is visiting the King of Sweden. The question of the Sound dues continues to perplex,

In Naples the political ferment continues, Many arrests have been made.

The potato harvest in Ireland is favorable on the whole.

The crops throughout France are satisfactory. The harvest in Algeria is excellent.

A formidable insurrection had broken out in the centre of Bengal. The insurgents are the Sentals and other tribes occupying the Rajamabal Hills—a bold and hardy race. They number from thirty to fifty thousand men, acting in five parties, and are armed with axes, poisoned arrows, and a few firearms. They have spread over the country a hundred miles in extent, destroying every thing European, and pretend that they are led by their God in person. The few Europeans have entrenched themselves until assistance shall arrive. The insurrection was so little anticipated that there were not a thousand troops within a hundred and fifty miles.

Shanghae advices are to June 29. Quietness was prevailing there and at Canton. Food was plentiful. Commication with the interior had been partially reöpened. An enormous butchery had been perpetrated at Canton. One thousand were executed for sympathizing with the rebels. The insurgents were losing ground in the North.

From Liberia.

The Boston *Traveler* publishes news from Liberia, from which we make the following extracts;—

One hundred and six immigrants arrived at Monrovia from Norfolk on the 18th of June, in the bark Cora. Among the passengers in the same vessel, were Rev. C. C. Hoffman and family, and Miss Martha Williford, Episcopal missionaries, returning from a visit to the United States to their station at Cape Palmas. Rev. D. A. Walson and family, and Rev. Mr. White and wife, from the United States, arrived on the 21st. The former is principal of the Alexander High School at Monrovia.

We have already announced the election of Stephen A. Benson to succeed Mr. Roberts as President of the Republic of Liberia. He was elected by the party styling themselves the "True Liberians." They celebrated their victory on the 22d of May. A few days previous, the President-elect arrived at Monrovia from Bassa. At the place of debarkation he was met by the citizens, and addressed by Hon. H. Paxton, who congratulated him on following, in executive honor, the present worthy Chief Magistrate, President Roberts.

Alfred T. Wood has been tried at Liberia for forgery, for obtaining money by false pretences, and for a "libel on the Republic," and found guilty, and sentenced to five years' imprisonment and $500 fine. This "Rev. A. T. Wood, D. D.," as he called himself in England, came from the British Provinces to Boston, flourished largely for two or three weeks, when the colored people founds out his true character, and he ran away to New York, and thence found his way to Liberia. He soon went to England and begged money to erect a house of worship for his Church in Monrovia, of which, he told one of his dupes, George Harris and his wife, mentioned in "Uncle Tom's Cabin," were members. He was finally arrested, tried and found guilty of obtaining money on false pretences in England, since which nothing has been heard from him till now he has turned up in Liberia, where he seems to have met with his deserts.

Powder Mills Blown up.—The Rochester *Union* of last Thursday, says the powder mills, situated in Brighton, five miles east of that city, was blown up between 6 and 7 o'clock last evening, with a terrific explosion, shaking the earth for miles around. No lives were lost, although the pxplosion created considerable excitement, owing to the fact that mills on the same spot blew up, in May last, destroying five men. The buildings destroyed were four in number, viz.: two cylinder mills, corning house and press. They were situated a few rods apart and heavy embankments of earth raised between. There were probably four or five hundred kegs of powder in the buildings at the time of the explosion. As the custom has been, the saltpetre was put into the cylinders with the charcoal and brimstone at 5 o'clock, when the workmen withdrew, leaving the mills to operate without attendance during the night. About an hour after leaving the mills they blew up, making four distinct explosions in quick succession. The shock was tremendous—sufficiently great to break glass in houses several miles distant. The sensation was not so distinctly felt in the city as on the occasion of former explosions, owing doubtless to the direction of the wind, but to the eastward of the miles it was far greater. The Genesee Mills were owned by A. J. Harlow & Co., the firm consisting of Messrs. Harlow, Crombie and Farnham. These mills have exploded four times within the last eighteen months, and the new mills had only been in operation six weeks. The proprietors had procured the most approved machinery for safety, and employed none but the most experienced men, having hired some at the East who had worked at powder making for thirty years. Yet with all these precautions that property has been swept away as by a single breath.

Specimen of the News of the Day.—As a specimen of the news of the day, we give the headings of some twenty-nine different separate news paragraphs just as they follow each other, under the general head of "Intelligence," copied from one of our religious exchanges:—Drowned, Heavy Robbery of Watches and Jewelry, Refusal of the Supreme Court of Pennsylvania to grant a Writ of Habeas Corpus in the Case of Passmore Williamson, Gov. Shannon in Kansas, Horrible Shooting Affray, Arrival of the Empire City, Another Railroad Accident, Verdict on the Late Railroad Accident, Another Accident on the same Road, Accident at Beverly, The Wounded of the Burlington Accident, Ravages of the Fever, Relief for the Norfolk Sufferers, A Refuge Sought for the Norfolk and Portsmouth Sufferers, Death of Seven Physicians, Fever Decreasing in New Orleans, Excitement at Baltimore, Death of the Lieut. Gov. of Missouri, Vermont Election, Mortality in New Orleans, Numerous Arrests, Visit of Gen. Cass, Death of Capt. Chas. G. Merchant, Another Railroad Accident, A Murder on Shipboard, Execution and Murder, Killed by a Child, Fatal Occurrence, Installment of the Governor of Kentucky.

Degrees Conferred at the Lafe Commencement of Brown University.—The honorary degree of Master of Arts was Conferred on Sylvester Gardner Shearman, one of the Associate Justices of the Supreme Court of the State of Rhode Island; George Woods of Washington City; and John L. Denison, of Mystic, Conn., and John Lauris Blake, Jr., of Orange, N. J., was admitted Master of Arts *ad cundem.* The honorary degree of Doctor of Divinity was conferred on Rev. Silas Axtell Crane, of East Greenwich, Class of 1823; Rev. Arthur Savage Train, of Haverhill, Mass., Class of 1833; and Rev. H. G. O. Dwight, Missionary to Constantinople. The honorary degree of Doctor of Laws was conferred on Samuel Ames, of this City, Class of 1833; and Wm. W. Mather, of Columbus, Ohio.

SUMMARY.

At 6¾ o'clock on Friday morning, Sept. 14, as the steamer Bay State, of the Fall River line, was passing through Hellgate, on coming round, the tide threw her stern on a rock called Rylander's Reef, directly opposite Eighty-ninth street, where she was detained for an hour and a half; the ferry-boat Astoria, came to her assistance and swung her round, but could not get her off, and she had to wait for the tide. Thirty of the passengers came on shore in small boats, and thence to the City per. cars. Her keel alone struck; no injury was done to her bottom. She arrived at her dock at 9 o'clock.

The result of the census of Boston has just been obtained. The total population of the city is 162,629. The number born in foreign countries, with their children under 21 years of age, is as follows: Irish, 69,239; Germans, 4,586; other countries, 12,511—a sum total of 10,000 more than the native population and their children. Out of the 23,841 increase during the past five years, 16,296 was by the Irish population, 1,920 by the Germans, and 4,634 by other foreigners—making the increase of natives only 997. It is estimated, however, that Boston business men, with their families, to the number of 50,000, reside in the neighboring towns.

On Monday afternoon, in Farmington, Ct., two barns belonging to Col. William Rowe, was burned with all his hay and grain, therein stored. The fire was caused by a boy throwing down a lighted segar, between the two barns, which set fire to the loose straw lying around. The flames then spread, despite all efforts to stop them, and in a half hour consumed the barns, as before stated.

A Rutland rumseller being recently before a grand jury as a culprit, assumed the attitude of an accuser of the authorities, saying: "It is a pity I was disturbed. The people were becoming so well treated; that they took liquors from me that were two-thirds water. If I had been let alone. I think they would have drank clear water before six months."

A small child, while playing near a well, in East Albany, on Saturday afternoon last, slipped, and was just on the eve of being precipitated into it, when the little one grasped a cat by the tail and held on to it, until the cries of the child brought assistance, when it was rescued. The cat was sitting on a log, and so death-like was its grasp that the print of its nails was easily detected on it.

The total number of persons killed on the various railroads in the United States, from March 27, 1853, to August 29, 1855, a period of less than 2 1-2 years, was *one hundred and ninety-six*. The number of wounded in the same time from railroad accidents was *two hundred and ninety-two.*

A hen's egg was exhibited a few days ago to the editor of the Woodstock (Va.) *Tenth Legion*, which has the perfect representation of a snake raised on the shell, in full coil, on the smaller end. No artist could have produced a more exact representation of a serpent. The forked tongue, the eye, and symmetrical proportions are as fairly developed as if in a real snake. Unfortunately, the shell of the egg was broken, when it was discovered that the indention, on the inside, contained what appeared to be a bona fide snake. It was as perfect, in every respect, as the representation referred to, on the shell.

In the Boston Municipal Court on Monday, Wm. Smith, for attempting to drown a boy, was sentenced to eight years in the state prison, the first eight days to be solitary. Smith, at the time of the occurrence, was passing along the street in an intoxicated state, when some boys raised a laugh at his manner of progression. In revenge, he seized one of the boys, carried him to a wharf and held his head under water. The boy would probably have been drowned had not others interfered to release him.

Two boatmen, one of whom was named Lloyd, in Scott county, Va., got into a dispute a few evenings since, when another, named Cuddy, interfered to protect the younger and smaller. Every thing having been quieted, the two eventually took seats, by the side of each other on the porch of the house, but in a few minutes Lloyd was seen to make a plunge at Cuddy with a huge case knife, cutting him across the abdomen, and inflicting a horrid wound, from which some of the intestines protruded, and from the effects of which he died next morning.

Serious riots have occurred in the rural districts around Namur, in Belgium. The inhabitants, conceiving the manufactures of chemical productions abounding in these parts were hurtful to the crops, turned out in large numbers, and attacked these establishments. The troops were called out, and having been attacked with stones and other missiles, fired in self-defence. Two of the assailants were killed, one wounded, and twenty were arrested and conveyed to prison.

A young man by the name of Swan, in South Glastenbury, Conn., had the lower part of one of his legs frightfully crushed, on Tuesday of last week, by a heavy anchor falling upon it. The anchor weighed upward of 1000 pounds, and fell from a wagon. An unsuccessful attempt to patch up the wound and properly place the broken bones was made, but it was found necessary to amputate the limb just below the knee.

The advantages of litigation are illustrated in the case of a school district in Cornish, N. H., against Ariel Comings for the recovery of the value of an old broken box stove, worth, probably, from 50 to 75 cents. The Court of Common Pleas, at Newport, last week, gave a verdict in favor of the District, giving $1 31 damages. The verdict carries with it taxable costs amounting in all to more than five hundred dollars, to say nothing of the amount expeuded, which cannot be taxed to the defeated party.

Prof. Alexander lately stated that about the year 1762 a star came in sight and shone very brightly. The light underwent a variety of very remarkable changes. It seemed as if the substance of the star were burning up, and it is hardly possible—says a well-informed scientific writer on the subject—to resist the conclusion that here was a world, the destiny of which, for the time being, had been fulfilled.

The editor of the Chicago "Daily Journal" says he has had exhibited to him by Dr. Hull, of Alton, Ill, something of the peach variety, but of the pumpkin appearance. It was in fact a peach, of excellent flavor, measuring a foot in circumference! The Journal also states that Dr. Hull had contracted to furnish the market of Chicago with 5,000 baskets of this gigantic fruit the present season.

Persons in the neighborhood of the railroad depot at Lasalle, Ill., on Tuesday night last, heard a noise on the track like the mewing of a cat. Proceeding toward it, the sound became that of an infant crying; and when the bundle was picked up, an infant, wrapped in two blankets was found. It lay directly on the track, and in a few minutes it would have been crushed by an approaching train. It is supposed to have been placed there to be killed!

On Sunday night, a Boston policeman took a woman with her babe, about six weeks old, to the station-house, having found them in the street. The child appeared to be in a dying condition, and expired before morning. The woman, when found, stated that she and her child had been turned into the street by her sister, who also had a child in a dying condition, and which actually did die early on the same day.

A dispatch dated Chicago, Saturday, Sept. 15, says: We have received dates from Nebraska City to the 8th inst. Colonel Monnies' party of Government surveyors was attacked by a band of Pawnee Loups, about 30 miles up the Platte River. Colonel Monnies and five others reached Nebraska City safely, but six others were dispersed, and have not been heard from. A company of fifty men was immediately raised, and started in pursuit.

A few days since, a man employed in the coal mines near Piedmont, Va., put his hand under a cross-tie of the railroad and was bitten by a copperhead snake on the finger. Whiskey was freely administered, and one of his companions hastily caught a chicken that was near, and tearing it asunder, bandaged the wound with the entrails. On the following day he was in a manner well.

A dispatch dated Philadelphia, Saturday, Sept. 15, says: Last evening the accommodation train on the Baltimore Railroad ran over a Mrs. Updyke, near Newport, Delaware, killing her instantly. She was walking on the track and was very deaf. She leaves a husband and family. No blame is attached to those in charge of the train.

A man, said to be drunk, was found recently in a closet of a hotel at Mission Doleres, Cal. The lady of the house seized him and called for her husband, who took him to the station-house. The accused was formerly a professor in an eastern university, and a man of splendid talent and high family.

A dispatch dated Saratoga, Sept. 12, says: General Halsey has received some $14,000 worth of the Railroad Bonds and other papers stolen from him, here, on the 5th of August last. The diamonds, jewelry, and money amounting in value to about $5,000, have not yet been recovered.

It is said that there is but one powder making establishment in the United States that has stock to run more than sixty days longer. They must close then or sooner, and await the result of the eastern war, or bid against the Czar of all the Russians for that indispensable ingredient for powder, saltpetre. The demand for Russia has caused it to advance in price one hundred and fifty per cent. in New York and Boston bought by sample all that will arrive this year from Calcutta.

Captain Tatch, of the whaling bark Sun, at Mattapoisett, from a cruise in the Atlantic Ocean, states that on the 1st inst., he "raised" a sperm whale, lowered boats and fastened to him. After staving two out of the three boats, they succeeded in securing and cutting in the whale, which stowed down one hundred and two barrels.

The women of Utah, it appears, have been falling in love with the U. S. soldiers under Col. Steptoe, and eloping with some of them. This has so incensed the prophet, Brigham Young, that he denounces with immediate death every man who entices away a Mormon female, and hurls his torpedo anthemas against the federal government and all who oppose "free love" and polygamy.

A horse belonging to Mr. Betts, of Long Ridge, in Danbury, Conn., while being driven on Monday evening, was scared, tried to kick himself clear of the wagon, and in attempting to scale a railing, a portion of the broken shaft, attached to the harness, entered his body three or four inches deep, inflicting a dangerous and probably fatal wound.

An amateur sportsman, of New Haven, Conn, with three companions, lately returned from the region of the Adirondack Mountains. They have been absent about six weeks, and in that time shot thirty six deer and a moose. The gentleman referred to shot fourteen of the deer and the moose, the latter weighing eight hundred pounds.

The last census reveals the appalling fact that there are nearly three thousand dentists in the United States. It probably costs the people two millions of dollars and ten million wrenches of agony per annum to keep their teeth in order.

An editor out west gives the following notice: "Our purse is lost! The finder is requested to return it, being careful not to disturb its contents, which were a brass rule, a piece of leaf tobacco nicely twisted up, the stump of a cigar, and a very good leather string."

An "exiled Hungarian count" who was recently lionising at the Montgomery White Sulphur Springs, in Virginia, and who created a tremendous sensation among the unmarried ladies, turns out to have been a journeyman barber of this city.

A band of gipsies are prowling about Charlottesville, Va. Some of the females travel much faster than the stage, and a visitor often meets at each of the Springs a female who had solicited alms at the first watering-place at which he arrived.

Nebraska Territory already contains taxable property to the amount of $619,806, according to the returns of the assessors. Of this aggregate, no less than $311,116 is in the county of Douglas.

The Richmond *Dispatch* says there is a negro man in that city who, for the last twenty years, has never failed to walk four miles at night to visit his wife, and to return to his employment.

The editor of the Buffalo *Express* says he has seen the contrivance by which the author of the Silver Lake snake-story in the *Republic* "heated his imagination." He merely says it "holds about a pint."

A dispatch dated Louisville, Sept 14, says: Some members of Santa Anna's family (his sister and brother-in-law) passed through here yesterday on their way to New York. The ex-President is expected to follow them shortly.

The Baltimore *Patriot* says that the atmosphere of that city was a few days ago filled with immense swarms of small flies. They fell to the earth with such rapidity that at times the scene looked not unlike a miniature snow-storm.

"Tufts College," the first one of the Universalist denomination in the world, was formally opened, last week, at Somerville, Mass. The president is the Rev. Hosea Ballou, D.D.

Two French Protestant chaplains have been sent to minister to the religious wants of the Protestant soldiers and sailors in the Crimea.

The drouth is beginning to be seriously felt throughout all New England.

New York Markets—Sept. 17, 1855.

Ashes—Pots and Pearls 6 31 a 6 37.

Flour and Meal—Flour, 7 87 a 8 00 for ordinary and straight State, 7 87 a 8 12 for mixed Western, 8 12 a 8 87 for Ohio, 9 00 a 10 50 for extra Genesee. Rye Flour 5 50 a 6 25 for fine and superfine. Corn Meal, 4 75 for Jersey.

Grain—Wheat, 1 85 a 1 90 for red, 1 90 a 1 95 for white. Rye 1 15. Barley 1 05 a 1 10. Oats, 38 a 50c. for State and Western. Corn, 87c. for Western mixed.

Provisions—Pork, 21 00 for new prime, 22 50 for new mess. Beef, 11 75 for prime, 13 75 a 14 00 for country mess. Lard 11½c. Butter, 15 a 18c. for Ohio, 18 a 22c. for ordinary to good State. Cheese 8½ a 10c.

DIED,

In Brooklyn, L. I., suddenly, on Seventh-day, Sept. 8th, Sallie Harrington, wife of Daniel W. Harrington, and daughter of John P. Knowles, formerly of Charlestown, R. I. Although unconscious most of the time, and suffering great physical agony during her illness, yet she left the blessed assurance that through it all, when earthly love was powerless to afford aid, she was sustained by Him, who triumphed over Death. And she exclaimed several times distinctly "Victory," "Glory." Also, on the 6th inst., John, infant son of the above. Their remains were interred in Cyprus Hills Cemetery. com.

Drowned, in Walworth, Wis., June 28th, Hoxsie P. Bassett, in the 14th year of his age.

LETTERS.

Azor Estee, S S Griswold, "M E S," Wm P Langworthy, S A Taft, Samuel Hunt, O P Hull.

Every Reader

WILL PLEASE NOTICE THE ADVERTISEment headed *The Great Book of the Year*, and send for a full descriptive Catalogue of all our Illustrated Works.

☞ To the *uninitiated* in the great art of selling books, we would say, that we present a scheme for money making, which is far better than all the gold mines of California and Australia.

☞ Persons desirous of selling any one Work alone, and canvassing a certain section of country, or several Counties, will please confer with the subscriber, who will cheerfully answer every letter, as far as possible, on the day of its reception. Address,

ROBERT SEARS, Publisher,
181 William-st., N. Y.

WILLIAM M. ROGERS, Treasurer.

The Virginia Association.

The Seventh-day Baptist Virginia Association will hold its next annual meeting with the Seventh-day Baptist Church at Lost Creek, Harrison Co., Va., commencing on the fifth day of the week before the fourth Sabbath in September, 1855, at 10 o'clock, A. M. Opening discourse by E. Bee; A. Bee, alternate.

J. F. Randolph, Secretary.

New Market Seminary.

This Seminary will re-open on the 12th of September, with Mrs. R. H. Whitford, as Preceptress.

This Institution is located in a pleasant section of country, and has a commodious and well arranged building, and is designed to furnish every facility and advantage to the student found in other institutions of this class.

Board for students may be had in families at one dollar and seventy-five cents per week, where all their wants will be kindly cared for. Tuition from $3 to $5 per term, according to the studies pursued. Music, with use of Piano, $10 00.

I. H. Dunn, Sec. of Board of Trustees.

New Market, N. J., August 26, 1855.

State of New York,

SECRETARY'S OFFICE, Albany, August 25, 1855.—To the Sheriff of the County of New York: Sir—Notice is hereby given, that at the General Election to be held in this State on the Tuesday succeeding the first Monday of November next, the following officers are to be elected, to wit:

A Secretary of State in the place of Elias W. Leavenworth;

A Comptroller in the place of James M. Cook;

An Attorney-General in the place of Ogden Hoffman;

A State Engineer and Surveyor in the place of John T. Clark;

A State Treasurer in the place of Elbridge G. Spaulding;

A Canal Commissioner in the place of Frederick Follett;

An Inspector of State Prisons in the place of Darius Clark;

A Judge of the Court of Appeals in the place of Addison Gardiner;

All whose terms of service will expire on the last day of December next.

Also, a Judge of the Court of Appeals in the place of Charles H Ruggles, Resigned;

Also, a Justice of the Supreme Court for the first Judicial District, in the place of Edward P Cowles, whose term of office will expire on the last day of December next;

Also, a Senator for the Third, Fourth, Fifth, and Sixth Senate Districts, in the place of Thomas J Barr, Thomas R. Whitney, Mark Spencer and Erastus Brooks, whose term of office will expire on the last day of December next.

COUNTY OFFICERS ALSO TO BE ELECTED FOR SAID COUNTY.

Sixteen members of Assembly;

A Sheriff in the place of John Orser;

A County Clerk in the place of Richard P. Connolly;

Four Coroners in the places of Robert Gamble, Joseph Hilton, Hieronymus N. Wilhelm, and William O'Donnell;

A Comptroller in the place of Azariah C. Flagg;

A Street Commissioner in the place of James Furey;

A Commissioner of Repairs and Supplies in place of Bartholemew Purdy;

Two Governors of the Alms House in the place of Patrick Henry add John J. Herrick;

City Inspector in place of Thomas K. Downing.

A Counsel to the Corporation in place of Robert J. Dillon;

Two Justices of the Superior Court in the place of Wm. W. Campbell and Murray Hoffman;

A Justice of the Marine Court in place of Chas. E. Birdsall;

A Police Justice for the Sixth Judicial District in the place of Geo. W. Pearcy;

A Judge of the Court of Common Pleas in the place of Lewis B. Woodruff.

Yours respectfully,

E. W. LEAVENWORTH, Secretary of State.

Sheriff's Office, New York, August 28, 1855.

The above is published pursuant to the notice of the Secretary of State and the requirements of the statute in such case made and provided.

JOHN ORSER,
Sheriff of the City and County of New York.

☞ All the public newspapers in the county will publish the above once in each week until the election, and then hand in their bills for advertising the same, so that they may be had before the Board of Supervisors, and passed for payment. Sep—13.

Farm for Sale.

THE House and Farm lately owned and occupied by James Hubbard, in Scott, Cortland Co., N. Y., are now offered for sale, on reasonable terms. The House is a large two-story house, nearly new, and well arranged to accommodate a large family. The Farm consists of about thirty-six acres of good land, most of which is under good cultivation and is well watered. There are about fifty trees of choice grafted fruit in good bearing condition. It is situated in an industrious and moral community, enjoying all the advantages of schools, meetings, and markets, necessary to make it a pleasant home.

Apply to A. D. C. Barber, or J. N. Pratt. 4t-9.

Farm for Sale,

CONTAINING about 100 acres, with a fair proportion of woodland, a small orchard of grafted fruit, and a comfortable dwelling and outhouses. It is situated about four miles north of Westerly, R. I., and within a mile of each of the flourishing manufacturing villages of Potter Hill and Ashaway. There are several other manufacturing establishments near, affording a ready market, in the immediate vicinity, for every species of produce. It is convenient to the first Hopkinton Church, as well as to the very excellent male district school.

It will be sold with or without the stock and farming implements, and possession given the ensuing winter or spring, if desired. To those wishing to secure a quiet home in an enterprising neighborhood, and surrounded by such comforts as can only be found in an old settled and thickly populated country, this affords an opportunity seldom offered. For terms and other particulars apply to the subscriber on the premises, or address John E. Potter, No. 15 Sansom-st., Philadelphia, Pa. Benjamin Potter, Ashaway, R. I.
11tf.

To Persons out of Employment.

The Great Book of the Year!

From the Editors of the Philadelphia Post.—"We think we may safely pronounce this to be the most thorough and valuable work on the Empire of Russia that has yet appeared in the English language."

From the Editor of the American Philadel. Courier.—"Truly a valuable Work—the great Book of the day."

Send for one copy and try it among your friends.

WORK FOR ALL AND, WORK THAT PAYS,

In selling, in every County in the United States—our new work on the "RUSSIAN EMPIRE," and other popular PICTORIAL WORKS. Terms, Catalogues, and Canvassing Circulars, forwarded free of postage, on addressing, ROBERT SEARS, Publisher,
181 William-st., New York.

☞ SEND FOR ONE COPY. Single copies of the Work on "RUSSIA," (the most elegant and useful Volume of the Year,) carefully enveloped in stout paper, and forwarded at our risk and expense to any Post-Office, on the receipt of the Retail Price, Three Dollars. Early application is necessary to secure the most beautiful and perfect copies.

☞ PERSONS WISHING TO ACT AS AGENTS, and do a safe business, can send for a specimen volume, and a well-bound Subscription Book, (price of both $3 25, sent free of postage,) and obtain from one to two hundred subscribers, to be delivered at a certain time to be agreed on, say in thirty or forty days from the time of signing. Address as above. R. S.

Ahead of all Competition.

In press, and will be published on the 20th of September. FLEETWOOD'S LIFE OF OUR LORD AND SAVIOUR JESUS CHRIST, together with lives of the Holy Apostles and Evangelists, and a History of the Jews. The whole carefully revised with additions by the Rev. Joseph Belcher, D. D.

Determined to furnish agents and their patrons with books of sterling merit, we are about issuing, in connection with our popular History of all Religious Denominations, a new edition of the above fine old work. It will contain about 700 pp. uniform in size and type with the latter, and will be handsomely illustrated by engravings. Copies have been procured from England and Scotland, and carefully collated by the above eminent divine, with those published in this country. Many fine omitted passages have thus been restored, the manifold mistakes of successive printers have been corrected, and we shall now have the pleasure of placing in the hands of canvassers *the most correct edition in existence of this admirable work.* For terms and other particulars address either of the

Publishers, { Noyes Spicer, Indianapolis, Ia.
John E. Potter, Philadel., Pa.

DeRuyter Institute.

This Institution is located in a pleasant and healthy section of country, and in a community comparatively moral and intelligent. It is easy of access from Syracuse, Chettenango, and Homer. Our motto is, *Teach the young to govern themselves—to educate themselves.* Grateful for past liberal patronage, we assure the public we have ample accommodations for more.

Expenses:

Tuition,	from $4 00 to $6 00
Board in families,	from 1 25 to 2 00
" in clubs	from 0 60 to 1 00
Room rent, per term,	from 1 25 to 2 62

Books and Stationery furnished at very low prices.

All bills settled invariably in advance. No bills for less than half a term. No deductions made except in case of sickness.

Board of Instruction.

HENRY L. JONES, A. M., Principal.
AMOS R. CORNWALL, A. B., Prof. Mathematics.
Miss JOSEPHINE WILCOX, Preceptress.
Mrs. SARAH E. JONES, Mrs. BARBARA A. CORNWALL, Miss SARAH E. SHIPPEY, Miss JANE C. BURDICK, Assistants in Female Department.

For further particulars, address, Henry L. Jones, Principal; W. D. Wilcox, President; J. B. Wells, Secretary; or C. H. Maxson, Treasurer, De Ruyter, Madison Co., N. Y.

Michigan Southern Railroad Line.

TRAVELERS for Chicago, St. Louis, Kansas, and all points West and Southwest, can obtain through tickets, and all information concerning routes, fare, &c., either by the New York and Erie Railroad, or the New York Central Railroad, by application at the Company's Office, No. 192 Broadway, corner Dey-st., to
JOHN F. PORTER, General Agent.

Central Railroad Company of New Jersey.

NEW YORK, SOMERVILLE, EASTON, &c. *Spring Arrangements*, commencing April 2, 1855: Leave New York for Easton by steamers RED JACKET and WYOMING, from Pier No. 2 North River, at 8 A. M. 1 and 4 P. M. For Somerville, (way.) at 5.30 P. M.

The above trains connect at Elizabethtown with trains on the New Jersey Railroad, which leave New York from foot of Courtlandt-st. at 8 A. M., 1, 4 and 5 P. M.

Returning—leave Phillipsburg (opposite Easton) at 6 and 9.45 A. M. and 3 P. M.; Somervill (way) at 6 A. M.

New York and Elizabethport.

Leave New York at 8 and 10 A. M., 1, 4 and 5 P. M.
Leave Elizabethport at 7.15 and 9.10 A. M., 1, 3.15 and 6 P. M. JOHN O. STERNS, Superintendent.

New York and Erie Railroad.

ON and after Monday, May 7, and until further notice, Trains will leave the pier foot of Duane-st., New York, as follows:

Dunkirk Express at 6 A. M. for Dunkirk.
Buffalo Express at 6 A. M. for Buffalo.
Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations.
Accommodation at 12¼ P. M. for Port Jervis and intermediate stations.
Rockland Passenger at 3 P. M. (from foot of Chambers-st.) via Piermont, for Suffern and intermediate stations.
Way Passenger at 4 P. M. for Newburgh and Otisville and intermediate stations.
Night Express at 5¼ P. M. for Dunkirk and Buffalo.
Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.
On Sundays only one express train, at 5¼ P. M.
These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c., with first-class splendid steamers for all ports on Lake Erie.

D. C. McCALLUM, General Sup't.

Miscellaneous.

Singular Epitaph.

The following is the inscription on a monument erected in Horsley Down Church, in Cumberland, England :—

Here lie the bodies of
Thomas Bond and Mary his wife.
She was temperate, chaste, and charitable.
But
She was proud, peevish, and passionate.
She was an affectionate wife, and a tender mother.
But
Her husband and child whom she loved, seldom saw her countenance without a disgusting frown,
Whilst she receiv'd visitors whom she despis'd with an endearing smile.
Her behavior was discreet towards strangers,
But
Imprudent in her family.
Abroad her conduct was influenced by good breeding,
But
At home by ill temper.
She was a professed enemy to flattery, and was seldom known to praise or commend;
But
The talents in which she principally excelled
Were difference of opinion and discovering flaws and
Imperfections.
She was an admirable economist,
And, without prodigality,
Dispensed plenty to every person in her family,
But
Would sacrifice their eyes to a farthing candle.
She sometimes made her husband
Happy with her good qualities,
But
Much more frequently miserable with her
Many failings.
Inasmuch that in thirty years cohabitation,
He often lamented that,
Maugre all her virtues,
He had not on the whole enjoyed two years
Of matrimonial comfort.
At length
Finding she had lost the affection of her husband, as well as the regard of her neighbors, family disputes having been
divulged by servants,
She died of vexation, July 20, 1768,
Aged 48 years.
Her worn out husband survived her four months and two days, and departed this life
November 28, 1768,
In the 54th year of his age.
William Bond, brother to the deceased,
Erected this stone as a
Weekly monitor to the wives of this parish,
That they may avoid the infamy of having
Their memories handed down to posterity
With a patchwork character.

[New York Observer.

From the New York 'Life Illustrated.'

Abbott Lawrence.

The Roman maxim, that nothing but good should be spoken of the dead, has been acted upon with singular unanimity in what has been said and written of Abbott Lawrence since his death. He has been held up before his countrymen as the very model of a man and—merchant. Young men have been given to understand that his career is an exact and full definition of the magic word SUCCESS, and that to be an Abbott Lawrence is to be all that a man can attain to in this sublunary sphere.

It is not true, that nothing but good should be spoken of the dead. The interests of the living require that the errors and faults of the departed should be as clearly pointed out as their virtues. A better maxim would be, that nothing should be spoken either of the dead or of the living, except in charity.

The good qualities and virtuous deeds of Abbott Lawrence are known to all. He won the coveted prizes of life, wealth, power, and good repute. He gave a new direction to the industry of large numbers of his fellow-citizens; Lowell, Manchester, Nashua, and Lawrenceville are his monuments. He was able so far to rise superior to the vulgar lust of possession, as to give away large—very large—sums of money for the promotion of the public good. He surpassed even the liberality of Boston, where munificence is the fashion.

A liberal hand is much, but a liberal mind is more. Even now that Abbott Lawrence is dead, we cannot forget than when he, a man who sprung from the humbler walks of life, filled the place of American Ambassador at the court of London, he was not true to the people he was sent to represent, nor to the principles which they represent. We cannot forget, that when dining with lords and magnates in the city of London, he congratulated the society whose guests he was, upon possessing the portrait of the man 'who had the *honor* of killing Wat Tyler,' This may have been ignorance, for Abbott Lawrence was not a learned man. But we cannot think he was so ignorant as not to know the story of the honest, heroic blacksmith, who first avenged a beastly insult offered by a tax-gatherer to his daughter, and then led his countrymen in arms against their oppressors, thus beginning that sublime series of struggles for freedom which Cromwell continued, and which at last found invincible champions in the men of seventy-six. It could not have been ignorance; we fear it was something else. The man seemed to be wanting in that description of moral courage which Senator Sumner has named BACKBONE.

Nor, while reading the accounts of his funeral, performed according to the usages of the Unitarian Church, and by clergymen of that denomination, can we forget that Abbott Lawrence was content in Boston to derive respectability from a connection with its fashionable religion, the Unitarian, but was not willing to bestow respectability upon that sect in London, where it is feeble and despised, by attending one of its humble places of worship. Like Sir Walter Scott, and other victims of the 'world spirit,' he preferred to be of the 'more genteel religion of the two.' In Boston, the most genteel religion is the Unitarian, and Abbott Lawrence professed it; in London, all sects are despised in the great world, except the Episcopalian; and accordingly, in London, Abbott Lawrence adhered to that. A MAN does not behave so. If he has a religion, he believes in it, and is rejoiced, most of all, to avow his belief where the principles which are dear to him, and which he believes essential to the good of men, are least understood or most despised.

The liberal hand, we have observed, is much. The sordid clutch with which some men hold fast to their gains, deaf to the wail of distress, and blind to the spectacle of calamity, is indeed most lamentable to witness. Of how much joy they rob themselves, and what a deadly fraud they commit upon their own hearts! At the same time, we are prompted here to declare our belief, that the act of giving is one which we have got into the habit of lauding too highly. To be generous is easy; to be just is difficult. To be generous is a luxury; to be just is necessity. Generosity wins universal applause; the just man is likely to incur odium. Giving away, in almost every conceivable case, does some harm. If it relieves distress, it is apt to lessen self-respect and the power of self-help in the receiver. If it founds colleges, it deprives those colleges of that only quality which can thoroughly vitalize them, the quality of self-sustainment. Compare the Mercantile Library, which is self-sustaining, with the Astor Library, which is the result of a rich man's endowment. The former is a living thing, of immence and direct benefit to thousands every day; the latter is a dead thing, and the good it does is more imaginary than real. Far be it from us to discourage one generous impulse, or to prevent one generous action. We merely say, that bestowing immense sums upon public institutions is not the unmingled good it is supposed to be; nor does it imply exalted virtue in the man who does it; nor does it entitle him to the highest place in the list of public benefactors. Sometimes, it is nothing more than the exchange of fifty thousand dollars' worth of property for a hundred thousand dollars' worth of fame.

When a man finds that he is making money inconveniently fast, there are several ways by which he can relieve himself. The common the popular, the easy method is to give a swinging sum to a college, a library, or a hospital. But would not a just-minded man think first of those who assist him to earn his money? Would he not conclude that he was getting too large a share of the earnings of his establishment? We cannot tell. We have never been in such a predicament. And yet we cannot help thinking that, if we were in the circumstances described, our first resort would be the wages-book, to see whether or not the superfluous money under which we groaned might not find an easy escape into the pockets of those who helped to earn it. To give a man money is a doubtful good; not so, to raise his wages. And we had rather bless and beautify a thousand homely homes, than found a thousand dead colleges.

Let Abbott Lawrence have all the glory to which his enterprise, his generosity, and his perseverance entitle him. But let us also bear in mind, that the virtue which is most applauded is not the virtue which is most praiseworthy, and that a man may do showy actions without being preëminently entitled to respect.

New Uses of Spiritualism.

A singular case of bigamy recently occurred in this city, says the New York *Times*, which illustrates the new uses to which spiritual raps may be appropriated. A woman named Susan A. Hubbard was arrested for the above offence, and taken before Judge Osborne, of the Lower Police Court, for a hearing, on the 20th ult. It was alledged that she had had three or four husbands; but it was necessary only to prove the existence of two marriages. Rev. Mr. Saggart, a Baptist clergyman, one of the witnesses, identified the prisoner as the person whom he had, some years since, married to Hubbard. Hubbard himself was present, and was also identified by the witness, thus proving that he was not dead, but had unfortunately "turned up." The second husband (or rather one of the subsequent husbands) was also present, and swore to his recent marriage with the defendant. Mr. Smucker, the counsel for the prosecution, wished to know the circumstances under which the last marriage had been brought about. The witness, Henry W. Smith, was a schoolmaster. He had first met the prinoner at an assemblage of spiritualists, on the corner of Broadway and Lispenard street. She was a prominent member of the circle which met there from time to time to summon the world of spirits to their presence and interrogate them. The prisoner gradually became acquainted with the witness, (a robust, good-looking young man) and, having conceived a passion for him, set about the work of inducing him to marry her. He heard that she had former husbands, and wished to know if they were dead. At the next meeting she summoned the whole of them from the land of showers, and made them all, one after the other, testify to the fact that they were dead (in the body,) and give other interesting items as to their spiritual condition. The young man, being a firm believer in Spiritualism, could not, of course, deny such evidence, and being attracted by the smartness, intelligence, and good looks of the "medium," he married her. Not long after, he discovered that her "Spiritual Manifestations" were lying manifestations, and that there were three or four other claimants to the possession of his wife.

PUMPKINS AND SQUASHES OF AMERICAN ORIGIN.—Dr. Harris, of Harvard University, says: "Accident led me, some four years ago, to undertake the investigation of the history of squashes and pumpkins, which has led to quite interesting results. Most of the older and well-known species and varieties were by modern botanists supposed to have come originally from Asia, and particularly from India. This I have proved to be an error, and have shown that these fruits were wholly unknown to the ancients, no mention being made of them in the Scriptures, nor by Greek and Latin authors; the writers of the middle ages, while they describe or take note of other cucurbitaceous plants, entirely omit pumpkins and squashes; and these did not begin to be known and noticed in Europe till after the discovery of America. Early voyagers found them in the West Indies, Peru, Florida, and even on the coast of New England, where they were cultivated by our Indians before any settlements were made here by the Europeans. The old botanists who flourished during the first century after the discovery of the New World, or the West Indies, began to describe them for the first time, and give to them specific names, indicating the Indian (American) origin. Here arose the mistake of modern botanists in referring these planis to the East Indies and to Asia.

"From a study of the history of the plant, I went next to a study of the species with particular reference to their botanical characters, and to this end have been cultivating and examining, every year, all the kinds accessible to me. I think I have established the facts that all the fruits known by the names of 'pumpkins' and 'squashes' are of American origin; that there are three distinct groups of them—the first including summer squashes and pumpkins, with deep, five-furrowed fruit stems; and the third, the winter pumpkins and squashes, with short, cylindrical and longitudinally wrinkled (but not five-furrowed) fruit stems. The last group was, probably, originally confined to tropical and sub-tropical parts of the western side of this continent, from California to Chili. The most esteemed varieties now cultivated in New England belong to this group, and the best of them are the 'autumnal marrow' and 'acron squashes.'"

How the Slaves Live.

Their Boasted Comfort and Contentment.

It is the boast of slaveholders, that their slaves enjoy more of the physical comforts of life, than the peasantry of any country in the world. My experience contradicts this. The men and the women slaves on Col. Lloyd's farm, reeceived, as their monthly allowance of food, eight pounds of pickled pork, or its equivalent in fish. The pork was often tainted, and the fish was of the poorest quality—herrings, which would bring very little if offered for sale in any Northern market. With their pork or fish, they had one bushel of Indian meal—unbolted—of which quite fifteen per cent. was fit only to feed the pigs. With this, one pint of salt was given; and this was the entire monthly allowance of a full grown slave, working constantly in the open field, from morning until night, every day in the month except Sunday, and living on a fraction more than a quarter of a pound of meat per day, and less than a peck of corn meal per week. There is no kind of work that a man can do which requires a better supply of food to prevent physical exhaustion, than the field-work of a slave. So much for the slave's allowance of food; now for his raiment. The yearly allowance of clothing for the slaves on this plantation, consisted of two tow-linen shirts—such linen as the coarsest crash towels are made of; one pair of trowers of the same material, for summer, and a pair of trowsers and a jacket of woolen, most slazily put together, for winter, one pair of yarn stockings, and one pair of shoes of the coarsest description. The slave's entire apparel could not have cost more than eight dollars per year. The allowance of food and clothing for the little children, was committed to their mothers, or to the older slave-women having the care of them. Children who were unable to work in the field, had neither shoes, stockings, jackets, nor trowsers given them. Their clothing consisted of two coarse tow-linen shirts.

The sleeping apartments—if they may be called such—have little regard to comfort or decency. Old and young, male and female, married and single, drop down upon the common clay floors, each covering up with his or her blanket, the only protection they have from cold or exposure. The night, however, is shortened at both ends. The slaves work often as long as they can see, and are late in cooking and mending for the coming day; and, at the first gray streak of morning, they are summoned to the field by the driver's horn.

More slaves are whipped for oversleeping than any other fault. Neither age nor sex finds any favor. The overseer stands at the quarter door, armed with stick and cowskin, ready to whip any who may be a few minutes behind time. When the horn is blown, there is a rush for the door, and the hindermost one is sure to get a blow from the overseer. Young mothers who worked in the fields, were allowed an hour, about ten o'clock in the morning, to go home to nurse their children. Sometimes they were compelled to take their children with them, and to leave them in the corner of the fences, to prevent loss of time in nursing them. The overseer generally rides about the field on horseback. A cowskin and a hickory stick are his constant companions. The cowskin is a kind of whip seldom seen in the Northern States. It is made entirely, of untanned, but dried, ox hide, and is about as hard as a piece of well-seasoned live oak. It is made of various sizes, but the usual length is about three feet. The part held in the hand is nearly an inch in thickness; and from the extreme end of the butt or handle, the cowskin tapers its whole length to a point. This makes it quite elastic and springy. A blow with it, on the hardest back, will gash the flesh, and make the blood start. Cowskins are painted red, blue and green, and are the favorite slave whip. I think this whip is worse than the "cat-o'-nine-tails." It condenses the whole strength of the arm to a single point, and comes with a spring that makes the air whistle. It is a terrible instrument, and is so handy, that the overseer can always have it on his person, and ready for use. The temptation to use it is very strong; and an overseer can, if disposed, always have cause for using it. With him, it is literally a word and a blow, and, in most cases, the blow comes first.

As a general rule, slaves do not come to the quarters for either breakfast or dinner, but take their "ash cake" with them, and eat it in the field. This was so on the home plantation, probably, because the distance from the quarter to the field, was sometimes two and even three miles.

The dinner of the slaves consisted of a huge piece of ash cake, and a small piece of pork, or two salt herrings. Not having ovens, nor any suitable cooking utensils, the slaves mixed their meal with a little water, to such a thickness that a spoon would stand erect in it; and, after the wood had burned away to coals and ashes, they would place the dough between oak leaves, and lay it carefully in the ashes, completely covering it; hence, the bread is called ask cake. The surface of this peculiar bread is covered with ashes, to the depth of a sixteenth part of an inch, and the ashes, certainly, do not make it very grateful to the teeth, nor render it very palatable. The bran, or coarse part of the meal, is baked with the fine, and bright scales run through the bread. This bread, with its ashes and bran, would disgust a Northern man, but it is quite liked by the slaves. They eat it with avidity, and are more concerned about the quantity than about the quality. They are far too scantily provided for, and are worked too steadily, to be much concerned for the quality of their food. The few minutes allowed them at dinner-time, after partaking of their coarse repast, are variously spent. Some lie down on the "turning row," and go to sleep; others draw together and talk; and others are at work with needle and thread, mending their tattered garments. Sometimes you may hear a wild, hoarse laugh, arise from a circle, and often a song. Soon, however, the overseer comes dashing through the field. "*Tumble up! Tumble up*, and to *work, work*" is the cry; and now, from twelve o'clock (mid-day) till dark, the human cattle are in motion, weilding their clumsy hoes; hurried on by no hope of reward, no sense of gratitude, no love of children, no prospect of bettering their condition; nothing, save the dread and terror of the slave-driver's lash. So goes one day, and so comes and goes another. [Fred. Douglass.

From the Friend of China.

Execution of Rebels at Canton.

The Canton execution ground is situated about 100 yards from the river, at a distance of two miles or so below the factories. The ground is oblong, about 150 feet in length, the entrance on the side nearest the river being about six feet. This is closed with bars during practical operations. At the grand entrance the ground is twenty feet wide. On the right hand, doorways open on several oven and tile manufactories.

As we approached the execution ground, many were met with hands to their nostrils, or with their tails tied round their faces, for the purpose of avoiding the horrid stench, which could literally be "felt" at a considerable distance. The ground was covered with partially dried gore, the result of the past day's work. There are no drains to take the blood away, nor is any substance used to slake it. One man was found digging holes for two crosses, on which, he said, four were to be tied and cut in pieces.

The execution had been fixed for noon. At half-past eleven, half-a-dozen men arrived with the knives, preceded by bearers of rough, deal wood-boxes, decorated with bloody sides.

These were the coffins. Unconcern was the general appearance of the soldiers and spectators, of whom, altogether, there may have been one hundred and fifty. The day was dull, a fresh breeze from the eastward carrying the stench away from foreigners, who, to the number of a dozen, had obtained admittance to the top of one of the houses on the far side of the street passing the entrance of this "field of blood." At a quarter to twelve, the first batch of ten prisoners arrived, speedily followed by the rest in similar quantities. Each prisoner (having his hands tied behind his back, and labelled on the tail,) appeared to have been thrust down in a wicker basket, over which his chained legs dangled loosely, the body riding comfortably, and marked with a long paper tally, pasted on a slip of bamboo, thrust between the prisoner's jacket and his back. These "man-baskets," slung with small cords, were carried on bamboos on the shoulders of two men. As the prisoners arrived, each was made to kneel with his face to the south. In a space of about twenty feet by twelve we counted as many as seventy, ranged in half-a-dozen rows. At five minutes to twelve, a white-buttoned mandarin arrived, and the two to be first cut in pieces were tied to the crosses. Whilst looking at this frightening process, the execution commenced, and twenty or thirty must have been headless before we were aware of it. The only sound to be heard was a horrid cheep—cheep—cheep, as the knives fell. One blow was sufficient for each, the head tumbling between the legs of the victim before it. As the sword falls, the blood-gushing trunk springs forward, falls on the breast, and is still forever.

In four minutes the decapitation was complete; and then on the other victims commenced the barbarity which to think of only is sufficiently barbaric. With a short sharp knife a slice was cut out from under each arm. A low, suppressed, fearful groan from each followed the operation of the weapon. Dexterous as butchers, a slice was taken successively by the operators from the calves, the thighs, and then from each breast. We may suppose, we may hope, that by this time the sufferers were insensible to pain; but they were not dead. The knife was then stuck into the abdomen, which was turned up to the breast bone, and the blade twisted round and round as the heart was separated from its holding. Up to this moment, having once set eyes on the victim under torture, they had become fixed as by fascination; but they could be rivetted no longer. A whirling sensation ran through the brain, and it was with difficulty we could keep ourselves from falling. But this was not all; the lashings were then cut, and the head, being tied by the tail to a limb of the cross, was severed from the body, which was then dismembered of hands and arms, feet and legs, separately. After this the mandarins left the ground, however, to return with a man and woman; the latter, it was said, the wife of one of the rebel chiefs—the man a leader of some rank. The woman was cut up in the way we have described; for the man a more horrible punishment was decreed. He was flayed alive. We did not see this, but it was witnessed by the serjeant of the marines of the U. S. S. J. P. Kennedy—the cry at the first insertion of the knife across the forehead, and the pulling of the flesh over the eyes, being most horrible.

The First Telegraphic Message.

We find in the papers, the following interesting account of Prof. Morse's successful efforts to establish the telegraph :—

He now returned to his native land, from Europe, and proceeded immediately to Washington, where he renewed his endeavors to procure the passage of the bill, granting the appropriation of thirty thousand dollars. Towards the close of the session of 1844, the House of Representatives took it up and passed it by a large majority, and it only remained for the action of the Senate. Its progress through this house, as might be supposed, was watched with the most intense anxiety by Prof. Morse. There were only two days before the close of the session, and it was found on examination of the calender, no less than one hundred and forty-three bills had precedence to it. Prof. Morse had nearly reached the bottom of his purse, his hard earned savings were almost spent, and although he had struggled on with undying hope for many years, it is hardly to be wondered at, if he felt disheartened now. On the last night of the session he remained till nine o'clock, and then left without the slightest hope that the bill would be passed. He returned to his hotel, counted his money, and found that after paying his expenses to New York, he would have seventy-five cents left. That night he went to bed sad, but not without hope for the future, for through all his difficulties and trials that never forsook him. The next morning, as he was going to breakfast, one of the waiters informed him that a young lady was in the parlor waiting to see him. He went in immediately, and found that the young lady was Miss Ellsworth, daughter of the Commissioner of Patents, who had been his most steadfast friend while in Washington.

"I come," said she, "to congratulate you."

"For what?" said Prof. Morse.

"On the passage of your bill," she replied.

"O, no—you must be mistaken," said he. "I remained in the Senate till a late hour last night, and there was no prospect of its being reached."

"Am I the first then," she exclaimed joyfully, "to tell you?"

"Yes, if it is really so."

"Well," she continued, "father remained till the adjournment, and heard it passed, and and I asked him if I might not run over and tell you."

"Annie," said the Professor. his emotion almost choking his utterance, "Annie, the first message that is sent from Washington to Baltimore, shall be sent from you."

"Well," she replied, "I will keep you to your word."

While the line was in process of completion, Prof. Morse was in New York, and upon receiving intelligence that it was in working order, he wrote to those in charge, telling them not to transmit any messages over it till his arrival. He then set out immediately for Washington, and on reaching that city, sent a note to Miss Ellaworth, informing her that he was now ready to fulfill his promise, and asked her what message he should send.

To this he received the following reply, "What hath God wrought!"—words that ought to be written in characters of living light. The message was twice repeated, and and each time with great success. As soon as the result of the experiment was made known, Governor Seymour, of Connecticut, who is at present, U. S. Minister to St. Petersburg, called upon Prof. Morse and claimed the first message for his State, on the ground that Miss Ellsworth was a native of Hartford. We need scarcely add that his claim was admitted, and now engraved in letters of gold, it is displayed conspicuously in the archives of the Historical Society of Connecticut.

PLEASURE OF PLANTING.—Where shall we find so pleasing an appreciation of the pleasures that attest the lover of a garden, as the following extract of a letter from the venerable Dr. Fothergill; "Planting and gardening supply a fund of entertainment, the most lasting and reasonable of any occupation in this life, pleasures not to be purchased. The trees which we ourselves have planted, the the fruits we have raised, the plants we have cultivated, seem to be like our children, a kind of new creation. Their shades, their taste, their fragrance, and their beauties, affect us with a richer repast than any other. What a pleasing scene lies open to a young man of fortune devoted to such amusements! Each succeeding year produces new shades, other fruits, fresh beauties, and brings besides most certain profit. To behold the rising groves, barrenness made fertile, our country improved, ourselves made useful and happy, and posterity enriched! I have seldom known of a man possessed of a taste for such pleasures, who was not at the same time temperate and virtuous."

MARRIAGE IN THE GREEK CHURCH.—The priesthood in Russia are peculiarly situated as respects the connubial state. The Greek, unlike the Roman Church, does not prohibit their marriage; while the Russian polity goes so far as to enjoin, nay, to insist upon it. No one, in fact, can hold a cure until he is married; and it sometimes happens that a wife has to be sought for in a great hurry in order to secure a desirable parish. If a Russian priest loses his wife by death he cannot wed a second time, because they interpret the phrase "having one wife" in its entirely literal sense; should he have the misfortune to become a widower, he generally enters a monastery, as he can no longer have the care of a parish.

VARIETY.

A dispatch dated Pittsburg, Friday, Aug. 31, says: This morning, about 2 o'clock, the express train on the Ohio and Pennsylvania Railroad, going West, ran over a cow, and three of the cars were thrown off the track, about twenty miles from this city. One car was completely wrecked, and ten persons were more or less wounded, four of them seriously.

The St. Louis Republican says:—Wm. Walker, a half-breed of the Wyandot tribe of Indians—a man of education and of wealth, and who glories in his Indian blood—is spoken of as a candidate for Congress in Kansas. The territory could not be better represented than by Mr. Walker.

The Miner's and Manufacturer's Bank of Tennessee, located in Knoxville, Joseph L. King, President, Hu. L. McClung, Cashier, is broke, and its notes, a good many of which are in circulation, are worthless. This institution has been in operation but a short time.

Statements have reached this country to the effect that the Persian Government have suppressed the public schools for Protestants formed in that country, and that Russian influence had instigated this most unwarrantable suppression.

During the funeral of Lord Raglan not a Russian gun was fired. In return, so soon as the church bells began tolling, announcing the interment of Admiral Nicrimoff, all the batteries were silenced.

One of the Detroit fire companies has adopted a resolution forbidding the use of intoxicating liquors by its members at the engine-house, at fires, or while wearing the uniform of the company.

The Illinois Central Railroad has found it necessary to order three hundred more cars, in consequence of the immense quantity of wheat to be transported.

The Baltimore steamers for Norfolk go daily freighted with coffins, for the afflicted city. Sometimes the entine cargo consists of these narrow houses for the dead.

At some of the fashionable up-town churches in this city, where the pew-holders come in late, the seats are neatly labelled, "Strangers are respectfully requested not to occupy this pew."

The money, under the clergy reserve act in Canada, has been paid over by the government to the parties entitled to receive it. Some of the rectors will receive from $10,000 to $20,000.

Mrs. Lucy Stone Blackwell has purchased a fine farm on Fox River, a short distance above Cedar Rapids, in Wisconsin.

The Rev. Father Sawyer, nearly a century old, is seriously ill at Bangor, Me.

New Steamboat Line for Albany and Troy.

From Pier 15, foot of Liberty-st., at 6 P. M

STEAMER RIP VAN WINKLE, C. W. Farnham, Commander, Monday, Wednesday and Friday, at 6 o'clock, P. M.; steamer COMMODORE, L. Smith, Commander, Tuesday and Thursday, at 6 o'clock, P. M., and SUNDAY, at 5 P. M.

Fares: Saratoga, $1 50; Moreau, $2 15; Fort Edward, $2 15; Whitehall, $2 75; Castleton, $3 10; Rutland, $3; Burlington, $4; Rouses Point, $5 50; Montreal, $7 50.

These Boats will arrive in Albany or Troy in ample time to form connections with all the Railroads, North, East or West, enabling passengers to reach Montreal and tintermediate points the same day.

These Steamers are of the first class for strength and speed—well known favorities of the public—having been thoroughly overhauled during the past winter, and offer every accommodation that can be desired by either freighter or traveler.

Through tickets can be obtained on board the boat for Saratoga, Moreau, Fort Edward, Whitehall, Castleton, Rutland, Burlington, Rouse's Point and Montreal

The Northern Freight Express will give Bills of Lading to all points as above named. Shippers who desire it, can have time receipts, by applying at the office on the Pier. A. A. DYKEMAN.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.*, and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been, and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

THE SOUTHERN LITERARY MESSENGER ON GEOLOGY AND THE BIBLE.

As the publication, in the *Recorder*, of the article from the *Southern Literary Messenger* was undoubtedly suggested by views which I have published on the same subject, it may not be amiss for me to pen a brief review of it. The writer discusses two points. 1. That our earth as it now is affords irrefragible evidence of *one* of the great facts stated in the Mosaic records—a *general deluge*. 2. That *one* of the most remarkable and clearly demonstrated epochs of astronomy proves the sacred chronology of the world to be true.

I think the writer signally fails to prove either of these propositions. The facts which he adduces to prove an universal deluge are facts which the Noachian deluge is totally incompetent to explain. That the Mosaic record clearly describes a deluge sufficient in extent, at least, to drown the antediluvian progenitors is not denied by any one. It is questioned, however, by the most profound scholars and devoted theologians, whether that deluge extended over any more than that part of the earth which was then inhabited. There are many and cogent reasons for the belief that, only so much of the earth was inundated as was necessary to drown the human race which, in all probability, had not yet extended over one-half the earth. On this point, however, I do not wish to present opinion or argument. I believe there was a flood sufficient to accomplish every purpose for which it was designed. I believe the *Bible* clearly teaches this, but I *do not* believe that *geology* teaches it, or that the earth affords any evidence of it whatever. And here I am at issue with the writer under review. Nor am I alone at issue with him. In the language of President Hitchcock, "among well informed geologists, at least, the opinion is almost universal that there are no facts in their science which can be clearly referred to the Noachian deluge, that is, no traces in nature of that event; and, on the other hand, that there is nothing in the Mosaic account of the deluge which would necessarily lead us to suspect permanent marks of such a catastrophe upon the earth." This testimony, of course, must settle this question; for geologists, of all men, are most *competent to testify* concerning the facts of their *own science*. Physiologists must testify of facts in *their* science, and astronomers of facts in *theirs;* so geologists must be allowed to testify of the earth, which is the especial subject of their study. But the writer under review testified to the contrary, and affirmed that the earth is covered with the marks of an universal deluge. We have only to inquire, then, whether the phenomena which he has presented are referable to the deluge in question. I think he has entirely mistaken the character of those phenomena and referred them to a cause totally inadequate to produce them. He starts with this assertion, "That the present dry lands of the globe were the bed of the antediluvian ocean, is admitted by all geologists." This I understand to be the revival of a theory long ago exploded, viz: That at the deluge the ocean and dry land exchanged places, so that the present ocean covers what was dry land before, and the present dry land occupies the place of the former ocean. The writer does great injustice to geologists when he attributes this theory to them, for they have long ago shown the absurdity of the hypothesis. That absurdity is manifest at a single glance. It is the aim of the writer to prove that the chronology which makes the earth only six thousand years old is the *true* reckoning. These two propositions put together give the following result, viz: That the ten miles of stratified rock, containing over thirty thousand species of fossil remains of animals and vegetable, was deposited during the less than two thousand years which intervened between the creation and the deluge. Such an absurd conclusion at once overthrows the hypothesis out of which it grows. The talented author of "The Religion of Geology" makes the following truthful remark on this point: "The facts of geology forbid the idea that our present continents formed the bed of the ocean, at least at so recent a date as Noah's deluge, and that the supposition that all organic remains were deposited during the two thousand years between the six days' work and the deluge is totally irreconcilable with all sound philosophy. Why, during the time when the fossiliferous rocks were in course of formation, four or five entirely distinct races of animals and plants successively occupied the land and the waters, and passed away in regular order; and these races were so unlike that they could not have been contemporaneous. Who will maintain that all this took place in the short period of two thousand years? I am sure that no geologist will."

But again, this theory is at war with the Mosaic account of the flood. The same land which was covered with water is represented as again emerging, so that even the very rivers flowing out of the garden of Eden, still flow in their former places. We must then admit, at least, that the *Asiatic* continent is the same as the antediluvian, or deny the authenticity of the account of Eden in Genesis. This latter alternative has been adopted by some, as Perm an Fairholme, who affirm that the account of Eden is no part of the Bible. The fact, then, that marine fossils are found imbeded in rocks on the tops of high mountains and elsewhere, proves nothing concerning the deluge of Noah, but they most clearly show that at a period immensely more remote than that the present dry land was formed beneath the ocean

The writer next quotes various authors to show the evidence of the flood in the distorted condition of the stratified rock, showing clearly that, "wherever the steep front of mountains disclose their interior construction, wherever the miner has pierced the layers beneath, wherever caverns and fissures reveal the disposition of the component materials, *convulsion*, and *disruption*, and *disarrangement* are visible." Again, "the whole of Great Britain has suffered considerable disturbance from prodigious and mysterious power, by which all the known strata, to the greatest depth that has been explored, have been more or less broken and displaced, and in some places have been so lifted that the lowest of them have been raised to the surface," &c. Now I submit that this is queer evidence of a flood of water *resting down* on the earth's surface. How much depth of water must rest on the *top* of the ten miles of stratified rock of Great Britain to "lift the *lowest of them to the surface?*" The absurdity of the proposition is seen at once. No amount of water resting down on the surface of the earth could ever "*lift up*" the strata of rock as we find them all over the earth. Nothing short of the melted mass which boiled *beneath* these rocks could ever have produced this uplifting, and disruption, and distortion which everywhere meets the eye. And surely nothing but tremendous heat below could have lifted whole continents from beneath the ocean. That same mighty upheaving power is now vomiting forth melted streams of lava from Vesuvius and occasionally from three hundred terrible chimneys, while ever and anon it shakes the earth for leagues, tumbling down whole cities on their defenseless inhabitants, and not unfrequently causing the earth to open her terrible jaws and swallow thousands at a mouthfull. All this, indeed proves the hypothesis *of internal heat*, but it says not one word about *the deluge*.

The writer was no less unfortunate in the selection of his next fact to prove a deluge by geology. He refers to the phenomena of *drift* as evidence of a flood in every part of the world. The drift formation presents us with blocks, of stone of all sizes and forms, torn from their native beds and transported to great distances. To understand the phenomena of drift, it is necessary to notice that this formation exists in two modes, indicating two phases of action. In the first case, the drift has been carried outward from the summits of mountains and spread over the neighboring plains. The best example of this phase of drift is found near the Alps. Boulders have been carried in great abundance and deposited in the valleys below, to the distance of many miles. This phase of drift, of course requires no *deluge* to account for it. The force of gravity with the action of glaciers, avalanches, &c., are the obvious causes of all this. This form of drift is found in all countries having large mountains. At the foot of the Himmalaya mountains, the drift has extended thirty miles into the plain. In the second phase of this formation, the force acted on a wider scale, having driven the material in a south-easterly direction over all the northern part of America and a part of Europe. For a full description of the drift, on both continents, the reader is referred to Hitchcock's Elementary Geology, page 237. A good example of this, on a somewhat large scale, can be seen at Baker's Bridge, Allegany Co., N. Y. Here are vast quantities of boulders of granite, synate and various other kinds of rock, mixed confusedly with sand, gravel, and clay, piled up to the height of more than a hundred feet above the native rock on which it rests. All this came from the north. On the top of the highest hill in Little Genesee, Allegany Co., are numerous large boulders of conglomerate rock, some of them eight or ten rods in circumference and fifteen or twenty feet high. These were drifted there from the north or in bergs when the northern ocean was tumbled over the continent to produce the general phenomena of drift. These boulders diminish in size and number as they go south, until they nearly disappear south of the Ohio. On the coast of New England they extend into the ocean and to some of the adjacent islands. Now, *this* phase of the drift formation cannot be explained by the Noachian deluge; for, in the first place, other agencies besides water must have operated to produce such results. And, in the second place, this phase of drift does not reach the regions of Asia, where the flood is particularly described in the Bible. If the flood produced this drift no reason can be given why it did not produce it *there* as well as in regions not yet inhabited by man, and where its power was little needed. But aside from these reasons, there is another most conclusive on this point, and which alone settles the fact that the flood of Noah did not cause the drift. There are numerous and unmistakeable indications that the drift was deposited long ages before man and the present race of animals were placed on the earth, and that the time necessary to perform such a mighty task was immensely longer than the hundred and fifty days during which the waters of Noah's deluge prevailed on the earth. This evidence is conclusive to all geologists, and I will not take time to reherse it, unless some of my interrogators or critics call for it.

The writer mentions in this connection one other fact which he calls "an impressive and extraordinary proof of a sudden and general deluge." About the beginning of the present century, a rhinoceros was found preserved entire near the mouth of the Lena, on the shore of the Arctic ocean, and also the bones of a mammouth were found in the same country. These being such as now inhabit tropical climates, the writer thinks they could not have been removed to the north so far except by a *general deluge*. To estimate correctly the value of this fact, it should be added that, the drift along the shores of the northern ocean abounds with bones of the same kind of animal. The writer's facts, when put together, produce a very curious phenomenon. It is this:—The transporting of these animals from the equatorial regions *northward* he ascribes to the deluge, and he has already ascribed the drift to the *same deluge*. Now, the curiosity of the matter is that, the same deluge, at the same time that it was bearing vast quantities of boulders *all southward*, was bearing rhinoceroses and elephants *all northward*. I think it accords much better with the incontestable facts of the case to suppose that those animals lived and died where their remains are found; especially as those remains are entire, wanting nothing, which could not be the case if they had been tumbled all the way up from the equator by the turbulent waters of the general deluge. Granite rocks, in going that distance south, are worn round and smooth, and we can hardly suppose our rhinoceros was tougher than granite. Such are some of the absurdities of supposing these animals transported there by the flood. But no such difficulties attend the supposition that they lived and died their. Every fact of geology shows that the climate of former times was warmer than at present, so much so that the present fauna and flora of the earth are but the miniature successors of those monsters of former times, when forests of gigantic tree ferns of two hundred species, and dense groves of equisctaceae and cycadeae covered the land, over which hovered swarms of heteroclitic and monstrous pterodaetyle, which, like the fiend of Milton,

> "O'er bog, or steep, through strait, rough, dense, or rare,
> With head, hands, wings, or feet, pursues his way
> And swims, or sinks, or wades, or creeps, or flies."

With flocks of such creatures flying in the air, and shoals of no less monstrous ichthiasauri and pleisiasaure swarming in the ocean, and gigantic crocodiles and tortoises crawling on the shores of the primeval lakes and rivers, air, sea, and land must have been strangely tenanted in those early periods of our infant world. (Buckland's Treaties.) But to this theory that these animals lived in the region where their remains are found, the writer proposes "the unanswerable reply" that, "no fossil remains of the vegetable kingdom, which must have existed for their support, *have ever been found*." This statement is not so "unanswerable" as it would be if *true*. The *fact* is that, plants of a tropical character, such as equiseta, lycopodiaerae, tree ferns, palms, &c., are found in a fossil state in the rocks of the northern regions—around Baffin's Bay, at Mellville Island, and as far north as 75°.

To strengthen still more the position which he has taken, the author affirms that, "unquestionable, admitted human fossils have been recently discovered in various parts of the world, as in the Island of Gaudaloupe and elsewhere in grottoes and caves of mountains." It is admitted that human fossils have been found, but it is denied that they give any evidence of a deluge. Dr. Buckland, in his Bridgewater Treaties, thus speaks of these fossils:—"The remarkable specimens of human skeletons found embeded in solid limestone rock on the shores of Gaudaloupe deserve attention in this connection. At first view they may seem genuine examples of man in a fossil state. But they belong to the alluvial formation, and probably were buried there only a few hundred years ago. For the same rock contains shells of existing species, as well as arrows, hatchets of stone, and pottery." Now, what does this show for a deluge? These remains have never been found except in the alluvial formation which is now being deposited, and the few thus found indicate that they rest peacefully where they were first laid. These remains found in caverns certainly do not show a deluge, for that would not have deposited them away in caves and holes, but would have left them scattered over the surface. More likely that they crawled into these caverns and died there.

This completes the geological evidence of a general deluge. It appears to me that it shows nothing concerning that sublime event. That event rests entirely on the testimony of Moses, which is clear and explicit. There let it rest. (To be continued.) D. E. MAXSON.

"YE ARE NOT YOUR OWN."

To every created object, animate or inanimate, it may be truly said, "Ye are not your own!" The lowest and most insignificant, as well as the most complex and important, were created for a purpose beyond themselves The grain of sand, the insensate stone, the simplest vegetable growth, the most microscopic insect, are links in the great chain of being, and formed to subserve the all wise purposes of their Creator. The glory of fruit, and tree, and flower, the varied activity animal life, and that mysterious union of spirit and matter, "made a little lower than the angels," also belong to God. The latter is especially his, by the three-fold claim of creation, preservation, and redemption, and yet it is the only one which presumes to independence—which needs to be reminded again and again, "Ye are not your own, ye are bought with a price."

When does men best succeed in attaining that great end of his being, or, when comes he nearest to complete and perfect manhood—to realizing the idea with which he was formed—the thought of which he is the offspring?

It is when he feels most the force of the declaration, "Ye are not your own!"

It was when his entire being, body and soul, are consecrated to the furtherance of Gods kingdom and glory, held and used as belonging to Him who hath redeemed them, not only from the evils of sin here, but a dreadful life hereafter.

How escape we from the evils, from the dominion of sin here? Can we do so?

"There remaineth, therefore, a rest for the people of God," and "he that is entered into his rest, he also hath ceased from his own works."

It is not a rest of inactivity. But he that loveth nobly and purely, and whose every act is imbued with that love, "hath ceased from his own works;" from all that is toilsome, and taken upon himself a service that is easy and without any sense of fatigue; a service which is in itself a reward—an exceeding great reward.

How precious is that rest which we may taste, even here—the repose of faith unquestioning and unshrinking, in the mercy of our Father, in the tender love of his Son, in the indwelling of his Spirit in our hearts. Oh, to take God at his word, to lose all the feeling of being "our own," or anything out of His care and ownership. Then, indeed, we enter into that rest which now is, and which remaineth forever for his people.

Oh, for the power of identifying faith, which exclaims, "It is I to whom these precious promises were made! I am one whom the Saviour loves, for whom he died!" Feeling thus, we come near to God—we rest in him. He accepts us! We are his! We cry "Abba Father." [Genesee Evangelist.

DOMESTIC HAPPINESS.

Ah! what so refreshing, so soothing, so satisfying, as the placid joys of home? See the traveler—does duty call him for a season to leave his beloved circle? The image of his earthly happiness continues vivid in his remembrance; it quickens him to diligence; it makes him hail the hour which sees his purpose accomplished, and his face turned towards home; it communes with him as he journeys, and he hears the promise which causes him to hope, "thou shalt know also that thy tabernacle shall be in peace, and thou shalt visit thy tabernacle and not sin." O! the joyful re-union of a divided family—the pleasures of a renewed interview and conversation after days of absence!

Behold the man of science—he drops the laborious and painful research, closes his volume, smooths his wrinkled brow, leaves his study, and unbending himself, stoops to the capacities, yields to the wishes, and mingles with the diversions of his children.

Take the man of trade—what reconciles him to the toil of business? What enables him to endure the fastidiousness and impertinence of customers? What rewards him for so many tedious hours of confinement? By and by, in the season of intercourse, he will behold the desire of his eyes, and the children of his love, for whom he resigns his ease; and in their welfare and smiles he will find recompense.

Yonder cames the laborer—he has borne the burden and heat of the day, the descending sun has released him from his toil, and he is hastening home to enjoy repose. Half-way down the lane, by the side of which stands his cottage, his children run to meet him. One he carries and one he leads. The companion of his humble life is ready to furnish him with his plain repast. See his toil-worn countenance assume an air of cheerfulness. His hardships are forgotten—fatigue vanishes—he eats and is satisfied. The evening fair, he walks with uncovered head around his garden—enters again, and retires to rest; and "the rest of a laboring man is sweet, whether he eat little or much." Inhabitant of this lowly dwelling! who can be indifferent to thy comfort! Peace be to thy house! [Jay.

A WORD TO BOYS.—Did you ever think, boys, that this great world, with all its wealth and woe, with all its mines and mountains set with brilliants, its oceans, seas, and rivers laid with pearl and gold, its steamboats and ships, railroads and steam printing-presses, magnetic telegraphs, etc., will soon be given over to the hands of the boys of the present age? This is what really awaits you, and you should look abroad upon your inheritance earnestly and hopefully, and prepare to enter, with stout and cultivated hearts, upon your duties. In after time, let it not be said that you disgraced the place of the great men and heroes whose mantle is to descend upon you.

FAUSTUS—INVENTOR OF PRINTING.

'Twas but a little deed he wrought,
All in a quiet way,
The Faustus of that honored age
Which never shall decay;
It may not be, he dreamed the light
Which from that deed should spring—
That he, in glorious after years,
Would shame the proudest king!

Oh! think ye on his swelling thought
That mighty vision sprung,
That far in other continents
His name would thus be sung?
That commerce's hands should bear it on
With winds, and wings of flame,
Above the rolling age's sea,
To everlasting fame?

Ah! little thought that humble one,
That from the rise of sun
To where it sank beyond the West,
The work he had begun
Should spread as spreads the morning light,
As beams the middle day;
And in its splendor, Error's night
Forever pass away!

Ah! little thought that earnest soul,
That it had roused a star,
Before whose zenith-light should bow
The nations from afar;
That millions upon millions freed
Should should beneath its gleam;
Oh! no, it was too gorgeous
For any mortal dream!

And yet he has accomplished it;
The pennon he unfurled
Is now the quivering dawn of days
Above the shouting world;
The falling dungeons utter it—
From tyrant's lips have sprung
"Immortal Faust! immortal Faust!"
As back their crowns were flung.

Bridged oceans bear the echo on,
Linked continents of slaves,
With tongue that drowns the thunder blast,
And shames the roar of waves,
Huzza to him who struck their chains,
Who set the ages free,
Immortal Faust! immortal Faust!
Immortal Faust, to thee!

PRACTICAL EDUCATION.

An old and even hackneyed theme, I grant; but not, by consequence either of its antiquity, or its frequent recurrence, necessarily worn out, or in any sense bereft of interest. Indeed to the educator such themes often present the strongest challenge to his earnest consideration, and zealous pursuit. The topic announced is pre-eminently of this class. Though often and in educational circles universally discussed it still presents to the teacher of youth new and ever-varying phases, no one of which may be disregarded by him in the pursuit of his profession.

It must be conceded that practical education is the imperious and unequivocal demand of our day. Little deference is now accorded to the mere "bookworm," however extensive and varied his attainments, and hence we often hear from such, the bitter complaint against mankind that their great learning is unappreciated and their long years of toilsome acquisition unrequitted. So, end *so bitterly* may they ever find ample reason to complain. The scholar for the times is not he whose light is concealed "under a bushel" and whose only claim to consideration is that of great acquisition, but he who having acquired knows how to use; not he, who, year by year, has stowed away "en masse" all that his devoted, yet objectless investigation could gather from his musty volumes, but he who has diligently applied each new acquisition of knowledge, directly, to the increase of his mental power, and by its legitimate employment, ejected what the mere literary gormand can never approximate; the conversion of scientific truths into palpable facts. Such education must ever evince in its possessor, the merit of "the good tree" which is known by its "good fruits." Moreover, the person thus educated must always and everywhere be appreciated, for knowledge with him is no inert possession, but ever active and practical, will continually work out some good to himself or his fellow-men. These sentiments admitted, the immense responsibility of the teacher in this regard, becomes fully apparent. To him most emphatically is entrusted the intellect of the next generation of men, and through them, of successive generations thereafter. By his molding and transforming power he pre-eminently arranges and determines the mental and moral characteristics of incoming society.

The individual thus educated, will not be ushered into the busy arena of life to be baffled in the performance of his part. He has been taught self-reliance, and hence can walk boldly into intricacies, with the assurance that perseverance in the exercise of his disciplined faculties, shall ultimately open up the way before him, and his triumph be rendered complete and glorious. He has been taught the use and application of his knowledge, and hence the importation of educated inefficiency and learned imbecility, not more common than deserved in regard to graduates from "the schools," when forming business connections, shall never rest upon him. He has, moreover, been taught a sterling and practical morality, not one consisting of mere theological abstractions, and his daily life shall furnish an ever recurring illustration of that most comprehensive rule of action "As ye would that others should do to you, do ye even so to them." [N. Y. Teacher.

INVEST FOR YOURSELF.

My lord, here is an acquaintance of ours, and he has been spending the energy of a very good understanding, of exceedingly strong will, or well formed habits, in conducting business and making a fortune. He owes no man anything; he is a benefactor to community; he assists the struggling poor, whom he leaves comfortable and independent; and he says, I have invested £50,000 for every one of my children. But what have you invested for yourself? You ought not, with all your love for your children, to think only of them. What do you propose to invest for yourself? This is the question, and it is a business one. You have but one way of investing money permanently. You may invest it in houses, or in lands, or in banks, but when the great fire comes that will burn all that up, and your beautiful mansion will be no more to the the flames than the dust you tread on, what portion of your property is invested for you, and will re-appear after the fire, to enrich you forever? None, but what you have given up to God—literally and absolutely none—what you have consecrated to the Saviour—what you have consecrated to the poor—what you have given out of love to Christ—love to other men. It is in his hand, and he will remind you of it, and show it to you in another shape at the last day. Oh, what a word that is, "Make to yourselves friends of the mammon of unrighteousness; that, when ye fail, they may receive you into everlasting habitations." These friends cannot procure a habitation; they cannot prepare a habitation; they can give no title to a habitation; all that being done by the free grace of your Father through the alone merit of your Saviour and Redeemer. The title being given, and the house being prepared for you, make friends of the mammon of unrighteousness, that they may receive you into everlasting habitations. A wonderful thing it is to take a cold shilling into my hand and turn that cold piece of metal into a friend, who, when the Lord shall lift up my head on that day, will be there to receive me, and bid me welcome to the land of rest. None of us would like to die poor. Who is he that dies rich? That man dies rich, and only that man, who, when he leaves behind him a little or more, or nothing, has before him a treasure laid up in heaven. Who dies poor? He that, whatever he leaves behind him, has nothing laid up before him. He dies poor.

[Rev. W. Arthur.

CIVILITY.

It is an easy thing to be civil, and although in the language of the old proverb, "fine words butter no parsnips," they frequently, nay, almost invariably, have a kindly effect, and influence the mind as well as the heart. Nevertheless there are certain persons who go through the world as if determined never to do a civil turn. They are naturally rough, harsh, peevish, and dissatisfied, and even when appealed to in matters of business, they will indulge in such a spirit, and assume such an air as to make the intercourse cold, formal, and repulsive. A sad mistake in every point of view. All of us are more or less dependent upon civility. It softens and sweetens the intercourse between man and man—it breaks down barriers and impediments that would otherwise exist—it appeals to the higher and more refined qualities of our nature, and it bespeaks not only intelligence and polish, but clearness of head and goodness of heart. A man of the world, one who has traveled or enjoyed the advantages of thorough education, and especially a gentleman, is rarely uncivil. To be so is to be rude, *discourteous, and insulting*. Nothing, indeed, is more agreeable, nothing more fascinating, and nothing better calculated to secure an easy path in life or society, whether in the social or the business world, than unwaveringly civility. It touches many a heart, it impresses many a mind, it removes many an obstacle; and, while it is calculated to gratify thousands, it can offend no one.

The man of finished manners and elegant taste, of cultivated mind and gentlemanly instincts, is civil, not only to the millionaire, the banker and the merchant, but to the mechanic and day laborer, and even the beggar who knocks at his door. He respects himself and hence he respects the feelings of others. He looks for kindness and good will at the hands of his fellow creatures, and he manifests these qualities himself. He may have his errors and infirmities, his prejudices and his passions, his follies and excitements; but at all times and occasions, his language and his manners are civil, or if having unwittingly committed an offence against propriety, he is the first to make the *amende honorable*.

Civility is not only one of the virtues, but it is one of the essentials of social and civilized life. It cannot be cultivated too sedulously. We should as much as possible endeavor to engraft its spirit upon the young, and thus render it a feature and an embellishment of character. The effect cannot but be salutary. If this quality be calculated to adorn and dignify age, what a grace and a polish will it impart to the ingenuousness of youth. It at once softens and refines, elevates and beautifies. Often, too, it opens the road to prosperity, and leads the way to conquest and power. With the sterner sex it has a magic and a charm, and with the gentler it is almost irresistable. [Phil. Inquirer.

WANT OF SUCCESS.—Walked by moonlight in the grounds, reflecting on the missions. My soul was at first sore tried by desponding thoughts; but God wonderfully assisted me to trust him for the wisdom of his dispensations. Truly, therefore, will I say again, who art thou, O great mountain? Before Zerubbabel thou shalt become a plain. How easy for God to do it! and it shall be done in good time; and even if I should not see a native converted, God may design by my patience and continuance in the work to encourage future missionaries. But what surprises me is the change of views which I have here from what I had in England. There my heart expanded with hope and joy at the prospect of the speedy conversion of the heathen! but here, the sight of the apparant impossibility requires a strong faith to support the spirits.

[Henry Martyn.

MOTIVES TO HOLINESS.—A man who has been redeemed by the blood of the Son of God should be pure. He who is an heir of life should be holy. He who is attended by celestial beings, and who is soon—he knows not how soon—to be translated to heaven, should be holy. Are angels my attendants? Then I should walk worthy of their companionship. Am I soon to go and dwell with angels? Then I should be pure. Are these feet soon to tread the court of heaven? Is this tongue soon to unite with heavenly beings in praising God? Are these eyes of mine soon to look on the throne of eternal glory, and on the ascended Redeemer? Then these feet and eyes and lips should be pure and holy; and I should be dead to the world and live for heaven. [Albert Barnes.

WHAT IS TO BE DONE?

Another celebration of our Missionary and other Denominational Societies naturally reminds us of what we owe to the world of mankind. All classes have claims upon us, in proportion to our power to serve them. The fact that some are far removed from our locality, does not lessen our obligation; they are, nevertheless, our *neighbors*, in the scriptural sense of the term. If we can obtain access to them, with a reasonable probability of serving them beneficially, we need nothing more to determine our duty. "Preach the Gospel to *every* creature," is an injunction which implies the right of every creature to be blessed by the same truth which has proved a blessing to ourselves. Has Christ died for all? Has He shed His blood for those beyond the sea, as well as for our companions at home? Has He bequeathed to them the legacy of Inspired Truth, that by its consolations they may be cheered—that by its promises they may be animated—that by its doctrine they may be sanctified? Who, then, are the executors of that Testament, under the responsibility of seeing that the bequest is shared by all the legatees?

Most unquestionably, does it devolve on Seventh-day Baptists to labor for the conversion of the world. But where are the missionaries? It is notoriously true, that we cannot adequately supply our own churches with pastors. Whom shall we send to the heathen, then? Whom shall we send to labor in the whitening fields of our Western country? Can they believe in Him of whom they have not heard? And can they hear without a preacher?

These are serious questions, and they seem to us more and more serious, every year. The lack of great, thorough, all pervading revivals of religion in our churches; the very prevalent neglect of family prayer; the numerous breaches of the Sabbath which go unrebuked of discipline; the difficulty, not to say impossibility, of sustaining prayer-meetings in the most of our churches; together with the spirit of worldliness which has seized upon all, young and old, go far to extinguish the hope of seeing the ministry re-inforced by any such additions as are needed to answer the Macedonian calls, which came from all parts of the earth.

True, we have hope in God, still. We are satisfied that His purposes will be accomplished by such instrumentalities as will glorify His name. *The gates of hell will not be* suffered to prevail against the Church, nor against the ministry of the Church. Ultimately, all will be right. But our anxieties have respect to the present. As we live in the present, so our responsibilities concern the present. They concern the future, only through the present, and as far as what we now do may exert an influence upon the generations that succeed us. Our responsibilities having reference to the present time, and to present opportunities; and the state of things in the Church of the present age being any thing but hopeful; we cannot help fearing, that the honor of serving God in the work of regenerating the world is reserved for another people, and that upon another set of servants will be bestowed the reward, while upon ourselves will rest the shame, nay, the curse, which is due to those who came not to the help of the Lord against the mighty.

If we have not missionaries to carry out the work to which our Denominational Organizations are pledged; if we can do but little more than to meet, every year, and groan over this deficiency; and if this has been a state of things of long continuance, with no immediate prospect for the better; is it not time that we begin to inquire, why is it thus? An adequate supply of "pastors and teachers," including evangelists, was embraced in the Ascension gifts of Christ to the Church; and if so important a gift is withheld, and that year after year, does it not betoken something wrong in the Church itself? Does it not indicate a state of things with which the Holy Spirit is grieved, and on account of which He cannot consistently hold that free intercourse with us, which is necessary to our prosperity?

We desire to see our Denomination immediately aroused to its great and important mission. There is no time for delay. But something more is called for than the active work of our Denominational machinery. There is a work which lies back of our great organizations, and even back of our church organizations. It is a work which concerns every individual personally, and with individuals it must begin. Nothing but that [illegible] tense, burning piety of individual [illegible] in- which does not confine itself to [illegible] hearts, but [illegible] the individual, [illegible] goes out to other hearts, and diffuses itself through the whole Church, will suffice to bring about the desired result. T. B. B.

Ordination of Missionaries for India.—Messrs. Jared W. and Ezekiel Scudder, sons of the late Rev. Dr. Scudder, were, on Sunday evening of last week, ordained as missionaries for India, at the Reformed Dutch Church, on 29th street, in this city. A number of eminent clergymen of that order officiated, and after the ordination exercises addresses were delivered by both the missionaries. It is said that in addition to their theological attainments, each of the young men has had the advantage of a complete course of medical lectures. They, with their wives and sister, will sail for Ceylon, India—their birthplace—about the first of next month.

ORGANIZATION OF THE EDUCATION SOCIETY.

In pursuance with the following resolution, presented by the Educational Committee to the Seventh-day Baptist General Conference and adopted by that body, Sept. 6, 1855, a convention was called in the 1st Brookfield Church, at Leonardsville, N. Y., Sept. 8, 1855, at 7 1-2 o'clock P. M., to organize the Seventh-day Baptist Education Society.

Resolved, That as the votes given on the question of the location for a Denominational College and Theological Seminary make a majority for Alfred Center, N. Y., (though the vote altogether is not deemed equal to the importance of the subject,) the Conference waive any further action on the subject, except to recommend the organization of an Education Society upon the Constitution presented by our Educational Committee, and advise that the Society so formed have the entire management of the subject committed to it from this time, with a due regard to the vote of the churches.

The Convention was called to order by Thomas B. Stillman, Chairman of the Educational Committee. Prayer by W. C. Whitford.

On motion of David Dunn, T. B. Stillman was called to the chair.

On motion of J. M. Allen, W. C. Whitford was appointed Secretary.

J. M. Allen, Secretary of the Committee, presented the Constitution recommended by the General Conference, which, after some modification, was adopted as follows, as the basis of the Society's organization.

Constitution.

Article 1. This association shall be known by the name of the Seventh-day Baptist Education Society.

Art. 2. The object of this Society shall be the promotion of Education, in such a manner as shall tend to the ultimate founding and full endowment of a Denominational College and Theological Seminary.

Art. 3. Any person by contributing two dollars may become a member of this Society for one year, which membership may be renewed, for a year, by the payment of one dollar. Each subscriber of twenty-five dollars, which may be met by two payments, shall be a member for life. Societies, churches, or associations, may become auxiliaries by contributing to its funds, and shall be entitled to one vote for every ten dollars contributed.

Art. 4. The officers of this Society shall consist of a President, Vice Presidents, a Recording Secretary, a Corresponding Secretary, a Treasurer, and ten Directors, whose respective duties shall be the same as those of like officers of similar associations, and shall be elected annually.

Art. 5. *Sec.* 1—The Society shall proceed, as soon as practicable, to establish a Literary Institution and Theological Seminary. The Professors in the Theological Seminary shall be Seventh-day Baptists—the Presidency of the Literary Institution shall always be filled by a Seventh-day Baptist—the other Professors and Teachers to be such as the Trustees of the Institution, acting in conjunction with the Society, shall see fit to elect. *Sec.* 2—Three-fourths of the Trustees of the Institution shall, at all times, be Seventh-day Baptists. *Sec.* 3—Any person contributing the sum of one hundred dollars, or more, towards the endowment of Literary Professorships, or securing its future payment to the Society, with the interest being paid thereon yearly, shall have the privilege of perpetually receiving in return, towards the education of a scholar, at the rate of ten per cent. per annum, for the time of actual attendance, on the amount paid or secured to the Society. All tuition in the Theological Department shall be free. *Sec.* 4—All contributions designated by their donors for a particular object, shall be accordingly appropriated. Contributions not thus designated, shall be disposed of according to the pleasure of the Society. All subscriptions for the endowment of Professorships shall constitute a permanent fund, and only the interest accruing thereon, shall be used for the objects specified.

Art. 6. The Society shall hold its annual session at such time and place as shall have been agreed upon at a previous meeting.

Art. 7. The officers of the Society shall constitute a Board for the transaction of business. The Board shall hold meetings, as often as once in three months, and special meetings as occasion may require, at the call of any two of its members, through the Recording Secretary. Five members shall constitute a quorum, and shall have power to transact all business pertaining to the interests of the Society.

Art. 8. This Constitution may be amended at any regular meeting, by a majority vote of the members present, provided such amendment shall have been recommended by the Board, or by a vote of two-thirds without such recommendation.

On motion of Jas. R. Irish, an opportunity was given for persons present, who desired, to become members of the Society. The list is as follows:—Wm. B. Maxson, T. B. Stillman, N. V. Hull, S [illegible] S. Griswold, H. H. Baker, A. B. Burdic[illegible], James R. Irish, W. C. Kenyon, J. M [illegible] Allen, D. E. Maxson, A. B. Spaulding, Abel Stillman, Clark Rogers, P. L. Berry, B. F. Langworthy, David Dunn, A. M. West, W. C. Whitford, Isaac Brown, Wm. A. Babcock, J. P. Hunting, J. B. Clarke, Isaac C. Burdick, Mrs. M. L. Burdick, N. H. Langworthy, J. B. Wells, Henry Clarke, David Clawson, C. S. Titsworth, A. J. Wells, G. S. Kenyon, Mrs. C. M. Baker, Mrs. R. H. Whitford, Lucius Crandall, Nelson Clarke, D. Delos Wells, G. C. Stillman, Alvit Clarke, Alfred Maxson, E. S. Fitch, John Babcock, David Babcock, J. Maxson, I. D. Titsworth.

In compliance with a vote, the chair appointed a committee, consisting of J. M. Allen, A. B. Burdick, and D. E. Maxson, to nominate the permanent officers of the Society.

On motion of J. R. Irish, it was voted that the Convention have a recess of a few minutes to give the old Seventh-day Baptist Education Society an opportunity to dispose of the funds in its possession and close up its business.

After the recess, the Nominating Committee presented their report, which, after some changes, was adopted as follows:—

President—Thomas B. Stillman.

Vice Presidents—Wm. B. Maxson, W. C. Kenyon, Jas. R. Irish, Lucius Crandall, Henry L. Jones, A. C. Spicer, Thos. R. Williams, James Bailey, S. S. Griswold Gerrit Smith, A. B. Burdick, Geo. B. Utter, C. H. Stillman, A. R. Cornwall, David Dunn, John Whitford, George Greenman, Benj. Maxson, J. P. Hunting.

Recording Secretary—W. C. Whitford.

Corresponding Secretary—J. M. Allen.

Treasurer—Clark Rogers.

Directors—N. V. Hull, T. B. Brown, L. C. Rogers, Welcome Stillman, D. E. Maxson, H. H. Baker, A. D. Titsworth, P. L. Berry, O. P. Hull, W. B. Gillette.

On motion of James R. Irish, it was voted that the Convention adjourn.

THOS. B. STILLMAN, *President.*
W. C. Whitford, *Recording Secretary.*

Meeting of the Executive Board of the Education Society.

The Executive Board of the Seventh-day Baptist Education Society held its first session in the 1st Brookfield Church, at Leonardsville, N. Y., on the 9th of Sept., 1855.

The Board was called to order by the President, T. B. Stillman.

On motion of J. M. Allen, it was voted that a committee of three be appointed to make inquries concerning the most feasible location for a Denominational College and Theological Seminary.

On motion, Thomas B. Stillman, George Greenman, and Lucius Crandall, were appointed that committee.

W. C. Kenyon, on motion of J. M. Allen, was appointed General Agent.

The General Agent was requested to proceed immediately to the collection of funds for the Society.

It was voted, on motion of J. M. Allen, that six per cent. be the rate of interest which shall be paid on all subscriptions secured to the Society, by persons in the different States.

By resolution, the Board allowed three years to the filling up of subscriptions, so as to determine the ratio of each subscriber in paying interest.

The General Agent was instructed to make arrangements with the subscribers to receive interest on their subscriptions on the 1st of September of each year.

On motion of W. C. Kenyon, a committee, consisting of T. B. Stillman, Clark Rogers, and Charles H. Stillman, was appointed to consider the question, at what time the interest on the several subscriptions shall commence, and what shall be the amount of interest which each subscriber shall be expected to pay.

It was voted that the President and Recording Secretary be a committee to audit the account of J. M. Allen, as General Agent of the Educational Committee; that the Board assume whatever sum they award him, and that he have an order on the Treasury for the same.

On motion of L. Crandall, the Minutes of the Convention held Sept. 8, 1855, together with those of this Board, were ordered to be published in the *Sabbath Recorder.*

On motion, it was voted that the salary of the General Agent be five hundred dollars per annum and his expenses.

On motion, the President appointed W. C. Kenyon, J. M. Allen, and W. C. Whitford, a committee to draft Rules of Order for the transaction of business by the Board.

It was voted that the next annual session of the Seventh-day Baptist Education Society be held with the 1st Church in Hopkinton, R. I., on the fourth day of the week before the second Sabbath in Sept., 1856.

It was also voted that, the exercises on that occasion be opened by a Literary Address, and that the President and Recording Secretary be a committee to obtain a person to deliver the Address.

The Board then adjourned to meet with the Executive Boards of the other Societies, in January, 1856.

THOS. B. STILLMAN, *President.*
W. C. Whitford, *Rec. Sec'y.*

FROM THE LAND OF CANAAN—NO. 3.

Jerusalem, June 20, 1855.

Dear Sisters—I left you standing on Mount Zion, looking towards the Damascus road. If you will now accompany me, we will walk through the Valley of Jehoshaphat, or the Kingsdale. Now, as we are passing out of St. Stephen's Gate, pause for a moment and look at the four lions which are sculptured in bold relief over the gateway, which has the appearance of great antiquity. Let us go on, following the zig-zag pathway down the steep descent, to the valley of Jehoshaphat. Here is the rock where it is said that Stephen was martyred, "calling upon God, and saying Lord Jesus receive my spirit." Just below, we are crossing a stone bridge of one arch over the dry bed of Kedron's Brook. Here Jesus passed with his sorrowing disciples, on that memorable night when he administered to them the memorials of his death, after commending them to God in that most wonderful and touching prayer. What a cheering thought that Jesus remembered us in that prayer, for he says, "Neither pray I for these alone, but for them also which shall believe on me through their word." The flat-roofed square building which you see on the left, is called the "sepulchre of the Virgin Mary." It has a long descent of fifty steps, leading to various chapels, in some of which service is performed every morning at seven o'clock by the Greeks. This is within a few rods of the Garden of Gethsemane, which lies just on the ascent of the Mount of Olives, and is enclosed by a high stone wall. The quietness here is well suited to the tone of our feelings, for the thought arises that, this very ground has been hallowed by the foot-steps of our divine Lord. Let us enter the Garden. Now that we are within its sacred precincts and seated at the foot of one of its venerable and time-worn olives, let us open the holy record and read the pathetic history of our Lord's last agony. Now with deep contrition, with bowed heads, bended knees, and tearful eyes, let us pray to God that we may ever see and avoid the enormity of sin which demanded such a sacrifice; and that we have divine light and guidance in bringing the chosen descendants of Abraham to see and acknowledge their guilt, and embrace their long rejected Messiah; and that God will hasten the time when the banner of the cross shall be unfurled in every valley and upon every hill top; when instead of the call of the mussleman from the towers and the minarets, the heralds of the cross may proclaim the gospel of Christ in its true light and purity.

We will proceed southward down the Valley, with Jerusalem on the right and the Mount of Olives on the left. You will be struck with its sepulchral character, for here you see numberless stones of an oblong square placed upon the ground, which mark it as the chief ancient burying ground of the Jews. For here the successive generations of Abraham have been laid, and the Jews are still willing to live here in poverty and contempt that they may be buried with their fathers. Here they believe that God will plead for Israel. "For then will he gather all nations, and will bring them down into the Valley of Jehoshaphat and will plead with them there for Israel, whom they have scattered among the nations." I think this must be the place which Ezekiel saw when he said, "The hand of the Lord was upon me and carried me out in the Spirit of the Lord, and set me down in the midst of the valley, which was full of bones." Here you see also several remarkable monuments, cut out of solid rock. First, we will notice the tomb of Jehoshaphat, the king of Judah, "who walked in the ways of the Lord," and from whom the Valley derives one of its names. It is an excavation in the rock behind the Pillar of Absalom, the door is ornamented by a pediment and pilasters. The Pillar of Absalom is a most wonderful structure, cut from the solid rock, with the exception of the cone, and ornamented with Ionic pilasters. "Now Absalom, in his lifetime, had taken and reared up for himself a pillar, which is in the Kingsdale, for he said I have no son to keep my name in remembrance; and he called the pillar after his own name, and it is called unto this day, Absalom's place." The stones which you see on the architrive have been cast there by the Jews in detestation of Absalom's rebellion against his father. Next is the cave of St. James, where it is said he retired and remained without eating or drinking till after the resurrection of Christ. It has two Doric pillars in front and stands in a recess of the rock. Close by is the tomb of Zacharias, who was "slain between the temple and the altar." This monument is square and, like Absalom's Pillar, detached from the rock; the top has a pyramid form, and the sides are ornamented with Ionic pilasters. Here you see another bridge of one arch thrown across the Kedron, leading to the hill of Zion. Just below, we are now passing the rock where it is said that Judas hung himself. Still following down the Valley, on the right we see the Fount of Siloam. Under the Hill Ophel, a long flight of stone steps leads to the water. Let us go down; and now you see a subterranean channel cut in the rock, which connects with the Pool of Siloam. Immediately opposite, you see the village of Siloam, the inhabitants of which live chiefly in caves and in the tombs which are cut in the sides of the rock. Their manner of living reminds me of the narrative in Matthew, of the "two possessed with devils coming out of the tombs." Our winding path now leads to the King's Garden, a triangular plain, rich in alluvial soil. Here you see the grain, vegetables, and trees flourishing luxuriantly in this most delightful spot, which is irrigated by the water of the Pool of Siloam. This is said to be, and no doubt is, the site of one of Solomon's gardens. He says, "I made me great works, I planted me vineyards, I made gardens and orchards and planted trees in them of all kinds of fruit, I made me pools of water to water therewith the wood that bringeth forth trees." On the right, you see a beautiful mulberry tree, the boughs of which are supported by stays and the roots defended by a wall or terrace. This is said to be the place where Isaiah was sawn asunder by order of Manassah. Near this, according to Eusebius, Melchizedek, King of Salem, met Abraham after his return from the slaughter of Chedorlaomer, when he brought forth bread and wine, and blessed him and said, "Blessed be Abraham of the most high God, possessor of heaven and earth; and blessed be the most high God, which hath delivered thine enemies into thine hands." We have now reached the south end of the Valley of Jehoshaphat, and here you see a picturesque building over the well of Job, which is Enrogel. This, according to Joshua 15: 7, 18: 16, is one of the border marks between the tribes of Judah and Benjamin. This well is is of solid masonry to a great depth, and of excellent workmanship. I have been informed since at Jerusalem, that this well or fount has not overflowed for hundreds of years until within the last seven years. Last winter the overflow was abundant, when the people came down to it with music and rejoicing; for they believe this to be one of the indications that the curse which has so long rested on the land is soon to be removed.

We will now lead your steps towards Jerusalem, pausing for a moment "by cool Siloam's shady rill," where the "waters of Shiloah that go softly." Jesus said to the blind man, "Go, wash in the Pool of Siloam." Its hallowed waters, with its low sweet murmur, still flows on in this quiet vale. But we must hasten, for the departing sun is now casting his rich tints upon the towering heights of Zion, and the lengthened shadows are lying in these sacred vales, giving the whole an air of indescribable beauty. We will now take the path that leads around the southern slope of Mount Zion, with the Valley of Hinnon on the left. Here the idolatrous Ahaz "made molten images for Baalim; moreover, he burnt incense in the valley of the son of Hinnon, and burnt his children in the fire, after the abomination of the heathen." The wicked Manassah, son of the good Hezekiah, caused his children also "to pass through the fire, in the valley of the son of Hinnon." The noble young Josiah broke in pieces their idols, "that no man might make his son or his daughter to pass through the fire to Moloch." He made this valley the receptacle of all the nuisance of the city, keeping fires continually burning, no doubt to render it odious and to prevent the assembling of the idolatrous people. Quenched are those fires and hushed are all those dreadful cries of agony which once echoed here, and a melancholy stillness now pervades this lovely valley. We now make a steep ascent and reach Zion's gate. The sun has sunk deep in the west, and the soldiers are standing with their hands upon the heavy iron doors, as if waiting for us to enter. When life's sun shall have set, may our spirits ascend and enter Zion's gate in the New Jerusalem, whose Maker and Builder is God. Martha Saunders.

The Bible on the Sabbath: *a Tract on the Sabbath, just issued by H. H. Baker.*

The advantages claimed for this Tract over others on this subject, exists, in first collating, as they occur, all the texts in the Bible referring to the *seventh day* as the weekly Sabbath. Secondly, by bringing together in their order, all the passages in the New Testament referring to the *first day* of the week, and thereby, by an essay or argument, brief, comprehensive and conclusive, covering the ground of these scriptures. By this arrangement, any person wishing to investigate this subject need not, necessarily, refer to the "Family Bible," and imagine that, "much more is there said and could be found, had they time;" for here they have presented at one view all the Bible says on both sides of the question, and with the subject thus set forth can investigate and at once come to a scriptural decision. It is designed to place this Tract in the hands of every Protestant minister in North America, as well as thousands of others, at as early a day as practicable.

When we remember that, within a few years between twenty and thirty ministers of other denominations have embraced the Sabbath and united with us, many of them possessing talents and piety of a high order, and are now advocates for the truth of the Sabbath; and when we look at the small and inefficient efforts we have made to call their attention to the subject, may we not say of a truth, that the Lord has far exceeded our most sanguine expectations, in blessing the means we have so feebly put forth? Let us pray that God will prepare the way for this messenger, that it may prove a blessing to the cause of the Sabbath reform.

As the distribution of this Tract is carried on by individual enterprise, all who love the cause of our Redeemer and wish the Sabbath of the Lord to be hallowed, are solicited to aid in giving it a general circulation. Already, more than three thousand ministers, in different States of the Union, have been provided for and are to be supplied through the United States mail.

Orders for the Tract should be directed to H. H. Baker, New Market, N. J., or they may be obtained by applying at the office of the *Sabbath Recorder*, 9 Spruce street, N. Y. They will be supplied at the rate of $3 a hundred. Orders for packages costing less than one dollar, may be remitted in postage stamps, and of the denomination of *one cent* if convenient, as large numbers have to be used in mailing the Tracts.

Deposition of a Son by Bishop Doane. A son of Bishop Doane, of New Jersey, who was some six months since ordained to the Diaconate in the Episcopal Church, by his father, having "gone over" to the Roman Catholic Church, has been deposed from that office by the same hand. The following is the sentence of deposition:—

To all, everywhere, who are in communion with the One, Holy, Catholic and Apostolic Church:

Be it known that George Hobart Doane, M. D., Deacon of this Diocese, having declared to me, in writing, his renunciation of the Ministry, which he received at my hands from the Lord Jesus Christ, and his design not to officiate in future in any of the offices thereof, intending to submit himself to the schismatical Roman intrusion, is deposed from the Ministry; and I hereby pronounce and declare him to be deposed, in the name of the Father, and of the Son, and of the Holy Ghost, Amen.

Given at Riverside, this fifteenth day of September, in the year of our Lord, 1855, and in the twenty-third year of my consecration. G. W. Doane, D.D., LL.D.,
Bishop of New Jersey.

In the presence of
Milo Mahan, D.D., Presbyter.
Marcus F. Hyde, A. M., Presbyter.

☞ Eld. N. V. Hull, of Alfred, will address the American Bible Union, on Thursday, the 4th of Oct., in this city. On the Sabbath following (the 6th) he will preach at the Seventh-day Baptist Chapel, on Eleventh-st., between Third and Fourth avenues, at 11 o'clock in the morning.

Sunday-Schools in San Francisco.—In a recent number of the San Francisco *Journal*, we find a very interesting account of the anniversary of the Sunday-School Union of that city, which embraces the Sunday-Schools of the different evangelical denominations. The exercises were held in the First Congregational Church, which was crowded to overflowing. The singing was performed by a youthful choir of some 800 children, and was a delightful feature of the occasion. The report of the Secretary showed that there are 11 schools connected with the Union, the average attendance at which for the previous year was 882 scholars, and 191 teachers. The different libraries contain about 8,000 books, and about 20,000 Sunday-School papers are distributed annually. We notice that one school, with an average attendance of 102 members, has a library of 1,200 volumes; another, with an average attendanne of 68 scholars, has a library of 1,700 volumes; and another, with an average attendance of 110 members, has a library of 700 volumes. This statement shows that the children of San Francisco are well supplied with a religious literature—far better supplied than the Sunday-Schools of New England even will average. The paper from which we copy says, "the whole affair proceeded with the utmost decorum, and gave another token of our rapid strides as a religious and refined community."

Mendi Mission.—In January last, (says the *American Missionary*, the organ of the American Missionary Association,) three ordained ministers of the "United Brethren" Order, W. J. Shuey, D. C. Kumler, and D. K. Flickinger, sailed from New York, for Africa, in company with missionaries about to join the Mendi Mission. Their expectation was to be absent about a year, and by personal inquiry and observation to prepare themselves to report to their denomination whether the field about the mission was a suitable one for them to occupy in the commencement of Foreign Missionary operations. The two brethren first named have returned to New York, where they arrived July 15. They come back prepared to recommend that the United Brethren should commence a Mission Station on the Jong River, not far from Wela, and will also recommend a co-operation, in some form, with the American Missionary Association, in carrying forward the work.

RELIGIOUS INTELLIGENCE.

The Rev. Samuel Wesley, father of John Wesley, was a man of marvelous courage. Being strongly importuned by the friends of James II. to support the measures of the court in favor of Popery, with promises of preferment, he absolutely refused even to read the king's declaration; and although surrounded with courtiers, soldiers, and informers, he preached a bold and pointed discourse against it from the words, "If it be so, our God whom we serve is able to deliver us out of thy hand, O King! But if not, be it known unto thee, O King! that we will not serve thy gods, nor worship the golden image which thou hast set up."

The practice of catechising did not originate with the Roman Catholic church, as is commonly supposed. They received it from the early fathers. In the first centuries there was a catechist in every church. Chrysostom, and others eminent among the fathers, had been distinguished as catechists. Indeed, the Jewish church had essentially the same form of instruction. The Jews were commanded to teach their children in answers to questions, and to instruct them in the house and by the way.

It is said that six or seven translations of the Bible already exist in Arabic; but all that were made when the facilities for producing such as were true in meaning and correct in style, were poor compared with what they now are. These defects suggested the idea to the American missionaries, and especially to the Rev. Dr. Smith, of the revised and improved translation upon which he is now engaged, and which will be a master performance of its kind.

Archbishop Innokearte lately celebrated divine service before Prince Gortschakoff, General Osten Sacken, Admiral Nachimoff, and all the sea and land officers. The archbishop brought to Prince Gortschakoff the pictures of the saints sent by the cities of Kieff, Varanwska, Moscow, and other places, and, in addressing the troops, the prelate told them to pray to the pictures, as their power had no equal in this world.

In the New York Universalist Convention, at Utica, a resolution recommending a national convention of the denomination, to take measures for the adoption of a liturgy, was passed. Trustees were also empowered to take definite action for the location of the proposed theological school, and a committee was likewise appointed to raise $50,000 for that object.

A grand Methodist jubilee came off recently, in Boston, in celebration of the 60th anniversary of the building of the first Methodist meeting-house in Boston, it being also the second erected in New England. Several veteran patriarchs of the preacher's ranks were present, and made speeches, and the occasion was one of great interest and pleasantness.

Protestant missions in the islands of the Pacific have been more successful, judging from the number converted and brought into the Christian Church, than in any other part of the world. According to the last enumeration, there were 119 missionaries, (American and English,) 45,929 communicants, and 54,708 scholars; and connected with the stations are 239,900 Protestants.

During the past year there have been received into the Reformed Dutch Churches in this country 2,900 persons, which is a falling off from accessions of the previous year. The contributions for benevolent objects during the year were $62,120.

Under the head of "Disorderly Officiating at Church," a writer in the *Churchman* says: "I have seen to-day what I never saw before, and hope never to see again—a minister of our church administer the holy sacrament of baptism in a black gown!"

An American congregation has been formed at Albuquerque, New Mexico, under the pastoral charge of the Rev. Mr. Talhurst.

Isaac Rich, of Boston, has made the munificent donation of twenty thousand dollars, to endow the Wesleyan University.

IMPERFECT IN ORIGINAL

General Intelligence.

European News.

The Baltic arrived at this port on Wednesday, Sept. 19, bringing one week's later intelligence from all important points. The news generally is not of much importance. Matters before Sebastopol seem to remain in about the same position as before, though the Russians on the Tchernaya are, we learn, again menacing the Allies. Rumors of negotiations are rife once more. From Asia Minor we learn that some fighting had taken place, but it does not seem to have amounted to much. There had been more Carlist disturbances in Spain. The Cotton market was dull; the Grain market firm.

Mexican News.

By way of New Orleans we have advices from Mexico to the 8th inst. The country—far from being settled—is really in a worse condition, (if that were possible,) than it was under Santa Ana's dictatorship. General Ignacio de la Slave, the leader of the Revolutionists at Vera Cruz, has refused to acknowledge the new Provisional Government under Carrara, alleging that it was not elected in accordance with the provisions of the plan of Ayutia. Meeting with some opposition to his views, De Slave, in regular Mexican style decided the matter by the sword, and forcibly took possession of Vera Cruz. Other cities and departments are equally undecided—some being in favor of one political programme, and others clamorous for the very reverse. A proposition to establish a Monarchy has even been started.

We have as yet no indication as to who will be elected President. Numerous parties are mentioned, but the candidates are not fairly in the field. Among the most prominent noticed by the press are Alvarez, Comonfort, de la Slave, Vidaurri and Haro Y. Tamariz. Alvarez and Vidaurri would seem to have the best chance, provided their present popularity lasts for another month. Carrara, the temporary President, has expressed a wish to give up the office to Alvarez, or any other person whom the latter might choose to appoint.

SMASH UP ON THE CENTRAL RAILROAD.—The Albany "Evening Journal," of Sept. 20, says: At an early hour this morning a fearful and melancholy accident occurred at West Albany, a few miles from this city, and more generally known as the Cattle Depot. It appears that a cattle train which had just arrived was being switched off the track when a coupling broke, leaving two or three of the cars filled with cattle on the track, which at that moment belonged to the express train, then due. In almost an instant after the breaking of the iron which connected the cars together, the train due here at 4.20 came up at regular speed, and ran into the three cars on the track.

The concussion was so great that the tender of the express train was thrown over and upon the locomotive, and the baggage and express cars badly broken. One cattle car was demolished, and all the cattle in it killed. So great and fearful was the concussion that trunks were thrown out of the cars to the distance of from twenty to thirty feet; and even the iron trunk belonging to Wells & Co.'s Express, heavily strapped with iron bands, was totally demolished. By this accident we are called upon to note the loss of one person and perhaps two, and the serious injury of four if not five persons who were on the express train.

A FIENDISH MURDER.—One of the most fiendish murders we ever heard of occurred in New Orleans a few days ago. It appears that an old woman had been for some time lodging in a house where furnished rooms are kept by a Mrs. Brown. The woman was in the last stage of consumption, and as she owed a great deal for rent, she was notified by Mrs. Brown to leave. About seven o'clock on the same evening, she sent a servant to purchase camphene, which she poured on the floor, and then enticed a little orphan that had been adopted by Mrs. Brown into her room, whereupon she set fire to the camphene and threw her into the blaze. When the little creature's clothes were all on fire, she seized and pushed her into the hall and shut the door. The act was witnessed by a little boy belonging to the house, who succeeded in putting out the flames, in which the wretched child was enveloped, and also checked those in the room occupied by this brutal woman. The child died the next evening and as it is supposed that death will speedily rid the world of the murderess, no legal proceedings were instituted against her.

EXCESSIVE DROUTH.—The drouth, so long continued, and which in this region is more severe than that of last year, is bearing with great severity upon labor. It is estimated that the amount of wages paid to the operatives in the mills in this State is now $25,000 less per week than when they are all running. Such an abstraction from the wages of labor must be very seriously felt by those depending upon their daily earnings for support. It must have, too, an effect upon the price of goods. We have not been informed of the amount of diminished production of goods, but it must be very large. Upon both branches of the Pawtuxet River there are about 162,000 cotton spindles, more than 100,000 of which are entirely stopped. Upon the Blackstone it is not so dry, but at least one half of the machinery in all the mills is lying idle. Many of the factories in Washington County are entirely without water. Some large reservoirs in Kent County, which have heretofore furnished an abundant supply of water in the dryest seasons, are now completely exhausted. [Providence Journal.

CITY MORTALITY.—Public health in the city still continues in a very satisfactory condition. According to the official report of the City Inspector the total number of deaths during the past week was 503—an increase of two over the mortality of the previous week. The proportion of deaths from diseases of the stomach and bowels is still large. Diarrhœa carried off 31, dysentery 25, inflammation of the bowels 15, and cholera infantum 54. There were 52 cases of convulsions infantile, 39 of consumption 16 of inflammation of the brain, 13 of whooping cough, and 62 of marasmus infantile. There were five suicides and one murder.

INTERESTING WEDDING PARTY.—In our list of marriages this evening, we report a wedding at which the venerable Dr. Lowell officiated. We are informed that additional interest was imparted to the services from the fact that Dr. Lowell, more than forty years since, married the father and mother of each of the parties. He also christened the bride in her infancy, and five of her brothers and sisters, all of whom were present. In the company were five couples, whom the Doctor married, several if not the most of whom are grand-parents. It was remarked that while the aged minister was thus surrounded by friends of three generations, he was about the youngest man in the party. [Transcript.

SUMMARY.

Bull-fighting is at length becoming unpopular in Spain. The *Messager de Bayonne*, in giving an account of some bull-fights which took place on the 26th and 27th ult., remarks that the taste for those spectacles, formerly so strong there, is fast declining. The performers were received with loud invectives, and even missiles, not exclusively of the softer kind, were thrown at them. As for some women who fought and killed the bulls, they were hissed and hooted by large crowds along the streets on their return home. In some instances, the disorder was so great as to lead to the arrest of the most turbulent among the people.

The greatest lumberman in America is William Price, of Quebec. He has erected a wharf at River La Loup, 120 miles below Quebec, at a cost of $120,000, to accommodate his lumber business. He is the most extensive dealer in North America; has 30 saws running near that place; 40 at St. John's Bay; 22 in constant operation at Ha-ha Bay, and at the Saguenay Rapids 10 more. He also purchases some millions of feet from the Ottawa. It is said he has furnished, for several years, employment for from 2000 to 3000 men, and freighted over a hundred ships annually, with lumber for European markets.

In the Boston Police Court, on Tuesday, a man was tried for assaulting his wife in a most shocking manner. It was testified that the wife's leg, from her ancle to her thigh, was covered with blood marks, and that her life was in danger from the cruel treatment of her husband. S. D. Parker, Esq., for the defence, with a spirit worthy of the worst day of barbarism, argued that a man had the right to beat his wife; but the judge thought differently, and therefore fined the brute, and put him under bonds to keep the peace.

The Rev. Toney Proctor, a free colored man and a preacher, died at Tallahassee, Fa., on the 16th ult., aged 112 years. It is said he was at the battle of Quebec, as the servant of an English officer, in 1759—a fact he distinctly recollected. He was, at the beginning of the revolutionary war, in the vicinity of Boston, at the time the tea was thrown overboard; and afterwards at the battle of Lexington. He went to Florida long before the change of flags, and settled in St. Augustine, whence he purchased his freedom, married, and reared a large family.

Cist's *Advertiser*, Cincinnati, estimates the wheat crop of this year in the United States, at one hundred and eighty-five millions of bushels! Of this mountain of breadstuffs, Ohio yields forty, Pennsylvania eighteen, Virginia thirteen, New York fifteen, Illinois twenty, Indiana fifteen, Michigan nine, Wisconsin eleven millions of bushels each. Alabama yields less than two millions; Kentucky, Missouri and Tennesee yield six millions each. The proportion of Georgia, South Carolina, New Hampshire and Massachusetts is not given.

The whole number of pairs of boots manufactured in Lynn, from June 1854 to June 1855, was 3,274,893; shoes, 6,000,700; total, 9,275,593 pairs! Number of males employed in said manufactures, 4,545; females 5,476. Total employed, 11,021. Total value of boots and shoes manufactured, $4,165,529 28. Micajah C. Pratt is the largest manufacturer in the city, his business for the year being as follows: 150,000 pairs boots; 150,000 pairs shoes, valued at $180,000.

It seems that housekeepers who wash their silver ware with soap and water, as the common practice is, do not know what they are about. The proprietor of one of the oldest silver establishments in the city of Philadelphia, says that "housekeepers ruin their silver by washing it in soap-suds—it makes it look like pewter. Never put a particle of soap about your silver—then it will regain its original lustre. When it wants polish, take a piece of soft leather and whiting, and rub it hard."

In Spain's reply to the Pope, with respect to the release from mortmain of the lands of the clergy, the government sets forth the grave reasons which have made it necessary; and, opening the history of Spain, shows one by one the cases in which her most Catholic kings, those most friendly to the papal see, have proceeded without its consent to dispose of ecclesiastical property, without Rome's having thought proper to break off her relations with Spain.

The San Francisco *Herald* recently stated that Mr. Silas Burrows, just returned from Almira, was an eye-witness to the execution of thirty-five rebels at Canton, in March last. In the New York papers, this number was increased to thirty-five hundred—and the Columbus Post, of Monday, gravely announces that Mr. Burrows witnessed the barbarous execution of thirty-five thousand rebels!

Returns from 384 towns in Maine shows the following result: whole number of votes 104,214, of which Morrill, Republican, had 48,704; Wells, Dem., 45,229, and Reed, Whig, 10,281. It has not been ascertained that a single Republican Senator is chosen. The House stands 61 Republicans, 67 Democrats, and 21 Whigs, with two Districts to hear from, which have probably chosen Democrats.

Several persons, some of whom were said to be members of the Nebraska Legislature, recently attempted to oust a squatter, named Davis, who barricaded his log-house. A battle then ensued, and firearms were freely used. A man from Iowa, named Goss, was killed; another named Purple, had his arm broken, and two others were wounded. The wife and children of Davis, it is reported, were killed.

A dispatch dated Chicago, Friday, Sept. 21, says: A libel suit has been instituted at Milwaukee against Judge Hubbell of the Second Judicial Circuit Court, by the editor of the Daily News of that city, on account of a statement alleged to have been made by the Judge that Attorney-General Caleb Cushing offered him a bribe of $5,000 in the land case of "Hungerford against Cushing." The suit is brought by Mr. Cushing's attorneys.

A dispatch dated New Orleans, Friday, Sept. 21, says: The Yellow Fever is here no longer considered epidemic. The number of deaths by it during the present week will not equal those from other causes. The deaths by fever at the hospital for the past week were only forty-four, which is a gratifying reduction as compared with the previous six or eight weeks.

A dispatch dated Racine, (Wis.) Saturday, Sept. 22, 1855, says: The brigs Black Hawk, and Young America came in collision at abont 3 o'clock this morning, near this place. The Young America went down almost immediately, with a cargo consisting of about 17,000 bushels of corn, bound from Chicago to Oswego. She was owned in Oswego. The crew were all saved.

Barnum gives notice of baby shows in Lowell, Worcester, Providence, Hartford, Conn., Pittsburg, Penn., Chicago, St. Louis, Louisville, and all the large cities in the United States and Canada as soon as arrangements to that end can be perfected; and Josiah Perham announces that henceforth he will hold a colored baby show in each town, and on the same date as Barnum and Col. Wood hold theirs.

It has been proposed by several gentlemen who own slaves in Kentucky, that they (the slaveholders) hold a convention at Frankfort, to adopt some plan for the abolition of slavery, and that Hon. W. H. Luke of Pendleton county, a slaveholder, be appointed by the friends of the convention to draw up a proposition for its gradual abolition.

The Troy (N. Y.) *Times* says that potatoes are selling in Saratoga at twenty-five cents a bushel. A farmer who disposed of a quantity at this price declared himself quite fortunate, as he thought that in a very short time potatoes would be selling at one shilling a bushel.

There is a whale ship now lying at the wharf, says the Nantucket Inquirer, which has just accomplished her third voyage into the Pacific, to which she was fitted as a whaler, and she has made already, clear to her owners, over and above an interest account, the snug little sum of $80,000.

A dispatch dated New Orleans, Friday, Sept. 21, says: Four stores on Charles-street, in this city, were destroyed by fire last night, and the "Bee" newspaper office was considerably damaged. The loss is estimated at $60,000. Two men were badly injured during the fire.

A short time since, Mr. W. R. Elliott, of Detroit, leaped out of his bed-room window in the night, while sleep-walking, on the pavement below, a perpendicular distance of thirty-five feet. Strange to say, no bones were broken nor was he seriously injured.

A dispatch dated New Orleans, Wednesday, Sept. 19, 1855, says: Advices from Canton, Miss., state that there are now one hundred and seven cases of yellow fever in that place, out of a population of only three hundred and eighty-eight. The number of deaths thus far has been twenty-nine.

A witness in a liquor case in Manchester, Mass., the other day gave the following testimony: "Sal Soda is ice and water and some stuff squirted into it from a concern. Don't know whether it is intoxicating or not; it makes one feel good—feet lift easier."

There is said to be a woman in one of the towns near Boston, who is only twenty-six years of age, who a year ago weighed three hundred and thirty pounds, and at the present time will probably come full up to three hundred and fifty pounds.

A hog, which has been running wild in the woods, in the westerly part of Woburn, Mass., for a year or two past, was killed on Thursday last by Mr. Sullivan Pierce, of that town. The animal had tusks several inches in length, and weighed about 125 pounds.

A Mr. Ragers Bagley, 107 years old, has purchased 160 acres of land in Minnesota territory, on which he designs settling. He is said to be still in the enjoyment of excellent health, and one of the most active and industrious men in the territory.

At a wedding party given near Danceyville, in Haywood county, Penn., a few days ago, forty-five of the guests were poisoned. One man is dead, and several other persons are not expected to recover. The poison was contained in some of the ingredients of cake used on the occasion.

The ages of the bishops of the church of England and Ireland are given in the Church and State Gazette. Fifteen of the number have exceeded the limits of three score and ten; while four of them have reached beyond four score. The oldest is 85, the youngest 44.

A dispatch dated Pittsburg, Thursday, Sept. 20, 1855, says: Last evening two freight trains on the Pennsylvania Railroad, near Altona, came in collision. A fireman named Wilhelm jumped off the engine and was killed. No one else was hurt.

The Ithaca papers speak of a man named Shirts, of the town of Dryden, in that county, who lost his wife on Friday and was married on Sunday, in season for the second wife to attend the funeral of the first.

A dispatch dated Salisbury, Conn., Sept. 20, says: We had in our vicinity a very heavy frost this morning, which will probably do some injury to late sown buckwheat and give us some unsound corn.

A train of twenty-one passenger and two baggage cars passed over the New York Central Railroad one day last week—being probably one of the largest, if not *the* largest, regular trains on record.

One man has been fined $20 and costs, in New Haven, Ct., for cruelty to a horse; another, for cruelty to animals, has been sent to jail for thirty days, in addition to fines.

At the late term of the Superior Court for Litchfield Co., Ct., twenty-six persons were divorced from each other.

A Catholic priest has been imprisoned at Chicago for drunkenness, and a Protestant minister arrested for horse stealing.

Experiments are being made with balloons at Vincennes, France, for the purpose of testing a plan for dropping shells and carcases upon the Russian shipping and magazines. The balloon is to be sent up when the wind is favorable, and is to carry up carcases and 12 inch shells, which are to be fired by electricity and dropped upon the objects of attack.

The late Thomas P Cushing, of Boston, left the munificent sum of $150,000 to the town of Asburnham, Worcester Co., to endow two seminaries of learning, to be located in Asburnham, the one for males, and the other for females over ten years of age.

Hon. Henry A. Wise has fitted up his dwelling-house, barns, and every other place of shelter, and invited thither the afflicted people of Norfolk and Portsmouth, Va., assuring them a most cordial welcome.

The Lockport *Courier* says that for the last three nights that vicinity has been visited by frost, and considerable damage has resulted therefrom. It learns that along the Lake Shore, and on all the low lands in that vicinity, the corn and buckwheat have been seriously injured.

There is said to be a good deal of suffering among the Sioux Indians, on account of the decrease of game, and their slothful disposition, which renders them indisposed to agricultural pursuits. The U. S. Agent has no money to expend for the their relief.

A Massachusetts paper, in reference to the silly cry of "potato rot," started by speculator forestallers, says that if half the potatoes now in the ground should rot, there would be more than enough left to supply the demand.

During the last five months, no less than eleven Postmasters in Ohio have been arrested, and held to answer, for robbery of money letters. More complaints, it is said, have been made from Ohio to the Department at Washington, than from any other State.

A dispatch dated Boston, Saturday, Sept. 15, says: While Mr. John M. Folsom, cattle dealer, was purchasing a railroad ticket for his home in Newburyport, he had his carpet-bag, containing $4,000 in bank bills, stolen. The theif made good his escape.

It is stated that contracts have been made for the introduction, this year, into the island of Cuba, of a large number of African slaves. One party alone has contracted for the supply of seven thousand. Portuguese agents, it is said, are now in New York, making the necessary arrangements.

The St. Paul's (Minnesota) *Democrat* of the 6th inst., states that there had been a bloody battle between the Sioux and Half Breed Chippewas, in which nineteen Sioux were killed and about sixty wounded, and several of the Chippewas also killed and wounded.

Hon. George S. Boutwell, late Governor of Massachusetts, has been appointed State Librarian and Secretary of the Board of Education, in place of Rev. Barnes Sears, D. D., the newly elected President of Brown University.

A dispatch dated New Orleans, Friday, Sept. 21, says: The yellow fever is making terrible ravages at Natchez, Vicksburg and Waterproof. At the latter place nearly all the inhabitants are sick with it.

Gov. Price, of New Jersey, has issued a Proclamation, setting apart Thursday, the 4th of October, as a day of Thanksgiving to Almighty God, for the continuance of public health, with abundant harvest. etc.

A dispatch dated Baltimore, Wednesday, Sept. 19, says: Four floors in one of Haxall's mills at Richmond, fell on Tuesday morning, carrying down 20,000 bushels of wheat. The loss is estimated at 10 to $20,000.

A dispatch dated Oswego, Saturday, Sept. 15, says: By reliable data it is ascertained there are now 364,000 bushels of wheat and about 100,000 bushels of corn afloat from Upper Lake ports, bound here.

On Mount Washington, the highest peak of the White Mountains in New Hampshire, a young lady is reported to have frozen her face on the 17th of August. Ice formed there that morning to considerable thickness.

Eli Thayer, of Worchester, Mass., is about to go to Maine, to organize a colony of lumbermen for Kansas. He says "they are the strongest and bravest men on this continent—the Highlanders of America."

The yellow fever has carried off one thousand six hundred and forty-nine of the unacclimated portion of the population of New Orleans in nine weeks of the present season.

A dispatch dated Chicago, Saturday, Sept. 22, says: Cholera has broken out in a malignant form in Kansas, opposite St. Joseph's, Missouri.

The number of baskets of peaches received in New York, a recent Tuesday, was between 40,000 and 50,000—all from New Jersey.

During the last five years the British Wesleyan Connection has decreased 100,000 members.

At the instigation of the Russian government, Persia has suppressed all her Protestant schools.

During the last year, the income of the Methodist Episcopal Church South was $396,458.

The latest news from the afflicted cities of Norfolk and Portsmouth indicates that the fever is slowly decreasing.

Every Reader

WILL PLEASE NOTICE THE ADVERTISEMENT headed *The Great Book of the Year*, and send for a full descriptive Catalogue of all our Illustrated Works.

☞ To the *uninitiated* in the great art of selling books, we would say, that we present a scheme for money making, which is far better than all the gold mines of California and Australia.

☞ Persons desirous of selling any one Work alone, and canvassing a certain section of country, or several Counties, will please confer with the subscriber, who will cheerfully answer every letter, as far as possible, on the day of its reception. Address,

ROBERT SEARS, Publisher,
181 William-st., N. Y.

MARRIED,

At New Market, N. J., on the evening of Sept. 23, by Rev. H. H. Baker, Mr. JOHN W. BENSON to Miss MARY ANN MALANIPHY, all of the city of New Brunswick.

In Berlin, Rennselaer Co., N. Y., by Schuyler Green, Esq., Mr. ALMON W. RHODES, of East Albany, to HANNAH SAUNDERS, of the former place.

In Newstead, Genesee Co., N. Y., on the 15th inst, by Eld. Rowse Babcock, Mr. WILLIAM GETTY to Mrs. CATHARINE BATES, both of the above place.

In Alden, Erie Co., N. Y., on the 18th inst., by Eld. Rowse Babcock, Mr. FRANKLIN BABCOCK, of Clarence, (son of Eld. Rowse Babcock,) to Miss KATIE O. HOUSE, of Alden.

In Clarence, Erie Co., N. Y., on the 18th inst., by the same, Mr. HENRY H. CLARKE, of Darien. to Miss ARINOE BABCOCK, of Clarence, daughter of Eld. Rowse Babcock.

At the same time and place, and by the same, Mr. LYMAN C. CLARKE, (brother of H. H. Clarke above,) to Miss LAURA E. BABCOCK, of Clarence, daughter of Eld. Rowse Babcock.

In Westerly, R. I., Sept. 16th, by Rev. Wm. Stowe, THOMAS V. STILLMAN to SARAH E. VINCENT, daughter of Joseph R. Vincent.

In Clarkville, Madison Co., N. Y., Sept. 19th, by Eld. J. Clarke, Mr. GEO. W. HOLMAN, of Clayville, Oneida Co., to Miss BARBARA M. CLARKE, of the former place.

DIED,

In Plainfield, N. J., on the morning of the 14th inst., Miss RHODA DRAKE, aged 62 years. She has, for many years, been an exemplary and useful member of the Seventh-day Baptist Church. Her life has been devoted to usefulness in the cause of the Redeemer, and very many have been made to realize the value of Christian kindness as ministered by her. She has lived many years in the family of Dea. Randolph Dunham, where many in the denomination have made her acquaintance and enjoyed the generous hospitality of the family in which she bore a willing part. She was universally beloved in life and is lamented in death. She died in hope. GDM.

In Lincklaen, Sept. 15th, of *dysentery*, FREDERICK WENDALL, infant son of Schuyler and T. Amanda Olin, aged 8 months and 26 days. "Suffer little children to come unto me, and forbid them not, for of such is the kingdom of Heaven."

LETTERS.

L T Rogers, Eliz M Osgood, Wm C Tanner, D E Maxson, W B Gillett, J C Bowen, L H Davis, David C Long, Martha Saunders, Clark Sherman, Rowse Babcock, J Clarke.

The Diadem is a strictly moral and religious work—designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address Z. P. HATCH, Publisher, 9 Spruce street, New York. May 24—3m.

New Market Seminary.

This Seminary will re-open on the 12th of September, with Mrs. R. H. Whitford, as Preceptress.

This Institution is located in a pleasant section of country, and has a commodious and well arranged building, and is designed to furnish every facility and advantage to the student found in other institutions of this class.

Board for students may be had in families at one dollar and seventy-five cents per week, where all their wants will be kindly cared for. Tuition from $3 to $5 per term, according to the studies pursued. Music, with use of Piano, $10 00.

I. H. DUNN, Sec. of Board of Trustees.
NEW MARKET, N. J., August 26, 1855.

State of New York,

SECRETARY'S OFFICE, Albany, August 25, 1855.—To the Sheriff of the County of New York: Sir—Notice is hereby given, that at the General Election to be held in this State on the Tuesday succeeding the first Monday of November next, the following officers are to be elected, to wit:

A Secretary of State in the place of Elias W. Leavenworth;

A Comptroller in the place of James M. Cook;

An Attorney-General in the place of Ogden Hoffman;

A State Engineer and Surveyor in the place of John T. Clark;

A State Treasurer in the place of Elbridge G. Spaulding;

A Canal Commissioner in the place of Frederick Follett;

An Inspector of State Prisons in the place of Darius Clark;

A Judge of the Court of Appeals in the place of Addison Gardiner;

All whose terms of service will expire on the last day of December next.

Also, a Judge of the Court of Appeals in the place of Charles H. Ruggles, Resigned;

Also, a Justice of the Supreme Court for the first Judicial District, in the place of Edward P. Cowles, whose term of office will expire on the last day of December next;

Also, a Senator for the Third, Fourth, Fifth, and Sixth Senate Districts, in the place of Thomas J. Barr, Thomas R. Whitney, Mark Spencer and Erastus Brooks, whose term of office will expire on the last day of December next.

COUNTY OFFICERS ALSO TO BE ELECTED FOR SAID COUNTY.

Sixteen members of Assembly;

A Sheriff in the place of John Orser;

A County Clerk in the place of Richard P. Connolly;

Four Coroners in the places of Robert Gamble, Joseph Hilton, Hieronymus N. Wilhelm, and William O'Donnell;

A Comptroller in the place of Azariah C. Flagg;

A Street Commissioner in the place of James Furey;

A Commissioner of Repairs and Supplies in place of Bartholemew Purdy;

Two Governors of the Alms House in the place of Patrick Henry add John J. Herrick;

City Inspector in place of Thomas K. Downing.

A Counsel to the Corporation in place of Robert J. Dillon;

Two Justices of the Superior Court in the place of Wm. W. Campbell and Murray Hoffman;

A Justice of the Marine Court in place of Chas. E. Birdsall;

A Police Justice for the Sixth Judicial District in the place of Geo. W. Pearcy;

A Judge of the Court of Common Pleas in the place of Lewis B. Woodruff.

Yours respectfully,
E. W. LEAVENWORTH, Secretary of State.

SHERIFF'S OFFICE, New York, August 28, 1855.

The above is published pursuant to the notice of the Secretary of ~~State and the~~ requirements of the statute in such case made and provided.

JOHN ORSER,
Sheriff of the City and County of New York.

☞ All the public newspapers in the county will publish the above once in each week until the election, and then hand in their bills for advertising the same, so that they may be had before the Board of Supervisors, and passed for payment. Sep—13.

Farm for Sale.

THE House and Farm lately owned and occupied by James Hubbard, in Scott, Cortland Co., N. Y., are now offered for sale, on reasonable terms. The House is a large two-story house, nearly new, and well arranged to accommodate a large family. The Farm consists of about thirty-six acres of good land, most of which is under good cultivation and is well watered. There are about fifty trees of choice grafted fruit in good bearing condition. It is situated in an industrious and moral community, enjoying all the advantages of schools, meetings, and markets, necessary to make it a pleasant home.

Apply to A. D. C. Barber, or J. N. Pratt. 4t-9.

Farm for Sale,

CONTAINING about 100 acres, with a fair proportion of woodland, a small orchard of grafted fruit, and a comfortable dwelling and outhouses. It is situated about four miles north of Westerly, R. I., and within a mile of each of the flourishing manufacturing villages of Potter Hill and Ashaway. There are several other manufacturing establishments near, affording a ready market, in the immediate vicinity, for every species of produce. It is convenient to the first Hopkinton Church, as well as to the very excellent male district school.

It will be sold with or without the stock and farming implements, and possession given the ensuing winter or spring, if desired. To those wishing to secure a quiet home in an enterprising neighborhood, and surrounded by such comforts as can only be found in an old settled and thickly populated country, this affords an opportunity seldom offered. For terms and other particulars apply to the subscriber on the premises, or address JOHN E. POTTER, No. 15 Sansom-st., Philadelphia, Pa. BENJAMIN POTTER, Ashaway, R. I.

To Persons out of Employment.

The Great Book of the Year!

From the Editors of the Philadelphia Post.—"We think we may safely pronounce this to be the most thorough and valuable work on the Empire of Russia that has yet appeared in the English language."

From the Editor of the American Philadel. Courier.—"Truly a valuable Work—the great Book of the day."

Send for one copy and try it among your friends.

WORK FOR ALL AND, WORK THAT PAYS,

In selling, in every County in the United States—our new work on the "RUSSIAN EMPIRE," and other popular PICTORIAL WORKS. Terms, Catalogues, and Canvassing Circulars, forwarded free of postage, on addressing, ROBERT SEARS, Publisher, 181 William-st., New York.

☞ SEND FOR ONE COPY. Single copies of the Work on "RUSSIA," (the most elegant and useful Volume of the Year,) carefully enveloped in stout paper, and forwarded at our risk and expense to any Post-Office, on the receipt of the Retail Price, THREE DOLLARS. Early application is necessary to secure the most beautiful and perfect copies.

☞ PERSONS WISHING TO ACT AS AGENTS, and do a safe business, can send for a specimen volume, and a well-bound Subscription Book, (price of both $3 25, sent free of postage,) and obtain from one to two hundred subscribers, to be delivered at a certain time to be agreed on, say in thirty or forty days from the time of signing. Address as above. R. S.

Ahead of all Competition.

In press, and will be published on the 20th of September.

FLEETWOOD'S LIFE OF OUR LORD AND SAVIOUR JESUS CHRIST, together with lives of the Holy Apostles and Evangelists, and a History of the Jews. The whole carefully revised with additions by the Rev. JOSEPH BELCHER, D. D.

Determined to furnish agents and their patrons with books of sterling merit, we are about issuing, in connection with our popular History of all Religious Denominations, a new edition of the above fine old work. It will contain about 700 pp. uniform in size and type with the latter, and will be handsomely illustrated by engravings. Copies have been procured from England and Scotland, and carefully collated by the above eminent divine, with those published in this country. Many fine omitted passages have thus been restored, the manifold mistakes of successive printers have been corrected, and we shall now have the pleasure of placing in the hands of canvassers *the most correct edition in existence of this admirable work*. For terms and other particulars address either of the

AMOS R. CORNWALL, A. B., Prof. Mathematics.
Miss JOSEPHINE WILCOX, Preceptress.
Mrs. SARAH E. JONES, Mrs. BARBARA A. CORNWALL, Miss SARAH E. SHIPPEY, Miss JANE C. BURDICK, Assistants in Female Department.

For further particulars, address, Henry L. Jones, Principal; W. D. Wilcox, President; J. B. Wells, Secretary; or C. H. Maxson, Treasurer, De Ruyter, Madison Co., N. Y.

Michigan Southern Railroad Line.

TRAVELERS for Chicago, St. Louis, Kansas, and all points West and Southwest, can obtain through tickets, and all information concerning routes, fare, &c., either by the New York and Erie Railroad, or the New York Central Railroad, by application at the Company's Office, No. 192 Broadway, corner Dey-st., to JOHN F. PORTER, General Agent.

Central Railroad Company of New Jersey.

NEW YORK, SOMERVILLE, EASTON, &c. *Spring Arrangements*, commencing April 2, 1855: Leave New York for Easton by steamers RED JACKET and WYOMING, from Pier No. 2 North River, at 8 A. M., 1 and 4 P. M. For Somerville, (way,) at 5.30 P. M.

The above trains connect at Elizabethtown with trains on the New Jersey Railroad, which leave New York from foot of Courtlandt-st. at 8 A. M., 1, 4 and 5 P. M.

Returning—leave Phillipsburg (opposite Easton) at 6 and 9.45 A. M. and 3 P. M.; Somerville (way) at 6 A. M.

New York and Elizabethport.

Leave New York at 8 and 10 A. M., 1, 4 and 5 P. M.
Leave Elizabethport at 7.15 and 9.10 A. M., 1, 3.15 and 6 P. M. JOHN O. STERNS, Superintendent.

New York and Erie Railroad.

ON and after Monday, May 7, and until further notice, Trains will leave the pier foot of Duane-st., New York, as follows:

Dunkirk Express at 6 A. M. for Dunkirk.

Buffalo Express at 6 A. M. for Buffalo.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Accommodation at 12¼ P. M. for Port Jervis and intermediate stations.

Rockland Passenger at 3 P. M. (from foot of Chambers-st.) via Piermont, for Suffern and intermediate stations.

Way Passenger at 4 P. M. for Newburgh and Otisville and intermediate stations.

Night Express at 5¼ P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train. at 5¼ P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c., and with first-class splendid steamers for all ports on Lake Erie.

D. C. McCALLUM, General Sup't.

Miscellaneous.

Chinese Banking.

It is well known that paper money has been for centuries used in China, and treatises on the ancient practice have appeared by European Chinese scholars; but in a paper read not long ago before the Asiatic Society, by Mr. Alcock, "On the Paper Currency and Banking System of Fuh-chow-foo," there is to be found, for the first time perhaps, a detail of the practical working of the system, by one who has been placed in a position to see its action and results.

It appears that the government system of paper-money, from various causes, more especially the bad faith of the rulers and want of confidence in the people, gradually grew out of use more than two centuries ago, and no attempts were made to revive it; but the Chinese people, seeing the real value of the expedient, have kept it among themselves as a regular trade, depending only on the personal credit of the parties exercising it, without any support or guarantees of the authorities. A want of uniformity of system necessarily follows from this; and the paper of one part of the country will be of no use in a distant quarter. The description of the trade of Fuh-chow-foo, therefore, will be found to suit exactly that place only. It is understood that, until within a recent period, the paper-money of Fuh-chow-foo was merely a plan by parties known to each other, of giving notes of hand when cash was scarce, and these notes were taken only by such parties; that it was not until some considerable interval had elapsed that issue of such notes became a separate occupation; and until about fifty years ago the trade was small. At that period it began to grow into favor. By 1815 notes of all amounts were in circulation, and paper is now nearly the sole circulating medium of the entire province, the native coin being almost wholly superseded. The perfectly unrestricted way in which any one may issue notes, has at times led to an over-issue and consequent depreciation; but the great competition resulting has had on the whole a good effect, and, by giving the public a choice out of a large number, it has confined all transactions of any considerable amount to parties in whom confidence could be placed. From the nature of the security, these banks cannot assist the merchant in the remittance of money to any distant places, nor do they take money in deposit for making payments by cheque. They will take deposits, paying interest at nine and a half per cent. but only as a personal favor; and they require the whole of the deposit to be retained or withdrawn in one amount.

This does not appear, however, to be the case in the more northern provinces. The banking establishment in the city and suburbs are reckoned by hundreds; but the number of those of any stability is about thirty, with capitals varying from half a million to upwards of a million dollars each. This wealthy class forms a distinct body, which by coöperation, regulates the market. Their notes are very rarely below par; they pass current with all parties, and are readily cashed by any of the body. These bankers keep some twenty men in their general employ, whose business it is to attend the markets and report to their employers every thing that is passing; and the bankers, upon their reports, determine the relative prices of notes, bullion, and dollars.

A considerable part of the business of the bankers is the refining silver for payment of taxes to the government, which must always be done in ingots of a certain size and purity; and a pretty large per centage is allowed them for this trouble. They also realize a good profit by making similar payments to the custom-house for merchants, when required to be made in the same way. Another source of profit is derived from the pawnbrokers' shops, which are very numerous in China. These establishments receive a high interest for their loans, and they generally refuse any thing in payment but copper cash and bank notes; and each shop has its own banker, whose notes alone it will receive. Such a connection is obviously profitable; and no banker can carry on a large trade without one. Some bankers have pawnbroker shops of their own; and one is known to have opened five in different parts of the city. Bankruptcies are very rare, and are almost confined to the smaller banks; they are usually settled by private arrangement, without reference to the authorities; and the defaulters have in most instances paid 50 to 60 cents on the $1. Forgery is seldom practised, and only for small notes. The highest punishment is transportation to the distance of 1000 miles; but it is more usually imprisonment or corporeal castigation. In one instance, a notorious forger, who had been several times prosecuted, was taken into the pay of the body, and was found a very effective instrument in detecting the impositions of others. The bank notes are longer but much narrower than ours. They are surrounded by an elaborate border, studded with sentences recommendatory of the firm, which give them a pretty appearance. They are usually printed from copper-plate, but some of the smaller banks find it more economical to use the ordinary wooden blocks. They represent copper cash, dollars, or specie, and vary in value from about $4 each, to above $500.

Newton as a Lover.

It appears, from Sir David Brewster's Life of Sir Isaac Newton, just published, that the great philosopher, at the ripe age of sixty, made proposals of marriage to a widow. The lady was the widow of Sir William Norris, who died in 1702. The following is Newton's philosophical way of popping the question:—

"Madam, your ladyship's grief at the loss of Sir William shows that if he had returned safe home, your ladyship would have been glad to have lived still with a husband; and, therefore, your aversion at present from marrying again can proceed from nothing else than the memory of him whom you have lost. To be always thinking on the dead is to live a melancholy life among sepulchres, and how much grief is an enemy to your health is very manifest by the sickness that it brought when you received the first news of your widowhood. And can your ladyship resolve to spend the rest of your days in grief and sickness? Can you resolve to wear a widow's habit perpetually—a habit which is less acceptable to company, a habit which will be always putting you in mind of your lost husband, and thereby promote your grief and indisposition till you leave it off? The proper remedy for all these mischiefs is a new husband; and whether your ladyship should admit of a proper remedy for such maladies, is a question which I hope will not need much time to consider of. Whether your ladyship should go constantly in the melancholy dress of a widow, or flourish once more among the ladies; whether you should spend the rest of your days cheerfully or in sadness, or in health or in sickness, are questions which need not much consideration to decide them. Besides that, your ladyship will be better able to live according to your quality by the assistance of a husband than upon your own estate alone; and, therefore, since your ladyship likes the person proposed, I doubt not but in a little time to have notice of your ladyship's inclination to marry, at least, that you will give him leave to discourse with you about it. I am, Madam, your ladyship's most humble and most obedient servant."

The Author of "Jane Eyre."

From Sharpe's London Magazine.

The following particulars, obtained from a private, and, we believe, authentic source, though we do not pledge ourselves to their accuracy, may not prove unacceptable to our readers:—

On the northern side of one of the wildest and bleakest moors of Yorkshire stands the little village of Haworth, consisting of a church and a few gray stone cottages. One of these, scarcely superior to its fellows, and distinguished only by a sort of court-yard, surrounded by a low stone wall, and overgrown with grass, (shrubs and flowers refusing to generate in so ungenial an atmosphere,) is the parsonage. The architecture is of the simplest description—a straight walk leads up to the front door, on either side of which appears a window, that of the sitting-room looking into the church-yard, well filled with gravestones. On this parsonage, until within a few months since, not a touch of paint nor an article of furniture had been expended for thirty years, the period which had elapsed since the death of Miss Bronte's mother. Some six or seven years antecedent to that date, an Irish clergyman, Rev. Patrick Bronte, then resident at Penzance, espoused a young lady, contrary to the wishes of her relations, who refused to hold any further intercourse with her after her marriage. Her husband, obtaining the perpetual curacy of Haworth, took his bride to his new residence, where they spent the remainder of their days, she dying in a rapid consumption, after the birth of her sixth child, Charlotte. Mr. Bronte, who, though advanced in years, is still alive, is described as a man of studious and solitary habits, and of a singular and highly eccentric turn of mind, which, together with a peculiar temper, must have rendered him anything but a suitable guardian to a youthful family. Nor can we wonder at the mother's dying exclamation, "What will become of my poor children?" Engrossed by his own pursuits, the father never even dined with his family nor taught them any thing, and the children learned to write and read from servants only. When Charlotte was 12 years old she (even then of an original and self-reliant nature) asked and obtained her father's permission that her sisters and herself should be placed at the clergy-school at Cowan Bridge. This, as it then existed, she has described to the life in "Jane Eyre." Two of her sisters died of the fever which at one time devastated the school; the two others, and probably Charlotte herself, quitted it with the seeds of consumption in their constitution, fostered by the cruel privations they underwent. The food was horrible, and of it, bad as it was, they obtained so little that often they were literally half starved. Frequently has she "crept under the table to pick up the crumbs others had dropped." At the time of the fever the doctor examined the food, he put some in his mouth and hastily rejected it, protesting it was not fit for dogs. "So hungry was I," said Charlotte, "that I could have eaten what he threw away." The three survivors returned to Haworth with broken health; but there fresh trials awaited them. "At nineteen," continued Charlotte, "I should have been thankful for a penny a week." I asked my father; but he said, "What do women want with money?" She was yet only nineteen when she advertised for and obtained a situation as a teacher in a school; not finding it turn out as she had hoped, she waited until she had saved money enough to pay her passage to Brussels, where she had secured a position as school teacher—she started alone, never having previously quitted Yorkshire. When she arrived in London it was night; she became alarmed, and not knowing where to go, and fearing to trust herself to strangers, she took a cab, drove to the Tower stairs, hired a boat and was conveyed to the Ostend packet. At first the officer in command refused to take her on board till the next morning, but on learning her desolate situation recalled his prohibition. In Brussels she remained two years, her experiences there are detailed in *Villette*. The character of Adele, in particular, is drawn from life. On her return she found that the health of her two remaining sisters was declining, and that her father's eyesight was becoming affected, and she considered it her duty to remain at home. She tried various ways of increasing their income, but failed in all. Without mentioning her project to her father, she wrote "Jane Eyre" a work of which Messrs. Smith and Elder had the good sense to perceive the merits, and were courageous enough to publish it. in spite of its peculiarities, which might have alarmed any but a really spirited publisher. About three months after the appearance of her novel, and when its success was no longer doubtful, Miss Bronte resolved to screw up her courage, and inform her father of the step she had taken. Mr. Bronte, it appears, did not then join his family, even at meal times. At dinner Charlotte announced her intention to her sisters, adding that she would put it in execution before tea! Accordingly, she marched into the study with a copy of her work, wrapped up in a review of it, which she had received, and the following conversation ensued:

"Papa, I have been writing a book!"

"Have you, my dear?"

"But, papa, I want you to look at it."

"I can't be troubled to read manuscript."

"But it is printed."

"I hope you've not been involving yourself in any such silly expense?"

"I think I shall gain some money by it; may I read you some reviews of it?" She read the reviews, and again asked him if he would look over the book; he said she might leave it and he would see—later on that same evening he sent his daughter an invitation to drink tea with him. When the meal was nearly concluded, he said: "Children, Charlotte has been writing a book, and I think it is a better one than I expected." For some years he never mentioned the subject again.

A lady, who afterwards became intimate with Miss Bronte, thus describes her first introduction to her: "I arrived late at the house of a mutual friend, tea was on the table, and behind it sat a little wee dark person, dressed in black, who scarcely spoke, so that I had time for a good look at her. She had soft, lightish brown hair, eyes of the same tint, looking straight a you, and very good and expressive; a reddish complexion, a wide mouth, altogether plain; the forehead square, broad, and rather overhanging. Her hands are like bird's claws, and she is so short sighted that she cannot see your face unless you are close to her. She is said to be frightfully shy, and almost cries at the thought of going among strangers."

Not Worth the Trouble.

"O! it's not worth the trouble to dress, I see only my husband." Then, madam, if your husband is not better worth pleasing than a host of "company," it is a pity you are married. Not worth the trouble to look better to him than his merest acquaintances. Not worth the trouble to surround yourself with every grace and fascination that you are capable of? Then if you are a neglected wife by and bye never complain, for it is your own fault; it was "not worth the trouble" to have a happy home.

"O! it's not worth the trouble;" says the nervous mother, snatching the implements of work from the hands of her awkward child; "not worth the trouble to teach her, I can do it better myself."

Can you? then how, if this is your method, will the child ever learn to become useful! If her timed services are not worth the trouble of teaching and correcting, how can you blame her if in after years she prefers to sit in the parlor, and leave the work to you? The instructor, who has not one tithe of the interest you should have in the child, thinks it well worth the trouble to impart to her a dozen different accomplishments; alas! that the mother should be more indifferent than a stranger.

It's not worth the trouble. How often the words are uttered! and with what sad consequences followed. The woman becomes the slatternly housekeeper, the daughter the insignificant pleasure seeker; friends are estranged because "it's not worth the trouble" to explain "that little difference" —and the influence of the spirit pervading such a decision is felt to the detriment of every walk in life.

Be careful, then, how you carelessly utter the words, "it's not worth the trouble."

[Olive Branch.

A Convent in Russia.

An English lady of nobility, in the year 1844, made the tour of Russia, and spent ten years there inspecting its people, observing the country, the manners and customs, etc., and on her return home she published a book entitled the Englishwoman in Russia. From one of the chapters of the work we take the following description of a Russian convent:

Among my acquaintance was the abbess of a nunnery in the province of Twer. Her reason for having embraced the sacred profession was one which we found common enough in Russia: Je n'avais pas de succes dans le monde, ainsi je me suis faite religieuse, was her candid confession. She was of high family, but the generality of those who thus devote themselves to a convent life are not of noble birth; indeed we are told that by so doing those who are of gentle blood lose their rank. We frequently went to pay her a visit, and were always received kindly and with true Russian hospitality; but as the monks and nuns of the Greek Church are forbidden to eat any kind of meat, they can only furnish their table with fish cooked in different ways, generally in oil, and with pastry, sweetmeats, and so on; and to confess the truth, I was not very fond of dining at the convent. The abbess was a lady well accustomed to the *politesse* of the world; it made no difference that I was a busermanca or heretic; she very politely took me over her establishment, and explained their mode of life; most of the nuns were either the daughters or widows of priests.

"Those young girls," said the superior, throwing open the door of a large apartment, "are the orphan children of priests; they are being brought up in the convent as the proper asylum for such. They are, as you perceive, very busy in embroidering the church vestments."

"But what becomes of them in after life, ma mere?"

"O," replied the abbess, "some of them are married off to young priests, for, of course you are aware that no pope can have a cure unless he be married. Those who have not a chance of becoming so settled remain in the convent, and when they are of a proper age they take the veil; but as no one can do so till she is forty, they hold the position of novices till then."

The young girls were all occupied in embroidery. One was making a chalice cover; it was about three-quarters of a yard square, of crimson velvet and pearls; in the middle was a resplendent cross, and the figure of a cherub with its wings spread, painted on some peculiar substance, was inserted at each corner. Another was engaged in ornamenting the collar of a robe with spangles and gold lace, with here and there the imitation of some precious stone. They seemed pleased at my admiration of their skill, and the abbess kindly offered to show me the wardrobe belonging to the Church, which she assured me had been made entirely by the inmates of the convent. On my expressing a great wish to see it, she led the way through a long corridor; we descended some stone steps, at the foot of which was a door, which my friend opened. Here I was shown into several rooms surrounded by immense clothes-presses and chests of drawers. Each was unlocked in succession, and innumerable suits of vestments were displayed to view. Some were of silver tissue with flowers of silk woven on it; others of silk with gold flowers, or of cloth of gold enriched with pearl embroidery. Each seemed to be more magnificent than the last, and the dresses were in such quantities that I thought the holy sister who accompanied us would never have finished opening and shutting the drawers. I inquired whether the splendid materials had been presented to the establishment. "Yes," answered the superior, "all these vestments are made out of the palls thrown over the coffins at rich funerals. After the interment they become the property of the church in which the deceased is buried, and are put to the use you see. Many of the dresses," continued she, "are, as you may perceive, very ancient; some of them were embroidered in the reign of Peter the Great, and others in the time of Anne and Elizabeth. But you have seen enough of these; would you not like to visit our infant school?" So saying, she opened a door on the opposite side and led the way through the church. There was an old nun standing before an image as motionless as a statue; she was rapidly repeating in a low tone some prayers in Sclavonic, and then prostrated herself several times and kissed the pavement. The superior smiled approvingly as we passed, and then informed me that it was sister Marie, "one of the most truly devout women in the convent, for no illness nor any other reason ever prevents her from performing her religious duties either night or day." By this time we had reached a moderately sized apartment, in which about twenty children were being taught to read by some of the nuns. They seemed happy and contented, and to all appearance were well treated; these were also children of priests. We afterwards visited some of the cells, which were very poorly furnished with a small mattress. a deal table, and one chair; we then proceeded to the refectory. It was their supper time, being five o'clock, for the nuns retire to rest at six, in order to be enabled to perform mass at two o'clock, A. M. The sisters were all seated at long tables, partaking of the mushroom-soup of which the Russians are very fond, but which is very distasteful to foreigners. We did not stay in the apartment, as we would not interrupt their repast.

Newspaper Literature in Prussia.

The Berlin correspondent of the Philadelphia *North American and Gazette*, in a recent letter to that journal, furnishes the following interesting particulars relative to the appearance and editorial conduct of the Prussian newspapers:—

Let me attempt to give your readers some idea of a Berlin newspaper. We will take as our example the journal which, everything considered—its good summary of news and its high literary character—stands at the head of the Berlin daily press. I mean the Berlinische Nachrichten, or the Berlin "News of State and Learned Matters." It is a small sheet, about twelve by eighteen inches in size, and bears a pretty vignette above its title, representing the Prussian eagle, with outstretched wings and crowned head, as usual, while below lies a sceptre, musical instruments and branches of laurel. Under the eagle appears the inscription, "With royal privilege." The journal, perhaps, never appears without one or more supplementary sheets, called Beilagen, yet the whole amount of paper is generally less than one of our penny "dailies" in our American cities. At the head of the first column one always finds a set of announcements, beginning "His Majesty the King, have most all-graciously designed" to appoint certain persons named to certain offices, to confer certain titles or decoration, or to give his consent to some of his subjects to receive and wear orders conferred upon them by the Sovereigns of other States. Here, too, we are informed of all the movements and journeys of the royal family, or of their august visitors. Then comes one or two political articles, always connected more or less directly, with the Russian war, the all-engrossing subject of political interest throughout Europe, and frequently a little cloudy and uncertain, like German diplomacy and politics in general.

Before the first editorial articles, we have, about twice a week, a report of the proceedings of Prussian Chambers. The Parliament does not assemble oftener than this, but in it more real work is done in the committees, and less breath expended in speeches, than in most bodies of similar character.

The leading editorials are followed by various items of news of Berlin first, then from other cities of Prussia, and afterwards from various countries of Europe, in regular order. The next place is occupied by telegraph despatches, followed by financial and commercial intelligence. Then come advertisements, and the American will be struck with the great number of announcements of public amusements of various kinds.

In the "Beilagen" we have further summaries of foreign news, and a variety of local city items, notices of new books, criticisms of works of art, concert and the theatrical entertainments, foreign correspondence, &c. Instead of the connected lists of marriages and deaths which we find in American journals, the German papers publish such and similar announcements separately in the form of advertisements, and paid for accordingly. I give a few specimens of the various kinds of such announcements:—

Betrothal Notice.—The Betrothal, which took place on the 12th of this month, of our eldest daughter Anna, with the Machine factory owner, Mr. Hermann Paucksch, we have the honor hereby to announce very respectfully to all friends and relatives in place of any more particular notice.

The Preacher and School Inspector, Schroeter, with his wife:—

In place of any more particular notice, recommend themselves as betrothed.

Anna Schroeter,
Hermann Paucksch.

Confinement Notice.—Last night was my dear wife, born von Liebeherr, easily and happily delivered of a healthy daughter, I have the honor thereby to announce this respectfully to my relatives and friends, in place of further notice. Carl Von Brantz,

Captain of the 1st Guard Reg. of Foot.

Notices of Deaths.—Yesterday evening softly fell asleep my warmly loved Grandmother, Herrietta Chevalier, born Krack, in the arms of her true sister the Frau Dorethea Meyer, born Krack. She had left the 81st year of her life behind her. For silent sympathy for her loss, beg, Albert Lahdo,
Dorothea Meyer.

This noon at half past 1 o'clock, fell softly asleep our little Paul. We thank God, who vouchsafed to us for two years the possession of this dear child, and beg of our relatives and friends their silent sympathy.

Among the expressions for decease in these notices, we see often, "slept softly away to a better life," "slept over 'to that side,'" "departed thither," and the like. The notices are often couched in very significant and touching terms though sometimes less happy. In cases of weddings the married pair "recommend themselves" in the newspapers in terms similar to the announcements of betrothal.

I have seen in the Nachrichten several advertisements for a wife on the part of some disconsolate old bachelor; men "of good person and thriving business;" demanding the usual mixture or the amiable temper, good health, and good breeding. There was one curious advertisement also, for "female society," on the part of a man who represented himself as very much depressed by reverses of fortune, and in need of something to revive and cheer his spirits.

The Berlin press is by no means free from governmental trammels. The papers here are occasionally "warned," or a certain edition suppressed and confiscated, for the utterance of political opinions which are considered as dangerous. Yet the Berliners are always ready to assert the privilege of "free speech," and the press is much freer in Prussia than in Austria.

Apples, as an Article for Food.—With us, says the Albany *Journal*, the value of the apple, as an article of food, is underrated. Besides containing a large amount of sugar, mucilage, and other nutriment matter, apples contain vegetable acids, aromatic qualities, &c., which act powerfully in the capacity of refrigerants, tonics, and antiseptics; and when freely used at the season of mellow ripeness, they prevent debility, indigestion, and avert, without doubt, many of the "ills which flesh is heir to." The operators of Cornwall, England, consider ripe apples nearly as nourishing as bread, and far more so than potatoes. In the year 1801—which was a year of much scarcity—apples, instead of being converted into cider, were sold to the poor; and the laborers asserted that they could "stand their work" on baked apples, without meat; whereas, a potato diet required either meat or some other substantial nutriment. The French and Germans use apples extensively, as do the inhabitants of all European nations. The laborers depend upon them as an article of food, and frequently make a dinner of sliced apples and bread. There is no fruit cooked in as many different ways in our country as apples; nor is there is any fruit whose value, as an article of nutriment, is as great, and so little appreciated.

Baked Sweet Apples.—Wash well the apples; place them in a pan with a very little water that the juice may not burn, if they are to be cooked in a brick oven; then put the apples in a jar, cover them close, and bake them five or six hours. Sweet apples should be baked long after they are tender.

Baked Sour Apples.—Wash well the apples; place them in a pan; pour in a teacupful of water and one of sugar; bake them slowly till done. Eat them with cream and the juice which cooks from them.

Coddle Apples.—Take windfalls, or fall apples; wash them, and put half a peck into a preserving kettle; add half a cup of water, sweetened with a large cup of sugar, or half a cup of molasses. Cover them, and boil gently until tender.

The Working of Cows.—Why should not cows work for a living, as well as other females—animal and human? We were visiting a friend the other day, who owns a small farm, and manages it well; and in the course of our observations about his premises, he called our attention to a large calf, the largest one we ever saw at the early age of two days old. It was a beauty; we wanted also to see the cow that produced such fruit. He showed her to us; she was a good conditioned cow, but only of the ordinary size. He then remarked that the cow belonged to a yoke of cows, which, with two other cows, yoked, had done all his farm work for several years past—hauling wood, drawing stone, plowing green sward, harrowing the ground, hauling manure, &c. They worked as kindly and more actively than oxen, and appear in as good plight, and produced as good calves, and as much milk as any lazy cows, that did not work. He is quite sure that a small farmer, who has no very heavy work to do—such as logging, &c., had much better keep 4 cows, and teach them to work, than to keep two cows only, and one yoke of oxen. The expense is less, he will get more milk, and will be able to perform as much work. Of course if he works his cows, he will give them extra keeping, and this will enable them to give as much milk while they work as less-feed and more idle cows will give. The females of our own species work, and some of them work as hard as men, the females too, of the horse genus, equal their mates of the other sex in the service of man; why, pray, should not cows also be made to perform such operations as may be consistent with their health and usefulness in other respects?

[Drew's Rural Intelligencer.

Gathering Squashes and Pumpkins.—The sooner Squashes are now gathered the better. They should be put into a dry cool place, where they may if possible, have sun and air by day, and be kept from frost at night. The least bruise is sure to be followed by decay, and on this account great care should be used in handling. A very good place for storing them is in a room over a kitchen, which is kept warm by the heat of the stove. Let them be kept as much separated as may be; if hung by the stem upon nails, or over poles, all the better. They should not be transferred to the cellar until it becomes impossible to keep them longer from frost, and then let them have the dryest part of the cellar. If properly preserved, there is no more wholesome table vegetable for the Winter and Spring, and they make excellent pies.

Pumpkins may be kept in the same manner as Squashes, but when designed for stock feeding, more room is required. A very good plan is to put them into a hay-mow, or other dry receptable, and pack them well in straw thoroughly dry, In this way a hundred loads may be put together, and the straw will protect them perfectly from frost. They make a first rate Winter feed for stock—to say nothing of "pumpkin pies."

A Useful Lady in the Camp.—A lady of color in the Balaklava, and occasionally in camp (writes the special correspondent of the London *Morning Advertiser* in the Crimea) is quite an original in her way; and an amusing specimen of the adaptability to circumstances of the darker specimens of the *genus homo*. She is both a Miss Nightingale and a Soyer in her way. A native of Jamaica, she has traveled extensively on the American continent, and has acquired great experience in the treatment of cases of cholera and diarrhœa. Her powders for the latter epidemic are now so renowned that she is constantly beset with applications, and it must be stated, to her honor, that she makes no charge for her powders. She is often seen riding out to the front with baskets of medicines of her own preparation, and this is particularly the case after an engagement with the enemy. Her culinary powers are so very great, that even Soyer told her the other day she knew as much about cooking as himself. Mrs. Seacole is, moreover, a highly intelligent woman.

New Steamboat Line for Albany and Troy.

From Pier 15, foot of Liberty-st., at 6 P. M

STEAMER RIP VAN WINKLE, C. W. Farnham, Commander, Monday, Wednesday and Friday, at 6 o'clock, P. M.; steamer COMMODORE, L. Smith, Commander, Tuesday and Thursday, at 6 o'clock, P. M., and Sunday, at 5 P. M.

Fares: Saratoga, $1 50; Moreau, $2 15; Fort Edward, $2 15; Whitehall, $2 75; Castleton, $3 10; Rutland, $3; Burlington, $4; Rouses Point, $5 50; Montreal, $7 50.

These Boats will arrive in Albany or Troy in ample time to form connections with all the Railroads, North, East or West, enabling passengers to reach Montreal and intermediate points the same day.

These Steamers are of the first class for strength and speed—well known favorities of the public—having been thoroughly overhauled during the past winter, and offer every accommodation that can be desired by either freighter or traveler.

Through tickets can be obtained on board the boat for Saratoga, Moreau, Fort Edward, Whitehall, Castleton, Rutland, Burlington, Rouse's Point and Montreal.

The Northern Freight Express will give Bills of Lading to all points as above named. Shippers who desire it, can have time receipts, by applying at the office on the Pier. A. A. DYKEMAN.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.*, and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been, and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

THE SOUTHERN LITERARY MESSENGER ON GEOLOGY AND THE BIBLE.

(Concluded.)

We now come to notice the writer's second point, that one of the most remarkable and clearly demonstrated epochs of astronomy proves the *sacred chronolagy of the world to be true.* It is my purpose to show that the "remarkable epoch" (although easily demonstrated by a tyro in astronomy) *proves nothing whatever in relation to the age of the world.* "This remarkable astronomical epoch is the coincidence of the greater axis of the earth's orbit with the line of the equinoxes, when the true and mean equinox was the same. This state of the heavens," the writer continues, "could have existed only at the first moment of the creation of our solar system; for the moment the earth and other planets began to move, the causes which altered this position of the earth began to exert their irresistable power and produce the procession of the equinoxes." This statement is no less *remarkable* than the astronomical epoch on which it is founded. That the state of the heavens in which the "greater axis of the earth's orbit coincides with the line of the equinoxes" could have existed only at the first moment of the existence of our system, is a most bold and baseless assumption, in the face of every astronomical fact that relates to the procession of the equinoxes. No man who had carefully studied the subject would ever venture such an assertion. It may sound somewhat imposing to the reader not acquainted with astronomy, to state such a proposition without explanation, and then affirm it as conclusive proof that the solar system has been in existence only six thousand years.

A brief explanation of the astronomical phenomenon in question will show the emptyness of the assertion that, it could happen only at the moment when the solar system began to exist. That such coincidence of the greater axis of the earth's orbit did exist about 4,089 years before the Christian era, is easily shown, but that it therefore follows that the solar system began to be at that time, is a most palpable *non sequitur*. It by no means follows. For a full explanation of the procession of the equinoxes, the reader is referred to Olmstead's Astronomy, page 104; Herschel's Astronomy, page 163, and for a still more explicit illustration, see Mitchel's Planetary and Stellar Worlds, page 156. The subject will be sufficiently understood for our present purpose, by the statement of a few astronomical facts. The phenomenon to be explained is "the coincidence of the greater axis of the earth's orbit with the line of the equinoxes." The earth revolves around the sun in an eliptical orbit, the sun being in one of the foci. The greater diameter is called the transverse axis, and the less diameter the conjugate axis. The point of the orbit nearest the sun is called the perihelian, and that the farthest the aphelian. The "equinoctial points" are points where the sun crosses the equator. The time when he crosses the equator going northward, about the 21st of March, is the *vernal* equinox, and the time when he crosses it going southward, about the 22d of September, the *autumnal* equinox. The "line of the equinoxes" is a line from the one to the other, across the plane of the earth's orbit. The "procession of the equinoxes" is a slow shifting of the equinoctial points from east to west. Thus, when the sun crosses the equator *next* March the vernal equinox will be further west than it was *last* March, and so for every succeeding year until the equinoctial point shall have made a complete revolution around the ecliptic or earth's orbit. The "line of the equinoxes" will then have coincided with every conceivable line across the plane of the earth's orbit, and somewhere in its course must have coincided with the greater axis of the earth's orbit. But as this greater axis is a line drawn from perihelian to aphelian, that coincidence could only occur when the earth was in one of these points, say in perihelian. Now, the proposition of the writer is that, when the line drawn across the plane of the earth's orbit from the vernal to the autumnal equinox corresponded with a line drawn from perihelian to aphelian, the solar system must have begun to exist. The intelligent reader cannot fail to perceive that there is not the *remotest* connection between his premise and his conclusion. Precisely of analagous character would be the following reasoning: At a certain time the moon, in her course around the earth, fell between the sun and earth so as to intercept the rays of the former and produce darkness upon the latter; therefore, that must have been the beginning of the solar system, for such a state of the heavens could only have existed at the beginning of our solar system. The astronomical fact here refered to just as much indicates the beginning of the solar system as the one under consideration does. But *neither* of them, as every astronomer knows, has the remotest bearing on the world's age. The *effect* of an eclipse of the sun is much more striking and important on the earth than the effect of the coincedence of the line of the equinoxes with the greater axis of the earth. The former hides the earth in darkness and fills the mind of the unlearned with dread. But the only effect of the latter is to cause an exact equality in the length of spring and summer compared with autumn and winter. At present there is a difference of some seventeen and a half days. The *last* coincidence of the earth's greater axis with the line of the equinoxes occurred 5,939 years ago. The next coincidence will occur in 20,984 years from that time, and so on once in about 20,000 years, as long as the sun and planets shall wheel their majestic course in the heavens. Thus, in a little more than 15,000 years from now, this remarkable astronomical coincidence will occur again. But nature will survive it. And the only terrestrial phenomenon that will attest its advent will be the passage of the sun from vernal to autumnal equinox in *just six months,* instead of six months and seventeen days, as it now does. This is certainly not quite remarkable enough to indicate the time when worlds were created and flung into their stupenduous orbits. The earth could have started in any other part of his orbit just as well as in that part where its greatest axis coincides with the line of equinoxes; for the causes which alter the position of the earth and cause the procession of the equinoxes are at work and causing that phenomenon in *every part* of the orbit alike. After the next coincidence shall have occurred, perhaps some contributor to some *southern* journal may insist that, that coincidence must have been the *beginning* of the solar system, and he will have just as much reason thus to insist as this writer in the southern journal now has to insist that the *former* coincidence must have marked the dawn of worlds.

The writer, in choosing the evidences of the great age of the world against which to hurl his shafts, has taken great care to select such as are most easily demolished, and what is most singular, such as geologists in general never adduce as evidence. He has been careful not to attack the strongholds of truth which lie at the foundation of the doctrine of the world's age.

The well near Etna, to which he has refered, is not at all relied on by geologists to sustain their belief. It is a mere man of straw which the writer may have all the glory of demolishing. The famous Egyptian zodiacs, to which he alludes, are of the same character. No geologist with whose writings I am acquainted has ever refered to them as evidence of the world's age. The astronomical tables of the Hindoos are ditto. Neither geologists nor astronomers make use of them as evidence of their theory of the earth's age. The great *fact* which most especially and incontestably evinces the vast antiquity of the earth, is the solid crust of the earth, stratified to the depth of about ten miles, and to the depth of about seven miles this stratified rock is filled with the remains of animals and vegetables, a work which almost incalculable ages alone could suffice to effect This the writer has not alluded to, and very judiciously; for the *fact* is incontestable and the inference inevitable. On the validity of this argument for the world's age, Hugh Miller makes the following truthful remarks:—

"The astronomer founded his belief of the mobility of the earth and immobility of the sun, not on a mere dream like hypothesis founded on nothing, but on a wide and solid base of pure induction. Galileo was no mere dreamer; he was a discoverer of great truths, and a profound reasoner concerning them; and on his discoveries and his reasoning, compeled by the inexorable laws of his mental constitution, did he build up deductive beliefs which had no previous existence in his mind. His convictions were consequent, not antecedent. Such also is the character of geological discovery and inference of the existing belief—their joint production—regarding the great antiquity of the globe. No geologist worthy of the name began with the belief and then set himself to square geological phenomena with its requirements. It is a deduction—a result—not the starting assumption or given sum in a process of calculation, but its ultimate finding or answer. Clergymen of the orthodox churches, such as the Sumners, Sedgwicks, Cohghears, and Pye Smiths, of England, or the Chalmers, Duncans, and Flemings, of our own country, must have come to the study of this question of the world's age with, at least, no bias in favor of the geological estimate The old, and as it has proven, erroneous reading of the Mosaic account was by much too general a one early in the present century not to have exerted upon them, in their characters as ministers of religion, a sensible influence of a directly opposite nature. And the fact of the complete reversal of their original bias, and of the broad unhesitating finding on the subject which they ultimately substituted instead, serves to intimate to the uninitiated the strength of the evidence to which they submitted. There can be nothing more certain than that it is minds of the same caliber and class, engaged in the same inductive track, that yielded in the first instance to the astronomical evidence regarding the earth's motion, and in the second to the geological evidence regarding the earth's age."

I have not the least doubt but that the *geological* theory of the earth's *age* will come ere long to be as universally believed as is the *astronomical* theory of the earth's *motion*. The evidence of the one is as irrefutable as that of the other. But one happened to be promulgated a little sooner than the other, and of course is sooner received. Truth can always afford to bide its time. D. E. MAXSON.

ALFRED ACADEMY, Aug. 27, 1855.

ONE HUNDRED YEARS HENCE.

Who'll throng the streets in eager haste
One hundred years from now,
And mammons's fleeting phantoms chase
With care-worn, anxious brow;
To gain a name
For wealth or fame—
Ambition's goal,
Or honor's scroll—
Who will be that spell-bound throng,
Passing with hasty steps along,
One hundred years from now?

Where, oh! where will be the men,
One hundred years from now,
Who now the virtuous poor condemn
With purse-proud, haughty brow;
Who give the sneer
To misery's tear,
Withhold relief
To orphan's grief;
Where, oh! where will be their pride,
When rich and poor l ie side by side,
One hundred years from now?

Who'll grace our courts as judges grave,
One hundred years from now,
Nor warp the law, nor screen the knave,
When wealth and affluence bow;
When bribes of gold,
And crimes untold,
Make justice sleep,
And mercy weep;
Who will be those jurists pure,
And bribes and sycophants abjure,
One hundred years from now?

Who'll guide our rights o'er land and sea,
One hundred years from now,
Stand by the banner of the free,
And dare confront a foe;
And never yield
O'er flood and field
And do no wrong—
Submit to none;
Who will be those patriots brave
To guard our flag o'er land or wave,
One hundred years from now?

Where, where will the proud despot be,
One hundred years from now,
Who'd crush the germ of Liberty,
And make the nations bow?
They'll be forgot,
Their names will rot,
Nor nations feel
Their iron heel;
And the fair goddess, Liberty,
Will reign o'er every land and sea,
One hundred years from now.

SOWING AND REAPING.

Under the government of God there is a blessed interdependence of sowing and reaping; there is a sure connection of cause and effect, although often at wide intervals. In the spiritual husbandry of God's vineyard, there is a mutual interchange of work and reward. One generation or set of men labor, and a succeeding generation entere into their labors; and the reward of those that sow in one age, is the harvest others reap in the next. They do not always reap who sow; but that precious promise, He that goeth forth with weeping, bearing precious seed, shall doubtless return again with rejoing, bringing his sheaves, is fulfilled thus: They return from sowing at one time, with sheaves of harvest which they or others have sown at another, it may be a long time ago; and the foot of the sower treads upon the heel of the reaper.

Sooner or later, but ever in the great Husbandman's good time, the seed sown beside all waters is sure to come up. The world's great Farmer has ever an eye upon his seed. It is ours to go forth and sow, to sow in hope, to sow in tears, but never doubting that we, or others in our stead, will in due time return with rejoicing, bringing the sheaves with them.

When there comes over the land—and coming we may be sure it is—a general and mighty revival of religion, then it will be seen and acknowledged how much the humble country pastors, and colporteurs and tract-distributors have had to do with bringing it to pass; when others will enter into their labors whose arms shall be heavy with the golden sheaves of a spiritual harvest, for which the seed is even now being sown.

No seed is lost. If it took two hundred years for Oliver Cromwell to begin to be appreciated, or for a just history to be written of the Puritans, or for the principles they spread broadcast to germinate and develop their fruit, then may seed-sowing ministers of the gospel, and founders of benevolent institutions, and laborious private Christians, contentedly await the results yet to be of their now unapplauded labors. "Though seed lie buried long in dust," and you may think it wasted and decayed, it is never lost. If not on this side of the grave, it shall spring on the other, and thou shalt be recompensed at the resurrection of the just. Work on, work ever; hope on, hope ever, for thy reward is sure. [N. Y. Evangelist.

THE PIOUS SHEPHERD.

An aged man, says a writer in the *Wesleyan Methodist Magazine,* who was remarkable for the purity of his character, the cheerfulness of his piety, and the general respect in which he was held, told me that when he was young he hired himself as a shepherd to a respectable farmer in the fens of Lincolnshire, and that, during the time of his servitude, Methodist preaching was introduced into the village; the itinerant ministers of that denomination coming at stated periods, and in an humble cottage declaring the word of life. My informant and several of his fellow-servants attended the ministrations of these zealous strangers, from whose lips were heard the words of truth and salvation. He received the gospel message with a believing and obedient heart, and obtained an assurance of God's forgiving mercy, with the regenerating grace by which he was made a new creature. After some time, the master, who was not a religious man, sent for the whole of his servants to appear before him in the parlor, every one of them wondering what was the matter. He then addressed them to the following effect: "I understand that you have all gone to hear these Methodist preachers, and some of you regularly attend their meetings. I now inform you that I shall not allow any of my servants to become Methodists; and unless you promise me, before you leave this room, that you will not attend another Methodist meeting during your stay with me, I shall immediately pay you the wages which are due you, and send you away to seek employment elsewhere." Beginning then with the foreman, he inquired of every one in order whether he would attend the Methodist preaching again; demanding of each a direct answer, yea or nay. Most of them, with little or no hesitation, expressed their regret for having thus offended him, and promised never more to offend in this matter. The farmer called upon the shepherd last, asking, with a grave countenance and a stern manner, "Harry, what hast thou to say for thyself?" Harry answered, "I am very happy in my place, and would be glad enough to remain with you as your shepherd; but my soul is of more worth than the wages that I am hired for. I have received good under the preaching of these men; and I am determined to hear them, whatever may come of it. I will not act against my conscience, sir, for nobody."

On hearing this, the farmer, whose object it was merely to ascertain the real character of his men, exclaimed, "Thou art an honest lad, Harry, and worthy to be trusted. As for these other fellows, every one of them would sell his soul for worldly benefit; and what confidence can one put in them?"

He then declared that he should retain Harry as his shepherd, and forthwith dismissed every other servant as unworthy of his confidence. The venerable man who gave me this account was then about eighty years of age; and as the facts occurred in the early part of his life, nearly a century has elapsed since the religious principles of these poor men were thus severely tested.

IDEA OF PROBATION.

There is a probation everywhere present in life, which runs into the smallest things, even into minute divisions of time. Each separate fraction of life may be taken to represent the whole. Thus a day is a short life. Its morning freshness, its mid-day ardor, its evening weariness, are images of the buoyancy of youth, the strength of manhood, and the feebleness and decay of old age. So in the seasons of the year. Spring, summer, and autumn, seed-time and harvest, are emblems of the successive stages of human life. Which ever of these periods of time we take, a day or a year, we remark that there is some part of that time which appears to be a probation for the rest. There is some point which present peculiar advantages for successful effort, and which gives direction to the whole. Thus there are particular hours of the day—the hours of the morning—which God designs for exertion. If these are well spent, they will bless the whole day with the continuance of their own useful and happy moments. But if the morning is idled away, it cannot be overtaken. So the year has but one spring, one seed-time. Whatever is done to secure the harvest, must be done then, or the husbandman is left to want till another year rolls round.

So take the whole of life together. Human character is constantly undergoing a trial, constantly passing through probations, and reaping its reward or its punishment. The mind and character are constantly undergoing changes—even as the body momently wastes away and is renewed. Human existence is not a dull round of the same acts, presenting the same opportunities of happiness with every returning year. The soul is never at a stand-still. It is always on the march, ascending or descending. It is a wave that mounts higher as it rolls. What we do this hour and what we did the last, throw their accumulated influence into the next. This year we reap honor and respectability as the fruits of exertion last year, or we suffer mortification and disgrace as the consequence of negligence and sloth. So the fate of next year will be decided by the actions of this. Thus as we advance onward, an incessant retribution pursues us, rendering probable what the Scriptures foretell—that the issues of this mortal life, will be felt through the eternal ages which are to succeed. [N. Y. Evangelist.

EARLY RISING.

It is remarkable what numerous examples we have of early rising in the Scriptures Let any one take a Concordance and look out the passages where it is mentioned, and he will be surprised at their number. Are not such examples binding on Christians? Abraham arose up early in the morning to offer sacrifice; "early will I seek thee," said the Psalmist; shall not Christians early rise to pay their vows unto God?" "Very early in the morning" the holy women came to the sepulcher to embalm the Saviour; and shall not his disciples seek their risen Lord early in the day? Christian! when are you most apt to neglect prayer, or perform it hastily and unprofitably? Is it not when you omit early rising? When are you most prone to neglect reading the Bible, or peruse its sacred pages negligently? Is it not when you act the sluggard, and waste precious hours in repose? At what season do you peruse God's word with delight, and call upon his name with fervor? Is it not when you early rise to pay your sacrifice? Nature, then, as well as Scripture, indicates the value of the morning for religious meditation, reading and prayer. Neglect not, then, their united intimations. Experience shows you the benefits of early rising. Profit by its voice. Let the dawn summon you from the bed of repose; let the orb of day witness you at your devotions, supplicating that the sun of righteousness may arise upon you with healing in its beams. Thus your body will be invigorated and your soul will be in health and prosper. "Whoso is wise and will observe these things, even they shall understand the loving kindness of the Lord."

CONFIDENCE IN ONE'S SELF.—When a crisis befalls you, and the emergency requires moral courage and noble manhood to meet it, be equal to the requirements of the moment and rise superior to the obstacles in your path. The universal testimony of men, whose experience exactly coincides with yours, furnishes the consoling reflection that difficulties may be ended by opposition. There is no blessing equal to the stout heart. The magnitude of danger needs nothing more than a greater effort than ever at your hands. If you are recreant in the hour of trial, you are the worst of recreants and deserve no compassion. Be not dismayed or unmanned, when you should be bold, daring, unflinching and resolute. The cloud whose threatening murmurs you hear with fear and dread, is pregnant with blessings, and the frown whose sternness now makes you shudder and tremble will ere long be succeeded by a smile of bewitching sweetness and benignity. Then be strong and manly, oppose equal forces to open difficulties; keep a firm reliance on your ability to overcome the obstacles, and trust in Providence. Greatness can only be achieved by those who are tried. The condition of that achievement is confidence in one's self.

HIGHER.

Higher! is a word of noble meaning, the inspiration of all great deeds—the sympathetic chain that leads, link by link, the impassioned soul to its zenith of glory, and still holds its mysterious object standing and glittering among the stars.

Higher! lisps the infant that clasps its parent's knees, and makes its feeble essay to rise frome the floor—it is the first aspiration of childhood—to burst the narrow confines of the cradle, in which its sweet moments have been passed forever.

Higher! laughs the proud school-boy at his wings; or as he climbs the tallest tree of the forest, that he may look down on his less adventurous companions with a flush of exultation, and abroad over the fields of his native village. He never saw so extended a prospect before.

Higher! earnestly breaths the student of philosophy and nature; he has a host of rivals, but he must eclipse them all. The midnight oil in his lamp burns dim, but he finds light and knowledge in the lamps of heaven, and his soul is never weary when the last of them is hid behind the curtains of the morning.

And higher! his voice thunders forth, when the dignity of manhood has invested his form, and the multitude is listening with delight, to his oracles burning with eloquence and ringing like true steel in the cause of freedom and right. But when time has changed his locks to silver, and when the world-wide renown is his; when the maiden gathering flowers by the road-side, and the boy in the field, bow in reverence as he passes and the peasant looks to him with honor—can he breathe forth from his heart the fond wish of the past?

Higher, yet! he has reached the apex of earthly honor, yet his spirit burns as warm as in youth, though with a steadier and paler light, and it would borrow wings and soar up to high heaven, leaving its tenement to moulder among the laurels he has wound around it, for the never-ending glory to be reached only in the presence of the Most High!

ONE IDEA.—It is admitted, says Professor Sanborn, by psychologists, that the mind, when engrossed by the contemplation of a single subject, becomes disqualified for the discovery or appreciation of truth. Everything is excluded but the solitary theme of interest. No light shines upon the mind's eye, except that which is reflected from the minute forms of its own thoughts. Empirics avail themselves of this principle to impose upon the credulous by their specious wonders. Men are hypnotized, mesmerized, rendered insensible to pain, and cured of diseases, by arresting the attention and confining it to a single object. "Men of one idea" live in a perpetual state of somnambulism. A man who is committed to a theory is not a safe investigator of truth. It matters not how learned or devout the man of "peculiar views" may be; for in such circumstances the smallest portion of truth suffices so to engage the attention of men of superior intellect, that they forget everything else, and become blind to all that is not comprised within the narrow circle of their own ideas. The theorist, like the spider, lives within the attenuated and feeble tissue, which his own brain has woven. History becomes an excellent "alterative," for such a mental diathesis.

OUR HOUSES.—We always look upon our houses as mere temporary lodgings. We are always hoping to get larger and finer ones, or are forced some way or other to live where we do not choose, and in continual expectation of changing our place of abode. In the present state of society, this is in a great measure unavoidable; but let us remember it is an evil, an that so far as it is avoidable, it becomes our duty to check the impulse. It is surely a subject for serious thought, whether it might not be better for many of us, if, in attaining a certain position in life, we determined, with God's permission, to choose a house in which to live and die—a home not to be increased by adding stone to stone and field to field, but which being enough for all our wishes at that period, we should be resolved to be satisfied with forever. Consider this, and also, whether we ought not to be more in the habit of seeking honor for our descendants than our ancestors; thinking it better to be nobly remembered than nobly born; and, striving to live that our son's sons, for ages to come, might still lead their children reverentially to the doors out of which we have been carried to the grave, saying, "Look, this was his house; this was his chamber."

MURMURING.—Cecil was once riding with a friend on a windy day, when the dust was so troublesome that his companion wished they were at their journey's end, where they might ride in the fields free from dust, and this wish he repeated a number of times. When he reached the fields, the flies so teased his friend's horse, that he could scarcely keep his seat on the saddle. On his bitterly complaining—"Ah! sir," said Mr. Cecil, "when you were in the road, the dust was your only trouble, and all your anxiety was to get into the fields; you forgot that the fly was there. Now, this a true picture of human life; we know the the trials of our present station, but the next will have trials, and perhaps worse, though they may be of a different kind."

A GOOD CONSCIENCE.

That conscience alone is good which is much busied in self-examination, which speaks much with itself, and much with God. This is both the sign that it is good, and the means to make it better. That soul will doubtless be very wary in its walk, which takes daily account of itself, and renders up that account to God. It will not live by guess, but naturally examine each step beforehand, because it is resolved to examine all after; will consider well what it should do, because it means to ask over again what it hath done, and not only to answer itself, but to make a faithful report of all to God; to lay all before him continually, upon trial made; to tell him what is in any measure well done, as his own work, and bless him for that; and tell him too, all the slips and miscarriages of the day, as our own; complaining of ourselves in his presence, and still entreating free pardon, and more wisdom to walk more holily and exactly, and gaining, even by our failings, more humility and more watchfulness. If you would have your consciences answer well, they must inquire and question beforehand. Whether is this I purpose and go about, agreeable to my Lord's will? Will it please him? Ask that more, and regard that more, than this, which the most follow. Will it please or profit myself? Fits that my own humor? And examine not only the bulk and substance of thy ways and actions, but the manner of them, how thy heart is set. So, think it not enough to go to church, or to pray, but take heed how ye hear; for, consider how pure he is, and how piercing his eye, whom thou servest. [Leighton.

CURIOUS CUSTOM OF THE OLD EGYPTIANS.—On the death of every Egyptian king, a general morning was instituted throughout all Egypt for seventy-two days; hymys commemorating his virtues were sung; the temples were closed; sacrifices were no longer offered; and no feasts or festivals were celebrated during that period. The people tore their garments, and covering their heads with dust and mud, formed a procession of 200 or 300 persons of both sexes, who met publicly twice a day, to sing the funeral dirge. A general fast was observed; and they allowed themselves neither meat nor wheat-bread, and abstained from wine and every luxury. In the mean time, the funeral was prepared, and on the last day, the body was placed in state, within the vestibule of the tomb, and an account was given of the life and conduct of the deceased. It was permitted to any one present, to offer himself as an accuser, and the voice of the people might prevent a sovereign from receiving funeral honors. This was an ordeal, the dread of which would, doubtless, tend to stimulate the Egyptian monarchs to the practice of their duty; for there is planted in the human breast, in all ages, and in all countries of the world, an ardent desire that a last tribute of respect should be paid to frail humanity.—

TRADE.—We rail at trade, and the philosopher and lover of man will have much harm to say of it; but the historian of the world will see that trade was the principle of liberty; that trade planted America and destroyed feudalism; that it makes peace and keeps peace, and it will abolish slavery. We complain of the grievous oppression of the poor, and of its building up a new aristocracy on the ruins of the aristocracy it de stoyed. But there is this immense difference, that the aristocracy of trade has no permanence, is not entailed, was the result of toil and talent, the result of merit of some kind, and is continually falling, like the waves of the sea before new claims of the same sort. Trade is an instrument in the hands of that friendly Power which works for us in our own despite. We design it thus and thus; but it turns out otherwise and far better. This beneficent tendency, omnipotent without violence, exists and works. [R. W. Emerson.

THE EVENING OF AGE.—When the summer of youth is slowly wasting away into the nightfall of age, and the shadow of past years grows deeper and deeper, as life wears on to its close, it is pleasant to look back through the vista of time upon the sorrows and felicities of our earlier years. If we have homes to shelter and hearts to rejoice us, and friends have been gathered together around our firesides, then the rough places of our way-faring will have been worn and smoothed away, in the twilight of life, while the sunny spots we have passed through, will grow brighter and more beautiful. Happy indeed are those whose intercourse with the world, has not changed the tone of their holier feelings, or broken those musical chords of the heart, whose vibrations are so melodious, so tender and touching in the evening of age.

THE BIBLE IN ARABIC.—The following account is given of the translation of the Bible into Arabic at Beyroot:—First of all, a native scholar, a slender, sallow, care-worn man, well versed in Hebrew and Greek as well as in Arabic, made the translation. Then Dr. Smith, the first Arabic scholar of the world, revised that translation. Then a profoundly versed Arabic scholar, whose ear had not been vitiated by any foreign idiom, revised it again, and the revised revision was again revised by Dr. Smith.

CHRISTIAN LIBERALITY.—There are certain great principles laid down in Scripture in relation to giving, and the use of property generally, respecting which there is much practical skepticism. They are as follows: 1. That which we have, we hold as stewards who must give an account. 2. The way to increase is to distribute. Some are rich because liberal. 3. That which is given to the poor is loaned to the Lord. 4. That which is done to Christ's little ones is done to himself.

It is calculated that the yearly consumption of tobacco in Turkey, reaches 320,000,000 pounds, allowing 40 pounds a year each for eight millions of smokers.

SUPPORTING OUR OWN.

ALFRED CENTER.

BROTHER BROWN—*Dear Sir:* In the *Sabbath Recorder* of Sept. 20th, your editorial is headed, "You know I must live." Without repeating what you had to offer in regard to Sabbath-breaking, &c, we would ask you to inform us, through the *Recorder*, what the encouragements are for the young of our denomination to educate themselves for any professorship or profession, thinking to gain an honorable support among the people of his choice, so far as the day is concerned. If they wish to teach a common school, he must go among the Sunday people for his school, while the seventh-day friends will hire first-day teachers, and by so doing they give their support to those of that day.

If a medical profession might be our choice, we should be compelled to look for patronage among our first-day brethren, if we wish to become eminent. Allowing us to be as well prepared to practice our professions, and equally as good in our morals, still, the first-day man, even an *infidel* in principle, will get the best support, &c. If a divine or divinity was our choice, we should expect even that would not any more than pay, and live on faith the greatest share of the time at that; still, we think that pays the best.

Please give us your views on giving support to our own, or those, if worthy of support, of our own denomination, or something besides Faith and Starvation.

Yours in love, WE.

We hardly know what relation the foregoing has to our editorial of the 20th ult., though, from the fling of our correspondent at "*faith and starvation*," we half suspect that he is covertly attempting to justify, or at least, extenuate, the line of conduct at which our remarks were leveled. However, be his design what it may, as his communication is suggestive of ideas in which our people have a practical concern, we take occasion to say:—

First, that Seventh-day Baptists ought, in our opinion, to give their patronage to teachers, physicians, and tradesmen, of their own Denomination, provided they can be as well served by such as by others. It is understood that, when a mechanic goes into a neighborhood of First-day people to pursue his calling, he must lose one of the six working days, every week, or else give up his principles and work on the Sabbath. There are comparatively few of the observers of Sunday, who will give him employment, and allow him to work on the day which they consider sacred. The same thing holds with regard to one who teaches a common school. The temptation with such persons to abandon the Sabbath is very strong; and if our daily prayer is, 'Lord, lead us not into temptation,' we ought not to run unnecessarily into temptation ourselves, nor to allow our brethren to do so, if we can help it. If it is possible, therefore, to sustain such brethren among ourselves, without suffering damage, we are not fully up to our duty if we refuse to do it.

In respect to physicians, the case appears to be somewhat different. Generally, they pursue their calling on all days alike. Their practice knows no Sabbath. We do not say that it ought to be so; we only say what is the general usage. In our opinion, a physician might pass those of his patients who are not so ill as to require daily attention, and so secure for himself, in some good degree, the rest of the Sabbath. But if the general usage is to be followed, we do not see that Seventh-day Baptist physicians labor under any such disadvantages, on account of their religion, as to create a claim for the patronage of their brethren. A First-day man never refuses the aid of a physician on Sunday; he is as willing to have it then as on any other day. A Seventh-day Baptist physician never refuses to give his aid on the Sabbath-day; if sent for, he goes readily, no matter what day it is. And we believe the number of those is very small, who would reject a physician merely because his religious creed happened to differ from their's. Sick people do not, generally, take such things into the account. They only want to know who has the most skill to cure them. Indeed, as far as our observation goes, Christians of every persuasion are willing even to employ infidels, if they suppose them to possess greater skill than others. That they should prefer employing infidels to Seventh-day Baptists, when Seventh-day Baptist physicians are known to possess quite as much ability in their profession, is a thought so uncharitable that we are not willing to entertain it, unless we can be furnished with the most positive proof of the fact.

But, in the second place, if Seventh-day Baptist artisans, or professional men, lay claim to the patronage of their brethren, they must do something to deserve it. Must I employ a builder to erect my house, merely because he is a Sabbatarian, when I have the best evidence in the world that he is not competent to do a good job? Must I have my horse shod by a Sabbatarian, whom I know to be a bungler, when a First-day man will, for the same money, do it fifty per cent. better? Must I employ a shoe-maker, a cabinet-maker, or a pretender of any other trade, paying him my money merely because he is of the same religious profession with myself, when a First-day man stands ready to do the job in a better and more satisfactory manner? Must we call in teachers, or employ physicians, of our own order, when it is clear that they are too deficient in skill to suit our purpose? These questions answer themselves. Reason shows that, when we are called to pay out our money, we are entitled to an equivalent for it. And though, in most of the various trades and professions, Seventh-day Baptists have a fair proportion of expert and finished workmen, they have also some of a different character; and when these latter do not succeed in enlisting the patronage of their brethren, we could wish that they possessed discernment always to ascribe it to the right cause.

We are inclined to think that our people, for the most part, are not backward in supporting the business men of their own order. But it sometimes happens, that artisans are not satisfied with the amount of patronage which they can receive in a Sabbath-keeping community. There is not business enough for them there, and either their necessities, or their cupidity, drive them to other places. This is to be regretted, but in the present state of things there appears to be no remedy.

T. B. B.

THE NORTH-WESTERN ASSOCIATION.

The Seventh-day Baptist North-Western Association held its Ninth Anniversary with the church in Berlin, Marquette Co., Wisconsin, commencing on Fifth day, Sept. 20th, and closing on the evening of the following First-day. The place of meeting was on the extreme northern limit of the Association; in consequence of which the delegation in attendance was not as large as on some former occasions, when the meetings were held at more central points. Those who did attend, were evidently actuated by an earnest desire to promote the interests of the churches—a desire which was responded to by the residents of Berlin, who for the time laid aside all other business. The meetings throughout were fully attended, and all appeared to feel that it was good to be there.

The Introductory Discourse was preached by Zuriel Campbell, of Christiana, from the prayer of our Saviour, recorded in the 17th chapter of John, "that they all may be one, as thou, Father, art in me, and I in thee."

ZURIEL CAMPBELL was chosen Moderator of the Association; I. D. CLARKE and N. J. READ, Clerks; Varnum Hull, of Milton, Corresponding Secretary; Duty J. Green, of Albion, Treasurer.

Letters were received and read from all of the churches in Wisconsin, and from members of the church at Farmington, Ill., but none from the church at Southampton. As these churches are comparatively new, our readers in the East will probably thank us to give their statistics in full.

Milton—Varnum Hull, pastor; Daniel Babcock and R. C. Bond, elders; Levi H. Bond and Jonathan Bond, deacons; A. D. Bond, clerk. Members 188. Has a Bible Class and Sabbath School with 10 teachers and 100 scholars.

Albion—Thomas E. Babcock, pastor; Jas. Weed, licentiate; J. A. Potter, S. P. Burdick, L. Coon, N. Palmer, and John Webster, deacons; T. F. West, clerk. Added last year, by baptism 17, by letter [illegible]; members 187. Has within its bounds three weekly prayer meetings, and three Sabbath Schools, of which T. R. Williams, John Webster and C. A. Burdick are superintendents.

Christiana—Z. Campbell and R. G. Burdick, elders; Z. Gilbert, R. T. Green, A. P. Stillman, and E. M. Crandall, deacons; W. H. H. Coon and D. B. Crandall, clerks. Added, by baptism 11, by letter 5, total membership 71. Has a Bible Class and Sabbath School.

Walworth—O. P. Hull, elder; W. H. Redfield, licentiate; Alfred Maxson and W. S. Clarke, deacons. Added 6; total number of members 71. Has a Sabbath School, Bible Class, and Prayer Meeting.

Berlin—Julius M. Todd, pastor; Charles Clarke and Charles Hubbell, deacons; Datus E. Lewis, clerk. Added last year 20, of whom 12 were by baptism; total of members 75. Has a Sabbath School, with 10 teachers, 50 scholars, and a library of from 100 to 150 volumes.

Dakota—Geo. C. Babcock and Hamilton Hull, licentiates; Rowland I. Crandall and Geo. C. Babcock, deacons; Geo. Thorngate, clerk. Added 2, total 30.

The letter from Farmington gave some account of the embarrassed condition of the church, and requested advice as to the course which ought to be pursued in the circumstances. The Association appointed a Committee, consisting of Thomas E. Babcock, Joseph A. Potter, and O. P. Hull, "to visit Farmington and vicinity, and make an earnest effort to remove all occasion of discord among the brethren located there, and to secure that harmony and brotherly love which should characterize the followers of the Prince of Peace."

At the last session of this Association, delegates were appointed to attend the meetings of the Eastern, Central, and Western Associations, and of the General Conference. They reported that the duties assigned them were not performed, partly for want of time, and partly because no provision was made to meet the necessary expenses. For the coming year, Varnum Hull was appointed to attend those Associations, and provision was made to meet the expense—a result attributable in part, probably, to the fact that the Eastern and Central Associations were represented at this meeting by their delegates, C. M. Lewis and A. W. Coon, whose presence was welcome to all.

Several topics of general interest were brought to the attention of the Association by Reports and Resolutions, which elicited remarks and opened the way for plans that will no doubt prove permanently beneficial.

The subject of Education was brought up by the Report of a Committee, which shows that two educational institutions are now in successful operation within the bounds of the Association—one at Milton and the other at Albion, each of which has about 100 scholars in regular attendance. It was also stated, in the course of remark upon the Report, that at Walworth an effort has been made, which will probably prove successful, to establish another Academy. These institutions are giving to our people a good name and great influence in the communities where they are located, at the same time that they are furnishing the rising generation in our churches with the means of easily obtaining that knowledge which is power.

The subject of Missions, especially within the bounds of the Association, was pretty fully canvassed. The Executive Committee appointed last year to look after the matter, reported that they had done nothing. The letter of one of the churches proposed that for the coming year an effort should be made to secure the entire services of one minister at least, whose business it should be to visit, at regular intervals, the isolated families of Sabbath-keepers scattered over Wisconsin, Illinois, and Iowa, with a view of encouraging them to stand by the cause of truth, and to organize churches where there is a prospect that they can be maintained. A resolution in accordance with this proposition was adopted; and the carrying out of it was left with an Executive Board, consisting of V. Hull, T. E. Babcock, J. A. Potter, R. G. Burdick, and O. P. Hull.

The case of Bro. Pardon Davis could not fail of eliciting interest at a meeting held with the church of which he is a member, and within the bounds of which many of his relatives reside. The resolution in relation to it drew forth animated remarks from many members of the Association. From the statements of a brother of Mr. Davis, who has visited him in prison, and has had interviews with many persons whose position gives them influence in the matter, we gather that there is some reason to hope for his release, after the excitement connected with his imprisonment has subsided; and that meanwhile very little good is likely to result from the multiplication of petitions on the subject by those who are looked upon as "abolitionists," and whose gratification would be no pleasure to "the powers that be."

For the other topics discussed, we must refer to the Resolutions, printed herewith.

The next meeting of the Association was appointed to be held with the church at Walworth—Thomas E. Babcock to preach the introductory discourse, V. Hull alternate.

— In the way of preaching, this meeting of the Association was fruitful, and we have seldom seen more attentive listeners. The evening after Fifth-day, Geo. C. Babcock preached, and on the following evening Russell G. Burdick. On Sabbath morning a missionary discourse was preached by Geo. B. Utter, followed by a discourse from A. W. Coon. Charles M. Lewis preached in the afternoon, and I. D. Clarke in the evening. On First-day afternoon, Varnum Hull preached on the Immortality of the Soul—a subject which has been much discussed of late in this vicinity. The evening after First-day was devoted to services in connection with the ordination of Geo. C. Babcock, whose examination by the presbytery, and ordination if deemed proper, was requested by the church at Dakota. The ordination discourse was preached by Thomas E. Babcock, the charge to the candidate was given by Geo. B. Utter, and the hand of fellowship by C. M. Lewis. At the conclusion of the ordination services, an incident occurred, which may well be repeated in other cases of the kind. One of the ministering brethren suggested, that as the church at Dakota was feeble, and unable to do much towards furnishing their new minister with the means of purchasing a suitable library, he was desirous of being one of ten to make up a purse of fifty dollars, to be invested in books for the use of the minister, and held as the property of the church. The proposition met a hearty response, and in a few minutes *sixty* dollars were raised for the object.

Report on Education.

The Committee to whom the subject of Education was referred, report, that in taking the matter into account, they feel impressed with the conviction, that Providence is pointing to our position as a people in the West, and calling loudly upon us to *take* and *hold* high ground upon the subject; that the resources of intellect, like those in the vast depositories of agriculture and minerals about us and under us, are struggling for development; that to facilitate the former as well as the latter, there must be a liberal and repeated outlay of interest, labor, and capital. Though some of our brethren who have acted as pioneers in the cause may feel that they have canceled heavy drafts upon every description of available treasure, we feel assured that patient waiting will bring them most seasonable, ample, and substantial reward.

It is a cause of rejoicing, that we have already two Academies in successful operation, and that within the year past measures have been taken, both at Milton and Albion, to enlarge the accommodations for students; and we hope that, as the demand for such accommodations shall increase, they will be promptly and cheerfully met. We hope, also, that our brethren will not be indifferent to the privilege which our early occupancy of the field affords us, of dispensing the benefits of education *beyond our own bounds.* May the inhabitants of the surrounding country remember us for nothing worse, than that we have furnished them with the most ready means of thorough intellectual culture.

We feel, also, that this is an appropriate place to commend to our brethren the enterprise of looking out worthy young men who may think of entering the ministry, and affording them such encouragement as they need in the way of material aid.

Resolutions.

1. *Resolved,* That the use of the term "*Reverend*" to designate a Minister of the Gospel, as it is only used in the Scriptures in reference to God, is unwarrantable, and ought to be discouraged.

2. *Resolved,* That in our opinion the prohibition by law of the manufacture and sale of intoxicating liquors as a beverage, is the only effectual means of exterminating the evils of intemperance.

3. *Resolved,* That we look upon the act of Congress in throwing open the Territories of Kansas and Nebraska to slavery, as a flagrant abuse of legislative power.

4. *Resolved,* That we cherish a deep and lively sympathy for Bro. Pardon Davis, now imprisoned in Louisiana, and that we are ready to do all in our power to aid his friends in their efforts to secure his release.

5. *Resolved,* That we hail with satisfaction the indications of interest within the Association in the establishment of a mission in the vicinity; in view of which, we recommend to the Executive Board the permanent employment of a man for the work

6. *Resolved,* That in recommending to the churches of this Association to contribute liberally to the support of a missionary in our own vicinity, we do not wish to divert means from the support of the same cause in foreign lands.

EVIDENCES OF PERSONAL RELIGION.

Concluded.

Among the evidences of personal piety furnished by the Bible, there is none on which more stress is laid than *love to God's people.* There certainly ought to be no difficulty in knowing who they are, for their characters ought to be as distinctly marked as the Word of God requires. Nor can we love any one as a Christian, only as the divine lineaments stand out in the life. There is a great deal of denominational love among all sects, and that is right, so far as it goes, and especially so far as denominational peculiarities are purely scriptural; but Christian love has to do with moral qualities and Christian graces. If we are Christians, we shall love all who have the mind, bear the image, and follow the example of Christ. A Christian has universal benevolence and good will to all men; but the new commandment can only be carried out towards those who, being redeemed by the blood of Jesus and regenerated by the divine Spirit, form, as it were, a new world. The affection of the soul will be towards these in proportion to the degree of moral excellence they possess. Love to Christians, as such, according to the degree of Christianity exemplified, is the natural result of love to Christ, and a destitution of this grace is a demonstration of an unconverted state, or of the want of love to God. John says, "If we love not our brother whom we have seen, how can we love God whom we have not seen?" These are the companions of the renewed man; with them he loves to converse, to pray and sing the praises of the Lord. The Christian world is one great spiritual fraternity, and it matters not of what country, or language, or color, or sect, Christianity induces to a recognition and love as soon as the Christian character is discovered.

Another evidence, and somewhat in connection with the preceding, is *love for the public worship of God.* In this exercise, we come into closer contact and with greater numbers of those who love and serve the same God, believe in the same Saviour, and have the same hope of eternal life. To the pious soul, it is good indeed to feel himself in company with so many trophies of divine grace, and of those who are bound to the land of purity and joy. Soon the earthly exercises and songs of praise will be over, but they are bound for Immanuel's land, and will cast their crowns at his feet, and shout the loud hallelujah to his great name, in united concert. How promotive of Christian love is the public worship of God, where the expression of devotional feeling meets the eye, and the accents of Christian praise from human voices arrest the ear! Oh, ye stayers at home from trivial causes, you who are seldom seen in the house of prayer, let your want of relish for devotional exercises rebuke and condemn you, and remember that God's house is the place where Christians meet. Public worship is of divine appointment, and time is allowed and required for the purpose of carrying out the duty. The requirement meets the approbation of the Christian mind, and his love to his God prompts him to obey. David said, "I have loved the habitation of thy house, and the place where thy honor dwelleth;" "I had rather be a door keeper in the house of the Lord, than dwell in the tents of wickedness;" and "my soul fainteth for the courts of the Lord." The effect of the work of grace on the soul is substantially the same in all ages, and if the ancient servants of the Lord delighted to do his will in this respect, and to unite with his people in acts of public worship, so will modern Christians. Let us go up to the house of the Lord to worship, is a Christian thought and wish, and meets a hearty response from every heaven-born soul

Lastly, *ardent attachment to the cause of Christ, and strong desires for its prosperity,* is invariably the experience of true believers. This feeling commences with the Christian character. As soon as an individual knows experimentally the great leading doctrines of revelation, he feels the importance of their being universally known and believed. As soon as that blessed light from the divine Spirit shines into the heart, revealing at once the sinfulness of our nature and its fearful consequences, he longs for all to flee from the wrath to come. As soon as the discovery is really and powerfully made, that the law of God is violated, the divine government assailed, and the divine lawgiver insulted and dishonored, he is anxious to see mankind lay down their weapons of hostility and become the willing subjects of his authority. And still further, as soon as the greater and more damning sin of rejecting the gospel—the most wonderful dispensation of heaven, and stupenduous act of grace known to men or angels—is apprehended, his soul goes out in holy and fervent desire towards those who are closing their ears and hearts against those accents of mercy which issue from Calvary. The prosperity of the Church of Christ lies in reality in the conversion of men, and when the climax of that prosperity arrives, the world will be converted to God. This event is the burden of the prayers of all that love the Saviour in sincerity, and the object of all their efforts. Every indication of the advancement of the kingdom of Christ is hailed with joy, and the prospect of its universal triumph inspires the mind with divine satisfaction.

May we all who profess Christianity have all the evidences of personal religion laid down in the word of God, that we may have a hope which will not make us ashamed at the last day.

GEO. R. WHEELER.

OBSTACLES TO BENEVOLENT MOVEMENTS—NO. 2.

That there is room for more benevolence in the church, is obvious to every one. Our Saviour says, "The poor ye always have with you." How often do we find that the favorable laws with which we are blessed are obstacles in the way of benevolence towards the importunate poor among us. "Let them go to the poor house, we pay taxes to support those institutions," is the plea of those to whom application is made. Yes, you pay your taxes, and so does the man of the world. But is your religion good for nothing—are you not willing to pay something for it? The man of the world pays for all he has; and are you not willing to do the same? True religion requires us to be careful "to remember the poor;" and those churches which let their poor suffer in the midst of plenty, are certainly deficient in Christian benevolence. Deacons of the flock, this is a work that belongs to you. Ascertain their wants, bear them to your more wealthy brethren, obtain their alms, carry them to the humble cot, and you will cheer the desponding heart.

A desire to leave a competence to our children, is an obstacle in the way of benevolence. More there are among us who have earned a competence, than of those who have found one. A fortune earned is more lasting than one found. If you would secure it for your children, put it away for safe keeping; and where will you find a safer banker than Jesus Christ? He pays the principal with interest. "He that giveth to the poor lendeth to the Lord." Are you not willing to take him for your security? Supposing that brother D—— is a farmer, worth twelve thousand dollars, he has four children, they all wish to be farmers, living in a rich farming community. He purchases for each of his children a farm for four thousand dollars, pays one-half of the amount, and leaves a debt of two thousand dollars for each of them to pay. Now they have something to stimulate them to labor, economy, and perseverance; and in nine cases out of ten they will succeed better than if the farms had been given them unencumbered. And besides, here is four thousand dollars left in the hands of the father, with which he may bless the cause of God. And will not that family feel stronger attachment to that church where their father has been a large contributor? They will certainly feel that they have an interest there. There are brethren among us who have this world's goods who are childless—why will not such feel for the interests of Zion? Must they give to their relatives—nephews and cousins? What claims have they in comparison to those of the church of God? Perhaps the church of which you are a member is crippled for the want of means to live and prosper. If not, others are. Build them a meeting-house, if they have none; or pay for the one for which they are in debt. Or help others that may need help in that way which may be most for their benefit and for the glory of God—in supporting among them the preached word, in building for them a sanctuary, a parsonage, a lecture room, or whatever the circumstances of the case may require. Do it, brethren, and you will be blessed in the deed.

Another objection is often made, that, if we give for missionary purposes, we are not certain that it will be appropriated to that cause. I have confidence to believe that every dollar that has been appropriated for missions among us, since the organization of the present Society, has been thus applied. If there should be deception and wrong in this matter, would the cause be to blame? No, indeed; let us correct the wrong, and double our diligence, that the breach may be healed. We are able to double our missionary contributions in all our churches. Until our ministers are willing to work hard, to live poor, and to give up their worldly speculations that they may become speedily rich, it will not be done. "Like priest, like people." Some must be leaders, and what are our teachers for, if it is not to lead in the cause of benevolence? That one who neglects the calls of benevolence will meet with similar neglect from those whom he serves. "There is that scattereth and yet increaseth;" of this we may be assured, for every good act which we perform will be blessed in return. "Cast your bread upon the waters, and you will see it after many days."

Another very formidable obstacle is this, Cannot God do his own work? If he wishes this or that done, will he not do it? Does he want human agency? Yes; this is the way God works. He has determined the means as well as the end. He has promised seed-time and harvest, yet land must be broken up and the seed sown ere we can even hope for a harvest. "One sows, another reaps; he that sows and he that reaps shall rejoice together." It was doubtless the design of God to deliver Peter from prison; yet it was to be done in answer to the prayers of the disciples who had assembled for that purpose. He had revealed to the prophets the truth that his ancient people should be released from captivity at the expiration of seventy years. But he told them that "he would be sought unto to do those things for them." Look abroad and see what has been accomplished by these instrumentalities, and we are at once led to wonder and to adore. Soon we may expect that the Jew, with the fullness of the Gentile, will be gathered in, and "nations shall be born to God in a day." Hasten it, Lord, in thine own good time.

A CHURCH MEMBER.

METHODISTS IN MISSOURI.—At a meeting which the citizens of Independence, Missouri, recently held, resolutions were passed protesting against the Northern Methodists holding an Annual Conference, which had been appointed to meet in that place. The reason assigned is, the anti slavery sentiments and opinions held by the ministers, and fears were entertained, under the excited state of public opinion on the subject of Slavery, that it might lead to results to be regretted. Among the resolutions passed is the following:—

"*Resolved,* That if the ministers and others constituting said conference should, after this respectful remonstrance, persist in holding the same here, we shall hold ourselves fully acquitted from any consequences that may result therefrom."

RELIGIOUS INTELLIGENCE.

A correspondent of the *Christian Advocate*, writing from Norfolk, Va., says: "There has been a great disposition to belie the Protestant ministers in our very midst, as well as abroad. It was first predicted that they would not visit the sick; then asserted that they had refused; and, lastly, that they had all fled. And while they are busy day and night traversing the filthy lanes and alleys, hunting up and visiting the sick and dying, still the impression on the minds of some is, or the report is repeated, that none but the Catholic priests visit the sick with the fever. The truth is that, with the exception of one denomination, the Protestant ministers are as indefatigable in their pastoral labors among the sick with the yellow fever, as any priest here or anywhere else."

An instance of the effect of little things has recently come to light in Armenia. A copy of the Gospel accidentally fell into the hands of a Koordish chief, some five or six years ago, and so well pleased was he with its teachings, that he made it the law of his tribe. All matters are tried by the rules of the Gospel. The tribe profess to believe in Christ, have a sort of church organization, and celebrate the Lord's Supper. In another section of that country a large number of semi-Christianized Turks have been discovered. They do not observe the great fast of the Mahommedans, nor do they observe their rites or forms of prayer. They pray extempore, and meet together once a year, make bread and eat it, and say this is for Christ.

An English paper publishes a translation from Hindostan of a list of the idols manufactured by "a most respectable and orthodox house at Birmingham." Here it is: "Yamen, (god of death,) in fine copper, very tasteful; Nirondi, (king of demons,) in great variety, the giant he rides being of the boldest design, and his sabre of the present style; Yaronnin, (god of the sun,) very spirited, his crocodile in brass, and whip in silver; Couberen, (god of wealth,) is of the most exquisite workmanship. Smaller demi-gods and minor demons in every variety. No credit, and discount allowed for ready money."

It would appear that the Episcopal church, in Scotland, does not gain much favor in the sight of the Presbyterian bodies in that country. On a late occasion, one of the sheriffs of a Scotch county rejected the claim of Bishop Eden, because he claimed under the name and designation of the "Right Rev. Robert Eden, D. D., Bishop of Moray and Ross." The bishop refused to amend the claim by deleting the words "Right Rev.," and the designation "Bishop of Moray and Ross," and the claim was accordingly rejected.

Peleario's work on the "Benefits of Christ's Death," thought by scholars to be hopelessly lost, is to be published in England, from copies discovered in St. John's College library, in the Italian edition of 1543, the French version of 1551, and the English translation of 1548, by Edward Courtenay, Earl of Devonshire. From 1843 to 1848, 40,000 copies were published in Europe. It was the original Italian which was supposed to be lost.

The Roman Catholic papers publish a list of prominent converts to Romanism in England during the last six years. The catalogue contains the names of one duchess, one marchioness, two countesses, twelve "right honorable" ladies, ten "right honorable" gentlemen, and a large number of the gentry. The clerical list has the names of two archdeacons and eighty clergymen of the English church.

The government of Spain has experienced considerable difficulty in effecting the sale of church property. The Bishop of Urgel was especially refractory, making himself so offensive that the authorities found it necessary to transport him from his own See, across that of the Mediterranean, to the Baleoric Isles, where he will remain shut up until he promises to behave better.

The Universal Protestant Conference has just opened at Paris, many eminent divines from all parts of Europe being present, including such men as Rev. Baptist Noel, Rev. Dr. Kruimnorcher, one of the court Preachers of Berlin, Dr. Stearne, and Sir Culling Eardley; also, from the United States, Rev. Drs. McLeod, Patton, Baird, and many others.

Movements have recently been made among the different denominations, with a view to the establishment of a ritual for public worship. In the Dutch Reformed Church some progress has already been made toward this end by the Rev. Dr. Bethune, who was made chairman of a committee of the grand synod, to prepare a devotional formula.

At a recent Sunday-School celebration at Warrenburg, O., thirty-six of the pupils recited 13,866 verses of Scripture, premiums of prize Bibles having been offered to the three pupils in each class who would recite the highest number. Three little girls recited 7,435.

General Intelligence.

European News.

By the arrival of the America at Halifax and the Washington at this port, we are in possession of one week's later intelligence from Europe. The news is startling—announcing nothing less than the fall of Southern Sebastopol. A fierce bombardment was opened on the 5th of September, and on the 8th the Malakoff and Redan were, for the second time, assaulted by the French and English. Repulsed six times, the former at last succeeded in taking the Malakoff. With its capture the southern side of Sebastopol became untenable, and the Russians, having first destroyed the defences and the shipping, evacuated the city and retreated to the northern forts. The loss of life must have been enormous. The grand total is set down at 30,000 men. The London *Times* of Sept. 11, furnishes the following:—

On Saturday, the 8th of September, within a few days of the anniversary of the landing of the Allied forces in the Crimea, and 316 days after the opening of the besieging batteries against Sebastopol, on the 17th of October, 1854, a final and victorious assault was made upon the southern part of the town. Before night the French flag waved in triumph upon the Malakoff Tower, which had fallen before the indomitable courage and perseverance of the assailants, and within a few hours more the Russian garrison had evacuated the Karabelnaia suburb and the southern portion of the fortress, after blowing up the magazines and principal works, setting fire to the town in many places, and then endeavoring to withdraw across the harbor from this terrific scene of devastation and defeat. So fell Sebastopol. The catastrophe surpasses in horrible interest all the preceding scenes of this gigantic contest. The columns of the Allied armies, combined in a fourfold attack, struggled all day with equal valor, though with unequal success, against the principal points marked out for assault. The extreme right of the French attack was directed against the work called the Little Redan, which was at first carried by the impetuosity of our Allies, though they were subsequently driven back by the fierce resistance of the Russians. The second and principal assault of the French army was against the Malakoff, which was carried by storm, and determined by its fall the fate, not only of the day, but of the siege. A third attack was made, by the British forces on the great Redan, and, although we learn that the salient angle of this formidable work was at one moment carried and occupied by our troops, it must be added that they were subsequently driven out of it by the fire of the Russian batteries which commanded it, and this check in some degree diminishes the exultation which will be felt in this country at the triumphant termination of the siege. The French columns on the left also assailed, in the fourth place, the Central Battery, but failed to establish themselves in the work. We have no doubt that every man who attacked the defences of Sebastopol on that eventful day fought with the same undaunted gallantry and the same determination to carry the place or to perish in the attempt; and, although the results of these several attacks were unequal, all were animated by the same spirit and contributed to the great result. The first prize of this glorious victory belongs of right to our gallant allies the French, since the Malakoff Tower, the key of the main position, fell before the vigor of their assault; but, with that chivalrous feeling which is the noblest bond of men who have fought and conquered together, the names of all those who carried the rugged defences of Sebastopol deserve to stand side by side on one page, and no invidious distinctions shall sully or lessen their common renown.

The Russians on their side unquestionably defended the place with the utmost determination, and on more than one point they had the advantage over the besiegers. But it was the courage of desperation, for this effort was their last. No sooner were the outer works taken, which laid the town and the port at the mercy of the allied forces, than the men-of-war and steamers in the harbor were all set on fire, blown up, sunk, or destroyed, either by the fire of the allied batteries or by the orders of the Russian authorities. Such was the fate of the Russian Black Sea fleet, on which the Imperial Government had expended incalculable sums of money and incessant labor—that fleet which two years ago threatened the very existence of the Turkish Empire, but whose solitary naval achievement was the atrocious outrage upon a far inferior force at Sinope. Of the authors of that nefarious attack, what remains? The Emperor Nicholas sleeps in the vaults of St. Peter and St. Paul, no longer conscious of the chastisement his wicked ambition has brought down on his empire and his heirs. The admirals who commanded and the crews who fought on that occasion have most of them fallen in the batteries of Sebastopol. The very ships for which Russia contended at the Conferences of Vienna as essential to her dignity and power are torn plank from plank and scattered upon the waves. The dockyard and arsenal were already, on Sunday, in possession of the Allied troops; Prince Gortschakoff had, it seems, solicited an armistice, though we know not whether it was granted; but his troops were hurrying away with the utmost precipitation; and, considering the moral and physical results of such a defeat upon the remnant of his army, it may be doubted whether the Russian General can attempt to make any further stand on the north side of the harbor.

No change has taken place in the position of affairs in the Baltic, with the exception of the moving of several ships from Cronstadt to Revel. This, together with the fact that a French transport had recently arrived at Niargen, with five thousand rockets of a formidable kind, has induced the belief that an attack on Revel was contemplated this season.

Another attempt has been made on Louis Napoleon's life. As the Emperor was going to the opera on the evening of the 7th ult., an individual named Bellemarre fired twice at a state carriage, supposing that it contained His Majesty. No damage was done. The man is said to be a maniac. He was instantly captured.

Austria is said to have offered her mediation to Denmark for the purpose of adjusting her difficulties with the United States.

Later from Tampico.

By the arrival of the schooner Red Fox, Capt. Sbisa, from Tampico yesterday, we have papers thence to the 1st inst.

They are filled with reports of the proceedings there consequent on the flight of Santa Ana, and the proclamation of a new Government. The news of these events was received with considerable excitement, but Gen. Casanova had sufficient influence to maintain quiet and order, till after 8 o'clock on the night of the 24th, when the fire bells were rung and the people summoned out upon the parade. Gen. Casanova, however, was soon on the spot, and succeeded in inducing the people to disperse, promising to summon them to meet on the following day to decide on the course they would pursue. This was accordingly done; authorities and people met and unanimously adopted the plan of Ayntis, and acknowledged the new order of things established in the metropolis, taking corresponding local measures. Gen. Casanova's is the first signature to the new proclamation. On the same day he issued an address to the citizens, in which he engaged as a soldier to support public order, and to recognize and pay obedience to whatever Government might be chosen by the nation In like manner he issued an address to the troops, in which he says: "As soldiers of the nation we must recognize and support the Government adopted by the nation. * * The army neither deliberates nor discusses; its mission is to sustain order and the laws."

The troops accordingly proceeded to profess their adherence to the new order of things, as at the same time did all other public officers.

The tariff of Ceballo, was at once proclaimed, and thus, without the slightest disorder, the State of Tamaulipas passed from its late subjection to the rule of Santa Ana, and, by the way, from bearing his name instead of Tampico, its former one, which it has resumed. The new Governor of Tamaulipas, appointed by Gen. Garrera, is Senor Don Juan Francisco Villasana. [N. O. Picayune.

California News.

The steamer Star of the West, with California news to Sept. 5th, arrived in New York Sept. 30th.

The principal items from San Francisco relate to the election, during which several bloody personal encounters took place.

From Oregon we have intelligence of more massacres by the Indians. Mr. Bauton, just arrived across the plains, reported a terrible Indian massacre of emigrants at Devil's Gate, on Sweet Water River. A train of 300—men, women and children—were attacked by the Chiennes Sioux, and 150 killed, and all their stock, provisions, &c., captured. The remainder of the train reached Salt Lake City in a starving condition. Among the slain were Gen. Lane's brother and family. It is also reported that 70 whites have been murdered near Fort Colville by the Indians.

The Camel Expedition.—The Washington *Star* has some particulars of the progress of the expedition to the Levant in search of camels to be used on the Western deserts between the Atlantic and Pacific Oceans. The U. S. storeship Supply was at Tunis on the 4th of August. Major Wayne, the chief of the expedition, and the officers of the ship, were presented to the Bey of Tunis, who, on hearing of the object of the expedition, immediately sent them a present of two fine camels. They were gratefully accepted in the name of the President of the United States. The Supply left for Malta on the 10th of August, courteously taking as passengers the widow and daughter of Sir Edward S. Baynes, late English Consul General. The Supply also took on board a beautiful block of marble from the ruins of Carthage for the Washington monument, presented by Mr. David P. Heap, son of our late Consul. The block is of variegated (red and white) marble, and was cut from one of the columns of the temple of Esculapius.

Cost of Governing New York City.—The entire amount of expense of the city government for the last six months in 1854, was $1,818,219 86; for the first six months in 1855, $2,338,765 53, making a total for the year of $4,156,485 39. The whole expenditures, including the trust accounts for the year, is $13,535,371 23. The entire receipts for the same period were $13,067,161 24. During the year $4,732,279 of the temporary debt has been paid. The total sum raised by general taxation during the twelve months was $15,466,051 31.

SUMMARY.

Next to the ancient church in Virginia, recently mentioned in the newspapers, the oldest in the United States is the Unitarian church in Hingham, Plymouth Co., Mass. It was erected 173 years ago, and has had only four pastors—Rev. John Norton, Rev. Ebenezer Gay, Rev. Henry Ware, and Rev. James Richardson, the present pastor.

Rev. Dr. Matthews, of this city, who has long been engaged in preparing an elaborate work on the relations of Science and Religion, has just completed an able work on the relations of Christianity to Learned Men. The distinguished author starts with the inquiry, "How far and from what causes learning has been arrayed against religion?"

Rev. Asa Cummings has left the editorial chair of the *Christian Mirror*, published at Portland, Me., and is to be succeeded by the Rev. Dr. Drummond, of Lewiston, Me. Dr. Cummings intends retiring and living on the estate of $100,000 recently inherited by his wife.

A Bedouin Arab stallion has just arrived in Philadelphia, of the celebrated Kylan breed in Eastern Arabia. He is of gray color and four years old; $10,000 has been refused for him, and his owner requires $12,500. The horse was 166 days on shipboard, during which time he never laid down. He is said to be in excellent health.

A dispatch dated New Orleans, Wednesday, Sept. 26, says:—We learn that there were forty deaths from fever at Vicksburg for the week ending yesterday, out of 170 cases. At Canton there are many deaths daily, and at many other points on the river the fever is raging with more or less violence.

Upon the whole, (says the Tribune,) we think we are safe in saying that the country at large is already assured of one of the most extensive crops of Indian corn ever grown in the United States.

On Monday, Sept. 24, Mr. Plumer Wheeler and others were engaged in digging a well at Manchester, N. H., when it suddenly caved in, catching Mr. Wheeler between the planking and holding him fast, while the dirt rapidly filled in up to his neck. In this situation he was held about an hour, he giving direction to those about him how to proceed in the attempt to extricate him; but after they had excavated nearly all the dirt, it caved again, covering him completely, and smothering him to death. The accident happened about ten o'clock in the morning, and they succeeded in reaching his body and taking it out at about five in the afternoon

On the 23d ult., an alarm of fire, in the city of Albany, had caused a very large crowd to collect on State-st. Bridge, when it fell into the water, a distance of twenty feet, carrying down with it not less than one hundred persons. The panic caused was frightful—men, women, and children being huddled together in great confusion amidst the greatest consternation, and yet but two or three were seriously injured, and none, so far as ascertained, fatally. This is not the first time this bridge has fallen. Not long since, if we remember right, some twenty persons were killed by the fall of it.

At a recent Allegany county fair, held at Angelica, a large rotating swing had been erected. There were four boxes, each holding four persons, and while these were full and the swing in motion, some part of the machinery broke, throwing the four persons in the highest box to the ground with great violence. One of them named Graham was almost instantly killed, and another has since died. The other two are very seriously injured. The persons in the other boxes sustained but little injury.

We learn that one hundred bushels of Rough Rice per acre have been realized on the Trinity lands, near Liberty. Six hands are said to be adequate to the cultivation of one hundred acres of land in rice. Why should not Texas, not only grow all the rice needed for home consumption, but also a large quantity for exportation? The lower Brazos and Trinity, and the coast region generally, are admirably adapted to the production of Rice. Will not some of our intelligent and enterprising farmers try the experiment?

G. W. Berry, of Neponsett, Mass., has what appears to be a curious specimen of bisquadrupedology, in the shape of a grey kitten, with one head and eight legs. The head and fore shoulders are those of a perfect animal. About half way between the head and tail the body is divided into two perfect hind quarters, with four feet and two tails. Two more legs appear just where the two bodies unite in one. Every thing seems perfect, externally. The kitten was one of a litter of five, and was dead when first discovered.

Joseph Carr, well known as a keeper of several eating houses in Boston, met his death on Wednesday of last week, from a very singular cause. Some six weeks since he complained that a corn upon one of his feet gave him great pain. Upon making known his complaint a gentleman recommended Mr. C. to put a clam-skin upon the corn, which he said was a sure cure. Mr. C. followed the direction, since which the pain spread entirely over his body, and it is thought by his friends to have been the cause of his death.

The coroner of Williamson county, Tenn., was called upon on the 21st ult. to hold an inquest over the body of a negro woman, the property of James Bolton. She was most terribly mutilated, besides having her neck dislocated. Mrs. Bolton confessed to the commission of the murder, but said it was done in self-defence. It is said by others that the motive which induced the crime was jealousy of an improper connection between the murdered negress and Mrs. Bolton's own husband.

A lad 16 years of age, named Alonzo West, has been indicted by the Grand Jury of St. Joseph County, Mich., for placing obstructions upon the Southern Road, and plead guilty. He is one of the gang who were employed in this fiendish employment in June last, and was arrested by Mr. Pinkerton, of the Northwestern detective police. His sentence has been deferred to the next term of the Court, to endeavor to induce him to confess the names of his accomplices.

A dispatch dated Boston, Monday, Sept. 24, says:—The British bark Annie, from Pictou, N. S., arrived at this port, reports on the 23d, off Cape Cod, came in contact with the schooner Chesapeake, from Rockland, for New York, with a cargo of lime, and lost foremast, main-topmast and bowsprit. The schooner was seriously damaged, and was abandoned by her crew, who arrived here in the Annie. The schooner, doubtless, sunk shortly after the collision, as nothing could be seen of her at daylight.

A Memphis (Tenn.) paper states that a colored boy in that city killed himself on the 21st ult. by shooting himself in the head. Some time since he ran off and attempted to make his way to Canada, but was arrested and placed by his master in a negro mart for sale. He was about being sold to some gentleman who resided in Arkansas, and his aversion to going is the only imaginable cause for this rash act.

The editor of the Minnesota Pioneer says he has in his office a squash raised in the garden of Captain Wm. Foster, on the Minnesota River, weighing seventy pounds. The squash was picked by Captain Foster just six weeks after the seed was planted, and was not fully grown. He has other specimens on his vines, planted at the same time, which he proposes to let remain, for the purpose of "seeing what the things will come to!"

A young lady named Hood, while combing her hair, met with a most horrible accident in the factory in which she was employed at Mechanicsville, Bucks county, Pa., a few days ago. She had thrown her tresses backwards, when they were caught by the machinery, and, with a part of the scalp, torn from her head. Her hand and arm were also badly lacerated in her endeavors to disenrage herself from the machinery.

A son of Samuel S. Robbins, of Salisbury, Conn., died at that place a few days ago, aged 18 years. His death occurred from a disease of the lungs, brought on about nine years ago, when playfully running and holding a head of herds grass by its stem in his mouth, he drew it with his breath into his lungs, from which it was removed after death, in a perfect state of preservation.

Miss M. C. Rice, one of the assistant teachers in the Webster Grammar School at Cambridge, Mass., has received notice from the proper authorities at Para, Brazil, of the death at that place of a gentleman who has left property to her, by will, of $70,000. This windfall, so unexpected, came from a disappointed suitor of Miss Rice, who, in despair at his rejection, some eight years ago, wandered away to South America, and made a fortune there.

One of our exchanges notices the fact that Pomponius Atticus Bibb has been appointed assistant secretary of state for Kentucky. Titus Pomponius Atticus Bibb, Esq., resides in the borough of Frankfort. To this grandiloquent announcement, another paper adds that Scipio Cincinnatus Washington Cæsar Tucker has been arrested for stealing a pig, and committed to jail. Mr. S. C. W. Tucker dwells in Nashville, Tenn.

A dispatch dated New Haven, Thursday, Sept. 27, says: The case of Willard Clarke, on trial for the murder of Richard Wight, who had married the young lady to whom Clarke was attached, was given to the Jury last evening. The defence was insanity, and at 2 o'clock the Jury returned a verdict of acquittal on that ground. When the verdict was announced, two rounds of applause were given by the large crowd present. Mr. Clark will be confined in the insane Retreat, by order of the Court.

The Assessor's report gives the total valuation of Boston at two hundred and forty-two millions, three hundred and forty nine thousand, two hundred dollars, showing an increase over the valuation last year of fifteen millions three hundred and thirty six thousand dollars. The rate of taxation has been fixed at seventy-seven cents on one hundred dollars, a reduction of fifteen cents from last year.

According to a writer in the Rochester American, a colored man named Richard Stamp, formerly a slave of Washington, is now living with his sixth wife at Urbana, Ohio, at the good old age of one hundred and eight years, who has in his possession the original papers, giving him his freedom, in General Washington's own hand-writing. He owns about one hundred acres of land, bought with money given him by his illustrious master.

The United States Agricultural Society, though yet in its infancy, has held two great National Exhibitions—the first, of horses, at Springfield, Mass., in 1852; the second of Live Stock generally, at Springfield, Ohio, in 1854. Its third Annual Exhibition of Domestic Animals is to be held this year on Boston Common, in aid of which a subscription of twenty thousand dollars for the payment of premiums and expenses has been made in Boston and its vicinity.

A dispatch dated Kingston, C. W., Monday, Sept. 24, says: A fire broke out at 2 o'clock this morning, in the extensive dry goods store of W. H. B. Smith, and entirely destroyed the interior of the house and its contents. Another fire occurred at 10 o'clock this morning, on the premises of the Bay of Quinter Hotel, and destroying the stables and outbuildings, the upper floor of the hotel, and a frame cottage.

Captain J. J. Wright, who was fearfully stabbed in the side and abdomen by Robert S. Dean, on the evening of the 15th ult., at the St. Nicholas Hotel, is reported to be slowly recovering, and his physicians have given a certificate to the effect that they consider him to be out of danger.

The Grand Jury of Burlington Co., N. J., has indicted the engineer of the train which was the cause of the late accident on the Camden and Amboy Railroad, for manslaughter, and the agent of the Company for keeping the property taken from the dead.

A woman recently disguised herself in men's clothes, and enlisted in the U. S. army at the rendezvous at Rome, N. Y. Her sex was not suspected until she was detected in a larceny, which led to the curious exposure. She is now in jail at Utica.

The editor of the Kansas Pioneer thus chronicles the dimensions of a beet, raised and presented to him by a resident of Kickapoo city. It is a whopper; and measures 25 inches in circumference, 23½ in length, weighs 18 1-2 pounds, of the common blood variety.

A dispatch dated Boston, Tuesday, Sept. 25, says:—One of the freight cars of the Stonington Steamboat Train, coming this way, caught fire this morning from a spark from the locomotive, when near Attleboro', and with its contents was entirely consumed.

On Sunday morning of last week, the best part of the city of Carbondale, Pa., was laid in ashes. Twenty buildings were destroyed by the raging element. The fire is supposed to have originated from the drunkenness of some of Washburn's Circus Company.

According to a work not long since published in London, Wenham Lake, from which so much ice is annually obtained, is located in the mountains, in the town of New Hampshire, in the state of Massachusetts.

A jury in Bradley county, Tenn., have recently awarded Charles M. McClung, of Knoxville, the exemplary verdict of $10,000 against a railroad in that section for injury done to his person some four or five years since.

Mr. T. Harlacher has presented the editor of the Allentown (Pa.) Democrat with a peach, of the variegated freestone species, measuring 18 1-2 inches in circumference, and weighing nearly a pound.

A dispatch dated Philadelphia, Friday, Sept. 28, says: A suit has been commenced in the Eastern District Court against Passmore Williamson for the value of the abducted slaves belonging to Mr. Wheeler.

A dispatch dated New Orleans, Friday, Sept. 28, says: During the past week, there have been 40 deaths from the yellow fever at Vicksburg, and 170 new cases. At Canton the number of deaths has been 20.

A dispatch dated Boston, Monday, Sept. 24, says: The total amount collected in this city and remitted for the relief of the sufferers from yellow fever in Norfolk and Portsmouth now reaches $9,000.

Hon. John Welles, one of the "merchant princes" of Boston, died at his residence in that city on Tuesday evening, the 25th, aged nearly 91 years.

$4,598 has been raised by the Liquor Dealers of this City, in aid of the Norfolk and Portsmouth sufferers—and four Wards have not yet sent in their returns.

New York Markets—Oct. 1, 1855.

Ashes—Pots 6 37; Pearls 6 62.

Flour and Meal—Flour, 7 75 a 7 87 for common to good State, Ohio, Michigan, Indiana, and Upper Lake, 7 94 a 8 18 for State and Western extras, 9 00 a 10 75 for extra Genesee. Rye Flour 5 75 a 7 00. Corn Meal 4 62 for Jersey.

Grain—Wheat, 1 80 a 1 90 for Western red winter, 1 75 for a lot of new mixed Ohio, 2 05 for fair white Canadian winter, 2 06 a 2 10 for white Southern. Oats, 42 a 45c for State, 46 a 47c for Western. Barley 1 25 a 1 35. Rye 1 14 a 1 18. Corn 85 a 86c for western mixed.

Provisions—Pork, 21 25 for prime, 22 50 for mess. Beef, 11 50 a 12 00 for country prime, 13 00 a 14 00 for country mess. Lard 11¾ a 12½c. Butter, 15 a 18c for Ohio, 19 a 22c for State. Cheese 9 a 10c.

Hay—70 a 75c per 100 lbs.

Lumber—12 00 a 13 00 for Eastern Spruce and Pine.

MARRIED,

In Walworth, Wis. Sept. 15th, by Eld. O. P. Hull, Mr. Nathan J. Read to Miss Anna Maria Randolph, formerly of Shiloh, N. J.

DIED,

In Little Genesee, N. Y., on the 19th ult, Joseph W. Wells, in the 48th year of his age.

In West Edmeston, Otsego Co., N. Y., Sept. 24th, Mrs. Mahala Coon, widow of the late Daniel Coon, aged 75 years. Sister C. was a member of the third Seventh-day Baptist Church in Brookfield, and she has left to her bereaved family and friends, every desirable reason to believe that she has made a happy exchange of worlds. W. B. M.

LETTERS.

Magnificent Floral Gift.

SUBSCRIBERS to the "CHRISTIAN DIADEM" for 1855, are entitled to a splendid steel engraving, the ☞ LILLY AND THE ROSE PERSONIFIED, being given *gratis* to all old and new subscribers who send us only ONE DOLLAR, by mail or otherwise.

Six Copies for Five Dollars.

The Diadem is a strictly moral and religious work —designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address Z. P. HATCH, Publisher, 9 Spruce street, New York. May 24—3m.

New Market Seminary.

This Seminary will re-open on the 12th of September, with Mrs. E. H. Whitford, as Preceptress.

This Institution is located in a pleasant section of country, and has a commodious and well arranged building, and is designed to furnish every facility and advantage to the student found in other institutions of this class.

Board for students may be had in families at one dollar and seventy-five cents per week, where all their wants will be kindly cared for. Tuition from $3 to $5 per term, according to the studies pursued. Music, with use of Piano, $10 00.

I. H. Dunn, Sec. of Board of Trustees.

New Market, N. J., August 26, 1855.

Ahead of all Competition.

In press, and will be published on the 20th of September.

FLEETWOOD'S LIFE OF OUR LORD AND SAVIOUR JESUS CHRIST, together with lives of the Holy Apostles and Evangelists, and a History of the Jews. The whole carefully revised with additions by the Rev. Joseph Belcher, D. D.

Determined to furnish agents and their patrons with books of sterling merit, we are about issuing, in connection with our popular History of all Religious Denominations, a new edition of the above fine old work. It will contain about 700 pp. uniform in size and type with the latter, and will be handsomely illustrated by engravings. Copies have been procured from England and Scotland, and carefully collated by the above eminent divine, with those published in this country. Many fine omitted passages have thus been restored, the manifold mistakes of successive printers have been corrected, and we shall now have the pleasure of placing in the hands of canvassers *the most correct edition in existence of this admirable work.* For terms and other particulars address either of the

Bela Sawyer, Sup't. John S. Savery, Proprietor.

Farm for Sale,

CONTAINING about 100 acres, with a fair proportion of woodland, a small orchard of grafted fruit, and a comfortable dwelling and outhouses. It is situated about four miles north of Westerly, R. I., and within a mile of each of the flourishing manufacturing villages of Potter Hill and Ashaway. There are several other manufacturing establishments near, affording a ready market, in the immediate vicinity, for every species of produce. It is convenient to the first Hopkinton Church, as well as to the very excellent male district school.

It will be sold with or without the stock and farming implements, and possession given the ensuing winter or spring, if desired. To those wishing to secure a quiet home in an enterprising neighborhood, and surrounded by such comforts as can only be found in an old settled and thickly populated country, this affords an opportunity seldom offered. For terms and other particulars apply to the subscriber on the premises, or address John E Potter, No. 15 Sansom-st., Philadelphia, Pa. Benjamin Potter, Ashaway, R. I.

Michigan Southern Railroad Line.

TRAVELERS for Chicago, St. Louis, Kansas, and all points West and Southwest, can obtain through tickets, and all information concerning routes, fare, &c., either by the New York and Erie Railroad, or the New York Central Railroad, by application at the Company's Office, No. 192 Broadway, corner Dey-st., to

JOHN F. PORTER, General Agent.

Central Railroad Company of New Jersey.

NEW YORK, SOMERVILLE, EASTON, &c. *Spring Arrangements*, commencing April 2, 1855: Leave New York for Easton by steamers RED JACKET and WYOMING, from Pier No. 2 North River, at 8 A. M., 1 and 4 P. M. For Somerville, (way,) at 5.30 P. M.

The above trains connect at Elizabethtown with trains on the New Jersey Railroad, which leave New York from foot of Courtlandt-st. at 8 A. M., 1, 4 and 5 P. M.

Returning—leave Phillipsburg (opposite Easton) at 6 and 9.45 A. M. and 3 P. M.; Somerville (way,) at 6 A. M.

New York and Elizabethport.

Leave New York at 8 and 10 A. M., 1, 4 and 5 P. M.
Leave Elizabethport at 7.15 and 9.10 A. M., 1, 3.15 and 6 P. M. JOHN O. STERNS, Superintendent.

New York and Erie Railroad.

ON and after Monday, May 7, and until further notice, Trains will leave the pier foot of Duane-st., New York, as follows:

Dunkirk Express at 6 A. M. for Dunkirk.
Buffalo Express at 6 A. M. for Buffalo.
Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations.
Accommodation at 12¼ P. M. for Port Jervis and intermediate stations.
Rockland Passenger at 3 P. M. (from foot of Chambers-st.) via Piermont, for Suffern and intermediate stations.
Way Passenger at 4 P. M. for Newburgh and Otisville and intermediate stations.
Night Express at 5½ P. M. for Dunkirk and Buffalo.
Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5½ P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c., and with first-class splendid steamers for all ports on Lake Erie.

D. C. McCALLUM, General Sup't.

State of New York,

SECRETARY'S OFFICE, Albany, August 25, 1855.—To the Sheriff of the County of New York: Sir—Notice is hereby given, that at the General Election to be held in this State on the Tuesday succeeding the first Monday of November next, the following officers are to be elected, to wit:

A Secretary of State in the place of Elias W. Leavenworth;

A Comptroller in the place of James M. Cook;

An Attorney-General in the place of Ogden Hoffman;

A State Engineer and Surveyor in the place of John T. Clark;

A State Treasurer in the place of Elbridge G. Spaulding;

A Canal Commissioner in the place of Frederick Follett;

An Inspector of State Prisons in the place of Darius Clark;

A Judge of the Court of Appeals in the place of Addison Gardiner;

All whose terms of service will expire on the last day of December next.

Also, a Judge of the Court of Appeals in the place of Charles H. Ruggles, Resigned;

Also, a Justice of the Supreme Court for the first Judicial District, in the place of Edward P. Cowles, whose term of office will expire on the last day of December next;

Also, a Senator for the Third, Fourth, Fifth, and Sixth Senate Districts, in the place of Thomas J. Barr, Thomas R. Whitney, Mark Spencer and Erastus Brooks, whose term of office will expire on the last day of December next.

COUNTY OFFICERS ALSO TO BE ELECTED FOR SAID COUNTY.

Sixteen members of Assembly;

A Sheriff in the place of John Orser;

A County Clerk in the place of Richard P. Connolly;

Four Coroners in the places of Robert Gamble, Joseph Hilton, Hieronymus N. Wilhelm, and William O'Donnell;

A Comptroller in the place of Azariah C. Flagg;

A Street Commissioner in the place of James Furey;

A Commissioner of Repairs and Supplies in place of Bartholemew Purdy;

Two Governors of the Alms House in the place of Patrick Henry and John J. Herrick;

City Inspector in place of Thomas K. Downing.

A Counsel to the Corporation in place of Robert J. Dillon;

Two Justices of the Superior Court in the place of Wm. W. Campbell and Murray Hoffman;

A Justice of the Marine Court in place of [illegible] Birdsall;

A Police Justice for the Sixth Judicial District in the place of Geo. W. Pearcy;

A Judge of the Court of Common Pleas in the place of Lewis B. Woodruff.

Yours respectfully,
E. W. LEAVENWORTH, Secretary of State.

Sheriff's Office, New York, August 28, 1855.

The above is published pursuant to the notice of the Secretary of State and the requirements of the statute in such case made and provided.

JOHN ORSER,
Sheriff of the City and County of New York.

☞ All the public newspapers in the county will publish the above once in each week until the election, and then hand in their bills for advertising the same, so that they may be had before the Board of Supervisors, and passed for payment. Sep—13.

Miscellaneous.

Terms used in Fortifications and Sieges.

Just now when the besiegers of Sebastopol are pushing closer and closer upon the works of the besieged, and we are likely to read in every newspaper inscriptions in which terms of military fortifications occur, it is well that we should for the sake of understanding all the points and passages of this great conflict, make ourselves acquainted with many of the terms employed in the nature and construction of objects referred to.

The *Glacis*, is made sloped ground in front of the rampart and is the most essential part of modern fortifications, and when well defended, is the most bloody scene of the siege.

Second Ditches and Convert Ways—When the ground lies low, and water to be found, there is often a ditch made round the glacis. All works constructed outside the ditch are called outworks.

Rampart, is elevated above the level of the place, according to the nature of the ground and particular construction of engineers.

Parapet, is a part of the rampart elevated about seven feet above the rest of the work, in order to protect the troops when drawn up there from the fire of the enemy; and the *banquette* is about four feet lower than the parapet, that the troops standing upon it may be able to fire over the parapet.

Mines—Properly speaking, excavations made by the besiegers against the place are called *mines;* those made by the defenders under their works, are called *countermines.*

Battery, is a parapet carried up to cover the gunners and men employed from the enemy's shot; the parapet is open at intervals for the guns to be fired through, and are called *embrasures;* the mass of earth between the embrasures is called the *merlon*. The platform or floor of a battery is formed of sleepers, to keep the wheels from sinking into the earth, and is made canting towards the embrasures to prevent recoil, and to facilitate the bringing back of the gun.

Intrenchments form an obstacle from behind which the soldiers may defend themselves, and keep the enemy at bay. They consist of a bank of earth, called a breast work or parapet, and a ditch dug in front or rear, usually seven feet high, with a step called a *banquette* to stand on, and from this the soldiers deliver their fire over the top.

Redoubts, are of easy construction, and are proper for covering an advanced post, or in defile, protecting a retreat supporting the wings of an army, or line of frontiers, and have the advantage of affording a good defence.

Stockades are strong, rough, close palisading pointed at top, and loopholed to fire through.

Abattis are obstacles formed by trees and branches, placing them outward or toward the enemy, in all directions, with the ends sharpened, and when placed upright in a ditch are called perpendicular abattis.

Gabions, baskets or osier work about three feet in length, and a foot and a half wide, pointed at bottom, and when placed on end are filled with earth and used for the commencement of a parapet, when used for the first parallel they are called *flying sap*.

Casemated Battery—Constructed with strong masonry, with openings or embrasures, so as to resist heavy shot or shell.

Facines—Bundles of brushwood or faggots bound up by the sappers. They are generally from twelve to eighteen feet long, strongly bound together, and made proof against musket shot.

Palisades—Are made from the stumps of trees, six to ten inches in diameter, and nine or ten feet long. They are generally fixed about 7 feet above the ground; any stout posts, rails, or timber of sufficient strength to prevent the enemy breaking them down, may be used.

Traverse—A mass interposed, the intention of which is to prevent or protect the men from the fire which may come upon them in any direction but their front.

Redan—An angular parapet work constructed in a cuneiform shape.

Lunette is formed as a redan, and having two flanks.

Hurdles are what the name implies, and are used in retaining earth on steep slopes.

En Barbette—Cannon placed on the top of a wall without a parapet, in order to have a commanding position, and takes a greater range; and not firing through embrasures, they can be turned to fire in any direction.

Zig-Zags—Oblique approaches which are made on the salient angles of a fortification.

Parallels—Sunken opproaches that are made on the salient angles or capitals of the bastions.

Japanese Peculiarities.

It seems that the national exclusiveness of this peculiar people is also exhibited in their social habits. The streets of their towns present only a dead wall on each side, the houses being situated in gardens behind them, and hidden as much as possible by trees and shrubbery. Being under constant surveillance, the people are much given to hiding themselves.

Their dress consists of one loose robe with a girdle about the middle. This is a very cool arrangement for summer weather, but in winter is not quite so comfortable. However, they manage to keep warm by levying contributions upon each other, for whenever one member of the family goes out in the cold weather, he borrows the garments of those who remain within, and put them on one over the other.

The Japanese idea of a shoe is peculiar. The article with them is simply a sole, and is worn not for the protection of the foot—which in fact it does not cover—but for the preservation of the matting on the floors—the sole being always slipped off at the door, the wearer going barefoot in the house. The shoe, therefore, is only intended to keep the feet from contact with the earth, and thus from soiling the matting, which is a matter of pride to keep very clean. This, indeed, is a very essential matter, as the matting is used not only for a carpet, but for a table cloth and mattrass as well, being in fact the only article of furniture in the house. The inmates sit, eat, and sleep upon the floor.

The Japanese pillow—for they indulge in that luxury—is a curious affair. It consists of a little block of wood, with sides of unequal width, so that by turning it over—which is often done even in sleep—the head may rest at different points of elevation. This peculiar pillow is made necessary from the fact that the hair is worn upright upon the head, matted together with grease and secured by pins, which by their material indicate the rank of the wearer. This pillow is considered a very comfortable affair, and altogether superior to the bag of feathers on which we outside barbarians are wont to recline our heads.

The Japanese, like the Chinese, take their food with chopsticks, and indicate their enjoyment of it by a loud snoring noise, not at all agreeable to civilized ears.

Being always accustomed to sit with their legs bent upon the floor, they find it painful to sit upon chairs, complaining that the part of the leg which hangs down "is just the same as if it was cut off."

The mandarins, when they go abroad, have always a retinue; an umbrella capable of covering thirty or forty persons, is held over their heads, while two men go before with brooms to sweep away evil spirits in the air! They believe in spirits, but not in the immortality of the soul.

When the Japanese gentleman walks out he is always accompanied with a servant, whose duty it is to carry three essential articles—an umbrella to shade his master—his slippers (for it is a general thing to go barefoot) and an eating-box containing food, lest his master should become faint on the way. When this happens the gentleman sits down upon the ground, opens his box and eats his dinner.

The Japanese are bound to support their fathers while living, and to worship them after death. This worship is the only social enjoyment they have, for they make an amusement of it, though one would think it must be a very grave one. In fact the grave yard is the only place of public resort, and is made a place of sensual enjoyment. Every day the household resorts to the family tomb, and there indulges in eating, drinking, and wailing alternately. This is their worship. Formerly they were required to spend three years by the graves of their parents, now fifty days will do, and they sometimes even hire men to watch in their stead. This indicates a lamentable decline of piety, which, however, is not without its parallel among the professors of a higher faith. [Port. Trans.

The Preservation of the Eyes.

Mr. Cooper, in his "Practical Remarks on Impaired Vision," gives some excellent hints on the preservation of the eyes, which will be interesting to many of our readers:—

Daily experience teaches us that the decay of vision is hastened by many causes which are frequently overlooked. Although it is at about forty that the sight usually begins to fail—yet we find that some persons attain extreme old age without needing glasses at all. A respected friend of mine who for many years held a distinguished position in the public service, can now, in the eighty-fourth year of his age, see to read and write with as much facility as he could fifty years ago; he has never used glasses, nor will he probably ever require them. Other persons, on the contrary, require glasses by the age of thirty, and, though much depends upon constitution, much also depends upon a person's habits.

One of the worst of habits is that of overworking the eyes by candle-light at night. Repose from labor, so necessary for the restoration of tone and vigor to the several organs of the body, is too sparingly granted to the eyes. Some from a desire to distinguish themselves, others urged by necessity, encroach upon the hours of rest, and overtax the sight without mercy, by lamp or gas-light. To the poor but working classes, medical treatment, when the eyes are thus oppressed, affords only temporary relief; the return to similar habits, however necessary, invariably brings back the same disease, and, by its repeated attacks, vision is sooner or later destroyed. Let us hope that the advancing spirit of the age will speedily arrest so crying an evil.

Let it be remembered that day-work is preferable to night-work; that while the light of a candle or lamp is trying even to a strong eye, the moderate light of the sun is strengthening to it. Those whom circumstances compel to study in the evening, should select that kind of work which is least distressing to the eyes; they should especially avoid indistinct writing or small print. [We have ourselves experienced the injury attendant upon a too great straining of the eyes over small print, and we can therefore more readily support Mr. Cooper's warning in this respect.]

Reading by firelight, or simply gazing at the fire when sitting alone, or in a contemplative mood, is highly injurious to feeble eyes, and should be avoided by all. It is not advisable to read by twilight; too little light is as pernicious as too much light, yet many persons will, evening after evening, try their eyes in this way rather than burn a candle. It is injurious to the eyes to be long exposed to the reflection of a strong light, whether artificial or natural, such as the reflected sunshine from the page of a book. Too brilliant a light produces undue excitement of the eyes. Travelers in the African deserts find it necessary to protect these organs from the sun's rays by a piece of crape. The inhabitants of some eastern countries, for the same purpose, anoint the edges of the lids and eyelashes with a black pigment composed of oxide of antimony and oil, which has the effect of subduing the light, and, at the same time, improving personal appearance. The inhabitants of the Arctic regions ingeniously protect their eyes from the light reflected from the snow by wearing in front of the eyes a long and thin piece of wood perforated by two narrow horizontal slits, one corresponding to each eye. By means of this simple contrivance, just such a quantity of light is permitted to enter the pupil as will suffice for vision. To preserve weak eyes as much as possible from a strong light, neutral tint spectacles are exceedingly suitable.

In reading and writing, just that amount and quantity of light, whether natural or artificial, should be allowed, which, while it thoroughly illuminates the object, feels grateful and pleasant to the eyes. This desideratum can never be obtained without due regard to the position of the light. The light cast upon a book while the candle is in front, is by no means pleasant, and the glare of the flame is very trying to weak eyes. It will be found, that if the candle or lamp be placed behind the reader, a little elevated, and slightly on one side, the pleasantest and least injurious effect is produced; for the light then reflected to the eyes is less distressing, and at the same time the eyes are perfectly protected from the heat and glare of the flame.

It would be well if in our public buildings more attention was paid to the position of the lights. It is very distressing to sit in a gallery immediately opposite the glare of a gas-burner or lamp, for an hour or more; the eyes frequently do not recover from the irritation thus excited for several days. Not only might the evil be easily removed by employing lights of greater power and placed nearer the ceiling, but there would be a great advantage gained from the increased purity of the air.

Sudden transitions from gloom to strong light should be avoided. The dazzling effect produced when we come suddenly from darkness into light, arises from the pupils having been widely dilated to admit the greatest possible number of luminous rays whilst in the gloom; and as the pupil of the eye requires time to contract, sudden transition from comparative darkness to a bright light compels the eye to admit far more rays than is either agreeable, or than it is calculated to bear without injury.

It cannot be too strongly urged upon any one about to use spectacles for the first time, that that power which will enable him to read without much exertion by candle light, is the only power suitable for him. It is by candle-light only he should use glasses at first, and as soon as he finds that he stands in need of glasses by day as well as by candle light, and that the glasses he used no longer afford him sufficient assistance by candle-light it will be proper to use the next power for the evening, but for the evening only, and allow himself the use of the others—and their use only—during the day. The greatest caution as to increasing the power of glasses should be observed, for persons who change their glasses, unnecessarily increasing their power each time, are exhausting the resources of art instead of economizing them as much as possible. Optical aid can only be extended to a certain point, and the steps to that point should be as slow and as numerous as possible. By exercising prudent precautions, persons may often attain great age, and yet never require the aid of glasses beyond a very moderate power; others, on the contrary, who from ignorance frequently increase the power of their glasses, may run through the whole assortment, and leave themselves only the most inconvenient resources to fall back upon—viz: the very highest powers.

American Expresses.

The machinery of commerce is developing so rapidly under the infludnce of modern science and industry, that we are hardly aware of the great changes that are occurring day by day. With railroads, steamboats, the telegraph, and *Yankee ingenuity*, we are now prepared for almost any thing.

No one change or improvement is more striking than that has faciliated the commercial intercourse of States and nations. Every step in advance in this direction is as much a step towards the millennium as the distribution of Bibles or the sending forth of a missionary to preach the Gospel to the heathen. Reader, will you pause and consider the influence now being exerted by a single feature of our commercial progress; a feature of which we may well be proud, because it is essentially American, having its origin in our own country. We refer to the American Express.

The American Express system originated with Wm. F. Harnden, in 1839, at the suggestion of Mr. Pullen, (now of the National Express Co.,) and some other gentleman of Boston. Mr. H. was in the employ of one of the Boston and New York Rail and Steamboat Companies, as ticket agent. His health having failed, he was obliged to abandon that agency, and seek some new employment, to sustain himself, his pecuniary means being small. Harnden died in 1845. The Express known as Harnden's—between Boston and Philadelphia, viâ New York—out of compliment to its founder, took its name from him.

The next Expresses which came into existence were what are now merged into either the "Adam's Express Co.," "American Express Co.," or the "National Express Co." The messengers either of one or the other of these, together with those since established (Wells, Fargo & Co., and the United States Express Co.,) move through almost every habitable part of North America, by land as well as water communication, on lake, ocean, and the steam-car, forming many of the links of commerce which connect us with the Old World. These expresses perform any and all kinds of service for the public. They carry the exchanges of the banks, collect notes, bills, drafts, accounts, etc., and carry all the small and large packages which are too valuable or unsafe to entrust to the mails or other means of conveyance. At one time the commercial interests of our whole land were agitated and suffering seriously for the want of a medium through which our money exchanges could be effected without ruinous discount to those who lived far in the interior. This want, about which politicians quarreled, and our law makers in vain endeavored to legislate, was at once most perfectly supplied through the Express system of communication; as by this means the cost of exchange was immediately reduced to the exact expense of transporting from any given point to another. The Expresses try to do every thing possible for every body. Every parcel is *ticketed, booked* and *billed* with more pains and regularity than in the Post Office Department. Reduction of postage has been greatly faciliated by the Express companies. Formerly the General Government insisted on the charge (except for very short distances) of 12½, 18¾, and 25 cents postage for carrying letters. The expresses, though threatened by Uncle Sam, undertook the same service for 5 and 10 cents. The Government not only scolded but *prosecuted*, and finally the United States courts sustaining the Expresses, the work of reduction commenced. The Expresses, in a word, are ubiquitous, and it has been a wonder that their never-tiring faithfulness performs the varied and enormous amount of business entrusted to them as well as they do. The express business has not only become spread like a net-work over the States of this Union, but its operations extend to the most distant clime, enabling the inhabitants of every part of the globe to enjoy the advantages of *separation* without the difficulties of distance. Their carriers have traveled, and still travel from State to State and nation to nation, at the highest speed of time, and as public *envoys of commerce*, frequently outstrip the mails and private dispatches of government. One of these companies has 300 offices, is now traveling 13,000 miles daily, paying a single railroad company over $100,000 per annum, carrying an average burden of from one to twenty-five tons, and employing 850 men.

The expresses have become like a piece of furniture which we cannot now do without, and it may safely be contended that as the five brothers Rothschild lived in the five principal commercial capitals of Europe, with their *private* dispatch messengers, going to and from each other, conducting their vast money exchanges, so the expresses may conduct the exchanges both domestic and foreign, from the fact that they possess the very best and *safest* medium of remittance from one mart to another. Said the late Mr. Rothschild in 1832, (the one who is said to have made millions sterling in English funds, on hearing by his own private messenger in London *eight hours earlier* than the public, of the victory of Waterloo,) "England is in general the Bank for the whole world. I mean that all transactions in India, in China, in Germany, in Russia, in America and in the whole world, are all guided here and settled through this country." So will it be said at no distant day of this country and of New York, its great commercial emporium, when, with a *direct* route to California, and a few Collins or Aspinwall ferry-boats across the Pacific, our express system shall be fully perfected and appreciated.

Anecdote of Dr. Young.

The following whimsical anecdote is related of the celebrated Dr. Young, author of Night Thoughts:—

This eminent writer, and amiable man, was remarkable for the urbanity of his manners and the cheerfulness of his temper, prior to a most disastrous family contingency, which threw a shade on all the subsequent part of his life. He was once on a party of pleasure with a few ladies, going up the water to Vauxhall, and he amused them with a tune on the German flute. Behind him were several officers also in a boat rowing to the same place, and soon came along side the boat where the doctor and the ladies were.

The doctor, who was not very conceited of his playing put up his flute on their approach. One of them instantly asked, "Why he ceased playing, or put the flute up in his pocket?" "For the same reason (said he) that I took it out, to please myself." The son of Mars very peremptorily rejoined, "that if he did not immediately take out his flute and continue his music, he would instantly throw him into the Thames." The doctor, in order to allay the fears of the ladies, pocketed the insult with the best grace he could, and continued his tune all the way up the river.

During the evening, however, he observed the officer, who acted thus cavalierly, by himself in one of the walks, and making up to him, said with great coolness, "It was, sir, to avoid interrupting the harmony either of my company or yours that I complied with you arrogant demand; but that you may be satisfied courage may be found under a black as well as a red coat I expect you will meet me to-morrow morning at a certain place without any second, the quarrel being entirely *entre nous.*"

The Doctor further covenanted in a very peremptory manner, that the business should altogether be settled with swords. To all these conditions the officer implicitly consented. The duelists met the next morning at the hour and place appointed; but the moment the officer took his ground, the Doctor presents a pistol at his head; "what, (says the officer,) do you intend to assassinate me?" "No, (said the Doctor,) but you shall this instant put up your sword, and dance a minute, otherwise you are a dead man." Some short altercation ensued, but the Doctor appeared so furious and determined, the officer could not help complying. "Now, sir, (said the Doctor) you forced me to play yesterday against my will, and I have obliged you to dance this day against your's; we are again on equal footing, and whatever other satisfaction you demand, I am ready."

The officer forthwith embraced the Doctor, acknowledged his impertinence, and begged that for the future they might live on terms of the sincerest friendship, which they did ever after.

Moving Sullen Oxen.

MR. MOORE:—Noticing in the *Rural* of the 4th ult., an extract headed "How to move a sullen Ox," it brought forcibly to mind my little experience in that matter. When a boy, I frequently had the management of oxen, one of which was at times particularly sullen, or *balky* as we then termed it, and my ingenuity and wit were put to the test to devise some means to induce the stubborn animal to draw. At last I hit upon a plan, as the sequel will show, which effectually accomplished my purpose, and cured him in a measure of his hanging back propensity.

On a certain day in winter I was set hauling wood with the oxen and sled. My road led over a bridge, and up a short but quite steep hill. Having arrived at the foot of the hill on the bridge, with a load, my team came to a dead stand still, and, as coaxing and whipping proved of no benefit, I bethought me of procuring the services of the "*old tom cat*," and applying him. I found tabby quietly sleeping on the hearth, and taking him in my arms, quickly retraced my steps to the oxen. My purpose was to apply the cat to the back of the ox and draw him backwards by the tail. *I did so;* but no sooner had the ox felt the claws of the feline monster enter his hide, than I found myself turning a back somerset through the air, off the bridge, with a propelling force I was powerless to withstand, accompanied by a tremendous squall from poor puss. I brought up, or more properly *down*, some twelve feet below, in the bed of the stream, amid snow and water. Without waiting to contemplate my situation I extricated myself and repaired to the scene of my exploit on the bridge. But lo! neither oxen, wood, nor cat were to be seen; all had mysteriously disappeared; but, as I subsequently found, the oxen brought up all safe in the woodhouse, with the load of wood.

Ever after when the old ox took it upon him to sulk, I had only to show him the cat and a pinch of the tail would make him straighten himself for very life. But I was extremely careful to keep out of reach of his heels.

Thus much for my experience in *moving a sullen ox.* [Rural New York.

THE DOMINION OF THE CZAR.—Although it is the boast of Great Britain that upon her dominions the sun never sets, yet we suspect that the idea is rather a conceited abstraction. Russia is one and continuous, from Kamtschatka to Warsaw—from Archangel to Sebastopol. The Russian Czar is absolute master—not in any figurative sense, but in as complete a sense as one immortal being can be master of another—of some fourteenth part (the exact proportion matters little) of the whole human race. What was Alexander of Macedon to this? He merely overran part of the world, and frightened it into obedience during his lifetime; the Russian Czar is the one and sole that animates the great mammoth body of his vast empire; and what his name is seems to matter little—Peter, Paul, Alexander, or Nicholas; he himself, as an incarnate idea, is indestructible. [Blackwood.

Reading in the Cars.

Oculists are warning prudent men against one of the commonest practices of the day, reading in the cars. We hear of expressmen who have become totally blind from continuing in this habit, and the editor of the New England *Farmer* gives his own experience to corroborate such testimony:

"We had several times been cautioned against reading in the cars, but a bag full of 'exchanges' has proved too strong a temptation to resist, and for several years it has been our practice to read from two or three to twenty or thirty papers while passing over a distance of twenty miles. But during the spring and early part of summer we invariably returned home with a painful sensation in and about the eyes, though feeling nothing of it on taking the cars at Boston. This pain at length became permanent, sometimes violent, and so great as to prevent us from reading, and generally from writing, though the sight was not impaired. Upon consultation with an oculist, he stated that the optic nerve had become weakened by overtasking it, and inquired if we were in the habit of reading in the cars? Under an interdiction from reading and writing, the eyes have rapidly improved, and we can now read half an hour at a sitting, under favorable circumstances."

SELECTING SEEDS.—This is peculiarly the time of seed gathering, and much depends upon the care and skill exercised. It may be laid down as a general rule, that the earliest and best specimens of plants should invariably be chosen to furnish the germs of a future crop. Corn is the most important production of our country, and special care should be taken to select seed now for Spring planting. After deciding from experience what variety is best adapted to a particular locality, let the next attention be directed to finding the fields or stalks which have ripened first, for a quick growth and early maturity are the most important consideration in a country where, on the average, one-tenth of the crop is annually lost by frost. Next to early ripening, look for those stalks which are most prolific in large ears. The ears themselves should be chosen with reference to their being well filled out with kernels at each end. Those ears which are true to the variety should be taken. If the kernels are of mixed colors, they are hybrids, and will not produce as well as if pure. The same principle applies in selecting other seeds. Choose the finest potatoes, squashes, pumpkins, melons, egg plants, beets, carrots, tomatoes, onions, peppers, &c., and the best and earliest beans and peas, and let them be carefully preserved till wanted. Care exercised upon such matters is not only a benefit to the person immediately interested, but is also a public good, by so much as it improves the general quality and fruitfulness of the various productions of the soil.

STAGGERS IN SHEEP.—Formerly I lost sheep by this disease, until, by experiment, I discovered a remedy, which has not failed me for many years, and I think it is safe as well as a sure remedy. About twelve years since I found that a nice ewe of mine, which had two fine lambs, was affected with this disease. She was down by the fence, at the side of the pasture, and when she endeavored to walk or run, would stagger and fall, and appear to be blind. I went to her, took my knife out, cut off an ear close to the head, and to my surprise found the blood did not start; not so much as one drop could I obtain. Thinking my sheep as good as dead I concluded to try experiments upon her. I returned to my dwelling, and taking a bottle of spirits of turpentine in my hand, went again to the pasture. I had been absent perhaps an hour, but the sheep had not moved from where I left her, and there was no discharge of blood from the ear. I poured, perhaps, twenty drops of turpentine into one ear; and after waiting a few minutes, I turned her over and poured the same quantity into the other. She soon began to shake her head, and a stream of blood ran from her amputated ear. In an hour she was apparently as well as ever. Since then I have used the same remedy, without cutting off the ear, and have never lost a sheep by the staggers.

[Rural New Yorker.

OXEN HAULING AND CROWDING.—To prevent this serious evil farmers should never turn their oxen to pasture in the yoke. This is sometimes done in drawing hay and grain, and in other occupations where the oxen have long seasons of rest between each load or draught. To save the trouble of yoking and unyoking, they are allowed to feed in the yoke; the inevitable consequence of which is to induce in them habits of crowding and hauling when they are put to the draught. It is better far to chain them to a post, where they cannot graze at all, during their hours of idleness, or go to the trouble of yoking, and unyoking, than endanger the formation of habits so deleterious as those which they are apt to acquire by feeding in the yoke.

HEALTH AND LIGHT SUPPERS.—One of the great secrets of health is a light supper, and yet it is a great self-denial, when one is hungry or tired at the close of the day, to eat little or nothing. Let such a one take leisurely a single cup of tea with a piece of cold bread with butter, and he will leave the table as fully pleased with himself and all the world, as if he had eaten a hearty meal, and be tenfold better for it the next morning. Take any two men under similar circumstances, strong, hard-working men of twenty-five years; let one take his bread and butter, with a cup of tea, and the other a hearty meal of meat, bread, potatoes, and the ordinary *et cceteras*, as the last meal of the day, and I will venture to affirm, that the tea drinker will outlive the other many years.

Stephen Harrison, who died lately from injuries sustained on the Western Railroad track near Westfield, left $5,000 by his will, for the purpose of connecting an agricultural department to Westfield academy.

The Galveston papers rejoice in evidences or the revival and extension of the sugar business in Texas. Four new mills have recently been built in that city.

New Steamboat Line for Albany and Troy.

From Pier 15, foot of Liberty-st., at 6 P. M

STEAMER RIP VAN WINKLE, C. W. Farnham, Commander, Monday, Wednesday and Friday, at 6 o'clock, P. M.; steamer COMMODORE, L. Smith, Commander, Tuesday and Thursday, at 6 o'clock, P. M., and SUNDAY, at 5 P. M.

Fares: Saratoga, $1 50; Moreau, $2 15; Fort Edward, $2 15; Whitehall, $2 75; Castleton, $3 10; Rutland, $3; Burlington, $4; Rouses Point, $5 50; Montreal, $7 50.

These Boats will arrive in Albany or Troy in ample time to form connections with all the Railroads, North, East or West, enabling passengers to reach Montreal and intermediate points the same day.

These Steamers are of the first class for strength and speed—well known favorities of the public—having been thoroughly overhauled during the past winter, and offer every accommodation that can be desired by either freighter or traveler.

Through tickets can be obtained on board the boat for Saratoga, Moreau, Fort Edward, Whitehall, Castleton, Rutland, Burlington, Rouse's Point and Montreal

The Northern Freight Express will give Bills o Lading to all points as above named. Shippers who desire it, can have time receipts, by applying at the office on the Pier. A. A. DYKEMAN.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by DR. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons, publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.*, and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been, and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

ATONEMENT.

Had not Bro. B. asserted that my denial of the doctrine of a vicarious atonement, together with my insinuations on the resurrection, had placed me in a position which gave my brethren a right to know how I stood, &c., I should not have deemed it proper for me to have longer trespassed upon the columns of the *Recorder* at this time. Lest, therefore, I might seem disrespectful either to cleric or laic, I will not be disobedient to the injunction of my superiors, although I know of no claim my brethren have to demand my theology, that I have not to demanded theirs. I can acknowledge no such amenability to my fellow men in religious belief as denies to me the right of private judgment respecting the meaning of the Word of God. If any man, or any body of men, understand the sacred oracles so different from me that they cannot recognize me as a Christian, it is for them thus to express themselves. But it never can be right to ignore my own honest convictions of truth, for either excommunication, persecution, or even death. After having availed myself of all helps at hand to ascertain what the Lord has spoken, I must decide according to the weight of evidence. And few can deny but that such is the state of theology at the present day—such are the conflicting opinions of even honest, pious, godly, and learned men, upon almost every important question of religion, that to ascertain what truth is can be no easy task.

Different opinions have obtained concerning God, his manner of existence; Christ, his character and mode of existence, and his relation to God, the manner in which he accomplishes the salvation of man; the state of the dead before and after the resurrection; the judgment, &c. Even the doctrine of atonement has been held very differently by different persons. Even those who maintain its vicarious character, have differed widely, one of that class maintaining that it was limited to the elect—another that it was general; one thinks that Christ suffered the proper penalty of God's violated law—another, only what was equivalent. Some think that the atonement appeased the wrath of God, and reconciled him to man—another, that it had no such effect, but only reconciled man to God.

When, therefore, Bro. B. insinuates that to be a true Christian requires the belief of the vicarious character of the atonement, does he not speak uncharitably? I *cannot* think that Bro. B. would agree with a certain orthodox clergyman, who said in a sermon, that he had no doubt but that Dr. Channing was in hell for denying the trinity or divinity of Christ.

Bro. B. cannot but know, that many men, eminent for piety, truth, and biblical research, have rejected a vicarious atonement, as unreasonable and unscriptural, while others cling to it as the sheet anchor of man's salvation.

The following is probably a fair view of those who hold the Atonement as vicarious. It is an extract from a tract published in connection with the "Assembly's Confession of Faith and Catechism":—

"God having freely chosen unto life a certain number of lost mankind, for the glory of his grace, did give them, before the world began, unto God the Son, appointed Redeemer, that, upon condition he would humble himself so far as to assume the human nature of a soul and a body, into personal union with his divine nature, and submit himself to the law as surety for them (the elect,) and satisfy justice for them (the elect,) by giving obedience in their name, even unto the suffering of the cross, he should ransom and redeem them all (the elect) from sin and death, and purchase unto them (the elect) righteousness and eternal life, with all saving graces leading thereunto, to be effectually, by means of his own appointment, applied in due time to every one of them (the elect.) This condition the Son of God did accept before the world began, and in fullness of time came into our world, and paid the ransom on the cross; but by virtue of the aforesaid bargain, made before the world began, he is in all ages since the fall of Adam, still upon the work of applying actually the purchased benefits unto the elect."

Another—"God sent his Son to make a satisfaction or amends to his Father for our sins—to assuage his wrath and indignation, conceived against us for the same."

Again—"It was requisite that the Mediator should be God, that he might sustain and keep human nature from sinking under the infinite wrath of God, satisfy God's justice, and procure his favor."

"The Atonement (says Symington) means that perfect satisfaction given to the law and justice of God, by which the sufferings and death of Jesus Christ, on behalf of elect sinners of mankind, on account of which they (the elect) are delivered from condemnation. God, being offended, requires to be satisfied, and the satisfaction is given by a *substitute*, not by the offenders themselves. On account of the satisfaction given by the *substitute*, the party offended is pleased to pardon the offenders, and to be reconciled to them. *The persons* on whose behalf the atonement is made, *are a definite number of mankind, not angels, but men; not all men, but elect sinners of the human family.*" (See Symington on the Atonement.)

The above, I suppose, must be a correct view of the vicarious atonement, as held by those who limit it to the elect only. This view supposes the following things:

1. That mankind have violated the law and justice of God.

2. That God requires satisfaction in the way of inflicting a penalty before he can pardon.

3. That for a part of mankind Christ became a substitute, and bare the penalty in the stead of that elect part.

4. That God accepts the suffering of Christ in behalf of that elect part, pardons them, and becomes reconciled to them.

5. That God designed only to save a part of mankind, but that he might have saved all had he been so disposed.

6. That the atonement is made to God to satisfy his justice, appease his anger, cool his wrath, and render him propitious.

7. That, however penitent a sinner might be, however reformed he might be, and however much he might pray to God to forgive him, God could not, until God in the person of Christ should suffer—until God the Father was satisfied, or was appeased, his anger assuaged, his wrath cooled.

8. That all for whom Christ died, or made atonement, will be saved.

9. That before the foundation of the world, before man was made, God and his Son made a bargain, in which the Son agreed to endure a certain amount of suffering, on condition that the Father should guarantee to him a certain number of human beings as *payment* for such suffering. That number was so definite it could neither be increased nor diminished.

10. That the elect ones were selected irrespective of any foreknowledge of their being any better than others; that others might have been selected in their stead, had God been so minded.

The above are, I believe, the main things involved in the doctrine of *limited* atonement. Those who hold the atonement to be general, maintain that the satisfaction which Christ rendered to his Father was for all men—that he tasted death for every man. But then they limit final salvation to only the elect. So there are no more saved by the general than by the limited view.

But the limited atonement writers charge great inconsistency upon the general atonement men. Symington, a limited atonement writer, says:—

"It is admitted, that there is such a thing as salvation, and that this salvation is the privilege, not of all, but only of some, of the human race. It must also be admitted, that in effecting salvation, the Divine Being acts agreeably to a preconceived plan, a designed arrangement. Well, then, if God, in the matter of salvation, acts according to design, and it so happens that salvation is limited in its application to some, does it not follow, that it was the design of God that it should be so limited? And if it was the eternal purpose of God, that only some should be saved by the death of Christ, with what propriety can it be held, that it was his design that Christ should die for all? Does not this amount to the supposition that God designed his Son should die for some to whom it was not his design that his death should be effectual?" See page 178.

Again, page 179, "The Supreme Being gives to every one his due. He cannot, according to this, either remit sin without satisfaction, or punish sin where satisfaction for it (sin) has been received. The one is as inconsistent with perfect equity as the other. If the punishment for sin has been borne, the remission of the offense follows of course. The principles of rectitude suppose this—nay, peremptorily demand it. Justice could not be satisfied without it. Agreeable to this reasoning, it follows that the death of Christ, being a legal satisfaction for sin, all for whom he died must enjoy the remission of their offences. It is as much at variance with strict justice or equity, that any for whom Christ has given satisfaction should continue under condemnation, as that they should have been delivered from guilt without a satisfaction being given for them all. But it is admitted, that all are not delivered from the punishment of sin—that there are many who perish in final condemnation. We are therefore compelled to infer, that for such no satisfaction has been given to the claims of infinite justice—no atonement has been made. If this is denied, the monstrous impossibility must be maintained, that the infallible Judge refuses to remit the punishment of some for whose offences he has received a full compensation; that he finally condemns some the price of whose deliverance from condemnation has been paid to him; that, with regard to the sins of some of mankind, he seeks satisfaction in their personal punishment, after having obtained satisfaction for them in the sufferings of Christ; that is to say, that an infinitely righteous God takes double payment for the same debt, double satisfaction for the same offense, first from the surety, and then from those for whom the surety stood bound."

Let the reader ponder the above, for it contains the doctrine of "vicarious atonement" as taught by the ablest men. Mark how strenuously the above writer limits the vicarious atonement to those only for whom the atonement was made, while he as strenuously insists, that if the atonement was general, or if Christ died for all, then all must be saved, or God himself is unjust, in taking double pay—double satisfaction.

Now, it so happens, that almost without exception, the general atonement view is, at present, maintained; and yet, according to Symington, all such ought to become Universalists. And, in fact, universal salvation must ever be the legitimate outgrowth of the general atonement system. It is only that system fully developed, according to such writers as I have quoted. And yet, on the other hand, the general atonement writers positively deny that such are the legitimate results of their view. Now, who shall decide when doctors disagree?

Speaking of the limited atonement view, the author of "God in Christ" says:—

"It is capable of no light in which it does not offend some right moral sentiment. If evil remitted must be repaid by an equivalent, what real economy is there in the transaction? What is effected, save the transfer of penal evil from the guilty to the innocent? And if the Redeemer, in the exce[illegible] his goodness, consents, freely offers him[illegible] the Father or to God to receive the pe[illegible]oes, or some sufficient part of the penal w[illegible] of the world in his own person, what does it signify, when that is accepted, but that God will have his modicum of suffering somehow—if he lets the guilty go will yet satisfy himself out of the innocent. In which the divine government, instead of clearing itself, assumes the double ignominy, first of letting the guilty go, and, secondly, of accepting the sufferings of innocence. In which Calvin, seeing no difficulty, is still able to say, when urging for Christ's three days in hell, 'It was requisite that he (Christ) should feel the severity of the divine vengeance, in order to appease the wrath of God and satisfy his justice.' I confess (continues the author I am quoting) my inability to read this kind of language without a sensation of horror; for it is the cool speculative language of theory, as concerned with the reason of God's penal distribution."

Says a distinguished American writer:—

"The Father must *command* him (Christ) to die, or the stroke would not be his own (the Father's) hand."

Thus Christ must die under *authority*, not willingly, in order that his death should have any real value.

Says Dr. Bushnell:—

"There can be no such thing as future punishment or retribution, in this view, without involving a charge of injustice. For if justice be exactly vindicated and the terms of the law exactly satisfied, to punish after that is plainly to exact double justice—which is injustice." Again continues Mr. Bushnell, "It is a fatal objection to this view, that it sets every transgressor right before the law, when as yet there is nothing right in his character, producing, if we view it consistently, the worst conceivable forms of licentiousness. For if the terms of the law are satisfied, the transgressor has it for his right to go free, whether he forsake his transgressions or not. As far as any mere claims of law or justice are concerned, he (the sinner) may challenge impunity for all the wrongs he has committed, shall commit, or can commit, while his breath remains."

Here it will be seen, that Dr. Bushnell and Mr. Symington agree, that universal salvation is necessitated by a general vicarious atonement. Therefore, while Symington falls back to limited atonement, Bushnell rejects both. And I demand, in the name of charity, whether he (Bushnell) may not be a "true Christian?" And yet Bro. Brown says that the doctrine of vicarious atonement has ever been cherished by *all true Christians*.

I will still continue in the language of the author of "God in Christ:"—

"I know of no definite and fixed point on which the orthodox view, so called, may be said to hang, unless it be this, viz: That Christ suffers evil as evil, as in direct and simple substitution for evil that was to be suffered by us; so that God accepts one evil in the place of the other, and being satisfied in this manner, is able to justify and pardon. As to the *measure* of this evil, there are different opinions. Calvin maintained the truly horrible doctrine, that Christ descended into hell, when crucified, and suffered the pain of the damned three days. A number of Christian teachers, even at this day, maintain that Christ suffered exactly as much pain as all the redeemed would have suffered under the penalties of eternal justice. But this penal view of Christ's death has been gradually giving way, till now, under its most modern, most mitigated, and least objectional form, he (Christ) is only said to have suffered under a law of expression. Thus God would have expressed a certain abhorrence of sin by the punishment of the world. Christ now suffers only as much pain as will express the same amount of abhorrence."

But Bro. Brown does not hold to the equivalent expressive view, for he says, April 26th:

"We are aware, that writers on the atonement have sometimes labored to show that what Christ suffered when he was made a curse for us, was not the identical curse which the law denounces against sinners, but something which the Father was pleased to consider a full equivalent. But Christ (says Bro. B.) endured the curse—the penalty proper—of the revealed law of God."

Now, if Bro. B. holds to the limited atonement view, I cannot see why he must not agree with Calvin, that Christ went actually to hell; and if he holds the atonement general, why he must not admit Universalism as true, according to standard writers on the subject.

'I confess (says one I have quoted) my inability to see how an innocent being could ever be set, even for one moment, in an attitude of displeasure under God. If he (God) could lay his frown, for one moment, on the soul of innocence and virtue, he must be no such being as I have loved and worshiped. Much less can I imagine that he should lay it on the head of one whose nature is itself coequal Deity. Does any one say that he will do it for governmental reasons? No governmental reasons, I answer, can justify the admission of innocence into a participation of frowns and penal distributions. If consenting innocence says, 'Let the blow fall on me,' precisely there is it for a government to prove its justice, even to the point of sublimity; to reveal the essential, eternal, unmitigable distinction it (justice) holds between innocence and sin, by declaring that, as under law and its distributions, it is even impossible to suffer any commutations—any, the least, confusion of places."

Such is the reasoning, and such are the conclusions of one whose piety has never been questioned, I think, and whose giant mind was made to reel under the commonly received orthodox view of vicarious atonement. And are such men (and they are not a few) to be unchristianized because they seek to justify the ways of God to man, in an honest inquiry concerning such subjects? One would think that Bro. B. supposed this subject so clear as that none need but receive *his* view to be right, and that all other views were heterodoxical, if not heretical. From what I have given, all can see, that there is a tremendous collision between the two parties on vicarious atonement, between the limited and general atonement men. And even the most casual observer can but know, that there is, or ever was, no such unity of opinion on that subject as to demand universal assent to all particulars. It seemed to be necessary to set before the readers much of this article, in order that they may see that if I should differ from Bro. B on this subject, or even deny vicarious atonement, as he and some others may explain it, that I shall differ in company with some who were and are acknowledged as "true Christians," and also, that the doctrine of vicarious atonement has not been "cherished by every true Christian," and that many of the best men and Christians have rejected it altogether.

The doctrine of atonement I most firmly believe. It is the only way by which any sinner can ever be saved. As taught by Paul, it harmonizes all the divine attributes, and presents the infinite love of the infinite Father, seeking the reconciliation of his unreconciled children. It reveals God in Christ reconciling the world unto himself.

At another time I will give what seems to me the scriptural view of the atonement. Self-defence against insinuation of unsoundness in the Christian faith, is my apology for this long article. S. S. GRISWOLD.

DEATH IN THE MIDST OF LIFE.

This is the title of a sermon delivered by Dr. Doane, Bishop of New Jersey, on the Sunday following the terrible catastrophe on the Camden and Amboy railroad. The opening which we quote, discloses some personal incident[illegible]ainful interest:

It is [illegible] of the distinguished Robert Hall, [illegible]g written a funeral sermon from th[illegible]s, "In the midst of life we are in death," he searched the Bible to find the place to announce them from, and wondered that he could not. They are in that which is only not the Bible, the Book of Common Prayer, and if not Scriptures, were conceived and born of it. I venture the opinion that they have been uttered from more hearts within the last four days than any other sentence in our language. And I have been so perfectly possessed with it myself, that it must be the theme, although it may not be the text, of what I say to you this morning. 'In the midst of life we are in death.'

You all remember how beautiful a day was Wednesday. We may suppose such weather constantly in Paradise. I spent the morning on our unsurpassed Green Bank with two friends, one of more than thirty years, who had come to put their children at the college. They left me with their little son, in the most perfect enjoyment of all that makes up life, to return to their homes in New York. In less than an hour I heard of what had happened on the railroad. I thought at once of them, and rather flew than ran to find their mangled bodies. God had preserved them perfectly uninjured.

There came to me from Boston, twenty years ago, a young man [Edward G. Prescott, Esq.,] who had early taken a high stand at the bar. He was of patriot name; the very blood of Bunker Hill. His father had adorned the bench. His brother had not been surpassed as a historian in modern times. He had lived carelessly, and away from God. But his heart had been touched. It had melted under the gospel. It yearned to preach to others the unsearchable riches which had been more than rubies to itself. And he asked me to receive him as a candidate for holy orders. I did. There are many who must remember him. He was ordained. He went to Salem as minister of the parish. He was most acceptable as a preacher; and as a pastor most devoted. He married as lovely a woman as ever lived. His life was filled to overflowing with the double tide of usefulness and happiness.

But 'this is not our rest.' His health failed. He sought in vain its restoration. He went to sea. He died on board the ship. He left a widow without children. Possessed of a handsome fortune, and, what is better, with a sense that it was not her own, she was another Dorcas, in the 'good works and the alms deeds which she did.' At ten o'clock on Wednesday, she started with her two dear friends, upon a tour for health and recreation. And, in little more than an hour, had yielded up her soul to God. Is it not true, 'that in the midst of life we are in death?' Do we or can we know 'what shall be on the morrow?' Which one of us might not have been in that disastrous train? Which one of us might not have been of that dead company which filled our streets with coffins, and hung our houses and our hearts with sackcloth?

My brethren, there can need no preacher to bring this mournful Providence home to our heart of hearts. Those nearing trains. The signal to break up. The carriage on the track. The crash. The crush. Car mounted upon car. Car rushing through the midst of car. The clouds of dust. The storm of splinters. The groan. The shriek. The wail. The wounded. The mutilated. The crushed. The torn asunder. The buried alive. That fearful row upon the bank. The hurt. The dying. The dead. Our public houses filled with the maimed and mangled. Our public hall a receiving vault for unknown corpses. Our private houses so many hospitals. Every man a servant. Every woman a nurse. Through that whole day business checked. The social currents all directed to one point. Not an act, not a word, not a thought, but of the wounded, of the dying, of the dead. The very centre of our city a choked grave-yard. There is no human eloquence that is not beggared by such sermons as that scene preached to every heart. God spoke, and man was still. "In the midst of life," all felt—"in the midst of life we *are* in death."

CONVERSION OF DR. CONE.

The early life of the late Dr. Cone, and the marked individuality of his character, make particularly interesting the "passing of such a man from death unto life." A narrative of this converting work of grace we have from himself. He says:

In the month of November, 1813, after breakfast, I took up the newspaper, and saw, among other things, a large sale of books advertised at Wood's auction rooms, and said to myself, I will look in as I go to the office, and see what they are. I did so, and the first book I took up was a volume of the works of John Newton. In an instant my whole life passed in review before me. I remember taking the book out of the College library, while at Princeton, and reading Newton's Life to my mother. His dream of the lost ring reminded me forcibly of my dream of the well, and I felt an ardent desire to own the book and read the dream again. I left the rooms, having first requested Mr. Wood, who was a particular friend, to put it up for sale as soon as he saw me in the evening, as it was the only work I wanted. He promised to do so, and I immediately went out towards our office, which was nearly opposite; but I had scarcely reached the middle of the street when a voice "like the sound of many waters," said to me—This is your last warning! I trembled like an aspen leaf—I felt myself to be in the grasp of the Almighty, and an earthquake could not have increased my dismay. Sermons heard when only eight years old, on the Balm of Gilead, and on the Lamb of God—the dream—all were painfully present, and I thought my hour of doom had come. I went to the office, took down the day-book to charge the new advertisements, but my hand trembled so that I could not write, and I put the book back in its place. I went out into South Street—then walked up and down Market Street in the crowd till dinner time, to drown, if it were possible, my thoughts and feelings. But all in vain. The sound still rung, not only in my ears, but through my heart, like the sound of a trumpet—This is your last warning! I went home to dinner, endeavoring to conceal my feelings as much as possible from my wife. The day wore heavily away; I was at the auction room at the hour; purchased the book that seemed to be strangely connected with my weal or woe; returned to my house immediately, and read Newton's eventful life entirely through before retiring to rest. There seemed to be some strong points of resemblance between us. He had been rescued from wrath to come! What would become of me? I found that he read the Bible and obtained light. I went to bed with the determination of rising early to imitate his example, and search the Scriptures. My dear young wife thought I was going mad. Oh no! no! I was not mad. He who had compassion on the poor Gadarene, was now bringing me to my right mind in a way that I knew not.

I commenced reading the Scriptures with deep interest, to find out how a sinner could be saved; and in two months, read the Psalms and different portions of the Old Testament, and the New Testament I think more than twenty times through. The Psalms, John's Gospel, and the Epistle to the Romans, were particularly precious. It required great effort to attend to domestic duties, and my business in the office; for I felt continually that it would profit me nothing "to gain the whole world, and at last lose my own soul." I sought out preachers, and heard Mr. Duncan frequently; but could not learn from any of them the way of salvation. One evening, after the family had all retired, I went up into a vacant garret, and walked backwards and forwards in great agony of mind; I knelt down; the instance of Hezekiah occurred to me; like him I turned my face to the wall and cried for mercy. An answer seemed to be vouched in an impression that just as many years as I had passed in rebellion against God, so many years I must now endure, before deliverance could be granted. I clasped my hands and cried out, "Yes, dear Lord, a thousand years of such anguish as I now feel, if I may only be saved at last." I continued to read, and whenever I could steal away unobserved into the garret, there I walked the floor, when all around was hushed in sleep; there I prayed and poured out tears of bitter sorrow. While thus engaged one night, the plan of salvation was revealed to me in the figure of Noah's Ark. I saw an ungodly race swept away with the flood, but Noah and his family were saved, for God shut them in the Ark. I felt that as a sinner I was condemned and justly exposed to immediate and everlasting destruction. I saw distictly that in Christ alone I must be saved, if saved at all; and the view I at that moment had of God's method of saving sinners, I do still most heartily entertain, after thirty years' experience of his love. This was Saturday night, and that night I slept more sweetly than I had for many weeks. Before daylight on Lord's day morning I awoke, and went down stairs quietly, made a fire in the front parlor, and threw open the window shutters, and as soon as I could see, commenced reading the New Testament. I opened to the 13th chapter of John, and came to where Peter said, 'thou shalt never wash my feet;' Jesus answered him, 'If I wash thee not, thou hast no part with me.' Simon Peter saith to him, 'Lord not my feet only, but my hands and my head?' At that moment my heart seemed to melt. I felt as if plunged into a bath of blood divine—I was cleansed from head to foot—guilt and the apprehension of punishment were both put away; tears of gratitude gushed from my eyes in copious streams; the fire in the grate shone on the paper from the wall, and the room was full of light; I fell upon the hearth-rug, on my face, at the feet of Jesus, and wept and gave thanks; my sins, which were many, were all forgiven, and a peace of mind succeeded which passeth understanding. Bless the Lord, O, my soul! from that hour to the present, a doubt of my calling and election of God has never crossed my path. With all my imperfections, shortcomings, and backslidings of heart, I have from that hour steadfastly believed that "neither death nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come, nor height, nor depth, nor any other creature, shall be able to separate me from the love of God which is in Christ Jesus my Lord!"

MINISTERIAL SHIFTS IN POVERTY.

Ministers, and small-salaried men generally, have fared hardly in these days of famine prices, and many curious stories could be told of expedients adopted, more ingenious than pleasant, to eke out a scanty income. But we suspect none have been reduced to such forlorn dilemmas as Sydney Smith reports of himself, with his unfailing good humor. It is found in one of his letters published in the recent memoir of his daughter. Referring to his entrance upon parochial life, he says:

"I was suddenly caught up by the Archbishop of York, and transported to my living in Yorkshire, where there had not been a resident clergyman for a hundred and fifty years. Fresh from London, not knowing a turnip from a carrot, I was compelled to farm three hundred acres, and, (without capital,) to build a parsonage-house. * * * *

"It made me a very poor man for many years, but I never repented it. I turned schoolmaster, to educate my son, as I could not afford to send him to school. Mrs. Sydney turned schoolmistress, to educate my girls, as I could not afford a governess. I turned farmer, as I could not let my land. A man-servant was too expensive; so I caught up a little garden-girl, made like a milestone, christened her Bunch, put a napkin in her hand, and made her my butler. The girls taught her to read, Mrs. Sydney to wait, and I undertook her morals. Bunch became the best butler in the country.

"I had little furniture, so I bought a cart-load of deals; took a carpenter (who came to me for parish relief, called Jack Robinson) with a face like a full moon, into my service; established him in a barn, and said, 'Jack, furnish my house.' You see the result."

THE GERMAN COOK—A LIVING SERMON.

"Do you want to buy some good books, sir?" asked a colporteur of the captain of a vessel. "No," answered the captain, "I've no time to read; my cook is so good a man that he does all the reading and praying on the ship." "Then you think there is such a thing as piety?" said the colporteur. "Certainly I do," answered the captain, "no man can go a voyage with my cook, and not be convinced of that fact."

"With your leave I should like to see him, sir." "Certainly," answered the captain, and kindly leading the way to the galley, he told the steward who the colporteur was, and what had brought him aboard; and while the men stood round his basket of books as he read over the titles, the German cook pointing to the basket, exclaimed, "[illegible]sus Grise in dere, and Chesus Grise up d[illegible]," and clasping his hands on breast, "Chesus Grise in *here*, too." This simple burst of pious feeling touched the hearts of the sailors. The captain bought a package of books and gave one to each of his men, and turning to the colporteur, said, "That is our Christian." The poor cook was a *living sermon* to both captain and crew; and the captain, though professing no religion himself, always allowed his men fifteen minutes in the morning and fifteen minutes in the evening, for their private devotions. "No man has a more orderly crew than mine," he says; "they are always ready."

ANECDOTE OF ROBERT HALL, SENIOR.—The father of the celebrated Robert Hall was one of the most remarkable men of his day. At once a divine and a wit, he could seldom be at a loss for the right answer at the right time. In 1775, Hall was engaged to take a part in the ordination of Andrew Fuller, at Soham. He had never visited the place, and of course was personally a stranger to the whole community. When he arrived near the town, on the day before the ordination, he fell into conversation with one of its inhabitants, and asked him the name of it. The man told him it was "Soham." Mr. Hall then said, "There are to be great doings at Soham to-morrow, are there not?" "Yes," answered he, "they are going to qualify a young man to give the sacrament." "And pray," asked Mr. Hall, "what kind of a man is he?" "A very good kind of man," was the reply, "but he holds to predestination; what say you to that?" "I have somewhere," said Mr. Hall, "met with an old author who held the same sentiment. I think his name was Paul." The man looked at him with some surprise, and said, "I do think you are one of them."

WILL THE STRONG HOLDS BE TAKEN?

The public has lately been electrified by the intelligence that Sevastopol has fallen. The seige of this fortress has been in progress for a year; and such has been the resistance which it opposed to the allied powers, that it was seriously doubted whether it ever would be taken Nevertheless, it has been taken. But at what a price! At what a sacrifice of human life! At what an expenditure of money! And all for what? Who of all the actors in this dreadful tragedy has been actuated by motives worthy of the end for which he was created? What object higher than earthly ambition has stimulated any of them? Still, it is spoken of as a "glorious victory," and the parties who have achieved it talk of *Te-Deums* and Thanksgivings.

Yet the Crimean Sevastopol is not the only one that has been beleagured, till the heart has grown sick under "hope deferred" of its being reduced to subjection. How long have our missionaries in China been encamped before that mighty fortress of heathenism, and still it is not taken! How many long years the missionaries of other denominations have been storming that citadel of darkness, without making any serious breach in its walls! A few deserters have come over to them, but the strength of their enemy appears to be essentially the same that it was before any asult was made.

And what shall we say of Hindostan, of Thibet, of the kingdoms of Africa, and many other "dark places of the earth," where the soldiery of Jesus Christ have fought, in obedience to their heavenly commission? These are all so many strong holds, where the black flag of the Prince of Darkness still waves in triumph. The bombardments that have been made of them, through the preaching of the gospel, have not yet accomplished their reduction; they are yet in the power of the great enemy.

Will these great Sevastopols of wickedness ever be taken? No, never, says the unbeliever; and he affects to lament the waste of money, and of human life, which have followed the attempt. He makes a doleful outcry about the lavishness of the church in squandering such vast sums in labor so useless, and deplores the martyrdom suffered by missionaries in sickly climates, when here at home they might have lived to a good old age. Yes, and the very persons who make these dolorous complaints, will glorify such victories as that achieved at Sevastopol, and have no tears for the immense libations of blood which they cost, nor for the treasures of money squandered in gaining them. Such is the consistency of the men of this world.

But the Sevastopols of heathenism will be taken. "The weapons of our warfare are mighty, through God, to the pulling down of strong holds." And whatever minor agencies may be employed to this end, we have no doubt that the preaching of the Gospel will be the chief; for it "has pleased God by the foolishness of preaching to save them that believe." If God was so jealous for the honor of the Gospel as to make foolish the wisdom of this world, in order that the simple preaching of the cross might be glorified, it is not likely that, in these last ages, He will allow any other agency to usurp the honor of converting mankind. If the nations can be converted, the Gospel must be the means of it. And since we know, assuredly, that "the kingdoms of this world will become the kingdoms of our Lord and of his Christ," how great is the encouragement to persevere in the work of mercy which the Lord has assigned us!

THE AMERICAN BIBLE UNION.

The sixth anniversary of the American Bible Union wa[illegible]ld in New York on the fifth and sixth d[illegible]of last week. It was very numerously attended, and is spoken of as an uncommonly interesting meeting. The Treasurer's Report showed the receipt and disbursement of nearly fifty thousand dollars during the past year. The Report of the Board of Magagers represented the affairs of the Union as in a very prosperous condition, and stated that every effort is being made to accomplish the prominent object for which the Union was organized, to secure a revision of the English Scriptures. In the election of officers for the ensuing year, Rev. Archibald MaClay, D.D., was placed in the presidential chair left vacant by the recent death of Spencer H. Cone. Among the Directors, we notice the name of Thomas B. Stillman, of New York. A good many addresses were delivered during the two days occupied by the anniversary of the Union, one of which was by Eld. N. V. Hull, of Alfred, N. Y. Of the other speakers we can only name, now, H. C. Vogel, James Edwards, Samuel Baker, T. A. Backus, Isaac Ewitt, Perry Davis, W. G. Howard, Duncan R. Campbell, T. B. Jones, C. P. Sheldon, Isaac N. Hill, J. S. Conant, J. M. Bray, and Geo. W. Eaton.

M[illegible]sions and the Eastern War.—It is generally understood, that the triumph of Russia in its struggle with Turkey and the Western Powers, would be followed by disastrous consequences to the American missionaries in the Turkish Empire. A letter which alludes to the subject was read at the recent meeting of the American Board, from Hon. Geo. P. Marsh, late United States Minister at Constantinople, in which he says:—

"The action of the missionaries has, I believe, thus far, not been impeded by the events of the war. If that action were now to be suspended, as it infallibly would be by a Muscovite triumph in the present great struggle, still the seed already sown could not fail to yield a harvest that would amply repay the sacrifices it has cost to American liberality and American devotion. If, on the other hand, the Turkish government shall be left free to protect these efforts against the open rancor and the secret intrigues of the Greco-slavic bigotry, there can be no doubt that they will prove the most efficient means of that regeneration of the East, which the barbarous element in the European political system is now exerting its utmost energies to smother."

LETTER FROM THE MILL YARD CHURCH.

The Seventh-day General Baptist Congregation in Mill-Yard, Goodman's Fields, London—
To the American Congregations of like faith and order, in Triennial Conference assembled, greeting:

Dear Christian Brethren,—May grace mercy and peace be abundantly bestowed on you, from the ever-blessed God, to the enriching of your Societies with his most precious gifts, the building up of baptized believers in their several localities as living stones into spiritual temples, and the uniting of you all into a resemblance to the Holy City, the New Jerusalem, which is to descend from heaven, so that the tabernacle of God may even now be with men!

We rejoice in all the good that we hear of you. Truly, your good works do manifest your faith; and we hope and trust that these will shine more and more, until the world, seeing the fruits of your devotion, may join with you in glorifying God our Father.

It gives us much pleasure to inform you that our society is increased by the addition of several members. Within this year we have baptized two, and ordained a third as a deacon.

Our Sabbath School (the only Christian one in Europe) is truly prosperous, and we trust that it will be a nursery for our congregation. The children are brought to our place of worship, and take an evident interest in it. God grant that the seed sown may produce an abundant harvest hereafter.

We hasten to inform you of a fact of considerable importance to the promotion of Scriptural reform. Mr. Heywood, a descendant of the celebrated and apostolic Oliver Heywood, and the well-known advocate of University Reform in this country, a learned and independent Member of the British Parliament, gave notice (toward the end of the session which closed three or four days ago) of the following among other useful motions to be made by him in the next session: That the House of Commons should address the Queen, requesting her "to appoint a Commission to inquire into the state of the Authorized Version of the Bible, and to prepare a plan for the farther revision of that Translation." Considering the prodigious extent to which the use of the translation made by direction of King James prevails in the world, and its well-known errors and defects, we conceive that theological truth may be much promoted by this movement. If the principal religious parties can agree to adopt a better text and translation, truth and piety must be advanced thereby. This important task, already undertaken by the "American Bible Union," has fallen into incompetent hands, and from the specimens that we have seen, we are persuaded that if performed as it has been begun, upon unsound principles, and by inadequate revisers, it never can give satisfaction to the truly learned and judicious students of Holy Scripture, and must fail of the good end intended by the promoters. We, for our part, use various translations in our public services, and do all in our power to promote a correct acquaintance with the sacred originals, especially amongst the young.

We had congratulated ourselves on the peaceful state of the world, and the advancement of industry, useful arts, and sciences, commerce and friendly intercourse among the nations, three or four years ago; and hoped for many years of peace; but now, alas! the "unclean spirits, like frogs," have seduced the nations into war, and our own country is one of the principal parties in this wicked and deadly struggle. Civilization is driven back, and religion prostituted to the service of vengeful and destructive demons. In all this we trace the fulfillment of prophecy; and while we protest against all war, and never stain our hands or consciences with any participation therein, we look forward with joy toward the end of the current period of 1260 years, when God's two witnesses—the tables of his holy commandments—shall no longer witness in sackcloth, and when, sickened with wars, and freed from the oppressiveness of the military governments, (which are now destroying each other,) men will reform their morals and religion by reference to God's commandments and his written word alone.

While we call your attention to these movements on our side of the ocean, and request the opinion of the Conference thereon, we would express our own opinion on a great Transatlantic topic—American Slavery. O, brethren, how earnestly we pray the Divine Being to extend merciful deliverance to slaves. We add our frequent prayers, also, to yours, for the deliverance of our imprisoned brother, Pardon Davis, whom the guilty hands of American slaveholders have shut up in a dungeon, for performing acts required by humanity and Christianity to his oppressed fellow creatures. Cry mightily to God and man, we entreat you, until he be set free.

Our elder and his family hold not unfrequent communications with your devoted brethren in China and Palestine; we rejoice to hear of their welfare, and offer our public prayers every Sabbath for them and for you.

Given in our church-meeting at Mill-Yard, on Sabbath-day, the 18th of the eighth month (August) 1855.

By order and in behalf of the said congregation,

William Henry Black, *Elder.*
Thomas Rix, *Deacon.*

FROM THE LAND OF CANAAN—NO. 4.

Mount of Olives, June 26, 1855.

Dear Sisters—There are moments in life which find us placed in circumstances of so great and so varied an import, that we feel as it were awed and overwhelmed by them Never did the surrounding scenery and its heart-stirring associations (drawn from scripture narrative) make a deeper impression on my heart than at this moment, as I stand here alone upon this Mount, and in a silence unbroken, save the rustling of the hoary Olive by the cool passing breeze. Here Jesus will stand when he shall come to gather all nations to bring them down into the Valley of Jehoshaphat. "His feet shall stand in that day upon the Mount of Olives, which is before Jerusalem on the east." What august associations does the mind at once perceive around this Mount. There is nothing to disturb the full impression of its identity; and if there be holy ground on earth, it is here. And there is no place in the world, perhaps, the view from which embraces so many objects of interest as from this summit. On every side the eye traverses or rests upon some interesting Scripture localities. And as I gaze upon the scenes, history becomes a reality. The view eastward embraces the Jordan and its plains; southward, the plains of Jericho and the Dead Sea. Beyond these rises the chain of the Mountains of Moab, Gilead, Pisgah, and Mount Nebo. At the base of this mount, on the east, lies Bethany, where our adorable Redeemer sought the quiet home of Lazarus, Mary, and Martha, whose kindred spirits often cheered his over burdened heart. This sweet valley, with its most charming seclusion, is just such a spot as the soul would crave when it would wish to retire from the busy scenes of life for repose.

It was a lovely morning when we visited Bethany, the town of Mary and Martha, and it was with pleasant emotion that I called to mind the narrative of these two sisters whom Jesus loved—Martha, with her energetic carefulness and generous hospitality, making haste to prepare a repast worthy of her Lord—Mary, in her meekness, sitting at the feet of Jesus, listening to the words of heavenly wisdom which flowed from his divine lips. By the light of a taper we explored the tomb where tradition says Lazarus was laid. It is a dark cavern, cut into the solid rock, has a descent of twenty-six steps, leading to a chamter about twelve feet square, and of sufficient height for a person to stand without stooping; from this there is another descent, leading to a smaller vault about eight feet square. From this latter it is said that Lazarus was raised when Jesus "cried with a loud voice, Lazarus, come forth."

At the north west are the Mountains of Ephraim; upon one of the lofty summits you see the mosque or tomb of Samuel. At the west Jerusalem lays extended before us, inclining gently to the east; from this point every part of the city is visible. In position, form and color, Jerusalem presents a most magnificent picture; yet the mind soon wanders from the present [illegible] and looks back to the hallowed scenes [illegible]ried ages. Our eyes now rest upon Mount [illegible]iah, which is in the foreground of the city, and crowned by the great mosque of Omar. This hill was consecrated by one of the most touching events in the history of man. There Abraham went up with the fire and knife in his hand to offer his only son, his beloved Isaac, who carried the wood for the burnt offering, and said, "My Father, behold the fire and the wood; but where is the lamb for a burnt offering?" What anguish must have pierced the heart of Abraham; yet with triumphant faith he replies, "My son, God will provide himself a lamb for a burnt offering." There the Lord appeared to David "in the threshing floor of Ornan." "And David lifted up his eyes and saw the angel of of Lord stand between the earth and the heaven, having a drawn sword in his hand, stretched out over Jerusalem." And there once stood the temple in its majesty, "the house of the Lord," where he said, I will put "my name there forever." Next our eyes rest upon the Church of the Holy Sepulcher. "Its area embraces a space about three hundred feet in length by a very irregular breadth, at such different levels that the chapl of the cross is fifty feet below the alledged rock of Calvary. This irregular form no doubt arose from the wish to include within the walls all the spots which tradition connects with the death and resurrection of our Lord."

We went to the Holy Sepulchre last First-day morning. Before the sun had risen, four sects had assembled for worship—Greeks, Roman Catholics, Armenians, and Copts. I will not weary you with a minute description of the church itself; still, it may interest you to know what is pointed out within its walls, and regarded as sacred by the idolatrous worshipers. Thus I noticed them, as they were shown while making the tour of the church: The stone on which Christ was anointed for his burial. The place where the Virgin Mary stood when the body was anointed. The tomb of Melchizedek. The place from which the clay was taken when God created Adam. The tomb of Joseph of Arimathea. The tomb of Nicodemus. The place where Jesus stood when he appeared to Mary Magdalene, and the spot also where she stood. The pillar to which Jesus was bound when scourged; and the place where he stood when he appeared to his mother after the resurrection. The place where the soldiers parted his garments; where was found the spear which pierced his side, and where he was mocked; and the pillar on which he was seated. The place where the penitent thief was crucified. A block of marble upon which the angel sat who announced to the women that the Lord had risen We now make an ascent of eighteen steps (most of which are hewn from the rock) leading to the chapel, to Golgotha, or Calvary; here we were shown a natural fissure in the rock, said to have been occasioned at the time of the crucifixion. "And the earth did quake, and the rocks rent." Making a descent by another flight of stone steps, we came to the sepulchre itself—"under the great central dome of the church, in a circular area, which is separated from the surrounding space by sixteen fine columns, which rise from the pavement to the upper gallery that rests upon it. In the center of this area stands a small but beautiful structure of white marble, about twenty-five feet in length, and of proportionate height and breadth." We passed into this tomb by a low narrow entrance. Here the primitive rock is entirely concealed by white marble, highly polished. This vault is lighted night and day by forty gold and silver lamps, which are suspended over the tomb where tradition says Jesus was laid. "When Joseph had taken the body, he wrapped it in a clean linen cloth, and laid it in his own new tomb, which he had hewn out in the rock."

Now our eyes rest upon Mount Zion, "the city of David," where "he reigned thirty and three years," and where his bones now repose. How often, upon that Mount, David in his lofty and holy inspiration poured out in beautiful strains the emotions of his elevated soul. How often he uttered the name of Zion, when he touched the strings of the beautiful harp. "The Lord hath chosen Zion; he hath desired it for his habitation." "Beautiful for situation, the joy of the whole earth, is Mount Zion." "They that trust in the Lord shall be as Mount Zion, which cannot be removed, but abideth forever." "Walk about Zion; go round about her; tell the towers thereof; mark ye well her bulwarks, and consider her palaces, that ye may tell it to the generations following." Generation has told it to generation, and Zion has been "the spell-word of the nation." What an exhibition of love, and how touching the reply of that little band of lonely captives, "By the rivers of Babylon, there we sat down; yea, we wept when we remembered Zion. We hanged our harps upon the willows in the midst thereof; for they that carried us away captive required of us a song; saying, Sing us one of the songs of Zion. How shall we sing the Lord's song in a strange land? If I forget thee, O Jerusalem, let my right hand forget her cunning. If I do not remember thee, let my tongue cleave to the roof of my mouth, if I prefer not Jerusalem above my chief joy." The first object of note on Mount Zion, as you enter the Jaffa gate, is the great and massive tower, the foundation and lower part of which is supposed to have been built by David. It was repaired, or the upper portion added, by Herod, and called the Tower of Hippicus; it is, however, generally called the castle of David. Just above this are the barracks for the cavalry. A little above there stands a stately church and dome, built over the place where it is said James, the brother of John, was beheaded. The interior of this church is most beautifully and richly adorned with mother-of-pearl and tortoise shell of various patterns in mosaic. We were invited to the patriarch's house, which is in keeping with the church for richness and beauty; and from there to his beautiful garden, which luxuriates in fine oriental trees and plants. Another church, said to stand on the site of the house of Annas the high priest, and also a large convent and nunnery, are connected with these Armenian premises, which cover the crownof the hill of Zion. Passing on near the city wall, not far from Zion gate, are some miserable hovels inhabited by lepers. When they see strangers coming, they rush out to implore alms, which no one can possibly refuse. Passing out of Zion gate, you see a part of this Mount lies without the walls, a large piece of table land, the site of the ancient city. Here is a group of buildings, both picturesque in appearanceand interesting in theirassociations, called Nebby David, or the prophet David. Here is the sepulcher of David, and here, most probably, Peter preached to the multitude when he referred most appropriately to this tomb. "Men and brethren, let me freely speak unto you of the patriarch David, that he is both dead and buried, and his sepulcher is with us unto this day." It is now much venerated, and strictly guarded by the Mohammedans. Neither Jews nor Christians are permitted to enter. Sir Moses Montefiore and lady could not gain admission short of the personal attendance of the pacha. The keys are kept by a Mohammedan sheik. A friend of the sheik took us to his house, and thus we gained admission. The sheik led us to a spacious arched room above the vault or tomb itself; it has the appearance of great antiquity; it is said to be the chanber where our blessedLord ate the lastPassover with his disciples, and it is also deemed to be the upper room where the apostles continued in prayer and supplication, with one accord. waiting for the promise, "till the day of Pentecost," when "they were all filled with the Holy Ghost." "Therefore shall Zion for your sake be plowed as a field, and Jerusalem shall become heaps." The southern slope of Zion is now under cultivation. Prophecy has been fulfilled to the exact letter here, and here God will most assuredly manifest himself again in the triumphs of his grace and glory.

Martha Saunders.

THE CASE OF PASSMORE WILLIAMSON.

Passmore Williamson, a Quaker gentleman, thirty-four years of age, is now confined in the criminal's department of Moyamensing Prison, Philadelphia, for the alledged crime of contempt of the United States District Court. When his imprisonment was first announced, the general expectation was, that the Supreme Court of Pennsylvania would at once interpose by a writ of habeas corpus, and set him free; but that Court refused to do so, on the ground that it had no jurisdiction over a person imprisoned by order of a United States Court. The case has thus become one of great importance, involving the rights of the State over its own citizens on its own soil. In view of its importance, we shall give to our readers, from time to time, the principal documents relating to it, commencing with the following from the *Independent* of Oct. 4th:—

THE ALLEDGED OFFENSE.

On the eighteenth day of last July, Col. Wheeler, U. S. Minister to Nicaragua, arrived at Bloodgood's hotel at Walnut-st. wharf, Philadelphia, with a colored woman named Jane, about thirty-five years of age, and her two sons aged twelve and seven, whom he claimed to hold as slaves, and whom he intended to take with him to New York, and thence to Nicaragua. He kept his eye closely upon his servants until the hour for dinner, when he left them awhile, charging the woman not to speak to any colored person, and if asked who she was, to answer "that she was a free woman, traveling with a minister." The woman knew something of her destination. She knew that in the strange land whither she was going no power could interfere between her person and the passions or the lusts of her master. She knew that her sons might be separated from her at his will, or might be scourged and tortured before her eyes without hope of redress. She had some vague idea that in the State where she was halting for a few hours, she was entitled to be free, and calling to her a female servant of the house, she told her story and her wishes. The master once left the table and came out to the porch to assure himself of the safety of his chattels; but presently the woman found opportunity to speak to a colored man about the premises; and the result of that interview was, that a messenger was dispatched to the Anti-Slavery office in Fifth-st. near Arch, with a note stating that there were three slaves at Bloodgood's hotel who desired their freedom. A person employed in that office hastened to the office of Mr. Williamson on the corner of Seventh and Arch-sts., and requested his immediate attention to the case. Mr. Williamson is Secretary of the Acting Committee of "the Pennsylvania Society for Promoting the Abolition of Slavery, and for the Relief of Free Negroes unlawfully held in Bondage, and for Improving the Condition of the African Race,"—a Society incorporated in 1789, of which Dr. Benjamin Franklin was the first President. In his official capacity, Mr. Williamson was the proper person to be applied to in the case.

It was now 4 1-2 o'clock, and the boat for New York would leave soon. Mr. Williamson was to leave for Harrisburg that night, and was busy in preparations for his journey. It was too late to find a judge competent or likely to grant a writ of habeas corpus, which, though commonly resorted to, was not at all necessary in such a case. Mr. Williamson advised the messenger, Mr. Still, to proceed at once to the hotel and inform the slaves that they were legally entitled to their freedom, and could take it, or, failing of this, to send a telegraphic dispatch to New York, so that the case could be met on their arrival there.

But Mr. Williamson could not rest with such a disposal of the case. He thought of that poor, helpless woman and her children, entitled to their freedom, and held in unlawful bondage through ignorance of the way of deliverance. Perhaps he had read the tract of the American Tract Society, which asks, "What would you not do to save one from *Algerine* captivity?" and felt that nothing less should be done to save one from captivity in Nicaragua. Certainly he had read the injunction of the Master, "Whatsoever ye would that men should do to you, do ye even so to them." He dropped his pen, and hastened to Bloodgood's hotel. Wheeler and his servants had already gone on board the boat. Without saying a word to any one, Mr. Williamson went on board, found the parties on the upper deck, and in the presence of Wheeler informed Jane that she was free by the laws of Pennsylvania. She expressed her desire to be free, and rose to depart. Wheeler attempted to detain her, and Williamson held him back, while Jane and her children, of their own free will, left the boat and entered a carriage, which some colored persons on the wharf, who were unknown to Williamson, had procured, and was driven rapidly away. Williamson returned to his office, went to Harrisbug the same night, and from that day has not seen Jane, or at any time known where she was.

At 11 o'clock the same night a United States Deputy Marshal, with two other officers, appeared at the house of Mr. Williamson senior, to serve a writ upon Passmore. They were informed of his absence from town; and the next day a lawyer appeared before the Court to state the fact of Mr. Williamson's absence, and his consequent ignorance of the process issued against him. Thus all due respect was shown to the court by Mr. Williamson's father upon his behalf. A second writ was issued, to which on the 20th July, Mr. Passmore Williamson made return with his own affirmation. This was a writ of *habeas corpus*, issued by Hon. John K. Kane, Judge of the District Court of the United States in the Eastern district of Philadelphia, on the petition of John H. Wheeler, commanding said Passmore Williamson to bring before said jndge the bodies of Jane, Daniel and Isaiah, said to be "*in his custody detained.*" To this writ Mr. Williamson made the following return:

"To the Hon. J. K. Kane, the Judge within named:

"Passmore Williamson, the defendant in the within writ mentioned for return thereto, respectfully submits, that the within named Jane, Daniel and Isaiah, or by whatsoever names they may be called, nor either of them, are not now, nor was, at the time of issuing the original writ, or at any other time, in the custody, power or possession of, nor confined nor restrained their liberty by him, the said Passmore Williamson. Therefore he cannot have the said bodies of the said Jane, Daniel and Isaiah, or either of them, before your Honor, as by the said writ he is commanded."

This return, it will be seen, is in strict accordance with the facts as above narrated. But Judge Kane pronounced the phrase "*or at any other time,*" "illusory, and evasive, if not false;" and having taken a week to frame his opinion, on the 27th July, he issued the following magisterial sentence: "Let Mr. Williamson, the respondont, be committed to the custody of the marshal without bail or mainprise, *as for a contempt of the court in refusing to answer to the writ of habeas corpus,* heretofore awarded against him at the relation of Mr. Wheeler." From that day to this Mr. Williamson has occupied a cell in the Moyamensing prison!

Mr. Williamson's counsel offered to amend the return by striking out the exceptionable clause, not as evasive or contemptuous, but as surplusage. This was met by an intimation that his client would then be indicted for perjury. Mr. Williamson offered to prove the correctness of his return. The Judge replied, that if he would take oath to produce witnesses to prove this within twenty-four hours, he would take the matter into consideration. Mr. Williamson not knowing any person who chanced to be present at the time, could not take oath to produce his witnesses within twenty-four hours; and so the case was decided without evidence. Next day several respectable persons came to Mr. Thomas Williamson, and offered, as eye-witnesses of the transaction, to verify Passmore's statement. But it was too late. In his official capacity Passmore Williamson had frustrated Judge Kane in the Christiana and Wilkesbarre cases, and *he* must be made to feel the power of a Judge of the United States Court over his own person! Such was the head and front of his offending.

Abyssinia.—Dr. Graph, the South African missionary, has recently returned from a mission to Abyssinia from Bishop Gobat, of Jerusalem. He had several interviews with the king, who seems bent upon improving his country, and his authority is now so firmly established that he can carry his wishes into execution. The King of Abyssinia has prohibited slavery, renounced polygamy, banished the Jesuits, and is anxious that some European mechanics, particularly masons, printers, and gunmakers, should settle in his country. Mr. Plowden, the English consul in Abyssinia, has taken to European clothing again, and has great influence with the king, to whom he gives good advice. An Englishman named Bell, is one of the first of the king's warriors, and, in battle, enjoys with three others the honor of wearing the same apparel as the king, in order that the latter may not be distinguished by his enemies. Another Englishman, named Coffin, who has been in Abyssinia 40 years, is still living there as chief of the provinces, and is now 68 years of age. Beside these three Englishmen, there are no Europeans in all Abyssinia.

Revival.—Rev. J. G. Fackler has written an account of an interesting revival of religion in the town of Richfield, in Upper Missouri. During a meeting which he held in that place, he says:—

"More than seventy persons became deeply concerned, and earnestly inquired what they 'must do to be saved.' Not less than sixty are indulging a comfortable hope through grace, that they have found the Lord precious to their souls. This number embraces many heads of families, among the oldest and most respectable of our population. Forty-four have already united with our church on examination, and it is believed that eight or ten more will shortly come to us. Some will go to other denominations."

The Work in France.—The Evangelical Society of France goes forward prosperously in its work; converts become more and more confirmed in their faith, and bold in their profession of it; missionary stations are prospered; some new churches have been organized; the missions in Paris have been quite successful, and are extending their operations; the Christian schools furnish particular encouragement, and even the scholars in the normal school understand that they have a holy mission to fulfill among children. The Society has sustained 102 laborers in different stages the past year.

Embarkation of Missionaries.—Sailed on Saturday, Sept. 29, in schooner Emily, for West Africa, to join the Mendi Mission, connected with the American Missionary Association, Dr. David J. Lee, Mrs. Martha C. Lee, and Miss Sarah G. McIntosh. Dr. Lee is a native of Pa., and Mrs. Lee of Norfolk, Va. They have resided in Indiana. Miss McIntosh is a native of Maine, has resided in Illinois, and was educated in the Female Department of Knox College. Mrs. Lee, as well as her husband, has a diploma of M. D., being a regularly educated physician.

Rogers' Hotel.—Our friend Clarke Rogers, of Plainfield, N. J., having purchased the Hotel and Dining Saloon, No. 4 Fulton-st., New York, has refitted it in a tasteful manner for the accommodation of the public. The lower saloon is appropriated to gentlemen alone, while the saloon on the second floor is open for gentlemen with or without ladies. Connected with the establishment is a large number of neatly-furnished lodging rooms. The whole is conducted on strictly temperance principles, under the supervision of Mr. Rogers and his gentlemanly partner, Mr. Zollver.

Fair of the American Institute.—The Managers of the American Institute have obtained the Crystal Palace for their exhibition this year, and are making a display more attractive than they have been able to make heretofore in their comparatively contracted quarters. Those who visit the exhibition now open at the Crystal Palace will be sure to get the worth of their money—a sight of the building alone being nearly an equivalent for the price of admission.

Reclamation of Fugitives.—The *Washington Union* publishes the following important Opinion of the Attorney-General of the United States. It shows that the protection of Slavery, rather than of Liberty, is the object sought in the interpretation and execution of the laws :—

1. The constitutional right of a citizen of the United States to reclaim a fugitive from his lawful service extends not only to the State and to the organized Territories, but to all the unorganized territorial possessions of the United States.

2. If in such Territory there be no Commissioner of the United States to act, the claimant may proceed by recapture without judicial process.

3. Any such fugitive from service in the Indian country is there unlawfully, and, as an intruder, is subject to arrest by the executive authority of the United States.

4. Such fugitive cannot be protected from extradition by any Indian tribe or nation; for the Indians are themselves the mere subjects of the United States, and have no power in conflict with the Constitution of the United States.

5. By the local law of the organized political communities of the Cherokees, Choctaws, and Chickasaws, there is ample provision for the delivery up of fugitives from service in any of the States.

Aiding Fugitives "unchristian Conduct."—The Indiana Presbytery of the Cumberland Presbyterian church has suspended from the ministry one of its clergymen, for unchristian conduct. The following are the specification :—

First specification.—For associating himself with an association known as the underground railroad, whose avowed business is to assist slaves to free territory.

Second specification.—For actually engaging in the business of assisting slaves in making their escape from slave to free territory, which is contraay to the laws of the United States and statute laws of the State of Indiana.

Several of the witnesses stated that the offending minister had boasted to them of the number of slaves he had aided to escape, giving the names and places in Kentucky from which they had escaped, and one of them testified that he had heard him say that he had never denied belonging to the underground railroad, and that he had said in April, this year, in speaking of the relative numbers taken to Liberia by colonization, and to Canada by underground railroad, that 10,000 had gone to Liberia, and 35,000 to Canada by underground railroad.

Farewell Missionary Meeting.—On Sunday evening, Sept. 30th, a meeting was held in New York, to listen to the discourses of the Revs. Jared W. and Ezekiel Scudder, two brothers, members of the last graduating class of the Theological Seminary, New Brunswick, N. J., who were to take their departure with their ladies on the 10th inst. for Arcot, India, to join in the missionary labors at that station. Both gentlemen are sons of the Rev. Dr. Scudder, the pious and successful missionary who died last year at the Cape of Good Hope, while on his return to America. An elder brother is already at Arcot, engaged in missionary labors.

☞ The Board Meetings of our Missionary, Tract, and Publishing Societies, will be held at Plainfield, on First-day next.

European News.

By the U. S. Mail steamship Pacific, which left Liverpool Sept. 22d, and arrived at New York, Oct. 3d, we have one week later news from Europe.

The Pacific's mail brings no new fact of importance, but the details, as far as received, of the capture of Southern Sebastopol, though the first announcement of this great event is fully confirmed, it is somewhat remarkable that a feeling of suspense and expectation, not unmixed with uneasiness, should pervade the public mind of England. France, on the contrary, is drunk with excitement. Delighted with her place of undivided honor amid the ruins of Sebastopol, she has given herself up to parades, illuminations, and extravagant exultations. The war—never before very popular—has at last aroused the enthusiasm of the French. Their national vanity has been appeased, and they begin to look upon the struggle with greater interest and more general satisfaction.

From the details of the bombardment and assault on Sebastopol, it appears that while the French, after six successive attempts, carried the Malakoff, the English were repulsed before the Redan, which they at one time occupied. All fought with the most determined bravery, as the long list of killed and wounded testify; but the latter found it impossible to maintain their position. Before they could re-organize for a second attack, the fort was abandoned by the Russians.

The next operations of the Allies are as yet enveloped in mystery. We have no indication of Russian movements, nor any authority for supposing that Prince Gortschakoff will retreat from the Crimea without another desperate effort to retrieve his lost laurels. How long he will be able to defend the northern forts does not appear. In spite of exaggerated telegraphic messages in the London *Times*, and over-sanguine expectations in the flush of victory, there seems little probability of any thing being done for some weeks hence. Reinforcements are crowding in on all sides, but the victors are as much in need of re-organization and rest as the vanquished.

An important item of news by this arrival is the journey of the Emperor Alexander to Moscow, Nicolaieff and the Crimea. His trip to Warsaw, with all its peaceable surmises, has been abandoned, and in its stead he goes to stimulate the energy of his beaten army and revive its old enthusiasm. He has issued a proclamation in which he acknowledges his losses, but places every confidence in the bravery and endurance of Sebastopol's late defenders.

Shocking Calamity.—During the County Fair at Angelica, N. Y., on Thursday, Sept. 20th, a distressing accident occurred which resulted in the death of two persons, and the injuring of two others, one so severely that hopes are entertained of his recovery. A couple of young men, who were said to have come from Warsaw, had erected a large portable swing, for the innocent amusement of those who were anxious to take an ærial ride. The "machine" consisted of an upright frame, about twenty feet high, near the centre of which is a horizontal axle, and around this revolved four cars. The cars were sufficiently large for four men to sit in each, and the motion was produced by turning a crank. Each car being filled, the wheel was set in motion, when suddenly some of the gearing became entangled, which rendered the concern unmanageable, and instantly the four cars came to the ground with a terrible crash, killing William Graham, an Englishman, residing about two miles south of Angelica, almost instantly, and injuring Gardner C. and Henry G. West, of Alfred, (the former of whom has since died,) and Robert Rice, of Angelica, who still lies in a dangerous condition. No other person was seriously injured.

The two men who owned the apparatus, as soon as the accident occurred made their escape for fear of arrest, leaving the machine behind, which was afterwards torn down by some of the enraged citizens of Angelica, and burnt up.

A Park that is a Park.

There is now a fair prospect that New York will have a Park worthy of the name. The Commissioners to whom the project of "Central Park" was referred, have made their report; and as soon as it has received the approval of the Supreme Court, operations will be commenced.

The Central Park, as provided for by the act, and as we now hope to see it laid out, contains 776 acres, including within its area the State arsenal and two reservoirs. This space of ground comprises some 7,500 lots, which have been estimated at an average cost of $700 each. It is bounded upon the south by a line on Fifty-ninth street, extended from the Fifth avenue to the Eighth, and on the north by a line of like extent on 106th street. This, we believe, will form the most extensive park that exists in any city in the world, with the single exception of Phœnix Park in Dublin, which contains some three or four thousand acre. Its length in a direct line will be two and one-third miles, and its breadth three-fifths of a mile. The total amount awarded by the Commissioners for the land taken for this purpose is $5,020,814. This, with the exception of $360,482—the the value of property therein comprised already belonging to the city—is to be paid to private individuals. The fund for the purpose is to be raised in this way: First, a tax of $1,675,329 has been assessed on contiguous property supposed to be benefitted to that extent at least, by the proposed park. This assessment is levied on all property comprised within the space bounded eastward by a line midway between the Third and Second avenues, westward by a line midway between the Tenth and Eleventh avenues, northward by 116th street, and southward by Forty-second street. Exceptions are made on the Fifth, Sixth and Eighth avenues, where the northern limit is extended to 120th streets, and the southern to Thirty-fourth street. Second, the balance of the fund—$2,985,000—is to be supplied by the city by means of a loan, for which the city stock will be pledged, redeemable in forty-five years, and paying an annual interest of five per cent., or in round numbers $150,000. It is supposed that the increase of taxable property within a certain distance of the Central Park will, before long yield a revenue to the city which will more than cover this annual interest.

Suicide by a Boy.—The Menasha (Wis.) Advocate of the 13th ult., gives the following account of the commission of suicide by a boy only 12 or 15 years of age :—

"Young Kelsey imagined himself to be whipped and abused too much by the village boys, and on Monday evening he told his mother he would stand it no longer; that he would hang himself. No attention was paid to the threat, and on Thursday morning he was whipped by his mother for some trivial offence, after which she sent him to the woods to procure some good switches, to be hereafter used on him for bad behavior. He was accompanied by a younger brother. After going into the woods a short distance, he sent the brother back home for a rope, in order, as he said, to bring a large bundle. On his brother's return, young Kelsey was stiff in death. In the absence of his brother, he placed some blocks on the ground, placed one of his suspenders round his neck, and tied one end to the limb of a tree, kicked the blocks away, and hung in that position until dead.

Important to Land Speculators and Purchasers.—A dispatch dated Washington, Wednesday, Oct. 3d, says:—Recently the Commissioner of Indian Affairs was applied to for information concerning the well-known "Carver Grant," and as to whether the title from Carver is good, it being alleged that the Nandwisse Indians, in 1766 or 1767, conveyed to him one hundred miles square of land on the east side of the Mississippi River, between the Falls of Saint Anthony and Lake Pepin. Some of this land has, from time to time, been sold, and but recently a speculator invested a thousand dollars in it. But the Commissioner of Indian Affairs, on the 1st instant, in reply to the inquiry above alluded to, says that the claim has frequently been before the Government, and decided by both the Legislative and Executive branches to be without merit, and that a title from Carver to any portion of the land is not worth as much as the parchment on which the deed is written.

Yellow Fever at the South.—This disease has made its appearance at Montgomery, Ala. The Board of Health, on the 26th ult., reported five cases and one death, and called upon the citizens (among whom, it is stated, a perfect stampede immediately took place) to clean their premises. The disease is said to have broken out at Jackson, Miss., to an alarming extent. At last accounts it had increased to ravages at Vicksburg. At Woodville and Yazoo City, Miss., it also prevails to some extent. Near Port Gibson. Mr. McAlpine, a planter, had died, and several of his family, and sixty of his slaves were ill. At Alexandria, La., on the 18th ult., there were 30 or 40 cases.

Robberies on Lake Michigan.—The Allegany (Mich.) *Record*, of Oct. 1st., says that the people along Lake Michigan, from here north to the Menistee, have been thrown into [illegible]tate of the most intense excitement by the operations of a gang of [illegible]uders, who are reported to be Mormons from Beaver Island, and who have carried on their operations with a boldn[illegible] coolness and desperation rarely equaled [illegible]e records of highwaymen. They are reported to have burned sawmills and robbed stores north of the Grand River. At Grand Haven they made repeated attempts to break into stores and shops. On Saturday they made their appearance at the mouth of the Kalamazoo, and after looking about, pushed up south as the tanneries in the town of Ganges, and on Saturday night broke open Robinson & Plummer's store, robbed them of $1,600 worth of goods, and made back again down the lake.

Republican Nomination.—The Republican Comvention recently held at Syracuse, N. Y., laid down a "platform" and nominated a State Ticket, as follows :—

For Secretary of State—Preston King.
For Attorney General—Abijah Mann, Jr.
For Controller—James M. Cook.
For Canal Commissioner—D. H. Bissell.
For Eng. and Surveyor—George Geddes.
For Treasurer—Alex. B. Williams.
For State Prison Inspect.—Wesley Bailey.
Judge, (long term,)—Bradford R. Wood.
For Judge, (short term,)—Joseph Mullen.

SUMMARY.

A dispatch dated St. Louis, Wednesday, Oct. 3, says: We have Kansas dates to the 2d inst. Returns from three Counties show a heavy vote for Whitefield, Pro-Slavery, for Congress. The Shawnee Indians supported the Pro-Slavery ticket. The entire vote of Johnson County was given for Whitefield. In Leavenworth County Whitefield had 800, and Reeder 200. At Willow Springs 100 votes were polled—all for Pro-Slavery candidates. Gov. Shannon voted the Pro-Slavery ticket. There was no fighting or tumult at the polls, the Free-Soilers generally not voting.

The nativities of the convicts in the Wisconsin penitentiary, at Waupun, are as follows:—Wales 1, Atlantic Ocean 1, Holland 1, Prussia 1, England 2, Ireland 9, Germany 15, United States 30. Total 60—56 males and 4 females. The following are the crimes for which the above convicts are being punished: Murder 11, manslaughter 2, rape 7, larceny 23, burglary 4, assault with intent to kill or murder 3, poisoning a well 1, adultery 2, embezzlement 3, passing counterfeit money 1, forgery 1, false pretenses 1, arson 1.

The death of Mr. Dellicker, a well-known merchant, who resides in Brooklyn, occurred recently under very peculiar circumstances. He was in perfectly good health, and had just returned from the country, where he had left his wife, who was recovering from a recent illness. He had but reached home when a telegraphic message was brought to him announcing his wife's death. He sank into a chair on reading the sad news, said he felt very ill, and requested that a physician should be sent for, and died immediately.

The father of Tuckerman, the Boston defaulter, was well known as a genial man, with a smile and a pleasant word for every one. Since the news respecting his son's swindling transaction was made known, all joyful expression left his face, and his stolid features, his eyes fixed on vacancy, and his ghastly, pallid color, all showed that deep grief had taken possession of him. Some ten days since, without any marked cause, he died from shame—the victim of his son.

The Post Office Department has issued an order in relation to the opening and closing of mails. It sets forth that the mails cannot, in compliance with law, be opened or made up by the postmaster or his sworn assistants within the reach of persons not authorized to handle them. The postmaster must, therefore, while discharging these duties, exclude from the room appropriated to the use of his office all persons except his assistants regularly employed and sworn.

A dispatch dated Syracuse, Monday, Oct. 1, says: The fourth anniversary of the rescue of the fugitive Jerry was celebrated at Wieting Hall, in this city, to-day. Gerrit Smith presided. Addresses were made by Mr. Salisbury, of Albany; Beriah Green, Gerrit Smith, Rev. S. J. May, Abram Pryne, and Rev. J. W. Loguen. Rev. E. P. Rogers, of Newark, N. J.. read a poem on the Fugitive Slave Law. The Hall was densely crowded with ladies and gentlemen, both in the forenoon and afternoon.

We learn from the Philadelphia Ledger that a Canal boat, containing two men, a woman and two children went over the dam on the Lehigh River, near Catasauqua, Pa., on the 1st inst., and were drowned. The very heavy rain on Sunday raised the river to a great hight, and the current where the accident took place was so strong that all efforts to save the unfortunate persons were unavailing. Earlier in the day a man went over at the same spot and was also drowned.

The people of Eastern Indiana and Western Ohio have consulted together, and have resolved to hold a grand "Union Fair" at the line, about four miles east of Richmond, Ind., on the 3d, 4th, and 5th of October. The great attractions are the following items on the premium lists:—Two hundred dollars for the best fire engine; do. for the best band; do. for the best and fastest trotting horse; one hundred dollars for the best and fastest pacing horse; forty dollar gold watch to best lady rider.

It is estimated that there are 10,000 daguerreotypists in the United States, these taking daily 20 pictures each, at an average of $2 50, giving 200,000 pictures at an expense of over half a million dollars. The amount of money paid annually for daguerreotypes is thought to exceed one hundred and fifty millions. Still the business is increasing.

A dispatch dated Buffalo, Monday, Oct. 1, says:—Judge Houghton, of our Supreme Court, has decided that the Prohibitory Liquor Law is unconstitutional, and says the Legislature has no right to pass such an act. In the case of the People vs. Stevens, the defendant admitted the offence charged against him, and was discharged.

The parents of Baron St. Andre, late French Consul at Philadelphia, who was killed in the Burlington disaster, have commenced a suit for damages against the Camden and Amboy Railroad Company in the Supreme Court of Pennsylvania. Charles Le Bontallies, one of the injured in the same accident, has also commenced suit.

The American Express Company offer a reward of $10,000 for the recovery of the stolen $50,000 Gold sent from the Dubuque Land-Office, and intended for the Sub-Treasury in this City. For any part of the Gold, a proportionate reward will be paid. They also offer $5,000 for the apprehension and conviction of the robber or robbers. The loss, from present appearances, is likely to fall on the Express carriers, though the Government is disposed to allow full time for ferreting out the place and circumstances of this daring piece of villiany.

The Fourierite establishment, known as the North American Phalanx, near Red Bank, New Jersey, has gone to smash. All its real estate, in which some $100,000 had been invested came under the hammer Wednesday and Thursday of last week, and produced, in the aggregate, $56,000, or a little over $83 per acre. This, with the estimated proceeds of its moveable property will enable them to pay from sixty to seventy per cent. on the stock issued.

The Census of Cook County, Illinois—the county which includes Chicago—shows that the number of white males is 59,393; females, 44,023; colored, 604, giving a total of 103,960, in the city and county. This shows an increase of population in five years, of 60,575, or over twelve thousand a year. The number of pupils is 8,130, and of schools 162. The number of manufactories is 377, and the value of their product exceeds ten and a quarter millions of dollars.

Commissioner Minot, of the Pension Office, has decided that the forces employed by order of the Secretary of War for the purpose of removing intruders, from the Cherokee lands in 1823 and 1824, are not entitled to bounty land under the act of 3d March, 1855, as it is shown by the record that they were not called into service by any State or Territory, and were not engaged in any war during the year designated.

The Pope has recently ordered a gold medal, of the largest size, to be sent to Geo. Cole, Esq., Civil Engineer at Buffalo, N. Y., in return for a copy of a work containing his tables and designs of machines for railroads, canals, tunnels, &c. The medal is inscribed "bene merito," ("To the well Deserving") and is to be accompanied by a letter of thanks.

The thirty-fifth Annual Report of the Episcopal Commissioners for building new churches has been issued. Twenty-seven churches, containing accommodation for 18,375 persons including 11,774 free seats, have, by aid of grants, been completed since the last Report, and twenty-one new churches are in course of erection.

According to the Census returns, the City of New York contains about a hundred thousand more inhabitants than the State of New Jersey. The entire population of New Jersey is 569,499, exhibiting a gain of 80,166 since the Census of 1850. The two counties which have received the greatest gains are those lying nearest to this City.

Among the medical graduates of the Edinburgh University, who obtained their diplomas at the last examination, were a Chinese and four Egyptians. The Chinese graduate, Wong Fun, is believed to be the first of his nation who has ever graduated at a British University.

Two white deer, caught in the Rocky Mountains, have arrived at Cincinnati, where they have been sold for $2,000, and are to be exhibited. One is a buck, with a fine pair of antlers, covered with a smooth white velvet coating.

The ship Faneuil Hall of Boston, from Baltimore for Calcutta, in ballast, was wrecked in July on Abrothas Bank, about 25 miles from Bahia. The crew were all saved. The vessel proved a total loss, and was sold as she laid for thirty-eight hundred milreas.

The Jerusalem Bishopric Fund was a severe loser by the Strahan failure. The *Record* publishes an appeal, saying that Bishop Gobat's operations will be greatly hindered, and in some directions stopped, without large and speedy contributions.

President Pierce was at Harrisburg, Pa., on the 26th ult., in attendance upon the State Agricultural Fair. He was welcomed in a brief address by the President of the Society, James Gowan, Esq., and made a reply.

An explosion occurred at the Cooper Falls Maine on the 26th of September, which killed two men, and severely injured two more. The fiew of the large boiler of the Stamp Mill collapsed, blowing out the front of the boiler and furnace.

The growers of cranberries on Cape Cod are realizing enormous prices. Twelve dollars a barrel has been given, and the Yarmouth *Register* says that some are holding back with the expectation of obtaining fourteen dollars.

A dispatch dated Pottsville, Pa., Thursday, Oct. 4, says: A frightful explosion took place, to-day, near Minersville, in the mines of Gideon Bast, on Wolf Creek. It is reported that five persons were killed, and many more wounded.

The monthly record of the *Baptist Memorial* for August, reports nine hundred and sixty-seven baptisms, sixteen churches constituted, eleven new church edifices, and the death of five Baptist ministers.

The corner stone of Wayland University has been laid at Beaver Dam, Wisconsin. The institution is named in honor of Rev. Francis Wayland, late President of Brown University.

A new car, made entirely of iron, has been placed on the Third-avenue Railroad. It weighs 1,500 pounds less, and with hold ten persons more than any of the other cars on the road.

The present number of students in the Collegiate Department of Yale College is as follows: Seniors, 92; Juniors, 109; Sophomores, 109; Freshmen, 153; Total, 463.

The Governor of Iowa has issued his proclamation, appointing Thursday, the 22d day of November, to be observed as a Thanksgiving Day in that State.

The aggregate amount of subscription in money already sent forward for the relief of the Norfolk sufferers, is nearly $100,000.

Nearly eleven thousand persons visited the Patent Office and Gallery at Washington during the last month.

The Freshman class in Yale this year is by far the largest ever received at any American college.

A public meeting has been held in Griffin, Ga., for the encouragement of southern emigration to Kansas, and Col. Cargile is endeavoring to organize there a company of a thousand emigrants to proceed to the territory this fall.

The people of Connecticut have recently decided, by a large majority, to amend the State constitution so as to require all electors hereafter to be able to read.

MARRIED,

In Piscataway, N. J., on the morning of the 27th ult., by the Rev. H. H. Baker, Mr. Alexander C. Heritage, of Marlboro, N. J., to Miss Mary Ann Dunham, of the former place. Wisconsin papers please copy.

In Hopkinton, R. I., October 1st., by Eld. C. Chester, Mr. Silas C. Weeks to Miss Sarah Coolage, all of Hopkinton.

At the same time and place, by the same, Mr. Edward J. Budington, of Hopkinton, to Miss Harriet N, Pitcher, of North Stonington, Conn.

At Adams Center, N. Y., Oct. 2d, by Eld. Alexander Campbell, Mr. William M. Hemphill to Miss Martha B. Langworthy, both of Alfred, Allegany Co., N. Y.

DIED,

In Warwick, R. I., Sept. 28th, at the residence of her son, Mrs. Sarah T. Stillman, wife of the late Paul Stillman, of Westerly, R. I., in the 67th year of her age. The deceased was from early life a member of the church of Christ, having united with the church at Newport, under the pastoral care of her Grandfather, the Rev. William Bliss. She has suffered much through life, from sickness and bodily infirmities, and for the last five years had been mostly confined to her room, much of the time prostrated, and especially in the latter part suffering intensely; yet strong in faith she passed calmly through the valley and the river of death, and fell asleep sweetly in Jesus. "Blessed are the dead who die in the Lord."

In Alfred, Oct. 1st, Fitch Palmiter, in the fiftieth year of his age. The death of Mr. Palmiter was so sudden as to startle the whole community. He was physically a strong man, and had not the first indication of approaching death. On the contrary, he was in perfect health, so far as known, but died so suddenly as neither to speak or breathe after the attack of whatever disease it might be that removed him, which is supposed to have been some difficulty of the heart. He is supposed to have been a member of either the Seventh-day Baptist Church of Hartville or Second Alfred. N. V. H.

In Plainfield, N. J., on the 26th ult., Emma, infant daughter of Randolph, Jr., and Keziah Dunham.

In Alfred, Oct. 1st, William, infant son of William L. and Martha Green.

New Market Seminary.

This Seminary will re-open on the 12th of September, with Mrs. R. H. Whitford, as Preceptress.

This Institution is located in a pleasant section of country, and has a commodious and well arranged building, and is designed to furnish every facility and advantage to the student found in other institutions of this class.

Board for students may be had in families at one dollar and seventy-five cents per week, where all their wants will be kindly cared for. Tuition from $3 to $5 per term, according to the studies pursued. Music, with use of Piano, $10 00.

I. H. Dunn, Sec. of Board of Trustees.
New Market, N. J., August 26, 1855.

Ahead of all Competition.

In press, and will be published on the 20th of September.

FLEETWOOD'S LIFE OF OUR LORD AND SAVIOUR JESUS CHRIST, together with lives of the Holy Apostles and Evangelists, and a History of the Jews. The whole carefully revised with additions by the Rev. Joseph Belcher, D. D.

Determined to furnish agents and their patrons with books of sterling merit, we are about issuing, in connection with our popular History of all Religious Denominations, a new edition of the above fine old work. It will contain about 700 pp. uniform in size and type with the latter, and will be handsomely illustrated by engravings. Copies have been procured from England and Scotland, and carefully collated by the above eminent divine, with those published in this country. Many fine omitted passages have thus been restored, the manifold mistakes of successive printers have been corrected, and we shall now have the pleasure of placing in the hands of canvassers *the most correct edition in existence of this admirable work.* For terms and other particulars address either of the

Farm for Sale,

CONTAINING about 100 acres, with a fair proportion of woodland, a small orchard of grafted fruit, and a comfortable dwelling and outhouses. It is situated about four miles north of Westerly, R. I., and within a mile of each of the flourishing manufacturing villages of Potter Hill and Ashaway. There are several other manufacturing establishments near, affording a ready market, in the immediate vicinity, for every species of produce. It is convenient to the first Hopkinton Church, as well as to the very excellent male district school.

It will be sold with or without the stock and farming implements, and possession given the ensuing winter or spring, if desired. To those wishing to secure a quiet home in an enterprising neighborhood, and surrounded by such comforts as can only be found in an old settled and thickly populated country, this affords an opportunity seldom offered. For terms and other particulars apply to the subscriber on the premises, or address John E. Potter, No. 15 Sansom-st., Philadelphia, Pa. Benjamin Potter, Ashaway, R. I.

D. C. McCALLUM, General Sup't.

State of New York,

SECRETARY'S OFFICE, Albany, August 25, 1855.—To the Sheriff of the County of New York: Sir—Notice is hereby given, that at the General Election to be held in this State on the Tuesday succeeding the first Monday of November next, the following officers are to be elected, to wit:

A Secretary of State in the place of Elias W. Leavenworth;

A Comptroller in the place of James M. Cook;

An Attorney-General in the place of Ogden Hoffman;

A State Engineer and Surveyor in the place of John T. Clark;

A State Treasurer in the place of Elbridge G. Spaulding;

A Canal Commissioner in the place of Frederick Follett;

An Inspector of State Prisons in the place of Darius Clark;

A Judge of the Court of Appeals in the place of Addison Gardiner;

All whose terms of service will expire on the last day of December next.

Also, a Judge of the Court of Appeals in the place of Charles H. Ruggles, Resigned;

Also, a Justice of the Supreme Court for the first Judicial District, in the place of Edward P. Cowles, whose term of office will expire on the last day of December next;

Also, a Senator for the Third, Fourth, Fifth, and Sixth Senate Districts, in the place of Thomas J. Barr, Thomas R. Whitney, Mark Spencer and Erastus Brooks, whose term of office will expire on the last day of December next.

COUNTY OFFICERS ALSO TO BE ELECTED FOR SAID COUNTY.

Sixteen members of Assembly;

A Sheriff in the place of John Orser;

A County Clerk in the place of Richard P. Connolly;

Four Coroners in the places of Robert Gamble, Joseph Hilton, Hieronymus N. Wilhelm, and William O'Donnell;

A Comptroller in the place of Azariah C. Flagg;

A Street Commissioner in the place of James Furey;

A Commissioner of Repairs and Supplies in place of Bartholemew Purdy;

Two Governors of the Alms House in the place of Patrick Henry add John J. Herrick;

City Inspector in place of Thomas K. Downing.

A Counsel to the Corporation in place of Robert J. Dillon;

Two Justices of the Superior Court in the place of Wm. W. Campbell and Murray Hoffman;

A Justice of the Marine Court in place of Chas. E. Birdsall;

A Police Justice for the Sixth Judicial District in the place of Geo. W. Pearcy;

A Judge of the Court of Common Pleas in the place of Lewis B. Woodruff.

Yours respectfully,
E. W. LEAVENWORTH, Secretary of State.

Sheriff's Office, New York, August 28, 1855.
The above is published pursuant to the notice of the Secretary of State and the requirements of the statute in such case made and provided.

JOHN ORSER,
Sheriff of the City and County of New York.

☞ All the public newspapers in the county will publish the above once in each week until the election, and then hand in their bills for advertising the same, so that they may be had before the Board of Supervisors, and passed for payment. Sep—13.

Miscellaneous.

An Incident in the Ohio Penitentiary.

I had been but a few months in charge of the prison, when my attention was attracted to, and deep interest felt in, the numerous boys and young men who were confined therein and permitted to work in the same shops with old and hardened convicts. This interest was increased on every evening, as I saw them congregated in gangs, marching to their silent meals, and thence to their gloomy bed-rooms, which are more like living sepulchres, with iron shrouds, than sleeping apartments. These young men and boys, being generally the shortest in height, brought up the rear of the companies, as they marched to the terrible "lock step," and consequently more easily attracted attention. To see many youthful forms and bright countenances mingled with the old and hardened scoundrels, whose visages betokened vice, malice, and crime, was sickening to the soul. But there was one among the boys, a lad about seventeen years of age, who had particularly attracted my attention; not from anything superior in his countenance or general appearance, but by the look of utter despair which ever sat upon his brow, and the silent, uncomplaining manner in which he submitted to all the hardships and degradations of prison life. He was often complained of, both by officers and men, and I thought unnecessarily, for light and trivial offences against the rules of propriety; yet he seldom had any excuse or apology, and never denied a charge. He took the reprimand, and once a punishment, without a tear or a murmur, almost as a matter of course, seemingly thankful that it was no worse. He had evidently seen better days, and enjoyed the light of home, parents, and friends, if not the luxuries of life. But the light of hope seemed to have gone out; his health was poor, his face pale, his frame fragile, and no fire beamed in his dark gray eye! I thought every night, as I saw him march to his gloomy bed, that I would go to him, and learn his history—but there were so many duties to perform, so much to learn and to do, that day after day passed, and I would neglect him, having merely learned that his name was Arthur Lamb, and that his crime was burglary and larceny, indicating a very bad boy, for one so young. He had already been there a year, and had two more to serve! He never could outlive his sentence, and his countenance indicated that he felt it. He worked at stone-cutting, on the State House, hence my opportunities for seeing him were less than though he had worked in the prison-yard; still his pale face haunted me day and night, and I resolved that on the next Sunday, as he came from school, I would send for him, and learn his history. It happened, however, that I was one day in a store, waiting for the transaction of some business, and having picked up an old newspaper, I read and re-read, while delayed, until at last my eye fell upon an advertisement of "A Lost Boy! Information wanted of a boy named Arthur ——," (I will not give his real name, for perhaps he is still living,) and then followed a description of the boy—exactly corresponding with that of the young convict—Arthur Lamb! Then there was somebody who cared for the poor boy, if indeed it was him; perhaps a mother, his father, his brothers and sisters, who were searching for him. The advertisement was nearly a year old—yet I doubted not, and as soon as the convicts were locked up, I sent for Arthur Lamb. He came, as a matter of course, with the same pale, uncomplaining face and hopeless gait, thinking, no doubt, that something had gone wrong, and been laid to his charge.

I was examining the Convicts' Register when he came in; and when I looked up, there he stood, a perfect image of despair. I asked him his name. He replied,

"Arthur."

"Arthur what?" said I sternly.

"Arthur —— Lamb," he answered, hesitatingly.

"Have you a father or mother living?"

His eye brightened, his voice quivered, as he exclaimed:

"Oh! have you heard from mother? Is she alive? Is she well?" and tears, which I had never seen him shed before, ran like rain-drops down his cheeks. As he became calm from suspense, I told him I had not heard from his parents, but that I had a paper I wished him to read. He took the advertisement which I had cut from the paper, and as he read it he exclaimed:

"That's me! that's me!" and again sobs and tears choked his utterance.

I assured him that the advertisement was all I could tell him about his parents—and that, as it requested information, I desired to know what I should write in relpy. The advertisement directed information to be sent to the editor of the *Christian Chronicle*, New York.

"Oh, do not write!" he said, "It will break poor mother's heart."

I told him I must write; and that it would be a lighter blow to his mother's feelings, to know where he was, than the terrible uncertainty which must haunt her mind day and night. So he consented, and taking him to my room, I drew from him, in substance, the following story:

His father was a respectable and wealthy merchant in an interior town of the State of New York. At the holding of the State Agricultural Fair, in his native town, he got acquainted with two strange boys, older than himself, who persuaded him to run away from home, and go to the West. He foolishly consented, with high hopes of happy times, new scenes, and great fortune. They came as far as Cleveland, where they remained several days. One morning the other two boys came to his room early, and showed him a large amount of jewelry, &c., which they said they had won at cards during the night. Knowing that he was in need of funds to pay his board, they pressed him to take some of it, for means to pay his landlord. But before he had disposed of any of it, they were all three arrested for burglary, and as a portion of the property taken from the store which had been robbed was found in his possession, he too was tried, convicted, and sentenced. He had no friends, no money, and dared not to write home; so hope sank within him—he resigned himself to his fate, never expecting to get out of prison, or see his parents again.

Upon inquiring of the two convicts who came with him on the same charge, I learned that what Arthur had stated was strictly true, and that his crime was keeping bad company, leaving his home, and unknowingly receiving stolen goods. Questioned separately, they all told the same story, and left no doubt in my mind of Arthur's innocence. Full of compassion for the unfortunate little fellow, I sat down and wrote a full description of Arthur, his condition and history, as I obtained it from him, painting the horrors of the place, the hopelessness of his being reformed there, even if guilty, and the probability of his never living out his sentence, and describing the process to be used to gain his pardon. This I sent according to the directions in the advertisement. But week after week passed, and no answer came. The boy daily inquired if I had heard from his mother; until at last, "hope long deferred seemed to make his heart sick," and again he drooped and pined. At last a letter came—such a letter! It was from the Rev. Dr. Bellows, of New York. He had been absent to a distant city, but the moment he read my letter the good man responded. The father of the poor boy had become almost insane on account of his son's long and mysterious absence. He had left his former place of residence, and moved from city to city, from town to town, and traveled up and down the country, seeking the loved and the lost! He had spent the most of a handsome fortune; his wife, the boy's mother, was on the brink of the grave, "pining for her first-born, and would not be comforted." They then lived in a Western city, whither they had gone in hope of finding or forgetting their boy; or that a change of scene might assuage their grief. He thanked me for my letter, which he had sent to the father, and promised his assistance to procure the young convict's pardon.

This news I gave to Arthur; he seemed pained and pleased. Hope and fear, joy and grief, filled his heart alternately; but from thence his eye beamed brighter, his step was lighter, and hope seemed to dance in every nerve.

Days passed—and at last there came a man to the prison, rushing frantically into the office, demanding to see his son.

"My boy! my boy! O, let me see him."

The clerk, who knew nothing of the matter, calmly asked him for the name of his son.

"Arthur ——."

"No such name on our books; your son cannot be here."

"He is here! Show him to me! Here, sir, is your own letter! Why do you mock me?"

The clerk looked over the letter, saw at once that Arthur Lamb was the convict wanted, and rung the bell for the messenger.

"There is the warden, sir; it was his letter you showed."

Too much of a good thing is often unpleasant. The old man embraced me and wept like a child. A thousand times he thanked me, and, in the name of his wife, heaped blessings upon my head. But the rattling of the great iron door, and the grating sound of its hinges, indicated the approach of Arthur, and I conducted the excited parent into a side parlor. I then led his son to his embrace. Such a half shriek and agonizing groan as the old man gave, when he beheld the altered appearance of the boy, as he stood, clad in the degrading stripes, and holding a convict's cap in his hand, I never heard before! I have seen many many similar scenes since, and become injured to them; but this one seemed as if it would burst my brain!

I drew up and signed a petition for the pardon of the young convict; and such a deep and favorable impression did the perusal of the letter I wrote in answer to the advertisement make upon the directors, that they readily joined in the petition, though it was a long time before McLean consented. He was exceedingly cautious and prudent; but the old man clung to him—followed him from his office to his country residence, and there in the presence of his family plead anew his cause. At length, excited by the earnest appeal of the father, the director looked over the papers again—his wife, becoming interested, picked up the answer to the advertisement, read it, and then tears came to the rescue. Mac said, rather harshly, that the warden would let all those young rascals out if he could. Those who know Gov. Wood, will not wonder that he was easily prevailed upon in such a case; and the pardon was granted.

Need I describe the old man's joy—how he laughed and wept, walked and ran, all impatient to see his son free? When the lad came out in citizen's dress, the aged parent was too full for utterance. He hugged the released convict to his bosom; kissed him, wept, and prayed. Grasping my hand, he tendered me his farm; his watch, any thing I would take. Pained at the thought of pecuniary reward, I took the old man's arm in mine, and his boy by the hand, and escorted them to the gate—literally bowing them away.

I never saw them more! But the young man is doing well; and long may he live to reward the fond affection of his parents.

This case may be but one among a hundred. Where guilt is not clear, there should be pity for youth, and some proper means taken to restore them to the paths of rectitude and honor. [Sandusky City (O.) Mirror.

Absence of Mind.

There are some minds which seem to have a propensity of obliviousness of things present. In some cases it appears to be a want of mind, rather than forgetfulness. But many cases of absent-mindedness are due to an all-absorbing interest in more important things. Well balanced minds are subject to a forgetfulness of unimportant matters, and sometimes ludicrous results ensue. Many laughable incidents might be given. The Philadelphia *Inquirer* narrates two late cases, occcrring in that city, as follows:—

"A day or two since, a gentleman stepped into the office of one of our leading private bankers, and with much anxiety, asked if a strange packet had not been picked up there. His manner was quite earnest and anxious, and he remarked that the contents of the packet were very valuable. The banker listened with his usual courtesy, and then cooly asked 'What is that under your arm, sir?' The gentleman immediately detected his absence of mind, recognized the package under his arm as that which he was in search of, bowed his acknowledgments, and left at once mortified and delighted.

Not long ago, an esteemed friend stepped into our room, and with much impatience and trepidation, asked if we had seen his spectacles? He was, he said, confident that he had left them on the table about half an hour before, and could not do without them. We turned our eyes from the desk on which we were writing, and immediately saw the spectacles, but thought it as well to let the absent minded pursue his search for a few minutes. he hurried through the room, overturned and examined the closet, cracks and corners, opened one or two drawers, and then repeated his inquiries, adding a remark, that he was certain that the missing spectacles must be somewhere in the room, for he remembered taking them off during his recent visit. At that instant a thought flashed upon him, he placed his hand upon his forehead, and there were the mysterious specs, not only visible, but tangible and palpable. A burst of laughter followed the discovery, and the excited searcher disappeared in the twinkling of an eye, and did not call again for at least a week. Even now, when the joke is related, he manifests an uneasy sensation. This, too, notwithstanding that he is one of the best natured men alive."

Effects of Under-Draining.

To the editor of the N. Y. Daily Times:

Dear Sir: If I cannot say that I am personally acquainted with the subject of the following short narrative, I can give you reliable assurances, that in it the benefits arising from a system of thorough underdrainage are not exaggerated.

Some years ago the son of an English farmer came to the United States, and let himself as a farm laborer in this State, on the following conditions: commencing work at the first of September, he was to work ten hours a day for three years, and to receive in payment a deed of a field containing twelve acres—securing himself by an agreement, by which his employer was put under bonds of $2,000 to fulfill his part of the contract; also, during these three years, he was to have the control of the field, to work it at his own expense, and to give his employer one-half the proceeds. The field lay under the south side of a hill, was of dark heavy clay resting on a bluish-colored solid clay subsoil, and for many years previous, had not been known to yield any thing but a yellowish, hard, scrunted vegetation. The farmer thought the young man was a simpleton, and that he, himself, was most wise and fortunate; but the former, nothing daunted by this opinion, which he was not unconscious that the latter entertained of him, immediately hired a set of laborers, and set them to work in the field, trenching as earnestly as it was well possible for men to labor. In the morning and evening, before and after having worked his ten hours as per agreement, he worked with them, and continued to work in this way until, about the middle of the following November, he had finished the laying of nearly 5,000 yards of good tile underdrains. He then had the field plowed deep and thoroughly, and the earth thrown up as much as possible into ridges, and thus let it remain during the Winter. Next Spring he had the field again plowed as deep as before, then cross plowed and thoroughly pulverized with a heavy harrow, then sowed it with oats and clover. The yield was excellent—nothing to be compared to it had ever before been seen upon that field. Next year it gave two crops of clover, of a rich dark green, and enormously heavy and luxuriant; and the year following, after being manured at an expense of some $7 an acre, nine acres of the field yielded 936 bushels of corn, and 25 wagon loads of pumpkins; while from the remaining three acres were taken 300 bushels of potatoes—the return of this crop being upwards of $1,200. The time had now come for the field to fall into the young man's possession, and the farmer unhesitatingly offered him $1,500 to relinquish his title to it; and when this was as unhesitatingly refused, he offered $2,000, which was accepted.

The young man's account stood thus:—

Half proceeds of oats and straw, first year		$175 00
Half value of sheep pasturage, first year		25 00
Half of first crops of clover, first year		112 59
Half of second crops of clover, including seed, second year		135 00
Half of sheep pasturage, second year		15 00
Half of crops of corn, pumpkins and potatoes, third year		600 00
Received from farmer for relinquishment of title		2,000 00
Account Dr.		$3,152 59
To underdraining labor and tiles	$325 00	
To labor and manure, 3 seasons	475 00	
To labor given to farmer, $16 per month, 36 months	576 00	—1,376 00
Balance in his favor		$1,776 50

Our farmers must learn, that knowledge and enterprise and perseverence, exercised in their business, will not only add a hundred fold to their own income, but will also confer more permanent benefits upon our country than these qualities exercised in the same degree in any other business whatever.

A Tale of a Tea-Kettle.

On a winter's evening, nearly one hundred years ago, the tea-board was laid out, and the window-curtains closely drawn, in the humble parlor of a small house in the town of Greenock, in the west of Scotland. A tidy, active matron was bustling about, slicing the bread and butter; a blazing fire gleamed and roared in the grate, and curled round the black sides of the kettle which reposed in the midst of it; and the fire crackled, and the water boiled with a faintly bubbling sound, and a stream of white vapor came whizzing out of the spout of the kettle with a shrill, cheery hiss. Now the matron aforesaid saw nothing extraordinary in all this; kettles had boiled, and fires had burned, from the beginning, and probably would do so to the end of the chapter.

As the matron stooped to pour the boiling liquid into the tea-pot, her son James, a boy of twelve summers, sat on a low bench in front of the fire, his elbows resting on his knees, whilst his hands, placed under his chin, supported his head. The boy was intently gazing at the fire, the kettle, and the steam; swallowing them with his eyes, absorbed in deep thought, and lost in contemplation. The boy looked at the fire, and the mother looked at the boy: "Was there ever sic' an idle ne'er-d'-weel in this warl,' as our Jamie?" was the question which, almost unconsciously, she proposed to herself.

A Mrs. B—— stepped in at this moment, when, turning to her visitor, Jamie's mother said, "Mrs. B——, did you ever see the like o' our Jamie? Look at him; he'll sit there for hours, staring at the kettle and the steam, till you wad think his een wad come o't o' his heed!"

And, truth to tell, there was something peculiar in the glance of the boy's eye; there was mind—active, speaking mind—looking through it. He seemed as one who gazed on a wondrous vision, and whose every sense was bound up in the display of gorgeous pageantry floating before him. He had sat watching the escaping steam until the thin vaporous column had appeared to cast itself upward in fantastic, changing shapes; sometimes the subtle fluid, gathering in force and quantity, would gently raise one side [illegible] lid of the kett[illegible]mit a white puff, and then let the metal f[illegible] with a low clanking sound. There was power and strength in that watery cloud; and as the dreaming bo[illegible]w this, an unbidden thought came into h[illegible]d, and he knew that the fierce struggle was symbolical of intellect warring with the elements of Providence.

And still he gazed, and saw in his day-dreams ships sailing without wind or sails, wagons propelled o'er deserts wild by some power unseen to mortal eye. "Jamie, Jamie," exclaimed his mother, "sit by to your tea. If I find ye staring at the fire again, ye'll feel the wicht o' my hand."

The boy rose meekly, and did as he was told. His name was James Watt, afterwards Sir James. He was honored with the title of knighthood, being the first who applied the powers of steam to any useful purpose.

The above anecdote is literally true. Watt was born in 1736. This incident occurred when he was in his twelfth year. He was the son of a poor tradesman in Greenock, and probably had never read a book—the sp[illegible]ing-book and the Bible excepted.

It is a historical fact, and beyond all [illegible]troversy, that all the improvements of the age—steam, telegraphs, printing presses, nau[illegible]al, mechanical and agricultural implements and instruments—were introduced by men who lived, moved, and had their being where the Bible was read in churches, schools, and families. Who ever heard of a Russian serf, a German boor, or an Irish vassal producing anything beyond a measure of wheat or a peck of potatoes? When the goddess of liberty was a babe in her cradle, she was rocked to maturity in the Bible shops of Massachusetts and Connecticut. A Burns at the plough, and a shepherd on the heather hills of Scotland, with no books save the Bible, have eclipsed Byron with all his bombast and jingle. [Home Journal.

The Little Wagon.

Passing along one of the crowded thoroughfares of the city, a few days since, we observed a couple in middle age, respectably clad, and altogether decent in appearance, drawing a little wagon, such as are used for children. Evidently they were from the country; and they had just purchased this "bauble coach" for their child at home. They were not ashamed to be seen taking it home themselves. Ashamed! not they. Not many of the rich merchants, who sweep by them, elated by some good bargain they have just made, feel as proud and happy as those parents in possession of that object upon which they look with so much complacency. It is doubtful which would be the happier, they, or the child who is to ride in it. A wealthy citizen informed that his boy would like a wagon, despatches an order for one to Berrian or Windle, by Kitty the nurse, or George the Butler. A superfluous five dollar bill has made the purchase, and the whole transaction was forgotten as soon as it was done. Not so with our worthy friends in humble mediocrity. They have been wishing for a long time to obtain what they knew would gratify their little child. They have talked together about it. They have feared that it was beyond their means. But they have denied themselves a little here and a little there, and at length they have accomplished the thing which they desired. A thousand-fold more delight have they in their purchase than a rich man ever knew in drawing a check to meet the wishes of a fastidious son. It was bought with the coinage of the heart, with the contrivances and sacrifices of love, and a thousand blessings are sure to go with it.

We observed that these parents were dressed in mourning. The craped hat and the black bonnet, told us that they had lost a relative—perhaps a child. Yes—so imagination would have it—they have just burried one out of the nursery group. Like other parents, similarly bereaved, they reproach themselves that they did no more for their child while it was yet with them. Perhaps it was a weakling. They wish now they had given it more air; and tried other means and methods to give it strength. But it died. All they could give it was a grave. They mean to be more gentle, more careful and more kind to the living. Blessings go with the little wagon!

We follow it to its destination. We catch the joy which it awakens in the whole household. We see the pillow nicely arranged, the gleesome baby snugly deposited, and the happy mother standing at the door and following the equipage on its first turn-out. We are young again ourselves. Cowper's lines to his mother, about his own little coach came back to us. We see the green lane, and smell the sweet clover, and hear the happy birds. The little wagon has carried our memory, imagination and heart away from noise and crowds to moral tranquility and domestic love. Little did the honest pair imagine, as they were drawing along their new purchase, what an effect they were producing on the tired and jaded heart of one of the throng by whom they were jostled. Blessings be with them and their nestling, for they have dropped a blessing on a stranger out of their little wagon. [Evangelist.

How Much Corn Shall we Plant?

To the editor of the American Agriculturalist:

In making our experiments public, we are apt to give only the successful ones, though the unsuccessful ones sometimes teach truth more clearly.

In the season of 1852, I put the manure of one horse and three cows on five eighths of an acre of land, and planted it with corn. The crop harvested from this piece in the fall was about one hundred bushels of ears.

The next season (1853) I put the manure of the same stock, increased by some additional muck, on an adjoining part of the same field, but of twice the size—being ten-eighths of an acre ($2\frac{1}{4}$) in extent—and planted this with corn. The crop harvested was only some 65 or 70 bushels of ears.

These measurements may not be exact—as they were made by pacing the land, and by measuring the corn with a basket—yet the margin is wide enough to cover many times the chances of error in drawing certain conclusions. The management of the two pieces was the same, and there was no apparent difference in the productiveness of the two seasons; so that I can only attribute the discrepancy in the two corps to spreading the manure of the second season over too much surface; and I am strengthened in this opinion, by the fact, that the natural soil of this field would not produce corn without manure, as was evident whenever the planting extended beyond the barn yard dressings. It appears that in this case the greatest amount of corn was raised from a given amount of manure, by having a drop heavy enough to yield at least fifty bushels of shelled corn to the acre.

But the labor that was expended on the surplus half of the second piece was wasted, or worse than wasted, as it was none the better for being tilled. Or, to look at it in another light, the same labor would have raised a green crop on that surplus half and turned it under, so that it would have been in good condition for either fall or spring use.

As it was, the five-eighths of 1852 was in good order the next spring for a crop of carrots and turnips, while the ten-eighths of 1853 was left by the corn in such condition that it was not considered advisable to expend the amount of labor on it necessary to the profitable production of roots.

From these observations I apprehend that the aggregate amount of corn raised in those portions of the Union where the crop depends on manure, would be made greater by planting less and cultivating it more highly; and that by generally adopting a succession of roots, the quantity of stock kept in the country may be much increased, at less than a corresponding expense. The well known importance of the corn crop—second only to that of hay—and t[illegible] increasing attention bestowed upon roots as articles of feed, render such policy worthy of consideration.

Extraordinary Flying Machine.

The following curious and interesting statement appears in the Paris *Patrie*. The age of wonders is not over yet:—

"The Academy of Science is a good deal interested by the invention of a flying machine, by Don Diego de Salamanca. With this machine, Don Diego's daughter, Rosanna, rose in the air some time ago at Madrid to the great astonishment of the Spaniards, who are but little accustomed to this sort of a miracle. Don Diego and his daughter are about to arrive at Paris to show the effects of his marvelous invention. The machine is very simple; it consists of a case two feet long, and one foot wide, adapted to a band of leather round the waist, buckled behind. The two iron rods fastened to the case support a small piece of wood, on which the feet repose. The case contains a simple and ingenious mechanism, similar to that employed in the automaton in motion. The mechanism is worked by means of a handle. It sets in motion two large wings, ten feet long, made of very thin caoutchouc, covered with leathers; and the wings may be so worked as to procure vertical, perpendicular, or horrizontal flying. The number of turns given to the handle determine the height to which it is desired to go.

The handle has to be turned every quarter of a league to regulate the distance; the operation of turning lasts a minute. Horizontal flying is the most difficult. The wings beat the air like the oars of a boat, or rather as the foot of a swan when it swims. By means of this curious machine a man can go almost as rapidly as a carrier pigion—from the Hotel de Ville to the Arcade Triumphe de l'Etoile in eight minutes, and in half an hour to Versailles. Although greatly astonished at this new invention, several members of the Academy have pointed out the inconvenience of bringing it into general use. In point of fact there will be no security for any one, if by the aid of such machines all our usages and customs be overthrown, and if malefactors can fly on the roofs of houses, and afterward get into apartments and commit all sorts of depredations. It will be very curious to see policemen in France and England pursuing theives in the air in order to lock them up on the earth. It appears that 1855 promises us all sorts of marvels."

Solidified and Artificial Milk.

Many experiments have been made in various parts of the world to produce a preparation of milk that will keep sweet in any climate, and for a long time. In Europe, the two kinds of milk indicated by the heading of this article, have lately been brought into public notice, and described as follows by one of our foreign exchanges:

"These two substances are perfect types of our knowledge in organic chemistry. The solidified milk has been patented by Mr. Fadenike, London; the artificial milk is the invention of Mr. Piesse. Both these substances will confer a lasting benefit upon the maratime interests of the world, being so useful for a long sea voyage, especially for emigrants with children. Either of these materials, being mixed with water, produce a real milk, which, with tea or coffee, cannot be distinguished from ordinary milk."

For the public benefit, Mr. Piesse has given his recipe for preparing his Lactine, or Artificial Milk, which we subjoin: Honey, four ounces; gum arabic, in powder, half an ounce; three yolks of eggs; fine salad oil, six ounces. Mix the honey and the gum first, then add the egg, and finally gradually mix in oil. It will at once be seen, that all the ingredients employed are perfectly nutritious; wonderfully representing the known composition of real milk. The oil is for the butter principle; the egg is the animal, or cheese matter; and the honey and gum are for the sugar, found in all milk. One ounce of lactine, dissolved in half a pint of water, produces half a pint of milk. By a slight modification of the process, Mr. Piesse hopes shortly to produce artificial butter. [Scientific American.

Rare Honesty.—Some years since a man in New Hampshire bargained for a lot of land, and agreed by notes, to pay $400 for it; but things went wrong with him, and after some time he left town suddenly between two days. The seller of the land, though rather stolid, said but little about it, and pocketed his disappointment, though he did not the dollars. He came to the vicinity of Boston, and remained a poor man, the "lot still on hand" making him no richer. A few days since, while passing along State street, a voice familiarly called his name, and turning, he recognized his old customer in a well dressed and good looking man. After shaking hands, the well dressed [illegible]sked him if he would now take the face o[illegible] note for the land. "Certainly," was the quick response, "and very glad to get it." "Well," said the man, "come in here," and taking him into an office in the vicinity, he counted out to him $1000, telling the astonished note holder that there was his pay with interest, with the assurance that he had enough left to meet any other little demands that might come up. He had been to California, and had come home to rest on his ores. He was munificent to his creditor, because he had been easy—a lesson to all stony hearted creditors. [Bos. Post.

New Steamboat Line for Albany and Troy.

From Pier 15, foot of Liberty-st., at 6 P. M

STEAMER RIP VAN WINKLE, C. W. Farnham, Commander, Monday, Wednesday and Friday, at 6 o'clock, P. M.; steamer COMMODORE, L. Smith, Commander, Tuesday and Thursday, at 6 o'clock, P. M., and Sunday, at 5 P. M.

Fares: Saratoga, $1 50; Moreau, $2 15; Fort Edward, $2 15; Whitehall, $2 75; Castleton, $3 10; Rutland, $3; Burlington, $4; Rouses Point, $5 50; Montreal, $7 50.

These Boats will arrive in Albany or Troy in ample time to form connections with all the Railroads, North, East or West, enabling passengers to reach Montreal and tintermediate points the same day.

These Steamers are of the first class for strength and speed—well known favorities of the public—having been thoroughly overhauled during the past winter, and offer every accommodation that can be desired by either freighter or traveler.

Through tickets can be obtained on board the boat for Saratoga, Moreau, Fort Edward, Whitehall, Castleton, Rutland, Burlington, Rouse's Point and Montreal.

The Northern Freight Express will give Bills of Lading to all points as above named. Shippers who desire it, can have time receipts, by applying at the office on the Pier. A. A. DYKEMAN.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been, and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying [illegible] the office.

The Sabbath Recorder.

REPLY TO ELI S. BAILEY—NO. 2.

I am glad brother Bailey has concluded to give his "reasons for not believing my theory." This is what, most of all, I desired. For now the reader may the better judge of the truthfulness of what I have set forth. Herein consists the safety of free discussion. For now the "inconclusiveness" of my reasoning, the "doubtfulness" of my facts, and the "deleteriousness" of the results, may have a counterbalance in the *conclusiveness* of brother B.'s reasoning, the *credibility* of his facts, and the wholesomeness of their results.

He has given two reasons for not believing my theory of the world's age, and I only wish to state to my readers the reasons why his reasons fail to alter my convictions.

His first reason for disbelieving my theory is, that it is opposed to the general sense of the Scriptures, as *he* understands them. Now the simple reason why this *reason* of his does not change *my* conviction is, that my theory is *not* opposed to the general sense of the Scriptures, as *I* understand them; and as he has not *attempted* to show, by any reference to the text, that it more clearly means what *he* affirms it to mean, than that it means what I affirm it to mean, of course his reason is *no reason* to me. When he shall show, by a critical analysis of the text, that it gives more obvious support to *his* theory than to mine, I will accept it as a reason for changing my views.

We have no means of knowing what Moses or the Holy Spirit meant, but by the *language they used.* If that language is just as consistent with one theory as with another, then we are left entirely to *external* evidence, and must suppose that Moses and the Holy Spirit meant to affirm nothing whatever on the subject. I am entirely willing to treat the question in this light, and rely solely on the evidence of science in support of my theory. But I believe that the text does clearly imply the great age of the world. I have given my reasons for such belief. Brother B. believes that it does not imply the great age of the earth, but has offered no reason whatever for that belief. I am therefore left without reason for changing my view of the text, except as I may find sufficient reason in the *belief* of brother B. Much as I esteem his belief, it is more than counterbalanced by the belief of such men as Harris, Pye Smith, Hitchcock, and also of numerous learned divines who commented on the text long before Geology had developed any truth on the subject. I give preference to the *belief* of these men the more readily, since they have confirmed that belief by good and substantial reasons, founded in the philological character of the text itself, unbiased by any theory whatever. In brother B.'s belief, then, I cannot find sufficient reason to abandon the view I have set forth relative to the meaning of the Mosaic account of creation.

Brother B. finds his *second* reason for disbelieving the theory of the world's age in the fact that geologists and astronomers themselves have promulgated *different* theories to explain the facts of their respective sciences, and the records of Moses. It is true, that astronomers have promulgated many theories during the progress of their science; and so have geologists; but it is also true, that astronomers have *demonstrated* the theory of the *motion of the earth*, and the immobility of the sun, in causing day and night, summer and winter. And now very few indeed find any difficulty in explaining those passages of Scripture which represent the *earth* as immovable, and the *sun* as movable, in accordance with this theory. But it is equally true, that geologists have demonstrated the great antiquity of the earth, and almost universally agree in the belief that both the Mosaic record and the facts of the science teach that doctrine. But I had never before learned, that diversity in the opinions of men was a good and substantial *reason* against any theory or any truth. Every theory stands on the merits of *its own* evidence. I find almost an infinite variety of opinions on almost every great truth of the Bible. Am I therefore to believe none of them? I cannot accept this diversity in *evidence*, and consequently brother B.'s second reason for disbelieving my theory is to *me no reason* for abandoning it.

In referring to the tracks in granite rock to which brother B. had previously called my attention, he uses the following language:—

"Brother Maxson, in this explanation, has unwittingly furnished an argument in opposition to his own theory; for if human tracks do exist in granite by accident, or without any adequate cause, it should not be deemed irrational to conclude, that God created the earth consisting of unstratified and stratified rocks at the beginning."

I am surprised at this statement. It represents me as holding, "that human tracks exist in granite rocks without any adequate cause." So far from holding such a sentiment, I expressly denied that "*human tracks* in granite rocks" *existed at all*, and my whole explanation consisted in giving "an *adequate cause*" for certain impressions which had been most strangely called "*human tracks.*" That *cause* I stated to be the action of winds, rains, and waves, on the softer ingredients of the rock, wearing it out in numerous fanciful shapes. This cause is still at work, producing this same effect. These impressions are now being formed in several places which have come under my own observation, and I saw the cause producing the effect. To suppose that these holes in the rocks were made by human feet, is an outrage on all philosophy and common sense, especially if brother B.'s theory is true. If these rocks were "created in the beginning as they now exist," (and this is the popular theory,) and these holes are really human tracks, as is claimed, then, verily, human beings at some time have been vastly heavier than they are now. Men in these days are hardly heavy enough to settle their feet two inches into solid granite. If we will have it that these *rude scratchings* are "human tracks," there is but one way to account for it, and that is by supposing that these rocks have been ejected from volcanoes in the form of lava, and that these tracks were made before it was too hard to be impressible. This would by no means be so impossible an event as brother B., in a former article, has supposed; for it is no uncommon event, in the region of volcanoes, for men to walk on the surface of lava which yields to their weight, and leaves indentations of their feet, while yet the *surface* is not so hot as to afford any inconvenience. *This* were at least *possible.* But it is absolutely an insult to common sense to claim that these are *human tracks*, but that the rock has been just as hard as it is now from the beginning. In the explanation which I have given of them, I have *not* "unwittingly furnished an argument in opposition to my own theory," but have *wittingly* furnished one in exact accordance with my theory. This gradual decomposition and wearing out of the softer parts of the unstratified rocks, by existing agencies, is an apt illustration of the gradual process of stratification, such as is at this moment going on in every lake, sea, and ocean on the globe. Causes are at work producing these tracks and to these causes I refer them. So causes are at work producing stratification, and to these causes I most unhesitatingly refer it. These causes are just as adequate to produce ten miles of stratified rock, as one mile, or one rod. Indeed, my theory claims that it is this disintegration and wearing down of the *unstratified* rock that has furnished the material for the *stratified* rock. These devil's tracks, and human tracks, and cow's tracks, &c., are only illustrations of this process on a very small scale. The reader may judge for himself how far my explanation of these "tracks" has involved me in self-contradiction.

Brother B.'s reason for disbelieving my statement concerning the measurement of the distance of the fixed stars, is in the language of Dunican Bradford, taken from his "Wonders of the Heavens." I am not acquainted with this author, and have only to say, that if he wrote fifty years ago, his statement was *then* correct, but if he wrote it recently, he is sadly behind the times. By the recent improvements in instruments for the measurement of angles, &c., aided by improvements in telescopic apparatus, the annual parallaxes of no less than thirty-five of the fixed stars have been determined with great accuracy by using the diameter of the earth's orbit as the base line of calculation. The difficulty which Dunican Bradford suggested no longer exists In the language of O. M. Mitchel, speaking of this triumph in science, "Ever baffled, but never conquered, the mind returns again and again to the attack, till finally the problem slowly yields, the immeasurable gulf is passed, and the distance of a single star rewards the toils of half a century." He then proceeds to illustrate the mode by which Herschel arrived at the result to which I alluded in a former article, and which brother B. doubts on the authority of a certain Dunican Bradford. Perhaps the statement of Herschel himself on this point may settle all doubts. It will, at least, have more weight than that of Dunican Bradford, or any other man. I have stated, that Sir Wm. Herschel, with his great telescope, saw stars so distant that their light must have been nearly two millions of years in reaching the earth. Let him speak for himself:

"Hence it follows, that when we see the object of the calculated distance, at which one of these very remote nebulæ may still be perceived, the rays of light which convey this image to the eye must have been more than nineteen hundred and ten thousand, that is, almost two millions, of years on their way; and that, consequently, so many years ago this object must already have had an existence in the sideral heavens, in order to send out those rays by which we perceive it." (Philosophical Transactions for 1802, page 498)

This language has been approvingly quoted by Dr. J. P. Smith, in his "Geology and Scripture," and also by Baron Humboldt in his "Cosmos." Such evidence, of course, is *conclusive.* But vast as is this distance traversed by Herschel's telescope, the fifty-two feet reflector of Sir John Ross reveals stars at *ten times* this distance.

But brother B. has provided a way of escape from my *conclusion*, even though he be compelled to admit the *fact* on which I base it. He suggests, that the stars might have been created millions of years before the earth was, and consequently their light had traversed nearly all this mighty distance before the earth was created. I based my reasoning on the supposition that the earth and stars were created at the same time. This, I grant, is necessary to the validity of the argument. And if I thought that brother B. doubted this, I would give my reasons for believing it; but I suppose he believes it as firmly as I do. The reader will find this point, in connection with the other points of the controversy, very ably discussed by Harris, in his "Pre-Adamite Earth," page 273.

Brother B. has devoted less attention to the phenomena of Niagara Falls than I had hoped that he would; and I confess that his reasoning on that point is very *unsatisfactory* to me. I much prefer the reasoning of Sir Charles Lyell, one of the most eminent geologists of the age, who visited the Falls in 1841, and again in 1842, in company with Mr. Hall, State Geologist. I cannot transcribe his reasoning, but must refer the reader to "Lyell's Principles of Geology," page 214. He shows, by clear and unmistakable evidence, that the entire gorge from the Falls to Queenstown, about seven miles, has been excavated by the river which now runs through it, and that the recession of the Falls has been at the rate of about one foot a year, at which rate, he says, "it would have required thirty-five thousand years for the retreat of the Falls from the escarpment at Queenstown to their present site." Has not brother B., in his explanation of the Falls, "unwittingly furnished an argument against his own theory?" He admits, that "the water has worn away the rock something like ten rods." This would require one hundred and sixty five years. How came he by this knowledge? Not by intuition; for it is not a self-evident fact. Not by the evidence of his senses; for he is not yet a hundred and sixty years old; nor yet by human testimony, for no human eye hath seen the mighty work. The evidence is in the very face of the scenery itself. Such a vast torrent of water, tumbling down a precipice of a hundred and sixty feet, *must* wear away the soft shale rock which constitutes the lower layers of the rocks, and the superincumbent weight of waters must break off the edge of the projecting limestone, which constitutes the upper layers. The fall of Table Rock was an illustration of this, though without the weight of waters on the top. The side of the chasm below the Falls, for the ten rods, which brother B. admits to have been worn away, shows most conclusively, that the action of the water has dug it out. But not more manifestly has this *ten rods* been dug out than has the *whole gorge below.* The same evidence is upon the *whole distance* as upon *any part* of it. The following item of evidence, given by Lyell, is so much in point, that I can hardly forbear to quote it. He says:—

"From observations made by me in 1841, when I had the advantage of being accompanied by Mr. Hall, State Geologist of New York, and in 1842, when I re-examined the Niagara district, I obtained geological evidence of the former existence of an old river bed, which I have no doubt indicates the original channel through which the waters once flowed from the Falls to Queenstown, at the height of nearly three hundred feet above the bottom of the present gorge. The geological monuments alluded to consist of patches of sand and gravel, forty feet thick, containing fluvatile shells of the genera Unio, Cyclas, Melania, &c., such as now inhabit the waters of Niagara above the Falls. These fresh-water deposits occur at the edge of the cliffs bounding the ravine, so that they prove the former extension of an elevated shallow valley, four miles below the Falls, a distinct prolongation of that now occupied by the Niagara, in the elevated region intervening between Lake Erie and the Falls. Whatever theory be framed for the hollowing out of the ravine further down, it will always be necessary to suppose the former existence of a barrier of rock somewhere below the whirlpool. By that barrier, the waters were held back for ages, when the fluvatile deposit, 40 feet thick and 250 feet above the present channel of the river, originated. If we are led by this evidence to admit that the cataract has cut its way back for four miles, we can have little hesitation in referring the excavation of the remaining three miles below to a like agency, the shape of the chasm being precisely similar."

This evidence (and this is only one item) makes the conclusion inevitable. I see not how it can be avoided. Perhaps brother B. can explain the phenomena alluded to on some other hypothesis. Sir Charles Lyell could not.

But let us look a moment at brother B.'s position. He thinks the Falls have receded about ten rods in all, and it is a matter of *actual observation*, that they have receded about one foot per year. Now, at this rate, it has required only 165 years to accomplish the whole recession. So the recession began in the year 1690. For all the years which had elapsed since the river was created, previous to that time, its mighty waters had been tumbling down the dreadful abyss, but no rock was worn away. There it stood, resisting the mighty force of the falling waters, but no particle of the soft rock crumbled off! All at once, however, when the year 1690 came, it began to wear away, and since that time has worn away ten rods. It would be interesting to know by what force the falling torrent was restrained from wearing back the rock previous to that time, and what made it begin to wear just at that time!

The more I study this stupendous work of nature, the more does it seem to me to indicate the vast antiquity of the earth. But this is but as a drop in the bucket. There are hundreds of such gorges, on both continents, and many of them on a much grander scale than this, which have *most manifestly* been worn out by the action of the waters which are at this moment deepening and widening them, but at a rate which totally forbids the idea that the whole could have been performed in six thousand years. Of the same character are the deltas of rivers, and the formation of coral reefs, to which I referred in a former article. Add this to the structure of the earth itself, and then superadd the evidence of the heavens, and the conclusion of the world's great age is as inevitable as any truth can be. The more this evidence is *studied* and *understood*, the more will it carry conviction to the mind. The *scientific* world has yielded to the conviction, so that in nearly all scientific works, it is treated as an established fact, much as is the diurnal motion of the earth. And there is no reason why it should not be; for it rests on evidence not less convincing.

But I have already been charged with being more positive than the men whose authorithy I have quoted. Thus brother B. says, "I have read some of your learned authors, particularly Professor Hitchcock's Elementary Geology, and his Religion of Geology, and would state, that though he adopts the same theory with yourself, yet he is far from occupying that positive position you have assumed." I know not with what object this remark was made; but the reader can better judge of its correctness, after reading the work alluded to. Take, for example, the following paragraph. After rehearsing the evidence of the world's great age, he says:—

"Now, these results are no longer to be regarded as the dreams of fancy, but the legitimate deductions from long and careful observation of facts. And can any reasonable man conceive how such changes have taken place since the six days of creation, or within the last six thousand years? In order to reconcile them with such a supposition, we must admit of hypotheses and absurdities more wild and extravagant than have ever been charged upon geology. But admit of a long period between the first creative act and the six days, and all difficulties vanish."

Whether I have assumed a more *positive* position than that, the reader may judge.

In closing this article, I wish to call the reader's attention to the first paragraph of brother B.'s last reply to me in *Recorder*, Aug. 30. It will at once be seen, that he has placed me in a dilemma from which I know not how to escape. After stating his reasons for commencing the discussion, &c., he says: "I presented a series of questions over the signature *Ne Scio* (I don't know,) intending to pursue this course (incog.) until I had obtained answers to my objections, or he should discontinue the subject." Now my difficulty is to know how I am to *discontinue* the subject, so long as he continues his interrogations, and demands response. It would be opposed to all my notions of respect due from man to man, to be silent when properly questioned. So long as he continues his questions, I of course shall continue my answers; and so long as he continues to criticise my views, I of course shall continue to defend them, if I think they need defense. I should have stopped long ago, if I had not been called upon to proceed. I am ready to stop now, if my opponents, and critics, and interrogators, &c., will let me. But I am just as ready to proceed, if they wish. I have yet plenty of play room before *I* shall have occupied a moiety of the space in the *Recorder* that *they* have occupied. About sixty columns of the *Recorder* have been occupied in the effort to *disprove* what the whole scientific world has long ago demonstrated to be true, viz., that the earth is more than six thousand years old. The discussion was *begun* by the opponents of this theory, before a single word ever appeared in the *Recorder* in favor of it. The writer who introduced it into the *Recorder* thought it not a fit subject for discussion in a religious paper, but still occupied sixteen columns of that same paper in discussing it. Brother B. is "opposed to such discussion through that medium," but yet has occupied a reasonable number of columns in discussing it, and has called on me to occupy several more. I am happily not involved in any such unpleasant necessity of occupying space in the *Recorder* in the discussion of a subject which I deem *inappropriate* for such a paper. I deem the subject under discussion *most especially* appropriate to the columns of a religious newspaper, such as the *Recorder* claims to be, and I have occupied just as much space as I thought proper in discussing it. If I wish to discuss it further, I shall think it proper to occupy still more space, until I have occupied as much as my six opponents have occupied.

The notion that this subject of "Geology and the Bible" is not in place in a religious newspaper, is a very strange one. Pray, where would it be in place? It has been discussed in almost every religious journal in the land, and religious teachers, more than any other class of individuals, have been engaged in it. It is most emphatically a *question of religion.* Most emphatically, then, are religious denominations concerned to discuss it through their journals. It may be true, as is affirmed, that "to a large portion of the readers of the *Recorder* such discussions are not only *uninteresting*, but absolutely *repulsive.*" If it is a truth, it is a most *humiliating* one indeed. It would *not be* particularly humiliating to be told that my style of writing was uninteresting, or even repulsive. I should take no exceptions at such a statement; for I make no pretensions to superior qualifications as a writer. But it is humiliating to be told that this *subject* is repulsive to a large portion of the readers of the *Sabbath Recorder.* For the last half of a century it has been a question of the most *thrilling* interest to the best and ablest men of the age. All classes have participated in the discussion of it, and more light has been elicited on dark points of both science and religion by it than by the discussion of any other question. But it may be that to *Sabbatarians* it is both "uninteresting and even repulsive." Be it so; it is a sad commentary. May it not always be so. It has become a common thing to disparage the discussion of any subject through the pages of the *Recorder*, especially if it is likely to assume anything like an elaborate and lengthened form. In the light of such views, it would be difficult to tell what the *Sabbath Recorder* is printed for. It is stated in its prospectus, that, as a religious paper it is designed to rank among the first. But still such matter as is *most prominent* in the first religious journals of the age is pronounced out of place in it. If the discussion of "Geology and the Bible" has been out of place in the *Recorder*, then certainly I owe its readers an apology, and my opponents a much more hearty one, as they have occupied more space. And I am not sure but our editor is also implicated; for it is peculiarly his province to determine what is proper for the columns of his paper. If he had thought the discussion of this subject out of place in the *Recorder*, he would have notified those who have discussed it of the fact, and saved the space for matter that would not be repulsive to the readers. He not only did *not thus* notify us, but he did notify *me*, that he was glad I had undertaken it, and was anxious that the view I had taken of the question should be presented. If, then, I do not offer any apology to the readers of the *Recorder*, it is simply because I do not think I owe them any. Whether I shall ever undertake the discussion of any question again through the columns of the *Recorder*, will depend entirely upon whether I think I can subserve the cause of truth by doing so. If I believed as brother B. does, that what I have written on this subject had a deleterious tendency, and was calculated to destroy the faith of weak believers in the inspiration of the sacred Scriptures, I should exceedingly regret the publication of these sentiments. But I do not believe any such thing. I believe that the view which I have taken is the only view which consists with the inspiration of the Scriptures, and I will only add a caution to weak believers, that they do not mistake a *false interpretation* of the inspired record for the true record itself. D. E. MAXSON.

ALFRED ACADEMY, Sept. 1, 1855.

THE WORLD IS FAIR.

The world is fair to those who live
For God and one another;
Who, working for the common good,
Each selfish feeling smother;
Whose generous hearts ne'er cease to flow
In kindness to both friend and foe.

The world is fair to those who sail
O'er life's temptuous ocean;
Their life-boats manned with spirits meto
To calm its angry motion—
Their banner floating to the gale,
With motto, "Right shall e'er prevail."

The world is fair to those who act
'Regardless of the morrow—
Who cast aside all idle dreams
Of future joy or sorrow—
Who live the present day to bless,
And ask no other happiness.

The world is fair to those who hope,
Nor droop in sorrow pining—
Who search 'neath every angry cloud
To find its "silver lining"—
Who look above through darkest night,
To God who doeth all things right.

The world has joys to those who're seen
O'er stricken mourners bending,
Their hearts attuned to others, joys,
Their tears with others, blending;
Who point the broken heart above,
And murmur gently, "God is Love."

JUNE CLIFTON.

INFLUENCE OF BRITISH MACHINERY.

In 1845, consequent on the divine favor resting on the preaching of the Gospel and distribution of the Scriptures for several years previous, an unusually large number of natives of the *Corri*, or weaver caste, belonging for the most part to the village of Chitoura, were simultaneously led to forsake their idols, and profess their faith in our blessed Redeemer. A marked peculiarity in these conversions, of which we had previously no such example in Upper India, was not only the number, but the desire of the converts to maintain themselves as heretofore by their trade of weaving.

One of the chief difficulties in the way of the converts supporting themselves was the refusal of their heathen neighbors to traffic with them. They were shunned as polluted outcasts, with whom no intercourse, even on business, could be held. The missionary was in consequence obliged to obtain a market for the cloth at distant stations, and chiefly among European residents. In this important matter he has been successful, and the tent cloth, sheeting, towelings, etc., of Nistarpore, are now well known marks in those parts.

Native looms throughout India are of the rudest description; but the poor weavers of northern India are immeasurably behind their ancestors in the south, and seem to have made no advancement in the art. Not only is their loom rudely constructed, but their cloth *(guggi)* is coarse to an extreme. As might be expected their work progresses very slowly, the result of a long day's labor seldom exceeding four yards of an average width of two feet.

To obtain for the converts a superior loom of British make, by which they might weave daily a larger quantity and a better cloth was the next effort of the missionary. Accordingly three looms, two Scotch and one English, were procured, and by the assistance of a practical English weaver they were set up, and the brethren instructed to work them. Not the least step in advance was the construction of a number of looms from the British models, with considerable improvements to suit the climate and country, and which paved the way for the suppression among the converts of their own primitive machines.

When the heathen on an anniversary occasion turned out by hundreds to witness the *tamasha*, or entertaining spectacle of their converted brethren working the European weaving-machine, the warping-mill performing its gyrations "as a thing of life," and winding off the threads from a score of bobbins at once, called forth a profoundity of obeisance amounting almost to an act of worship.

A machine for spinning cotton thread is still a desideratum at the mission station Agra is one of the cotton marts of Upper India, and its district produces a staple of a superior kind. I feel confident, therefore, that were they in possession of even an ordinary machine for spinning cotton, the Christian weavers of Nistarpore would, from their position in a cotton-producing locality, not only revolutionize the cotton weaving of Upper India, but exert a moral influence on the surrounding country, which would tend to remove many barriers that now impede the progress of Christianity. Much in this respect has already been accomplished. The heathen, in the neighborhood of the mission station especially, cannot disguise from themselves the fact that Christianity is a remarkable quickener and elevator in regard to at least temporal concerns. They see their late brethren working with extraordinary machines which never before entered into their philosophy, nor are to be found described in the *shasters.* They see them weaving twice, often three times the quantity of cloth, of a better quality, in a given time, than they can accomplish. They see them, moreover, better clothed, fed, and sheltered, and find them and their children living with that sobriety, peace, and harmony, which is in striking contrast to their own heathenish and devilish practices.

The natives of India, more than perhaps any other people on earth, require to be convinced by stubborn facts and results. As if in opposition to the feeling of having greedily swallowed absurdities and monstrosities for ages past, they will now receive or believe in nothing which is not tangible and practical. Christianity, to such a people, must not only be presented in its spiritual freedom from all earthliness, but exhibited in its benign contact with the every-day engagements and business of life. [Baptist Missionary Herald.

JAY ON PLATFORM SPEECHES.

Mr. Jay was never great in making platform speeches; indeed, we venture to say, he never delivered a speech of this kind worth hearing. He had a perfect abhorrence of such efforts, and could never be prevailed on more than two or three times to appear before the public in this manner. The last time he did so presented a scene which, most assuredly, public speakers could not wish repeated. A missionary meeting was appointed to be held in his own Church edifice, ministers and laymen from different parts of the kingdom had engaged their presence and help, and "the Committee of Arrangements" waited on Mr. Jay to represent to him how important it was that he should, in his own house, sustain the society by a speech. Somewhat to their surprise, with very small reluctance, he consented to second the first resolution. The meeting began with an immense flourish of trumpets, and the first speaker, fully primed and charged, fired away for some half an hour; "the Rev. Wm. Jay was then announced amidst thunders of applause." Alas, that it was even so. He rose, and having, with ironical humility, apologized for being unprepared, he informed the Chairman that all he should do would be to give "an illustration of this speechifying age." He then began in almost innumerable words, and endless repetitions in different forms of expression, to detail a conversation between a farmer and his servant John on their way to market. There he had stopped them in the middle of the road, for some ten minutes, and very gravely went on to relate the speech of the farmer, till he was interrupted by John with the remark, "Why, dear me, master, what is all this ado about nothing? Why couldn't you say sir, 'John, let us change saddles?'" The congregation was literally convulsed with laughter, and Jay sat down with the remark, "That sir, is an illustration of the speechifying character of the age—I second the motion." No more speeches were delivered that evening, for every speaker was in confusion; the meeting was soon broken up, and Mr. Jay was never asked for another speech.

PEEL'S FIRST EFFORTS IN ORATORY.

Soon after Peel was born, his father, the first baronet, rising daily in wealth and consequence, and believing that money, in those peculiar days, could always command a seat in Parliament, determined to bring up his son expressly for the House of Commons. When the son was quite a child, Sir Robert would frequently set him on a table, and say, "Now, Robin, make a speech, and I will give you this cherry." What few words the little fellow produced were applauded, and applause stimulating exertion, produced such effects, that before Robin was ten years old he could address the company with some degree of eloquence. As he grew up, his father constantly took him every Sunday into his private room, and made him repeat, as well as he could, the sermon which had been preached. Little progress in effecting this was made, and little was expected, at first; but by steady perseverance the habit of attention grew powerful, and the sermon was repeated almost verbatim. When at a very distant day the Senator, remembering accurately the speech of an opponent, answered his arguments in quick succession, it was little known that the power of so doing was originally acquired in Drayton church.

THE LATE REV. JONATHAN GOING, D. D.—Those acquainted with the cheerful temperament and active life of Dr. Going, would hardly suppose he was ever the subject of distressing doubts as to the genuineness of his conversation to God. Generally, he was not; but at an early period of life, he nearly broken down with painful solicitude on this point. On a journey from Worcester to Providence, somewhat more than thirty years ago, he made the following statement:

"Soon after leaving Brown University, I was for the space of about six months in a very unhappy and distressed state of mind in regard to the question, *Am I really a Christian?* I was led almost to the borders of despair, and so prostrated in mind as to disqualify me for doing anything whatever. At length I came to the following conclusion: I shall not spend my life in this miserable condition. If I am saved, it will be an act of grace; if I go to hell, it will be just; and now I am resolved to do all in my power to glorify God, promote the interests of Christ's kingdom, and the salvation of men, and, said he, to tell the matter as it is, I have not been much troubled with doubts of that sort since."

PERSIAN LITERATURE.—I send some lines from the Persian, which I find in an article on Persian Literature, in the "Oxford Essays, contributed by members of the University, 1855." You must do well by your readers if you can often furnish them, from any source, with beauty so clear to the imagination, or truth so wholesome for the heart, as in this little translation. It is hard, indeed, to tell whether the poetry, the humanity, or the religion in the verses strikes one most. I am sure I shall do something to nurture every noble sentiment, in transcribing them, to be circulated in your paper, for hundreds, by whom otherwise they might never be seen:

I saw some handfuls of the rose in bloom,
With bands of grass suspended from a dome.
I said, "What means this worthless grass, that it
Should in the rose's fairy cirle sit?
Then wept the grass, and said, "Be still! and know
The kind their old associates ne'er forego.
Mine is no beauty, hue, or fragrance, true!
But in the garden of my Lord I grew!"

Blessed be the bard who can give us in words so few, a sweetness and grandeur so worthy to be by us all *committed to memory and learned by heart!* [Transcript.

THE STRUGGLE IN THE EAST.

When the present struggle between Russia and the Allied Powers began, American sympathy appeared to be on the side of the latter. Certainly, our own took this direction, and we think, judging from the manifestations given by the Press, generally, as well as from the deference with which the opinions of Kossuth were regarded all over the country, that we are not widely astray in saying, that every true American wished to see that great impersonation of despotism, the Czar, humbled. And we are not sure but the wide-spread, and constantly growing, Anti-Slavery sentiment of the country added its tribute of sympathy to the common stock. For as it was known that a serfdom, not so atrocious in all its features as the system of American slavery, it is true, nevertheless of degrading character, was one of the established institutions of Russia, what was more natural than that those who had sworn eternal hostility against every form of oppression should deprecate the farther extension of the Power that had fostered it?

At the outset, Russia seemed to be, and probably was, the unprovoked aggressor. The resistance of Turkey to the Czar's unjust demands was a struggle for her very existence. Who could witness the altercation, without sympathy for the Porte? Who could think of the Czar's shameless assumption of authority, without wishing to see him rebuked? But as the drama proceeds, the plot thickens. New actors are brought forward, and we lose sight of the merits of the original question, it being rendered all but certain that Turkey has nothing to hope for, whether Russia or the Allies prove victorious. In the one case, she is swallowed whole, the esophagus of the Czar being of sufficient caliber to gulp down a continent; in the other, she is cut in pieces, and then disposed of as the hungry parties can agree.

As a contest between Russia and the Powers, we think it difficult to tell which side is the cause of humanity. Will the victories of the Queen's troops abroad better the condition of her operatives and tax payers at home? Will the prestige of the English oligarchy be weakened by the recent successes in the Crimea? Will the cause of Republicanism and of Free Speech, in France, be advanced by the renown of Napoleon's bayonets at Sevastopol? The oppressed of Italy, Hungary, Poland—will they find in these fortunes of the war anything to encourage their aspirations for liberty? On the other hand, in what respect is the cause of Russia the cause of civilization? In what respect would her superiority in this struggle ameliorate the condition, either of her own people, or of others?

To our comprehension, these questions are somewhat puzzling. Not but what something plausible may be said in behalf of the Russian side. Paradoxical as it may seem, it is claimed by some that the Czar himself is a republican in his instincts and tendencies The very despotism which he wields, is spoken of as a power beneficently at work to undermine the serfdom of his empire. By this peculiar system of slavery, instituted by Boris Gondonof the usurper, in 1593, the peasants of the country were fixed to the soil. Successive monarchs made large grants of lands and serfs to their favorites, so that, by the close of the last century, about three-fourths of the population of the empire had passed into the condition of serfs owned by individual proprietors. Alexander I., at the commencement of the present century, undertook a reformation, and ordained that no more grants of serfs should be made to any individual whatever. But the nobles being obliged by their profligacy and extravagance to mortgage their estates, institutions were established by the Emperor for lending money to them, at a high rate of interest, secured by mortgages upon their lands and the serfs pertaining to them. As these mortgages ran out, the crown took possession of the estates, and the serfs became peasants of the crown. The result is, that the two classes of serfs are now about equal in numbers, while fully half (it is estimated) of the serfs of the nobles are mortgaged to the state beyond hope of redemption.

Now it is claimed that this change, so gradually yet constantly going on, inures to the advantage of the peasantry greatly. For instead of being subjected to the capricious intolerance of individuals, their condition is fixed by general laws and principles, which have an eye to their good. The eagerness of the serfs themselves to pass into the number of the crown peasants, is urged as evidence that the change is working for good. Thus, even in the anti-slavery aspect of the question, it is not so certain but what a concession to Russia of all that she demands would contribute to the enfranchisement of the people quite as much as the preservation of the integrity of the Ottoman Empire could possibly do.

But the great agent of civilization—the power which accomplishes the melioration of the condition of mankind in all respects—is the Gospel. In comparison with this mighty "power of God," the laws and institutions of men, with all their appliances of authority, are but trifling agencies. To our mind, therefore, the whole question resolves itself in this: Whose success, in this contest, would be most likely to open the way for the free and unrestricted propagation of the Gospel of Jesus Christ? The Czar, we know, claims to be fighting for the faith, and is very religious in his way. But who does not know that the gospel cannot be freely propagated where the Czar has undisputed sway? And though in the triumph of French puissance the Protestant faith has nothing to hope for, might we not expect that the powerful influence of Britain would baffle the intrigues of Romanism, to whatever extent they were befriended by Napoleon, and thus secure for the cause of truth what the friends of God and humanity are wishing for—praying for—laboring for? T. B B.

OUR MISSION IN CHINA.

From a Letter of Nathan Wardner, dated Shanghae, June 27, 1855.

On the 23d of May, Bro. Carpenter and myself started in a boat for Cha-so, a walled city, about fifty lee from Shanghae. We got under way about 2 P. M, and soon leaving the Whampoa, pursued a winding canal through a beautiful tract of country, and stopped for the night at a place called Sang-pang. Starting at daybreak, we reached our destination at about 7 A. M. While the boatmen were getting our breakfast ready, we went to the city temple and preached to a respectable audience, and distributed some tracts. After breakfast, we loaded ourselves with tracts, and passing through the principal streets in the city and suburbs, soon relieved ourselves of 800 copies. It being rainy, we completed our circuit as expeditiously as convenient, and after a short walk on the wall, returned to our boat, and started for home, where we arrived in time for a meeting at the chapel at 4 P. M. Cha-so is said to have been built during the Ming dynasty. The wall is only about six lee in circuit and in rather a dilapidated state. It is not a place of much trade or wealth. The Catholics have got a foot-hold there, and have a chapel in the city; and we were told they were buying a lot outside the north gate for another.

On the 30th of May, we started for Sang-kong, rather a noted city in this district, and about 140 lee from Shanghae. At Che-pau, a village about 64 lee distant, some tracts were distributed and religious conversation held with the villagers. At Sz-kong, 12 lee further on, we distributed 300 copies. The next morning, about 7 o'clock, we reached Sang-kong, where we spent two or three hours, and distributed 1200 tracts and took a walk of about two miles on the city wall, in the midst of some very delightful scenery. Everything in and about the city exhibits more neatness and taste than is often found in China. There is a nine-storied pagoda just within the west gate, from the top of which we had an extensive and beautiful prospect. Leaving there about 10 o'clock, we reached Ming-hong, a large village on the Whampoa, about 6 P. M., where we distributed the remainder of our tracts and calendars; and the next morning reached Shanghae about half past eight.

On the 5th of the present month, we started on separate boats, with our families, for Nay-zeang, Ka-king, Ta-chang, and Lee-oo. We entered the Soo-Chow Creek about 1 P. M., and reached the first-named place about sunset, where we distributed several hundred tracts. Our boats being hired by the job, kept going nearly all night, which prevented much sleeping. The next morning, about 9 o'clock, we landed at Lee-oo. This place might almost pass for a city, if a wall was not made indispensable to merit such a title. We immediately landed and scattered tracts in all the principal streets, giving out word, in the mean time, that we would soon visit the chief temple, where we should like to address them. When we reached there, we found several hundreds assembled, (with those who accompanied us,) to whom I proclaimed the good news, to the best of my ability, for about 20 minutes, and received good attention. We then told them we should be back again in about two hours, and returned to our boats for some refreshment. When we arrived at the temple again, we found a much larger concourse of people than we left, and soon ascertained that preparations were being made for a theatrical play. Bro. C., however, preached to a large crowd at some length, though in the midst of considerable noise. We then repaired to another temple in the outskirts of the village, where we in turn preached to a quiet and attentive group, of a hundred or more. We then returned to our boats, and at the turn of the tide started for Ta-chang, about 54 lee distant, and arrived there about dark. One of the first things that attracted my attention the next morning was a ludicrous representation of a short-jacketed foreigner, with his hands on his hips, smoking a cigar—showing that some visitor had made an impression there before us. As soon as we showed ourselves, the people began to gather round, and when we were ready to go ashore, there were as many as could conveniently hear us, to whom we preached as long as we thought they would hear with profit.

After an early breakfast, we started, with one of the boatmen to help carry our books, for the city, two lee distant. Passing through the main street from the great south to the great north gate, we mounted the wall and walked around to the great east gate. Thence pursuing the chief street towards the west, we went till our supply of tracts was exhausted, (preaching in the city temple on the way) all of which occupied us till about eleven o'clock. This city is about 18 lee in circumference, octagonal in shape, with eight gates. The wall is high, strong, and in good repair, but having fewer bastions than any I have yet seen. Much of the space enclosed is unoccupied, except as wheat fields, orchards, gardens, &c., and judging from appearances, it is not a place of very great wealth or trade, there being no water communication to it except a middling sized canal.

Returning to our boats we started for Ka-ding, 32 lee distant, where we arrived about 2 P. M., passing some scenery on the way of surpassing beauty. Here we exhausted our store of books. This city is near the size of Shanghae, and appears to be a place of considerable business and some wealth. The Shanghae rebels took and held it for a short time, one year ago last fall. The people appeared very much prejudiced against foreigners. They may have the impression that foreigners were the instigators or abettors of that insurrection, as they are generally not very backward in attributing as many of their evils and misfortunes to foreigners as they can find an excuse for. We met with no direct insult, but were treated with a cold reserve, and some scornfully refused to accept our books. When we returned to our boats, we found a large crowd assembled to get a sight of the foreign "nyang-nyangs, and pan-paus," (women and children.) Standing on our boats, we addressed them a few words of exhortation, and giving them an invitation to call on us at Shanghae, pulled off for home, where we arrived at half past eight the next morning, having been absent nearly three days and nights. During these three trips we put in circulation about 6,000 copies of my tract printed last fall, several hundred calendars, and some gospels and catechisms.

We were intending the next week to visit Nay way, about 100 lee in the opposite direction, but sickness in my family has as yet prevented me from leaving home.

We still keep up daily preaching in the chapel, with tolerable success, as far as congregations are concerned.

DISCUSSION.

To the Editors of the Sabbath Recorder:

I can but feel deeply interested in relation to the results very likely to grow out of existing discussions of various themes of a theoretical and speculative character. The difficulty attendant upon fixing a reliable standard in the premises, we think, will be apparent at once to the most superficial observer of matters and things in this department; for it ought to be remarked, by the way, that Divine Revelation, while it teaches many great and sublime cardinal truths, is not to be arraigned and pressed into compliance and harmony with ALL the ultra notions which the living brain can, by stretch of fancy, cogitate. The fact that the Bible cannot be made available in such controversial lore, ought, it would seem, to settle this important question forever, for the very plain reason that, although this God-given rule of action and thought is perfect in *all* that regards man's origin and eternal destiny, still we are not to conclude that the sacred writings are to be brought in support of what we candidly believe to be true even, unless prompted to such a course purely from a love of the truth. Unless we are actuated and controlled in all our efforts at investigation by such a spirit and temper of mind, we shall utterly fail in the pursuit of so desirable an object; for while we may be allured into the belief that we are most adroitly controverting our opponent's position, we ought to look well to the bearings of the discussion upon ourselves, and also its influence upon unbelievers in the great system of revealed religion. This is a very important consideration to be taken into the account withal, and should ever be kept in view by the controversialist, or else untold injury may be done to the cause of evangelical truth. We wish not to be understood to mean that we are opposed to research. A spirit of inquiry, kept within proper limits, is indeed right and perfectly laudable, when engaged in by the Christian minister or layman, notwithstanding, they should never perhaps seek to differ upon any subject, much less about matters of a trivial character; for many, it would appear, do not exact a very bold provocation ere they take the arena with all the zeal of a Jehu, and fulminate their anathemas against all those daring to differ from them in matters of opinion and belief. The purpose should be to find truth wherever we may, and recognize it as an invaluable jewel, whether it is found to be in unison with our preconceived notions or not, but never to pursue the speculative course of reasoning, for the very best of reasons that should obtain in a controversy engaged in by the professing Chirstian, namely, that he will find himself sorely tempted to pursue the wild and enchanting strife after light and knowledge, which is so poorly befitting the humble Christian disciple, and withal well calculated to engender a strong feeling for the mastery; and then all the good that we might have hoped to gain is lost, perhaps forever. In this connection, we will take the liberty of saying, that the history of the Christian church for the last three hundred years furnishes proof incontrovertible, that the controversial tone has been marked by the spirit of intolerance, disorganization, and death, to *all* the dearest interests of society; and from the very nature and constitution of the evangelical order of things, it could not well have been otherwise. The great truth is, that the Bible, as a rule of faith and practice, has been and is overlooked or studiously avoided by those enlisted in discussion. The sacred writings abound in *all* that is necessary to man's present and future well-being; but, strange as it may appear, they are forced to speak that which they cannot, by any just and fair construction of language, be made to express. Hence the utter folly of supposing that either of the parties enlisted in the controversy, under existing circumstances, being warped by prejudice, can possibly present the truth, the whole truth, and nothing but the truth, for where pejudice prevails, its ever certain influence is felt in the way of fashioning the peculiar views we may have long and most strenuously advocated, irrespective of a plain "Thus saith the Lord."

A RHODE ISLANDER

RICHBURG, Oct. 4. 1855.

THE CASE OF PASSMORE WILLIAMSON.

The following article, from the *Hartford Courant*, is one of the clearest and most forcible we have read upon the case of Passmore Williamson. It is said to have been written by Hon. James Dixon, formerly a member of Congress from Connecticut. The apologists for Judge Kane have thought him quite justified in imprisoning Mr. Williamson, on the alleged ground that he had *perjured* himself by making a false return to the writ of habeas corpus. Admitting the truth of this allegation, it appears from the following article, [that the proper course in such a case would have been—not to commit him to prison, under pretext of contempt, but—to *hold him to answer for perjury at the next term of the Court.* Read the article, and judge for yourselves:—

The special boast of our "free and independent" people is their secure enjoyment of personal liberty. No man can be imprisoned here, we are in the habit of asserting, without due process of law. The accusation must be specific—the accused must be confronted by the witness—he must be heard by himself or his counsel—and a jury of his peers must pronounce him guilty, before he can be deprived of life or liberty. This is the theory of our Government.

Yet, at this moment, a citizen of the United States, and he a white man—(for if he was black not a word were to be said!—why single him out from the four millions of his fellow men, who, in this land of liberty, drag out a wretched life in slavery?)—a white citizen of the United States—has been imprisoned more than two months, in the city of Philadelphia, without law—without alleged crime—without trial—without a hearing—without a jury—without limit of time. As he has had no day in court, so no day is fixed when he may go free. He lies in jail at the discretion of the Judge; and for what? Let us briefly state the case.

In the month of July last, a gentleman named Wheeler arrived in Philadelphia, accompanied by three slaves. By the law of Pennsylvania, these slaves, on touching the soil of that State, became free. Passmore Williamson was at that time secretary of a society, founded by Dr. Franklin, for the relief of free blacks, claimed as slaves. He informed the slaves in question that, by the laws of Pennsylvania, they were entitled to their liberty, whereupon they left their master, and went their way, as they had the most perfect right to do. Wheeler applied to Judge Kane, of the U. S. District Court, for a writ of *habeas corpus*, directing Williamson to bring the alleged slaves before his court, to be dealt with according to law. To this writ Williamson made return, that the persons specified in the writ were not under his control, and that he, therefore, could not bring them into court—and he added, that they *had never, at any time, been under his control.* Judge Kane, finding himself foiled in his purpose of returning the slaves to their former owner, discovered in this return a pretext for punishing Williamson. He went into an elaborate argument to prove his return to the writ a contempt of court. He could find no contempt in the allegation that the slaves were not, at the time of the service of the writ, under the control of Williamson, but he claimed that it had been proved that, at the time of their escape, they were so. The insertion, therefore, of this allegation, viz: *that the slaves had never been under the control of Williamson*, he decided to be a contempt of court, for which he, at once, sentenced Williamson to imprisonment. The counsel of Williamson immediately asked permission to amend the return, by striking out the objectionable part; but this permission was denied, and the respondent was hurried off to prison, where he still remains. An application to the Supreme Court of Pennsylvania for a writ of *habeas corpus* to bring before it the body of Williamson, has been refused, on the ground, solely, that the State Court could not go behind Judge Kane's adjudication On this decision we make no comment. It was, perhaps, correct, and seems to be supported by precedents. See 7 Wheat. 38, 5 Cond. Rep. 225.

Such are the facts in this case. They disclose an instance of lawless oppression and tyranny unparalleled in the annals of judicial proceedings, and they ought to arouse the indignation of the people to a degree which would be satisfied with nothing short of the condign punishment of the Judge, whose power has been so grossly abused.

What is the crime for which Williamson is imprisoned?

1. Is it in the fact that he announced to the slaves of Wheeler their legal rights? This will not be claimed. On the contrary, it was his right and duty, as a man and a citizen, to give them the information concerning their right to freedom. They were oppressed and ignorant, and it would have been the duty, as has been well said elsewhere, "of Judge Kane himself, and of every magistrate, every officer of justice in the State, to give such information, and see that the laws were executed according to their benevolent object and intent, and not suffer the weak, through ignorance of the laws in their behalf, to become the prey of the strong, evading and overriding those laws."

2. Was there any *intentional* contempt of court on the part of Williamson? This is not even claimed by Judge Kane. How could it be, when the respondent desired to amend his return by striking out the immaterial part which was objected to? No, the contempt for which he lies in prison was technical—constructive—made out by reasoning—was, indeed, no contempt at all, as any man of ordinary sense must see. It was a base pretext, and such must be the judgment of the people when the facts are understood.

3. In point of fact this statement in Williamson's return, that the slaves in question had never been under his control, was strictly true. They were as free the moment they reached, by the voluntary act of their owner, the State of Pennsylvania, as Judge Kane himself. They were not *under the control* of Williamson, in any legal sense, and his return was, therefore, strictly correct—but suppose it were not—suppose the respondent committed perjury. Did that authorize the Judge to commit him to prison without a trial by jury? For the satisfaction of any lawyer who may urge that claim, we cite the following conclusive authority: "If from any collateral evidence it should appear that there is reason to believe the respondent (in a *habeas corpus*) has perjured himself, the Circuit Court will recognize him to answer at the next term of the court to such matters as may be found against him." [United States vs. Dodge, 2 Gallis, C. C. R 312] If, therefore, we admit that Williamson was guilty of perjury, that was a crime for which he should have been indicted and tried by a jury. This, however, was not what Judge Kane desired. He well knew that Williamson's return was true, and that if indicted for perjury, he would be triumphantly acquitted.

4. The power of Judge Kane to imprison for contempt of court, is defined by an act of Congress passed March 2, 1831, the first section of which is as follows:

"*Be it enacted*, &c. That the power of the several courts of the United States, to issue attachments and inflict summary punishments for contempt of court, shall not be construed to extend to any cases except the *misbehavior* of any person or persons in the presence of said courts, or so near thereto as to obstruct the administration of justice, the misbehavior of any of the officers of said court in their official transactions, and the *disobedience* or resistance by any officer of said courts, party and juror, witness, or any other person or persons, to any lawful suit, process, order, rule, decree, or command of the said courts."

Was Williamson guilty of *misbehavior* in Court? This is not pretended. Was he guilty of *disobedience* to any writ, process, order, rule, decree or command of the Court? Let us see. What was the writ served upon him? It made it the duty of the respondent to bring the bodies of the alleged slaves into court, or to make his return of reasons for not so doing. He made return accordingly. He stated that the persons were not, and never had been, under his control, and that he could not therefore have their bodies in court. Now we ask any lawyer to say how, under the act of Congress quoted above, Judge Kane had power rightfully to imprison for *contempt of court.* There was no pretence of *misbehavior* in court—there was no *disobedience* to the writ—which was in effect in the altertive—to bring in the bodies *or* make return of reasons for not complying. If the return was in fact *false*, that was not *disobedience.* It was perjury, and for that, as is proved by the authority above cited, the respondent should have been recognized to appear at the next term to answer. Clearly there was no shadow of authority for the arbitrary sentence of imprisonment. It was a lawless exercise of judicial power, which would result in the impeachment of the guilty Judge, if the Government of the United States were not under the control of the oligarchy of the South.

There is no species of tyranny more dangerous than that which takes the form of judicial proceeding. The people of Connecticut are in the habit of respecting the adjudications of courts—and it is difficult for them to believe that the discretion of a Judge may be the most dangerous enemy of liberty. We beg leave to commend to them the following sentiments of Lord Camden, on this subject, himself one of the purest Judges who ever adorned the English bench:

"The discretion of a judge is the law of tyrants. It is always unknown. It is different in different men. It is casual, and depends upon constitution, temper, and feeling. In the best, it is oftentimes caprice; in the worst, it is every vice, folly and passion, to which human nature is liable."

DR. PARKER ON CHINA.

Rev. Dr. Parker, the United States Commissioner to China, was recently tendered a public dinner by prominent citizens of Boston. In his reply to the invitation, he writes as follows:—

You express the feelings of congratulation with which you look forward to the manner in which you are to be represented at the Imperial Court of China. Past experience has shown what diplomacy alone can be expected to accomplish with a Government like that of China, and that it is from influences more potent than those of the ablest diplomatist, that any important changes are to be looked for in the relations subsisting between China and Western nations, which influences now exist, and are operating to important ends. The most your representative can expect, is to study and watch, and, so far as practicable, direct and avail himself of, those agencies to the best of purposes.

One of your own philosophers has recently laid down the principle, which cannot be controverted, that "the outbreak of a revolution is but the pulsation of the age, healthful or spasmodic, according to its harmony with the sum of human knowledge at the time." Had his mind, on the occasion of uttering the sentiment, been directed to China, a more striking illustration of the soundness of his philosophy could scarcely have been selected. The revolution in that Empire, which has within the past three years cost the sacrifice of a million of people, in ways most revolting to humanity, has been in harmony with the very limited sum of human knowledge possessed by the leaders and their adherents. They know and feel that the Government that has ruled over the Empire for more than two centuries, whatever it be in theory, in practice is oppressive and unjust, and *unmodified* it is no longer endurable. This is about the sum total of their knowledge upon the subject. Of all administrative knowledge and talent they are deplorably destitute, and consequently the "pulsation of the age" has not been "*healthful*," but preëminently "spasmodic."

It is under this condition of the Empire that Western diplomacy (*i. e.* of England, France, and the United States) is called to task itself, and if, as true friends to the best interests of the whole people of China, we can, under the internal pressure that has so painfully been felt, obtain access to the Manchow Court, and, appealing to its self-interest, and desire of *self-preservation*, prevail on it to modify its ancient policy, so as to afford a government that shall meet the *popular* demand, and correspond to the progress of the nineteenth century, you may thus look forward to a termination, at no distant day, of the state of revolution and anarchy, and the inauguration of more extended social, commercial, political, and friendly foreign intercourse with that Empire, immense in extent of territory and population, and inexhaustible in commercial resources.

FREEDOM OF CONSCIENCE.

In Edinburg, Scotland, four young men were recently placed at the bar of the high court of Judiciary, charged with having been engaged in the demolition of a Catholic church at Greenock. After they were found guilty of the offense of which they were accused, the Lord Chief Justice, before pronouncing their sentence, indulged in the following observations:—

"It is not because you entertain particular opinions, or because you maintain those opinions with zeal, we are going to pronounce sentence upon you; neither is it because of any particular favor to the religious opinions of those whose property has been assailed. In this country all persons are entitled, not only to entertain what religious opinions they please, but to worship according to their own faith whatever it may be. Be they Jews, Gentiles, Pagans, Christians, Papists, Protestants, Episcopalians, or Presbyterians, it is all the same. The law says they have a right to worship after their own fashion, and that law will protect them in the exercise of their right. While we hear rumors of persecutions for religious opinions in other countries, and are inclined to sympathize with the sufferers, and to feel indignation at the conduct of the oppressors, it would be very wrong indeed if in this country, which boasts of being a land of liberty, where persons are entitled to freedom of conscience, without any restraint except that which conscience itself imposes, any proceedings which involve violence against parties on account of their religious opinions, should be permitted to go unpunished. While the law permits them to have liberty, the law must take care that that liberty is preserved them, and not abused by the strong."

THE PORTUGUESE IN ILLINOIS.—The St. Louis *Republican* contains a very pleasant account of the prosperity of the poor Portugese who were exiled from Madeira for embracing Protestantism a few years ago. Many of them in their own country were persons of wealth. But they lost all for the truth's sake, and were aided to come to this country and to settle in Illinois by the contributions of the benevolent in our country. A considerable portion of them settled just out of Springfield, Ill. They were entirely without means when they went there; but they refused no honest labor, however humble, and have by degrees gained and prospered until now they live in neat houses, surrounded by little lots of land, which most of them have purchased and own, and are a prosperous and happy people, distinguished for their sobriety and morality, and their frugality and industry. The writer says:—

"Crime is not charged upon them. They are unobtrusive in their manners, strict in their attendance at church, where they appear dressed with scrupulous neatness. They do not interfere in the politics of the country, believing that they have not the knowledge of our institutions which would justify the interference. They feel that they are secure and enjoy—'life, liberty, and the pursuit of happiness'—and with these, as far as government is concerned, they are content."

PROSPECTS IN CHINA.—The Directors of the London Missionary Society have recently received interesting communications. From China, they hear of enlarged facilities for preaching the gospel, even amidst the struggles and uncertainties of civil war. As in India, so in China—the influence of idolatry would seem to be feeble. Speaking generally, the missionary committee in China say:

"True, temples and shrines are everywhere to be seen, idols without number fill the land, and multitudes bow down before them; but that is no index to any deep conviction or earnest attachment, on the part of the Chinese, in regard to the objects or principles of their worship. So far as the reasonableness, utility, or authority of the practice is concerned, the great mass of the people have no idea on the subject, and will not say a word in its defense. Many of them assert that they have never knelt before an idol; others admit that they were merely trained to observe the form, but beyond this they know and care nothing. It is chiefly on this ground that we are at liberty to speak so freely and fully against idolatry, and commend to all around us the faith and service of the true God."

METHODIST PREACHERS.—The following statement is from an article written by a Methodist minister, who asserts that he has been an itinerant for more than twenty years:

"The unnecessary privations and sufferings of our preachers, even in the service of old and wealthy societies, is now operating to thin out and reduce our ministerial ranks. Many are absolutely driven out by poverty; many are disgusted by the cold indifference of the churches they serve, and retire in disaffection; many, being worn out personally, or having families in feebleness, are compelled to leave. And, what is more—and alarmingly common—the very best portion of our ministry, with expensive or feeble families, are finding sufficient excuse to accept what are being continually offered to them—presidencies, professorships, principalships, editorships, agencies, &c."

AMERICAN MISSIONARY ASSOCIATION.—The annual meeting was held at Chicago, Sept. 26; F. D. Parish, Esq., of Ohio, Vice-President, in the chair. The report of the Treasurer, Lewis Tappan, was presented, with the certificate of the auditors. The receipts of the fiscal year ending Aug. 31 were $52,326 30. Expended on the Mendi, Jamaica, Ojibwa, Hawaiian, Canada, Siam, California, Copt, Marquesan, and Home Missions, including the expenses of the Society, &c., $58,300 83. The Secretaries, Revs. Geo. Whipple and S. S. Jocelyn, read the annual report of the Executive Committee. The annual sermon was preached in the evening by the Rev. James A. Thome, of Cleveland. The subject, "Christian Missions illustrated by the proceedings of Paul at Athens."

General Intelligence.

California News.

Two weeks later news from California was received in New York on the 14th inst.

By this arrival we have intelligence of great mortality on board the steamship Uncle Sam, on her way from San Juan to San Francisco. The Cholera broke out on board at an early stage in her passage, and 108 persons died before she reached port. The disease is attributed to eating unripe fruit.

There had been a great fire at San Francisco, which burned over from twenty to thirty acres, destroying 350 houses, worth about $400,000. Also a fire at Grass Valley, destroying 300 buildings, loss $350,000. The flourishtng town of Weaverhill, also, had been destroyed by fire, causing a loss of about $200,000.

Fourteen whale ships are reported lost on the north-west coast, among which were the *King Fisher* and the *Enterprise* of New Bedford, the ship *Jefferson* of New London, and the ship *Edgar* of Cold Spring.

The schooner C. E. Foote, which arrived at San Francisco on the 17th of September, is the *first* vessel that has brought a cargo direct from Japan to the United States. Her cargo consisted of rice and Japanese ware.

Seventeen miners are reported to have been murdered by the Indians on Rogue River on the 20th of August.

In Oregon, a rumor is quite current that Governor Stevens has been massacred by a company of Black Feet Indians.

By last mail came out the report that one hundred and fifty emigrants had been murdered at or near Hell-Gate. A man calling himself Wiggans represented himself to have been one of the train, alone escaping, leaving comrades, wife and children prey for the scalping knife. He, by a well-made story, succeeded in hoaxing editors and opening hearts and pockets to his many wants. Since the foul falsehood has become apparent, his whereabouts is unknown.

By way of San Francisco we have late news from China. The imperialists continued to butcher their unfortunate prisoners with the most unrelenting ferocity. Among the thousands who perished in Canton on the scaffold, says the Hong-Kong *Gazette*, several were skinned alive, and one higher criminal than the rest was cut in twenty-four pieces—lingering, dying.

European News.

One week later news from Europe has been received since our last.

The news from the seat of war is very interesting. Active operations had been resumed in the Crimea. On the 22d September the allies attacked the Russian infantry, and the latter retreated to the heights over Rusta. The allies had landed 20,000 men at Eupatoria, and had 30,000 on the Russian flank. The Russians were fortifying in the north part of Sebastopol, and erecting new batteries. Sebastopol is to be razed, and the basins filled up. The Russian loss in the recent assault is stated to have been eighteen thousand men. From Asia we learn that the garrison at Kars were in great want, and were eating horse flesh. The Russians had abandoned Erzeroum, and were at Malagulemia. The Baltic fleet will winter at Kiel.

The extracts from the foreign papers, giving details of the recent assault on Sebastopol, furnish an awful picture of war as conducted in the 19th century.

Horrors of the Hospital of Sebastopol.

Of all the pictures of the horrors of war which have ever been presented to the world, the hospital of Sebastopol presents the most horrible, heartrending, and revolting. It cannot be described, and the imagination of a Fuseli could not conceive any thing at all like unto it. How the poor human body can be mutilated and yet hold its soul within, when every limb is shattered, and every vein and artery is pouring out the life stream, one might study here at every step, and at the same time wonder how little will kill! The building used as an hospital is one of the noble piles inside the dockyard wall, and is situated in the centre of the row at right angles to the line of the Redan. The whole row was peculiarly exposed to the action of shot and shell bounding over the Redan, and to the missiles directed at the Barrack Battery, and it bears in its sides, roofs, windows, and doors, frequent and destructive proofs of the severity of the cannonade. Entering one of these doors I beheld such a sight as few men, thank God, have ever witnessed! In a long low room, supported by square pillars, arched at the top, and dimly lighted through shattered and unglazed window frames, lay the wounded Russians, who had been abandoned to our mercies by their general. The wounded did I say? No, but the dead, the rotten and festering corpses of the soldiers who were left to die in their extreme agony, untended, uncared for, packed as close as they could be stowed, some on the floor, others on wretched tresties and bedsteads, or pallets of straw, sopped and saturated with blood, which oozed and trickled through upon the floor, mingled with the droppings of corruption. With the roar of exploding fortresses in their ears, with shells and shot forcing through the roof and sides of the rooms in which they lay, with the crackling and hissing of fire around them, those poor fellows, who had served their loving friend and master the Czar but too well, were consigned to their terrible fate. Many might have been saved by ordinary care. Many lay, yet alive, with maggots crawling about in their wounds. Many, nearly mad by the scenes around them, or seeking escape from it in their extremest agony, had rolled away under the beds, and glared out on the heart-stricken spectators, oh! with such looks. Many with legs and arms broken and twisted, the jagged splinters sticking through the raw flesh, implored aid, water, food, or pity, or, deprived of speech by the approach of death, or by dreadful injuries on the head or trunk, pointed to the lethal spot. Many seemed bent alone on making their peace with Heaven. The attitudes of some were so hideously fantastic as to appall and root one to the ground by a sort of dreadful fascination. Could that bloody mass of clothing and white bones ever have been a human being, or that burnt black mass of flesh have ever had a human soul? It was fearful to think what the answer must be. The bodies of numbers of men were swollen and bloated to an incredible degree, and the features distended to a gigantic size, with eyes protruding from the sockets, and the blackened tongue lolling out of the mouth, compressed tightly by the teeth which had set upon it in the death rattle, made one shudder and reel round. In the midst of one of these "chambers of horror"—for there were many of them—were found some dead and some living English soldiers, and among them poor Capt. Vaughan, of the 90th, who has since succumbed to his wounds. I confess it was impossible for me to stand at the sight, which horrified our most experienced surgeons—the deadly clammy stench, the smell of the gangrened wounds, of corrupt blood, of rotting flesh, were intolerable and odious beyond endurance. But what must the wounded have felt who were obliged to endure all this, and who passed away without a hand to give them a cup of water, or a voice to say one kindly word to them. Most of these men were wounded on Saturday—many perhaps on the Friday before—indeed, it is impossible to say how long they might have been there. In the hurry of their retreat, the Muscovites seem to have carried in dead men to get them out of the way, and to have put them upon the pallets in horrid mockery. So that this retreat was secured, the enemy cared but little for their wounded. On Monday only, did they receive those whom we sent out to them during a brief armistice for the purpose, which was, I believe, sought by ourselves, as our overcrowded hospitals could not contain, and our overworked surgeons could not attend to any more.

The Arctic Expeditions.

On the 31st day of May, 1853, an expedition, under the command of Dr. Kane, U. S. N., left New York in the brig Advance to search for Sir John Franklin. For a while encouraging intelligence was received from the expedition, and then followed a long silence, which created great anxiety in the minds of those who had friends on board. At length, on the 4th of June, 1855, an expedition under Lieut. Hartstein, consisting of the propeller Arctic and the bark Release, was fitted out in New York to go in search of Dr. Kane. The vessels of this last expedition returned to New York, on the 11th inst., bringing with them Dr. Kane and his surviving companions. The Doctor reports that he was obliged to abandon the Advance in latitude 78.45, after having penetrated as far as 82.30, which was further than any other navigator had gone, with the exception of Captain Parry, who reached the latitude of 83.15. While here he saw the Polynya, or open sea, stretching away off to the north farther than the eye could reach. This point he had reached after traveling eighty or ninety miles over the ice in sledges; but as an immense zone of it intervened between him and his vessel, it was impossible for him to prosecute his investigation farther northward. For two winters the Advance was completely hemmed in; and as it became evident to him, from the condition of his men, that they could not survive another winter, he determined to leave her and make the best of his way to the nearest settlement He discovered about eighty new capes and twenty bays, and found land up as far as he was enabled to penetrate. The extreme northern boundary of this he named Grinnell's Land, in honor of Mr. Henry Grinnell. The hardships they endured were of a fearful character, and at one time six out of their party of nineteen were so low that it was thought they could not survive. Of these, three died, and the rest were saved, after the most unremitting care and attention. One of these was Mr. Alston, the carpenter, who died, while crossing over the ice, of lockjaw, super-induced by the intense cold. The other two were frost-bitten. The lockjaw, Dr. Kane says, was very prevalent. The party, after making their way over thirteen hundred miles of ice, arrived at Leviely or Godhaven, and had taken passage in a Danish brig, named the Maria, when the Release made her appearance. Their joy at meeting their countrymen here can better be imagined than described. They lost no time, it is almost needless to state, in taking their departure, and after a favorable voyage arrived at New York, as above stated, on the 11th inst.

The Public Lands.—The Washington *Star* says that the sales of the public lands for the fiscal year 1855 have been larger than ever before, with the exception of the great year of speculation, 1836, when there were in the aggregate over 19,000,000 acres. They have been this year 15,068,366 acres, distributed among the States as follows:—

	Acres.	Amount.
Ohio	62,708	$30,048
Indiana	854,417	64,000
Michigan	829,216	623,262
Iowa	3,273,739	4,064,911
Missouri	3,097,525	1,249,271
Arkansas	499,008	183,041
Florida	256,158	108,638
Illinois	1,082,421	945,572
Wisconsin	1,573,010	1,770,725
Alabama	2,273,477	534,047
Mississippi	965,517	285,621
Louisiana	384,146	181,981
Minnesota Territory	412,096	513,456
Oregon Territory	5,557	6,948
Washington Territory	555	694
Total	15,068,366	$10,572,910

Horrible Murder and Suicide.—The Missouri *Democrat*, Oct. 6, says: We record this morning one of the most frightful instances of human depravity that it has ever been our misfortune to learn of. The circumstances, which are briefly these, are shocking beyond parallel:

A German Shoemaker named William Ebberling, living in this city, on Fourteenth, near Madison-street, has for a long time led an unhappy life with his wife. Their quarrels and dissensions have frequently disturbed the peace of the neighborhood. He has on more than one occasion brutally beaten and maltreated her, and her life was one of drudgery and hardship. On Thursday afternoon last, about 3 o'clock, he was seated on his bench, working at his trade, when a dispute arose between them, and he made a sudden spring upon her, catching her by the throat, and inflicting five wounds upon her with a sharp-pointed shoe-knife, which he had in his hand at the time, any one of which was sufficient to have caused death. She is not dead yet, but the physicians in attendance pronounce her recovery impossible. He then fled from the house, followed by a large Newfoundland dog belonging to him, and proceeded to the river and jumped in, for the purpose of drowning himself. He was dragged out, however, by the dog, before he had accomplished the purpose. He then caught the dog, and with the same knife with which he had stabbed his wife, and which he had never let go, deliberately cut its throat, and again jumped into the river, and succeeded in accomplishing what the more noble brute had prevented him from doing at first.

SUMMARY.

A dispatch dated Boston, Monday, Oct. 8, says:—A fatal accident occurred on the Boston and Maine Railroad this morning at Wyoming, a few miles from this city. The passenger train from Haverhill came in collision with a cow which suddenly jumped upon the track, and the result was that the engine was thrown down an embankment, the baggage-car upset, and the passenger cars thrown from the track. E. Abbott, of the Andover, and Charles Richardson, of the Haverhill Express, who were in the baggage car, were both instantly killed. Mr. Reuben Gleason, of the Reading Express, jumped out of the same car and was badly injured. Mr. Geo. Richards, fireman, had both legs crushed off, and is now at the Hospital in a dying state. Two brakemen, named Kimball and Staples, each lost a leg. Not a single passenger was injured.

The N. Y. *Times* of Oct. 10, says:—The Grain and Flour movement at present overshadows both the Stock and Cotton market. The transactions on the Corn Exchange since the arrival of the steamer Pacific, last week, have been enormously large, and the excitement was intense on Saturday and Monday. There was a calmer tone in the market to-day, caused by the temporary withdrawal of a leading Broker, who had been the heaviest buyer for English account. An Agent of the British Government is said to be in town for the purchase of Flour for the Army in the East, and to his orders the trade attribute the movement referred to. There are a variety of buyers in the market for France.

The Lockport Journal says a man named Kinney met with a horrid death in Sleeper's saw-mill, at Middleport, on Saturday last. It appears that he started the mill with a full head of steam on, and then proceeded below to arrange the strap on the drum, and while leaning over his frock was caught by the gearing, which whirled him violently around the shaft, tearing his clothes completely off, and mangling him in a frightful manner. When discovered he was found some three feet from the shaft, with the flesh torn from both legs to the knee, leaving the bones and muscles exposed. One arm was pulled out of the socket, and a bruise on the face was discovered. His boots were thrown some distance by the violence of the motion.

A new movement has been made in the case of Passmore Williamson. In the United States District Court at Philadelphia, application was made on the part of Jane Johnson, the former slave of Col. Wheeler, asking that the *habeas corpus* to bring herself and children into Court, issued to Passmore Williamson, be quashed. John M. Read, Esq, on behalf of the petitioner, asked that the petition be filed, and contended that a writ of *habeas corpus* must always be issued on behalf of the party whose liberty is restrained, and not for a party wishing to restrain the liberty of another. The application was denied.

A massive gold medal, appropriately designed, was presented to Capt. Ingraham one night last week, at the Metropolitan Hotel, New York, by the committee appointed at the great mass meeting held at Metropolitan Hall on September 2, 1853, to endorse and sustain his conduct in the celebrated rescue of Koszta from the Austrian officials at Smyrna, during the preceding month of July. Captain Ingraham responded in a brief address, explaining his conduct on that occasion.

The Supreme Court of Errors, of Connecticut, has just rendered a very important decision in regard to Savings Banks and Building Associations. The decision was made in a case where an association attempted to foreclose a mortgage, and the Court decided that it could only recover the amount of the principal, less the legal interest and bonus which had been charged. Those debtors, therefore, who have heretofore paid these large amounts in the way of bonuses and interests, can now recover them back from the associations.

There die annually in the City of New York about 12,000 horses, or 22 per day. Each dead horse is considered to be worth $17 50; his bones are burned and sold to the sugar refiners for refining purposes, and to the farmers for manure; his meat is pressed and the grease used by the soap and candle makers, while the entrails and remnants are fed to the hogs to make pork for home consumption.

A letter in the Columbia Times, dated Yorkville, S. C., says: "Negro Clarissa was tried on Tuesday, and found guilty of the charge of murder, by poisoning Col. Wilson's child. She confessed that she had also poisoned two children of Mr. McCully, and one for Mr. Marshall, of Newbury, and probably one for Mr. Berry. She also confessed that she had prepared poison as many as three times for Mrs. Wilson, her late mistress.

The ship William Penn, of Naw Bedford, from the Chincha Islands, was wrecked off Hatteras Shoal on the 30th ult. The Captain—Cole—was saved by the schooner C. C. Stratton. The Captain's wife, Dr. C. T. Boweine, of Virginia, and seven men, were picked up by the brig Marius, and were brought to Savannah.

In Camden, N. J., on Friday, Mrs. Briggs attempted to chastise one of her children with a switch, when it was thrown into a spasm, which continued so long that strangulation and death ensued. The coroner's jury returned a verdict of "death from asphyxia."

The extensive steam flouring mills of Hecker & Brothers, situated at the foot of Bridge street, Brooklyn, were entirely destroyed by fire, Oct. 11th. Among the property destroyed was 16,000 bushels wheat, 750 barrels flour, and 5,000 bushels mill feed. The loss of the Messrs. Hecker amounts to about $60,000; insured for $39,500.

A lawyer of Cincinnati, recently received a letter from a lawyer in Memphis, Tenn., stating that there was in jail at that place, and about to be sold to pay his jail fees, a colored boy claiming to be free, and who says that his mother resides in Cincinnati.

At a meeting of the American party in Boston, Dr. Henry Willard, who had just concluded a speech, and appeared as well as usual, suddenly complained of illness and died in a few minutes.

We announce with deep regret the death of Mrs. Mills, of the Marquesas Islands, which took place immediately on her arrival at San Francisco, on her way to the land of her nativity. Her death was the result of exposure and hardships on the Isthmus of Panama, consequent upon the unfavorable weather, the crowd of passengers, and the insufficiency of the arrangements for the comfort and safety of the people. The rest of the mission company were about embarking for the Marquesas, carrying with them the body of Mrs. Mills.

The advantages of litigation were illustrated in the case of a School District in Cornish, (N. H.) against Ariel Comings for the recovery of the value of an old broken box stove, worth probably from 50 to 75 cents. The Court of Common Pleas at Newport, recently, gave a verdict in favor of the District, giving $1 31 damages. The verdict carries with it taxable costs amounting in all to more than *five hundred dollars*, to say nothing of the amount expended, which cannot be taxed to the defeated party.

We are advised, says the Washington *Union*, that postmasters should make no record or marks upon registered letters, by which the fact of their containing money or other valuables may be suspected or made known. It has been ascertained that, in some instances, postmasters are in the habit of marking the word "registered" on the outside of such letters, together with the amount inclosed. The practice is forbidden by the department.

Mr. Lewis Brown's death, by cholera, at Chicago, Illinois, was communicated to his mother, Mrs. Elizabeth Brown, at Rochester, N. Y., on the 30th ult. She was much affected, and remarked, "Poor Lewis, I shall soon be with you!" A few moments after, she arose to go up stairs, and fell backwards, and was caught in the arms of her daughter, and died almost instantly, without a struggle.

The Lowell *News* says that there are now in that city two young ladies who were born in New Orleans in opulence, but in consequence of death and reverses of fortune, were left not only orphans but penniless. Rather than to remain in indigence at home, they made their way to Lowell and entered the mills as operatives, and are now numbered among the many beautiful, exemplary, and intelligent ladies of the city who labor in the mills.

Frances Browne, an unfriended poetess in England, recently contributed to the Athenæum a poem of much merit, called, "Is it come?" The poem attracted the notice of the Marquis of Lansdowne, who, hearing that the author was poor, immediately sent her five hundred dollars. It was a noble tribute to struggling genius, and deserves to be recorded.

The order of Jesuits, which once had over twenty thousand members, is said to have now but five thousand five hundred and ten. Of these, one thousand five hundred and fifteen are in Italy; one thousand six hundred and ninety-seven in France; one thousand two hundred and ninety-four in England and America; four hundred and sixty-three in Belgium; and three hundred and sixty-nine in Spain.

The antipathy of the Scotch people to reading sermons is well known. At Kirkcudbright, at an "inauguration," an old woman on the pulpit stairs asked one of her companions if the new minister was a *reader*. "And how can he read, woman?" was the reply; "the poor man's blin'." To which the first made answer, "I'm glad to hear it—I wish they were a' blin'."

The Boston *Traveler* states that some weeks since a gentleman of Boston was traveling in the West, and while at Chicago purchased half a dozen barrels of fine flour for his own use at $5 87 a barrel. He sent it to Boston, and the extreme cost, delivered at his house there, was $7 75 a barrel. At that time the same brand of flour was selling there at *fourteen dollars* a barrel, or for nearly double what the gentleman's cost him.

The Assessors' report gives the total valuation of property in Boston at two hundred and forty-two millions three hundred and forty-nine thousand two hundred dollars, showing an increase over the valuation of last year, of fifteen millions three hundred and thirty-six thousand dollars.

The amount of taxes for all purposes in the city of Brooklyn is $1,532,427; or one hundred and sixty-two cents on every one hundred dollars. In one ward of the city, comprising a part of what late was Williamsburg, where there is a local assessment, the tax is $2 28. This is the largest tax we have ever known imposed in the United States.

The Buffalo *Commercial* of Thursday says: "On Monday evening last, we had about 600,000 bushels of grain afloat in the Buffalo Harbor, and in less than thirty-six hours thereafter, every bushel had been put in store, and a large portion of the vessels re-loaded and cleared for up-lake."

Mrs. Elizabeth Sheldon, at Lisbon, St. Lawrence county, N. Y., on Sunday, 23d ult., bent down the top of a tree, tied her skirts to it, and a rope to that and about her neck, and then let the tree spring back to its place. When found, she was dead, though her feet rested on the ground. She was disappointed in marriage.

There were many thousands of the men and women of New York who gathered in the Tabernacle on the evening of Oct. 8th, to unite with the "New York and North American Grand Union of Daughters of Temperance" in giving a welcome to John B. Gough, recently returned from a two-years' lecturing tour through England and Scotland.

A dispatch dated Middletown, Conn., Tuesday, Oct. 9, says: Hon. Samuel D. Hubbard, ex-member of Congress, and late Postmaster-General under President Fillmore, died at his residence in this city, last evening, at the age of 55 years. He had been sick with a spinal complaint for some time.

"*A Sunday Ordinance*," which prohibits a number of secular employments, the sale of merchandize, liquors, &c., on the Sunday, has been in operation in Cincinnati, for several months past. But a vigorous opposition is now organized, which is laboring for the repeal of all Sunday restrictions.

The following new post offices have been established in this State, and the following named gentleman appointed postmasters: Eggertsville, Erie county Christian Eggert; Martinsville, Niagara county, William Dornfield.

A locomotive built to burn Anthracite coal has been running a hundred miles a day on the Reading Railroad for the past four weeks, and her performance is so satisfactory that good judges on the road think her the best for passengers they have ever known. She has abundance of steam, and throws no dirt or sparks and makes a saving of 43 per cent.

A dispatch dated Chicago, Oct. 11, 1855, says: Accounts from Northern Wisconsin in the vicinity of Lake Winnebago and Fox River, state that tremendous inundations have taken place, caused by late severe storms. Thousands of tons of hay, and large quantities of grain, have been swept off. Apprehensions are felt for the safety of the whole mill property of that section.

The latest telegraphic returns swell the majority for Chase considerably, and render certain the trumph of Republicanism in Ohio. In sixty-six counties heard from, Chase has a majority of 20,000. The Legislature will also be largely Republican. As far as heard from, there are twenty-five Republican Senators and sixty Republican Representatives.

Oliver Champlin, of Berlin, Marquette Co., Wisconsin, has a calf six months old which weighs 590 pounds, nearly 100 pounds to a month.

New York Markets—Oct. 15, 1855.

Ashes—Pots 6 37; Pearls 6 67 a 6 75.

Flour and Meal—Flour, 8 50 a 9 00 for different grades of State, Indiana, Michigan, and Ohio, 9 25 a 10 75 for extra Genesee. Rye Flour 6 00 a 7 00 for fine and superfine. Corn Meal 4 75 for Jersey.

Grain—Wheat, 1 95 a 1 98 for red, 2 10 a 2 15 for white. Rye 1 40 a 1 45. Oats, 46 a 50c. for Western. Corn, 94 a 95½c. for Western mixed.

Provisions—Pork, 21 50 for prime, 23 50 a 24 00 for mess. Beef, 11 50 a 12 00 for country prime, 13 00 a 14 00 for country mess. Butter, 15 a 18c for Ohio, 19 a 22c for common to good State, 23 a 24½ for choice. Cheese 9 a 10c.

Hay—River 70 a 75c. for shipment, 80 a 90c. for local use.

Hops—8 a 11c. for old, 12 a 15c. new.

MARRIED,

In Edgerton, Wis., Oct. 3d, by Eld. A. W. Coon, Dr. H. L. Coon, of Rutland, to Miss Sarah Morton, of the former place, all of Dane Co., Wisconsin.

On the 10th inst., by Eld. J. Croffut, at his residence No. 145 av. C., Mr. Thomas F. Burrows to Miss Sarah Higgins, all of this city.

DIED,

In Greenmanville, Ct., on the 13th inst., Victor Elwyn, only child of Edwin G. and Mary A. G. Champlin, of Westerly, R. I., aged 3 months and 23 days.

LETTERS.

Daniel Williams, Verona Mills	$1 00
W C Whitford, New York	1 00

FOR THE CAROL:

N V Hull, Alfred Center	$6 50
C M Lewis, Hopkinton, R I	70

WILLIAM M. ROGERS, Treasurer.

Western Colony Society.

During the recent Anniversaries at Leonardsville N. Y., a Convention was called for the purpose of considering what can be done to encourage Sabbath-keepers who are moving Westward to locate together. The Convention, after consultation, adopted a Constitution for a Western Colony Society, one object of which will be the permanent settlement of its members in a fertile and healthy region in the West; and another object the erection and endowment of an Institution of Learning. Officers were appointed to take the matter in hand, and if possible carry out these objects. On Wednesday, Oct. 24th, it is proposed to have a meeting of these officers in New York, commencing at 10 o'clock A. M. Information has been obtained which points to a very desirable location for immediate occupancy. It is hoped that the officers generally will attend this meeting, and that all persons interested in the enterprise, and desirous of enjoying its advantages, will *at once* communicate their wishes to the Corresponding Secretary, that the Board of Managers may be able to decide what can be done. W. C. Whitford, Cor. Sec.

New York, Oct. 14, 1855.

Michigan Southern Railroad Line.

Travelers for Chicago, St. Louis, Kansas, and all points West and Southwest, can obtain through tickets, and all information concerning routes, fare, &c., either by the New York and Erie Railroad, or the New York Central Railroad, by application at the Company's Office, No. 192 Broadway, corner Dey-st., to

JOHN F. PORTER, General Agent.

Carpet Warehouse.

Young & Jayne, No. 364 Broadway, corner of Franklin Street, (opposite Taylor's Saloon,) offer for sale a very choice and extensive assortment of

CARPETINGS, OIL-CLOTHS, CURTAIN MATERIALS, MATTRESSES, &c.,

at the lowest rates. Purchasers are respectfully solicited to examine the stock.

Misrepresentations, either expressed or implied, are strictly prohibited in this establishment.

YOUNG & JAYNE,
364 Broadway, corner of Franklin-st.

N. B.—Churches and clergymen furnished at wholesale prices. Sept 27—3 m. *

New Market Seminary.

This Seminary will re-open on the 12th of September, with Mrs. R. H. Whitford, as Preceptress.

This Institution is located in a pleasant section of country, and has a commodious and well arranged building, and is designed to furnish every facility and advantage to the student found in other institutions of this class.

Board for students may be had in families at one dollar and seventy-five cents per week, where all their wants will be kindly cared for. Tuition from $3 to $5 per term, according to the studies pursued. Music, with use of Piano, $10 00.

I. H. Dunn, Sec. of Board of Trustees.

New Market, N. J., August 26, 1855.

DeRuyter Institute.

This Institution is located in a pleasant and healthy section of country, and in a community comparatively moral and intelligent. It is easy of access from Syracuse, Chettenango, and Homer. Our motto is, *Teach the young to govern themselves—to educate themselves* Grateful for past liberal patronage, we assure the public we have ample accommodations for more.

Expenses:

Tuition,	from $4 00 to $6 00
Board in families,	from 1 25 to 2 00
" in clubs	from 0 60 to 1 00
Room rent, per term,	from 1 25 to 2 62

Books and Stationery furnished at very low prices.

All bills settled invariably in advance. No bills for less than half a term. No deductions made except in case of sickness.

Board of Instruction.

HENRY L. JONES, A. M., Principal,
AMOS R. CORNWALL, A. B., Prof Mathematics.
Miss JOSEPHINE WILCOX, Preceptress.
Mrs. SARAH E. JONES, Mrs. BARBARA A. CORNWALL, Miss SARAH E. SHIPPEY, Miss JANE C. BURDICK, Assistants in Female Department.

For further particulars, address, Henry L. Jones, Principal; W. D. Wilcox, President; J. B. Wells, Secretary; or C. H. Maxson, Treasurer, De Ruyter Madison Co., N. Y.

Farm for Sale,

Containing about 100 acres, with a fair proportion of woodland, a small orchard of grafted fruit, and a comfortable dwelling and outhouses. It is situated about four miles north of Westerly, R. I., and within a mile of each of the flourishing manufacturing villages of Potter Hill and Ashaway. There are several other manufacturing establishments near, affording a ready market, in the immediate vicinity, for every species of produce. It is convenient to the first Hopkinton Church, as well as to the very excellent male district school.

It will be sold with or without the stock and farming implements, and possession given the ensuing winter or spring, if desired. To those wishing to secure a quiet home in an enterprising neighborhood, and surrounded by such comforts as can only be found in an old settled and thickly populated country, this affords an opportunity seldom offered. For terms and other particulars apply to the subscriber on the premises, or address John E. Potter, No. 15 Sansom-st., Philadelphia, Pa. Benjamin Potter, Ashaway, R. I.

11tf.

Good Crops, Good Prices, Good Books, and Good Times.

BELCHER'S HISTORY OF ALL THE RELIGIOUS DENOMINATIONS IN THE UNITED STATES. Large Octavo 1,024 pp. and nearly 200 engravings.

FLEETWOOD'S LIFE OF CHRIST AND HIS APOSTLES. 704 pp. and 25 engravings.

Probably there has never been a more favorable opening for the sale of books than the present. Large crops have been produced throughout the country, and these are bringing good prices; every body is in high spirits.

The above volumes are printed on fair paper, in clear, large type, are handsomely illustrated, and bound in a neat and attractive style. More than all, their contents bear the ring of the true metal, enabling the agent to sell them to the highest in the land as well as the humblest, with the gratifying feeling on his part that he is conferring a favor rather than receiving one. They have gained and are gaining a world-wide fame; and being sold exclusively by subscription, the agent has the entire benefit of their popularity.

Canvassers, and those wishing to become such, will find it for their interest to secure an agency. We can offer them with other popular works on the most favorable terms. For further particulars apply to or address either of the

Publishers, { John E. Potter, Philadel., Pa. / Noyes Spicer, Indianapolis, Ia.

Magnificent Floral Gift.

Subscribers to the "CHRISTIAN DIADEM" for 1855, are entitled to a splendid steel engraving, the ☞ LILLY AND THE ROSE PERSONIFIED, being given *gratis* to all old and new subscribers who send us only ONE DOLLAR, by mail or otherwise.

Six Copies for Five Dollars.

The Diadem is a strictly moral and religious work—designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address Z. P. HATCH, Publisher, 9 Spruce street, New York. May 24—3m.

New York and Erie Railroad.

On and after Monday, May 7, and until further notice, Trains will leave the pier foot of Duane-st., New York, as follows:

Dunkirk Express at 6 A. M. for Dunkirk.

Buffalo Express at 6 A. M. for Buffalo.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Accommodation at 12¼ P. M. for Port Jervis and intermediate stations.

Rockland Passenger at 3 P. M. (from foot of Chambers-st.) via Piermont, for Suffern and intermediate stations.

Way Passenger at 4 P. M. for Newburgh and Otisville and intermediate stations.

Night Express at 5½ P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5½ P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c., and with first-class splendid steamers for all ports on Lake Erie.

D. C. McCALLUM, General Sup't.

State of New York,

Secretary's Office, Albany, August 25, 1855.—To the Sheriff of the County of New York: Sir—Notice is hereby given, that at the General Election to be held in this State on the Tuesday succeeding the first Monday of November next, the following officers are to be elected, to wit:

A Secretary of State in the place of Elias W. Leavenworth;

A Comptroller in the place of James M. Cook;

An Attorney-General in the place of Ogden Hoffman;

A State Engineer and Surveyor in the place of John T. Clark;

A State Treasurer in the place of Elbridge G. Spaulding;

A Canal Commissioner in the place of Frederick Follett;

An Inspector of State Prisons in the place of Darius Clark;

A Judge of the Court of Appeals in the place of Addison Gardiner;

All whose terms of service will expire on the last day of December next.

Also, a Judge of the Court of Appeals in the place of Charles H. Ruggles, Resigned;

Also, a Justice of the Supreme Court for the first Judicial District, in the place of Edward P Cowles, whose term of office will expire on the last day of December next;

Also, a Senator for the Third, Fourth, Fifth, and Sixth Senate Districts, in the place of Thomas J. Barr, Thomas R. Whitney, Mark Spencer and Erastus Brooks, whose term of office will expire on the last day of December next.

COUNTY OFFICERS ALSO TO BE ELECTED FOR SAID COUNTY.

Sixteen members of Assembly;

A Sheriff in the place of John Orser;

A County Clerk in the place of Richard P. Connolly;

Four Coroners in the places of Robert Gamble, Joseph Hilton, Hieronymus N. Wilhelm, and William O'Donnell;

A Comptroller in the place of Azariah C. Flagg;

A Street Commissioner in the place of James Furey;

A Commissioner of Repairs and Supplies in place of Bartholemew Purdy;

Two Governors of the Alms House in the place of Patrick Henry and John J. Herrick;

City Inspector in place of Thomas K. Downing.

A Counsel to the Corporation in place of Robert J. Dillon;

Two Justices of the Superior Court in the place of Wm. W. Campbell and Murray Hoffman;

A Justice of the Marine Court in place of Chas. E. Birdsall;

A Police Justice for the Sixth Judicial District in the place of Geo. W. Pearcy;

A Judge of the Court of Common Pleas in the place of Lewis B. Woodruff.

Yours respectfully,
E. W. LEAVENWORTH, Secretary of State.

Sheriff's Office, New York, August 28, 1855.

The above is published pursuant to the notice of the Secretary of State and the requirements of the statute in such case made and provided.

JOHN ORSER,
Sheriff of the City and County of New York.

☞ All the public newspapers in the county will publish the above once in each week until the election, and then hand in their bills for advertising the same, so that they may be had before the Board of Supervisors, and passed for payment. Sep—13.

Miscellaneous.

Benefits of Droughts, and the Modes in which they Improve Land.

It may be a consolation to those who have felt the influence of the late long and protracted dry weather, to know that droughts, are one of the natural causes to restore the constituents of crops, and renovate cultivated soils The diminution of the mineral matter of cultivated soils takes place from two causes:

1. The quantity of mineral matter carried off in crops and returned to the soil in manure.

2 Mineral matter carried off by rain water to the sea, by means of fresh water streams.

These two causes, always in operation, and counteracted by nothing, would in time render the earth a barren waste, in which no verdure would quicken, and no solitary plant take root. A rational system of agriculture would obviate the first cause of sterility, by always restoring to the soil an equivalent for that which is taken off by the crops; but as this is not done in all cases, Providence has provided a way of its own to counteract the thriftlessness of man, by instituting droughts at proper periods, to bring up from the deep parts of the earth food, on which plants might feed when rains should again fall. The manner in which droughts exercise their beneficial influence is as follows:

During dry weather a continual evaporation of water takes place from the surface of the earth, which is not supplied by any from the clouds. The evaporation from the surface creates a vacuum (so far as water is concerned) which is at once filled by the water rising up from the subsoil of the land; the water from the subsoil is replaced from the next strata below, and in this manner the circulation of water in the earth is the reverse to that which takes place in wet weather. The progress to the surface of the water in the earth manifests itself strikingly in the drying up of springs, and of rivers and streams which are supported by springs. It is not, however, only the water which is brought to the surface of the earth, but also all that which the water holds in solution. These substances are salts of lime and magnesia, of potash and soda, and indeed whatever the subsoil or deep strata of the earth may contain.

The water on reaching the surface of the soil is evaporated, and leaves behind the mineral salts, which I will here enumerate, viz.: Lime, as air slacked lime; magnesia, as air slacked magnesia; phosphate of lime, or bone earth; sulphate of lime, or plaster of Paris; carbonate of potash and soda, with silicate of potash and soda, and also chloride of sodium or common salt; all indispensable to the growth or production of plants which are used for food. Pure rain water, as it falls, would dissolve but a very small proportion of some of these substances, but when it becomes soaked into the earth it there becomes strongly imbued with carbonic acid from the decomposition of vegetable matter in the soil, and thus acquired the property of readily dissolving minerals for which before it could have very little preference.

I was first led to the consideration of the above subject by finding, on the reëxamination of a soil which I analyzed three or four years ago, a larger quantity of a particular mineral substance than I at first found, though none had been applied in the meantime. The thing was difficult of explanation, until I remembered the late long and protracted drought. I then also remembered that in Zacatecas, and several other provinces in South America, soda was obtained from the bottom of ponds, which were dried in dry weather, and again filled up in the rainy season. As the above explanation depended on the principles of natural phylosophy, I at once instituted several experiments to prove its truth.

Into a glass cylinder was placed a small quantity of chloride of barium, in solution; this was then filled with a dry soil, and for a lone time exposed to the direct rays of the sun on the surface. The soil on the sunny side of the cylinder was now treated with sulphuric acid, and gave a copious precipitation of sulphate of barytes.

The experiment was varied, substituting chloride of lime, sulphate of soda, and carbonate of potash for the chloride of barium, and on the proper reägents being applied, in every instance, the presence of those substances were detected in *large* quantities on the soil on the cylinder. Here, then, was proof positive and direct, by plain experiments in chemistry and natural philosophy, of the agency of droughts.

We see, therefore, in this, that even those things which we look upon as evils, by Providence are blessings in disguise, and that we should not murmur even when dry seasons afflict us, for they too are for our good. The early and the latter rain may produce at once abundant crops, but dry weather is also a beneficial despensation of Providence in bringing to the surface food for future crops, which otherwise would be forever useless. Seasonable weather is good for the present, but droughts renew the storehouse of plants in the soil, and furnish abundant supply of nutriment for future crops.

JAMES HIGGINS,
State Agricultural Chemist.

BALTIMORE, July 14.

Report of the British Post-Master-General.

In the United Kingdom there are fifteen letters written in the year for every one of the population. In the United States the number is only four. This is extraordinary, considering the spread of education in America as compared with this country, the commercial activity of our Transatlantic kinsmen, and their locomotive disposition and sociality. The population of the United States is about 24,000,000, and of the United Kingdom 27,000,000; yet in 1854 the letters which passed through the American post-offices were 119,000,000, while the number that passed through the post-offices in this country was nearly 450,000,000. In London, in 1852, there were forty-one letters written for every one of the inhabitants, and in New York the number was only thirty-three. The cause of this discrepancy is, no doubt, the want of postal facilities in America. There is no such thing as prompt and daily deliveries of letters to every house, cottage, and hovel in that country, such as we have in England, and although there are 24,000 post-offices in America, and only 10,000 in the United Kingdom, the former do not afford the accommodation which the latter do on account of the vast area over which they are spread; and, besides, they are a poor substitute for the letter carrier and rural postman. The population of the following places, viz.: London, Liverpool, Manchester, Birmingham, Bristol, Preston, Leicester, and Limerick, in 1854, was 3½ millions; the postal receipts were 1½ millions sterling; and the postal local expenditure was £260,000. The population of the eight following places, viz.: New York, Philadelphia, Baltimore, Boston, New Orleans, Cincinnati, St. Louis, and San Francisco, was in the same year 1½ millions; the postal receipts were £300,000; and the local expenditure, £80,000.

Thus in the eight cities and towns of the United Kingdom the postal receipts amounted to nearly half as many pounds sterling as there were inhabitants, and the cost was about one-sixth of the receipts, while in the eight American cities the postal receipts did not amount to one-fifth the number of pounds sterling as there were inhabitants, and the cost was nearly one-third of the receipts. The local cost of working a million of letters in England is £550, and in America £2,400. This difference arises from the cheapness with which letters charged an uniform postal rate can be worked as compared with the cost of working letters charged a variable postal rate. In America there are three inland rates, and in England there is only one. In 1839, before the introduction of an uniform rate of postal in England, the gross expense of working a million of letters was £10,000; at the present time it is only £3,000, or less than one-third.

Lord Canning in his report says, that the "extension of the rural posts has been in steady progress for several years, and I have no doubt has assisted materially to produce the great increase that has taken place in the total number of letters." In a large number of rural districts there have been double daily deliveries established. Postal accommodation is now looked upon almost as essential as drainage and a good supply of water. The value of genteel residences in suburban districts has been much enhanced by a double daily delivery of letters, as it saves the expenses and trouble of sending at a distance to the chief post-office for day mail letters and newspapers. The postal facilities for the delivery of newspapers have also vastly increased the number of letters of late years. Almost every copy of a newspaper published gives rise to epistolary correspondence on business or other matters; but this would not be the case to one half the extent, if it were not for the postal facilities for the delivery of newspapers, for if they are not of very recent date when received and read, the immense number of letters which they are calculated to give rise to are useless. Oftentimes, a single advertisement in a London morning paper causes scores and even hundreds of letters to pass through the post. [Daily News.

Influence of Occupation upon Health.

A curious and interesting report has been prepared by Mr. Finlaison, the actuary of the National Debt office, upon the subject of sickness and mortality among the male members of friendly societies in England and Wales, as shown by the returns made by them to the Government for the five years 1846—50. It appears that the proportion on the sick list, in the course of a year, is one in four, or 24.99 in every hundred. The proportion seems large, but some allowance may have to be made for cases of feigned illness; and the persons in question are not those who are most favorably circumstanced in regard to food, clothing, lodging, and the various conditions of health. Mr. Finlaison proceeds to divide the members of these societies into four classes: 1. Those who have heavy labor with exposure to the weather—such as agricultural and other out-door laborers—a class in which he has 353,103 cases. 2. Those who have heavy labor without exposure to the weather—such as smiths, sawyers, coopers, plumbers—a class numbering 84,259. 3. Those who have light labor, with exposure to the weather—as shepherds, drovers, drivers, pedlers, messengers, custom-house officers—in number 58,809. 4. Those who have light labor without exposure to the weather—such as clerks, shopmen, barbers, factory operatives, servants—in number 286,909. He found that persons engaged in heavy labor, with and without exposure to weather, have respectively 28.04 and 26.24 per cent. of their number sick in the year; persons engaged in light labor, 20.80 and 21.58; in round numbers, taking a census of workingmen disabled, for every three whose work is light or moderate, there are four of the class whose lot is heavy labor. The duration of sickness to each person sick, is, however, upon an average, only 38 days and 40.73 in the two classes engaged in heavy labor, and 41 days and 44.25 in the two classes engaged in light labor. The mortality is heaviest among the persons classed as engaged in light labor; and in-door labor shows itself less favorable to longevity than out-door. But the main difference in the distribution of sickness, seems to turn upon the expenditure of physical force.

"This is no new thing," says Mr. Finlaison, "for in all ages the enervation and decripitude of the bodily frame has been observed to follow a prodigal waste of the mental or corporeal energies, but it has been nowhere previously established upon recorded experience, that the quantum of sickness annually falling to the lot of man is in direct proportion to the demands of his muscular power. So it would seem to be, however. Therefore, whatever scientific invention of machinery to save the expenditure of bodily strength may be devised, its production should be hailed as one of the greatest blessings to the sons of toil, and not ignorantly contemned by the very class whom in reality it ultimately benefits. A study of the following digest leads to the conclusion, that the inventor of any engine which spares the physical energies, diminishes the amount of human sickness, in proportion as he, by means of his advice, economizes the labor of his fellow-creatures."

The tables show that the liability to sickness runs up to a temporary maximum in the young man, and then declines, and does not attain the same per centage until advanced years. This sick maximum of early manhood—the effect of a primitive demand on the bodily vigor—is in the period from 18 to 21, except in the class engaged in out-door heavy labor, in which it appears to be at 14. The same per centage is reached, ever afterwards to increase, at the age of 48 in the class who have in-door heavy labor, 51 in the case of in-door light labor, 57 with out-door heavy labor, and 65 with out-door light labor.

These last remarks relate to the proportion of persons sick, not to the duration of sickness. The duration of sickness does not decline in manhood, but increases with the age. The severity of the railway employment according to these tables, tells upon the constitution; the men, it is said, get, "weather-beaten." In the police there is a marked increase in the amount of sickness after 40, as if the service broke down the men at an earlier age than other occupations.

The Millionaires of New York.

The New York correspondent of the Charleston *Courier* makes the following mention of the millionaires of that city:—

Wm. B. Astor is our richest man; he inherited his wealth. Stephen Whitney, five millions; owes his fortune to speculations in cotton and the rise in real estate. W. H. Aspinwall, four millions; came of a rich family, and gained vast increase of wealth in the shipping business. James Lenox, three millions; which he inherited. The late Peter Harmony, two millions; came to this city as a cabin boy, and grew rich by commerce. The Lorillards, two millions; came from France poor, and made their huge fortune in the tobacco and snuff business. The late Anson G. Phelps, two millions; learned the trade of a tinner, and made a fortune in iron and copper. Alexander T. Stewart, two millions; now of the dry goods palace—began business in a little fancy store.

Of these who are put down for a million and a half, George Law began life as a farm laborer, Cornelius Vanderbilt as a boatman, John Lafarge as steward to Joseph Bonaparte. Of the millionaires, James Chesterman began life as a journeyman tailor, and Peter Cooper as a glue maker. George Bancroft, Henry James, Professor Anthon, Thomas McElrath, and Dr. Francis are each stated to possess a hundred thousand dollars. Edwin Forrest is rated at a quarter of a million; so is Sidney E. Morse, of the New York *Observer*. Wm. Niblo, it appears, has four hundred thousand dollars, and Dr. Mott two hundred thousand. Barnum is put down at eight hundred thousand; Bennett at one hundred and fifty thousand. But perhaps the most remarkable statement of all is, that Mrs. Okill, of New York, has made a quarter of a million by keeping school.

How to Have a Good Horse.

It is not sufficient to have a good colt, the the product of superior mare with a stallion of good blood and established reputation. This is necessary, but it is not all that is necessary. A most promising colt, that attracts universal admiration while it follows the mare, may be grown into an almost worthless horse. How then, having a good beginning, shall we grow a good horse?—for good horses alone are profitable to raise. By exercising the greatest care in their management until they have ceased to be colts. Many almost ruin a colt the first winter by starvation, by turning it into the yard to run with the young cattle, to pick up a scanty nourishment, and that of the cheapest and coarsest food. There is on the other hand, no one season of its life, when care and good and full feeding of appropriate food will tell so much for good as this same first winter. A friend, who has annually sold two or three of the best horses at the highest market prices, has often assured us that at no one time in the life of his colts did he take so good care of them and feed them, as during the first winter; and that by the effect produced upon them the first year, he could tell what kind of horses they would become. There is something so absurd in scanting the supply of nourishment to young growing animals! Some fancy that such a course will render the animal hardy. The only effect produced upon the growing animal by an insufficient nutrition, is to hinder its best development. Wait until it has attained its growth, and then stint it if you choose. It can then be done with less injury.

Colts are often put to hard work at too young an age. It not unfrequently happens, that you will see a horse of five years, with all the wear and tear of ten in his appearance. This should never be. The exercise of the same judgment in the management of colts which most use towards children, would prevent this.

Colts should be put to exercise and training at an early age, and may do light labor to advantage, but putting upon four years the labor proper only for six or seven years, has been the ruin of many a promising animal. [Granite Farmer.

How Much a Laugh Costs.

Hugh Miller, in describing the hardships of his life as a mason, quartered in rude "barracks" or "bothies" and sometimes half starved, makes some observations that are worthy to be thought of by men who are made amateurs of slavery by the sight of negro merriment.

"One marked effect of the annual change which the north-country mason had to undergo, from a life of domestic comfort to a life of hardship in the bothy, if he has not passed middle life, is a great apparent increase in his animal spirits. At home he is in all probability a quiet, rather dull looking personage, not much given to laugh or joke; whereas in the bothy, if the squad be a large one, he becomes wild and a humorist—laughs much, and becomes ingenious in playing off pranks on his fellows. And yet, amid all this wild merriment and license, there was not a workman who did not regret the comforts of his quiet home, and long for the happiness which was, he felt, to be enjoyed only there. It has been long known that gaiety is not solid enjoyment; but that the gaiety should indicate little else than the want of solid enjoyment, is a circumstance not always suspected. My experience of barrack life has enabled me to receive without hesitation what has been said of the occasional merriment of slaves in America and elsewhere, and fully to credit the often repeated statement that the abject serfs of despotic governments laugh more than the subjects of a free country. Poor fellows! If the British people were as unhappy as slaves or serfs, they would, I dare say, learn in time to be quite as merry."

The True Gentleman.

He who acknowledges allegiance to a genuine law of honor, carries with him in the relations of life a high ideal of what is due from man to man in those relations, and keeps it before him as his standard of action. He is above a mean thing. He cannot stoop to a fraud. He invades no secrets in the keeping of another. He betrays no secrets confided to his own keeping. He takes selfish advantage of no man's mistakes. He uses no ignoble weapons of controversy. He never stabs in the dark. He is ashamed of inuendoes. He is not one thing to a man's face, and another behind his back.

If by a accident he comes in possession of his neighbor's counsels, he passes upon them an act of oblivion. He bears sealed packages without tampering with the wax. Papers not meant for his eye, whether they flutter in at his windows or lie open before him in unguarded exposure, are sacred to him. He profanes no privacy of others, however the sentry sleeps. Bolts and bars, locks and keys, hedges and pickets, bonds and sureties, notices to trespassers, are none of them for him. He may be trusted, by himself, out of sight—near the thinnest partition—any where. He buys no office He sells none. He intrigues for none. He would rather fail of his rights than win them through dishonor. He will eat honest bread. He tramples on no sensitive feelings. He insults no man. If he have rebuke for another he is straightforward, open and manly. He cannot descend to scurrility. Billingsgate doesn't lie in his track. From all profane and wanton dialect his lips are chastened. Of woman, and to her, he speaks with decency and respect. In short, whatever he judges honorable he practices towards every man. Whatever he judges dishonorable he discards.

Cost of Keeping a Fashionable Church.

One hundred dollars a Sunday is about the expense of a fashionable Church in Boston, we learn from a recent paragraph in the Boston Transcript. In New York the expense is not far from five times that sum. We will figure up the expenditures of one Church in this city, the affairs of which we happen to be somewhat acquainted with.

The Church, parsonage, library, etc., cost in round numbers, $500,000; the annual interest of which sum at seven per cent., is $14,000.

The pastor's salary is $4,000, that of his assistant is $500.

The presents annually given to the pastor, we believe, do not average less than $500; presents to his assistant, say five dollars.

The singing, with the salary of the organist, repairs of the organ, and wages of the blower, cost very nearly $1,600.

The costs of cleaning, including the salary of the sexton, will average about $900 a year.

The annual depreciation in value of the building and its contents, by use and time, may be computed at $1,000.

The cost, therefore, of maintaining the Church for one year is $22,505, which is equal to $432 78 per Sunday.

Forty smart mechanics, working steadily all the year, earn about as much as it costs to support this Church.

For $22,505 a year, two thousand children could be kept under instruction in good schools. It would maintain a College of five hundred students in the highest efficiency.

It would support twenty-two country Churches, or eight city Churches in a liberal manner.

However, we must add, that there are not more than ten Churches in the city conducted upon any thing like the scale of the one to which we refer; though there are three which probably exceed it. [N. Y. Life Illustrated.

A Balloon in a Thunder Storm.

Mons. Godard, Colonel Latham, and Messrs. Hoal, Crippen, and Belman, ascended in a baloon at Cincinnati, recently. It appears that they encountered a violent thunderstorm in the clouds, which drove the balloon on, it is stated, at the rate of 70 miles an hour, and that they attained an altitude of 17,450 feet. Mr. Belman thus describes their descent, after dark, and during the storm:—

"Suddenly we felt our car rushing over the tops of trees, crushing and tearing the limbs as the balloon was driven along. Mons. G. gave us the valve-rope, and mounting the side of the car, he ordered us to hold fast. In another moment we landed in a corn-field, and by the force of the wind we were dragged and bumped along the ground a distance of half a mile; now through a fence; then striking a stump of a tree, or whirling through the corn stalks at a fearful velocity; our heads rapped each other, and not unfrequently we saw stars all around. Up and down we went, when the car struck a tree, and Mons. Godard was hurled to the ground, a distance of thirty-five feet; the next moment we were crashing against a tall stump of a tree, when Col. Latham and Mr. Hoal, were thrown with great violence from the basket, the former on the back of his neck and shoulders, and the latter on his breast. Mr. Crippen and myself were left alone in the car. Mr. Crippen obeying instructions to keep in the bottom of the car, and I holding with all my might to the valve-rope, up we mounted. Fortunately we dashed into the limbs of a tall dead tree, and in an instant tree, balloon, car, and œronauts, were flat on the ground. Mons. G. had his lip badly cut, and the flesh lacerated on one of his limbs; Col. Latham an ankle sprained, head, shoulders, and body generally bruised; Mr. Hoal his breast crushed in, three ribs broken and otherwise badly bruised; Mr. Crippen with his head and neck "skewed," and generally scratched and bruised. I was bruised somewhat, but not materially injured.

TO PRESERVE PLUMS.—Make a syrup of clean brown sugar; clarify it as directed in these recipes; when perfectly clear and boiling hot, pour it over the plums, having picked out all unsound ones and stems; let them remain in the syrup two days, then drain it off; make it boiling hot, skim it, and pour it over again; let them remain another day or two, then put them in a preserving kettle over the fire, and simmer gently until the syrup is reduced and thick or rich. One pound of sugar for each pound of plums. Small damsons are very fine preserved as cherries or any other ripe fruit; clarify the syrup, and when boiling hot put in the plums; let them boil very gently until they are cooked, and the syrup rich. Put them in pots or jars; the next day secure as directed.

MILK CLEAN.—In some careful experiments made by Dr. Anderson, the quantity of cream obtained from the first drawn cup of milk was in every case much smaller than the last drawn; and those between afforded less or more as they were nearer the beginning or the end. The quantity of the cream obtained from the last drawn cup from some cows, exceeded that from the first in the proportion of sixteen to one. In others the proportion was not so great. "Probably," says Dr. Anderson, "on an average of a great many cows, it might be found to run as ten or twelve to one." The difference in the quality of the cream was also much greater than the difference in quantity. From this it appears, that the person who, by bad milking of his cows, loses but half a pint of his milk, loses, in fact, about as much cream as would be afforded by six or eight pints at the beginning, and loses, besides, that part of the cream which alone can give richness and high flavor to his butter."

TOUCHING DELICACY.—There were many little occurrences which suggested to me, with a great consolation, how natural it is to gentle hearts to be considerate and delicate towards any inferiority. One of these particularly touched me. I happened to stroll into the little church when a marriage was just concluded, and the young couple had to sign the register.

The bridegroom to whom the pen was first handed, made a rude cross for his mark; the bride who came next did the same.

Now, I had known the girl when I was last there, not only as the prettiest girl in the place, but as having distinguished herself in school, and I could not help looking at her with some surprise. She came aside and whispered to me while tears of honest love and admiration stood in her bright eyes—

"He's a dear good fellow, Miss, but cannot write yet; he's going to learn of me, and I wouldn't shame him for the world!"

WHO WOULD NOT BE A FARMER?—The Louisville *Courier* pays the following tribute to the occupation of the farmer:—"If a young man wants to engage in a business that will insure him in middle life, the greatest amount of leisure time, there is nothing more sure than farming. If he has an independent turn of mind, let him be a farmer. If he wants to engage in a healthy occupation, let him till the soil. In short, if he would be independent, let him get a spot of earth, keep within his means, shun the lawyer, be temperate to avoid the doctor, be honest that he may have a clear conscience, improve the soil so as to leave the world better than he found it, and then if he cannot live happily and die contented, there is no hope for him."

DRIED PEACHES.—Peaches as usually dried are a very good fruit; but can be made vastly better if treated in the right way. Last season the recipe, which had quite a circulation in the papers, of drying the fruit by a stove after halfing it and sprinkling a little sugar into the cavity left by the extracted pits, was tried in our family. The fruit was found to be most excellent; better to the taste of nine out of ten persons than any peach preserves by far. The peaches, however, were good ones before drying; for it is doubtful whether poor fruit can be made good by that process or any other. [Prairie Farmer.

VARIETY.

The secret of all success in life, of all greatness, nay, of all happiness, is to live for a purpose. There are many persons always busy, who yet have no great purpose in view. They fritter away their energies on a hundred things, never accomplishing any thing, because not giving their undivided attention to any one thing. They are like butterflies, that flit from spot to spot, never gaining wealth; while the ant, who strictly keeps to a certain circuit around her hole, gradually lays up stores for winter comfort.

America is the only country on earth that can by possibility lay any claim to the national capital of the globe. The researches of Lieut. Maury have demonstrated that by wind and wave, it is down stream from our country to all the world; and that all nations must ascend to reach it. With an ocean on either hand, its power descends with celerity to every country on the sphere; and that too, from even the deepest interior of the country.

An argument arose (says Sydney Smith,) in which my father observed how many of the most eminent men of the world had been diminutive in person, and after naming several of the ancients, he added, "Why look there at Jeffery; and there is my little friend —— who has not body enough to cover his mind decently with; his intellect is exposed."

One of the curiosities of Paris, is the enormous vine which ornaments the court of a house in the Rue des Marias St. Germaine. It is said to have been planted by Racine, and supposing that he did it in the last year of his life, the vine must be now about 156 years of age, as that celebrated writer died in 1699. It is this year in a flourishing condition, and covered with fruit.

Cist's Advertiser, Cincinnati, estimates the wheat crop of this year in the United States at one hundred and eighty-five millions of bushels! Of this mountain of breadstuffs Ohio, yields forty, Pennsylvania eighteen, Virginia thirteen, New York fifteen, Illinois twenty, Indiana fifteen, Michigan nine, Wisconsin eleven millions of bushels each.

A human foot-print, too perfect in shape and proportions to be doubted, was taken from the Middlesex Freestone Quarry, at Portland, Me., last week. It is apparently the footstep of one of the Aborigines, and doubtless some of the primitive tribes, as it exhibits unmistakable evidences of the original Moccasin. This specimen was taken at the depth of 60 feet in the rock.

A paper maker in the south of France makes a pulp of five common plants, in certain proportions, with 20 per cent. rags, and produces a paper not distinguishable from pure linen, and which is of excellent quality, and can be afforded at half-price. It is stated that a large company has been founded in Paris for its manufacture.

At the recent (and fifth annual) meeting of the American Association for the Advancement of Science, Professor Pierce, of Cambridge, said some of our colleges were too much like manufactories, and assumed to turn out educated men as though they were screws or pins!

Dr. Baillie once said that "all his observation of death-beds inclined him to believe that nature intended that we should go out of the world as unconscious as we came into it." "In all my experience," he added, "I have not seen one instance in fifty the contrary."

In a new book by Dr. John Davy, we find the theory that sea fish, besides being nearly as nutritive as butcher's meat, contains more or less iodine, and therefore prevents the production of scrofulous and tubercular disease, such as pulmonary consumption.

Thirty millions of people in Great Britain only purchase and read ninety millions of newspapers in a year, whilst the twenty-five millions of the United States require over four hundred millions.

Thoughts and theory must precede all action that moves to salutary purposes, yet action is nobler in itself than either thought or theory.

New Steamboat Line for Albany and Troy.
From Pier 15, foot of Liberty-st., at 6 P. M

STEAMER RIP VAN WINKLE, C. W. Farnham, Commander, Monday, Wednesday and Friday, at 6 o'clock, P. M.; steamer COMMODORE, L. Smith, Commander, Tuesday and Thursday, at 6 o'clock, P. M., and SUNDAY, at 5 P. M.

Fares: Saratoga, $1 50; Moreau, $2 15; Fort Edward, $2 15; Whitehall, $2 75; Castleton, $3 10; Rutland, $3; Burlington, $4; Rouses Point, $5 50; Montreal, $7 50.

These Boats will arrive in Albany or Troy in ample time to form connections with all the Railroads, North, East or West, enabling passengers to reach Montreal and intermediate points the same day.

These Steamers are of the first class for strength and speed—well-known favorities of the public—having been thoroughly overhauled during the past winter, and offer every accommodation that can be desired by either freighter or traveler.

Through tickets can be obtained on board the boat for Saratoga, Moreau, Fort Edward, Whitehall, Castleton, Rutland, Burlington, Rouse's Point and Montreal

The Northern Freight Express will give Bills of Lading to all points as above named. Shippers who desire it, can have time receipts, by applying at the office on the Pier. A. A. DYKEMAN.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood: in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons, publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been, and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY—
By the Seventh-day Baptist Publishing Society,
AT
NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

ADDRESS OF REV. N. V. HULL,

Delivered before the American Bible Union, at its recent Anniversary in New York.

Truth is common property—the common and unalienable inheritance of our race. It is not only common property, but it also has a common value. As light is to the eye, so is truth to the soul. As food is for the body, so is truth for the mind. Truth is a blessing, and a blessing God given. He that withholds common truth from another is unfaithful to God and unjust to man; for in this every man is made a steward of God for men. And he that seeks not after truth as for "hid treasure," wrongs his own soul; and he that does not obtain the truth within his reach at whatever cost, and retain it at whatever risk, disobeys the voice of wisdom when it says, "Buy the truth, and sell it not." Prov. 23: 23. And yet, sir, truth is so precious, so valuable, that it is more than a compensation for any outlay we may make in order to obtain it. *But it is only so to him who loves it, to him who esteems it* "BETTER THAN RUBIES." I have been called upon, sir, to make some sacrifices, in my experience, for the truth; yet, from the day that my heart was, as I trust, renewed by grace divine, to the present moment, every sacrifice has only made the truth dearer to me, and the rewards she has brought and laid at my feet, and the bliss she has poured into my soul, have been ample and glorious. I propose, then, as a theme for the present occasion:

Truth the divinely-appointed food for the Soul.

As I am a plain man, and as I speak to-day in behalf of plain men, I will indicate the course of reasoning pursued by such, in proof of the above proposition, and its application to the *objects* and *aims* of the "*American Bible Union.*"

I. The soul of man was made in the image of God. Gen. 1: 27—"So God made man in his own image," etc.

II. Though, in the fall, this "image of God" was "marred," yet, by the regenerating grace of God, it is in an important sense restored. Eph. 4: 24—"And put ye on the new man, that in God is created in righteousness and true holiness." See also 2 Cor. 5: 17.

III. As the soul was made in the image of God, and was, therefore, fitted to have communion with him, it naturally, from the laws of its regenerated state, seeks after him. See Ps. 42: 1, 2—"As the heart longeth for the water brooks, so longeth my soul for thee, O God" "My soul thirsteth for God, for the living God; when shall I come and appear before God?" Also Ps. 63: 1, &c.

IV. God is pure and holy, the essence and fountain of all truth. Exod. 34: 6—"And *Jehovah* passed by before him, and proclaimed, *Jehovah, Jehovah,* God merciful and gracious, long suffering and abundant in goodness and truth." Also, Ps. 57: 10, and Jer. 10: 10.

V. Therefore, "Truth is the food of the Soul." Ps. 25: 5—"Lead me in thy truth, and teach me, for thou art the God of my salvation; for thee do I wait all the day," and 43: 3, and John 17: 17. Also, Eph. 5: 26, 2 Thes. 2: 13.

VI. But this truth is found mainly, and in an important sense, in the Holy Scriptures. Ps. 119: 142—"Thy righteousness is an everlasting righteousness, and thy law is the truth." See also Ps. 119: 151, and 119: 11, and 1: 1—2. Also 2 Tim. 3: 16, 17—"All scripture is inspired of God," &c. So also Rom. 15: 4, and John 18: 17—"Sanctify them through thy truth, thy word is truth."

VII. But the "common people" are dependent upon the learned for the *rendering* of that Word. This is self-evident. The Scriptures were originally given in languages to us unknown; therefore, before we can read them they must be translated into our own tongue; also into all the languages of the world, for our "common salvation" is designed for *all.* See the commission given by Christ to his disciples, Matt. 28: 18, 20. To refuse, then, to give to all men the Word of God, is to deny their *right* to it. But to deny their *right to it* is to deny their right to its *contents.* To deny their right to its contents is to deny their *need* of religious instruction. To deny their need of *religious instruction* is to deny their sinfulness, and to deny this is to deny the Word of God. See Rom. 3: 10, 18; also 3: 23—"For all have sinned and come short of the glory of God."

VIII. But an *unfaithful* rendering of the word is to take from the people the *truth,* and to give them in its place *a falsehood,* and that too in the name of the Lord! And this also is self-evident, for, as the word originally given was the word of the Lord, so the word rendered is only so far His as it is faithful to the original. Every instance, then, of unfaithful rendering of that word is to withhold from the people the truth, and in its stead to give them a lie, and this too in the name of Him who is the unchanging "father of lights!"

IX. This brings us to consider—
1st. The duty of translators; and,
2d. Their responsibility.

(1st.) The duty of translators to be faithful, is not only *manifest* but *imperative.* In the work of translation, they become mouth *for* God *to* men. The *honor,* therefore, of God, and the *interests* of men, require it of them, that they be faithful. Every instance of unfaithfulness of rendering his word dishonors God, for it misrepresents Him—makes Him appear in a false light. He is, therefore, discredited. For the sake, then, of the honor of Him who said: "I will not give my glory to another," (Isa. 42: 8,) His word should be faithfully rendered. But the *interests* of man require, also, that this word be faithfully rendered. If man had no interest in the revelation which God has made, why then was it made? Such a sentiment reflects upon the *wisdom* of God. But all the interest that he could have in it, was in it as made by God. It will not be doubted, that whatever interest man had in it, God knew, and that, to provide for that interest, the revelation was made. But, to suppose that God did not provide exactly and completely in the revelation made, is to charge Him with imperfection. We say, then, that all the interest that man has in divine revelation, is in it as God made it. But that word, unfaithfully rendered, ceases to be the word of God, and becomes the word of men. With that, then, ceases man's interest in it. Again, when an unfaithful rendering of the word is given as the word of the Lord, a gross and wicked deception is practiced upon the recipient; and so far as his interest in that word is concerned, he might, in just so much as it is false, as well be without it. All the interest, then, that we have in having a revelation at all, centers in our having a faithful one.

(2d.) As to the responsibility of translators in this matter, it is equal to our highest conceptions of divine realities. There is not only the honor of God and the interests of man concerned here, but the eternal interests of the translator himself are also involved. Nor can he relieve himself of this responsibility by saying he is simply in the employ and under the direction of others, *for no man can withdraw his allegiance from God, or make himself simply responsible to men.* "*To me,*" says God, "*every* knee shall bow." But hear the word—Prov. 30: 6 [illegible] thou not to His words, lest he reprove thee, and thou be found a liar." Rev. 22: 18, 19. See also Deut. 4: 2, and 12: 32.

X. But it may be objected to the work of the *Union,* that it is uncalled for. I ask, What is that work? Why, simply to make an honest effort to furnish faithful versions of the word of God, both in our own and other languages. If it be replied, that we have a version in our own language, and therefore the labor of the Union is uncalled for, I ask, Have we a *faithful* version? If any one should answer that we have, I should wonder at his temerity, *for there is not a critic, living or dead,* who *does not affirm the contrary.* But if it be asked whether our translation be not a very excellent one, one that we should love and respect? I answer, YES! But I also reply, not for its evident inaccuracies, for it is only to be respected in so far as it faithfully reflects the mind of the Holy Spirit. Our object is not to degrade or underrate the copy of the scriptures that we have, not to "make a new Bible," *but to secure a more perfect translation.* And now I seriously ask, if there is but *one* known error in our present version, would it not be desirable to have it removed? If so, much more when there are *many!*

XI. One thought, sir, as to the duty of the whole Church to engage in this work. Of the Church, the whole Church, Jesus says, "Ye are the light of the world—the salt of the earth." And in this connection he commands the Church, "Let your light shine." I ask, then, in what way can the Church, so far as any individual act is concerned, let her light shine so perfectly, as by giving to the nations a faithful record of the Divine will? Sir, to withhold the word of the Lord from the moral world, would be like withholding the orb of day from the natural world. To give it, mistranslated, is like giving the sun, set in a sky overcast with thick clouds. But why argue this question? How difficult, indeed, the task of illustrating an axiom! Whose simple *Christian* heart does not desire the *pure* word of God? How manifestly, then, sir, is it the duty of the Church to give that word to the desiring, longing, humble Christian, and to the millions of earth's benighted pilgrims in this vale of tears.

PUBLIC WORSHIP IN SWITZERLAND.

The mode of public worship varies greatly in different countries and different ages, and our readers may be interested in a description of the customary services in the National Church of Switzerland, which we take from the *News of the Churches:*—

The principal service during the summer season takes place at nine o'clock in the morning. About ten minutes before the hour appointed for its commencement, the schoolmaster of the town ascends the pulpit, and reads one or more chapters of the Bible, usually from the New Testament. At the same moment the bells begin to ring, and the congregation to assemble. The effect of this is very objectionable. The people regard the reading of the Bible as something merely introductory, which is to occupy their time while they are taking their seats; little or no attention is consequently paid to it. In fact, the noise is generally so great as to make it impossible to hear what is read. This is more particularly the case in cold weather, when the ladies bring their *chauffepieds* to church (little wooden boxes filled with hot embers, on which they place their feet.) At nine o'clock the bell stops, and the schoolmaster proceeds to read the Ten Commandments, together with our Lord's summary of them in the gospel. While these are being read, the minister enters the church in his robes, and takes his seat near the pulpit. At their conclusion he ascends the pulpit, and takes the schoolmaster's place. He begins by reading a public confession of sin, the people standing, but not responding. A hymn is next sung, in which all the congregation join, sitting. The minister then offers an extempore prayer, at the close of which he gives out his text from a large Bible, the people continuing to stand till the text has been read. Then follows the sermon, delivered usually from memory, without notes. In Lausanne and Geneva it is the practice to repeat the same sermon on successive Sundays in each of the churches of the city; this is an idle habit, and tends, I fear, to formality and the love of display. A sermon is thus prepared once in three or four weeks, with much assiduity and the recital of it is carefully practiced, and then this said sermon is repeated from memory on three or four successive Sundays before each of the congregations of the town. After the sermon is over, liturgical prayers are read, concluding with the Lord's Prayer and the Apostle's Creed. A second hymn is sung, and the congregation is dismissed with the blessing.

For the Sabbath Recorder.

GEOLOGICAL DEMONSTRATION.

It is quite a mystery to some of the readers of the *Sabbath Recorder,* as to how our modern geological scholars can measure ten miles of the earth's thickness. Many, who would appear very unseemly at a modern geological school, yet want to know how the thing can be done. I have, therefore, thought it might be a charitable work to give them one easy lesson upon the subject.

Here it is: Know, then, my good reader, that no geologist pretends to go down that depth into the earth, to measure and explore. O no, according to his theory he would there [illegible] he says the rocks have come up to us, and we measure them on the surface of the globe! The lowest rocks in the natural series are granite; these are never found on the tops of high mountains. The earth's crust has in places been forced outwards by inside pressure, forming long chains of mountains, leaving the layers, of which that crust is composd, tilted up upon their edges. Granite, the lowest rock layer in the original crust, when thus forced outwards, is the highest; it is thus it forms the ridges of mountain ranges. On the centre of those mountain ridges, there is a discernable dividing line where the granite layers come together. On each side below these granite layers there is a layer of secondary rock, of similar thickness, and of the same composition, similarly stratified, and containing similar fossils; then follow other layers down both sides of the mountain, each agreeing with its fellow, the same as in the first series, until the whole series is completed. Now, says the geologist, it is plain, these two layers of granite were once one. So with the two layers of stratified rock that follow, one on each side, and the granite was once beneath them, and the secondary beneath the third, and so on through the series.

Now for the measurement. The geologist ascends to the top of the mountain, finds the dividing line, and travels off to the right hand as far as the granite goes, measuring the distance. Then he travels over the secondary layer, and measures that. So he measures every layer, until he comes to the one which he now calls the outer layer of the earth. He adds these together, and finds them measure ten miles. He then goes back to the place of beginning, and commences again upon the dividing line, and measures off to the left hand in the same way as before, finds that each layer matches with its fellow on the opposite side; he says the distance is so nearly alike, that he has no doubt they were once lying horizontal, and were joined together, but were thrown up by some convulsion or convulsions of nature. This, he says, is their arrangement the world over. So he has measured ten miles of the thickness of the old earth, and seen for himself the work of millions of ages of nature's great laws!! Bah! That's a great lesson! Easily learned! Hurrah for the mathematical accuracy of the geological schoolmen! This is the A B C of the science; the full demonstration; and the other parts follow quite as easily to geological believers in revelations made by dumb rocks, fossil shells, old lizards' bones, mammoth skeletons, and petrified logs, and other mineralized vegetable remains found in the mud drifts of an ocean older than the HEDDOMADAL CREATION.

S. D.

At Honsroyk, near Utrecht, it is said, that the aged school teacher *Van Noort,* after having been suspended for six weeks in 1852, for permitting the children *to read the Bible,* and instructing them in what they read, has recently been indefinitely suspended, by the municipal authorities, for his continuing to give doctrinal instruction in his school.

From the London Athenæum.

IS IT COME?

BY FRANCES BROWN.

Is it come? they said on the banks of the Nile,
Who looked for the world's long-promised day,
And saw but the strife of Egypt's toil
With the desert's sands and the granite grey.
From pyramid, temple, and treasured dead
We vainly ask for her wisdom's plan;
They tell of the slave and tyrant's dread—
Yet there was hope when that day began.

The Chaldee came with his starry lore,
That built up Babylon's crown and creed;
And bricks were stamped on the Tigris' shore
With signs which our sages scarce can read.
From Ninus' temple and Nimrod's tower
The rule of the old East's empire spread—
Unreasoning faith and unquestioned power—
But still, Is it come? the watcher said.

The light of the Persian's worshiped flame
On ancient bondage its splendor threw;
And once on the West a sunrise came,
When Greece to her freedom's trust was true.
With dreams to the utmost ages dear,
With human gods and with godlike men,
No marvel the far-off day seemed near
To eyes that looked through her laurels then.

The Roman conquered, and reveled, too,
Till honor, and faith, and power were gone;
And deeper old Europe's darkness grew,
As wave after wave the Goth came on.
The gown was learning, the sword was law,
The people served in the oxen's stead;
But ever some gleam the watcher saw,
And evermore, Is it come? they said.

Poet and Seer that question caught
Above the din of life's fears and frets;
It marched with letters—it toiled with thought,
Through schools and creeds which the earth forgets;
And statesmen trifle, and priests deceive,
And traders barter our world away;
Yet hearts to that golden promise cleave,
And still, at times, Is it come? they say.

The days of the nations bear no trace
Of all the sunshine so far foretold;
The cannon speaks in the teacher's place—
The age is weary with work and gold;
And high hopes wither, and memories wane—
On hearths and altars the fires are dead;
But that brave faith hath not lived in vain;
And this is all that our watcher said.

THE HALF-DAY SACRIFICE.

Some years ago, in the village of C——, on the Hudson river, a pious mechanic plied his trade. He worked like one having two callings, being "diligent in business," and at the same time "fervent in spirit, serving the Lord." His fellow workmen in the shop were irreligious. Some of them were disposed to scoff. Others showed that they were influenced by the Christian example and counsels of their shopmate, who at length discovered that one of them was deeply affected by a sense of his sinfulness. He took courage, and earnestly sought to guide his [illegible] to the Saviour. "Oh, come to Christ," he said; "He *can* save you: come, for He is *willing* to do so."

"I believe all this," was the answer, "and yet, I do not know why, but it seems something is dark. May be, *I* am an exception to God's mercy?"

"No such thing. The gospel knows no such exception. 'Him that cometh unto me I will in no wise cast out.' Give your heart to Christ, and he will surely accept and save you."

"Why, that it is just what I want; for I'm tired of trying to settle this thing myself. Are you *certain* of what you say?"

"To be sure I am. God says, 'My son, give me thy heart.' He is more ready to give you the Holy Spirit than you are to ask it of him. See here; would you be willing to lose a half day to attend to this subject now?"

"Yes, gladly—anything if I could only find Christ."

"Then knock off work, and come with me." And the two put on their coats, and took their way to a grove back of the village.

"Now, do you really feel your need of a Saviour?"

"Oh, I am truly wretched—my heart is heavy. I'm miserable—I feel so vile; but I can't *tell* all I feel."

"Well, God knows all about it; and it's His mercy that has shown you the truth, that you are so sinful. But do you honestly and heartily desire a Saviour?"

"Desire? I must have a Saviour! I can't live without. Why, I feel lost!"

"So you are. And Jesus came to seek and to save the lost. He's been seeking you a long while; suppose you set out to seek him now! The Bible says Nathaniel prayed under a fig tree; why not go and pray for yourself under that big pine tree? and I'll pray at the same time."

The two then separated, and in that quiet place the sinner cried for mercy, and his friend a little way off also joined his prayers. After a while the weeping man came back, and complained that the heavens seemed brass, and God's grace shut off.

"Go again; you must not give it up. 'The kingdom of heaven suffereth violence, and the violent taketh it by force.' Go back. A blessing must come. Let us ask the Holy Spirit to help us besiege the throne of grace."

And again they prayed; the poor man with increased earnestness; his friend with greater love. But back came the horror-stricken man. "Oh, I can't stand it; I can't stand it! God *has* given me up. And I deserve it all. What *shall* I do? God have mercy on me."

"God *will* have mercy. How I wish you would believe it. *Do;* it's true—*Bible* truth. They that call upon the Lord shall be saved. It's not because God lacks mercy, or because a Saviour is not ready. No; but it's because you don't fairly believe God. Now, Dick, it's too bad in you, a sinner that God's done so much for. Go back and pray again. Ask him to forgive this last sin of unbelief. Then perhaps it'll be all right. Go, now; wrestle with the covenant Angel, and don't let him go till he bless you."

Once more they prayed apart; but scarce a minute had been so spent ere joy burst like a spring in the pious workman's breast. He thought his comrade had found the blessing. And behold, he saw him coming with smiles on his face, and tears in his eyes. "It's all gone; the load's gone. I feel light here," said he, putting his hand on his heart. "Oh that weight is gone. I trust God has pardoned all my sins."

"Yes, my brother, and blessed be his holy name," said the other; and both wept and rejoiced together. The incident soon became known in the church. It brought joy to God's people, and thoughtfulness to sinners. A revival of religion followed, and about forty were added to the sacramental host.

This narrative unfolds a *fact.* How great a power is committed to a pious layman's hands. How much undeveloped energy has the church, in the latent influence of her members. Oh, it would look a fearful thing, a shocking waste of strength, could we estimate the amount of these unused resources.

And is not an *inference* warranted here, that if this lay influence were rightly exerted for Christ, the church would move onward, "fair as the moon, clear as the sun, and terrible as an army with banners."

Permit also a *reflection.* Did not that good man's zeal add immensely to his own Christian growth? And what a blessing to be the occasion of such a descent of the Divine love. Think of the reward. Who would not wish such a constellation of immortal stars in the crown of his rejoicing? "He that winneth souls is wise." [Am. Messenger.

CARRYING AWAY THE LAMBS.

When the shepherds of large flocks of sheep cannot succeed in separating the dams from the rest, because their young ones are among them, they will carry away their lambs in their arms to a better pasture, and then the dams willingly follow. Ah! "the good shepherd" has often to adopt the same method! To separate his chosen ones from the rest of the world, he is compelled to carry away the lambs of the human flock in his warm bosom to heaven; and then bereaved parents gladly follow. The poet has drawn a very beautiful and touching simile from this well-known practice of pastoral life:

"A shepherd long had sought in vain
To call a wandering sheep;
He strove to make its pathway plain
Through dangers thick and deep.

But yet the wanderer stood aloof,
And still refused to come;
Nor would she ever hear reproof,
Or turn to seek her home.

At last the gentle shepherd took
Her little lambs from view!
The mother gazed with anguished look—
She turned—and followed to!"

The late Dr. Payson, when engaged in paying pastoral visits to his spiritual flock, happened one day to enter "the house of mourning," and there he found a disconsolate mother, whose darling child had just been "taken from the evil to come," whom he thus addressed: "Suppose, now, some one was making a beautiful crown for you to wear; and you knew it was for you; and that you were to receive it and wear it as soon as it should be done. Now, if the maker of it were to come, and, in order to make the crown more beautiful and splendid, were to take some of *your jewels* to put into it, should you be sorrowful and unhappy because they were taken away for a little while, when you knew they were gone to make up your crown?"

It is by the dark seasons of the night, which is far spent, that we are prepared for the dazzling effulgence of the eternal day.

GOOD ADVICE.

The Hon. Edward Everett recently delivered an address to the pupils of the public schools of Boston, which closed with this language:—

"Let your present superior good fortune, my young friends, have no other effect than to inspire you with considerateness and kind feelings towards your schoolmates. Let not the dark passions, and the base, selfish, and party feelings, which lead men to hate and vilify, and seek to injure each other, find entrance into your young and innocent bosoms. Let those early honors lead you to a more strict observance of the eleventh commandment towards those whom you have dishonored in those school-day rivalries, or who, from any cause, have been prevented from sharing with you the enjoyments of this day; and as all of you may not exactly know what the eleventh commandment is, I will end a poor speech by telling you a good story.

"The celebrated Archbishop Upsher was, in younger days, wrecked on the coast of Ireland, at a place where his person and character were alike unknown. Stripped of every thing, he wandered to the house of a dignitary of the Church, in search of shelter and relief, craving assistance as a brother clergyman. The dignitary, struck with his squalid appearance after the wreck, distrusted his tale and doubted his character, and said that so far from being a clergyman, he did not believe he could even tell how many commandments there were. 'I can at once satisfy you,' said the Archbishop, 'that I am not the ignorant impostor you take me for. There are eleven commandments.' This answer confirmed the dignitary in his suspicions, and he replied with a sneer, 'Indeed, there are but ten commandments in my Bible; tell me the eleventh, and I will relieve you.' 'Here it is,' said the Archbishop, 'A new commandment give I unto you, that ye love one another.'"

"THE CONSECRATED COBBLER."

When William Carey went to India, many a wise man would have said to him, "You may just as well walk up to the Himalaya mountains, and order them to be removed and cast into the sea." I would have said, "That is perfectly true, this Hinduism is as vast and solid as those mountains; but we have faith—not much, yet we have faith as a grain of mustard-seed;" and William Carey said, "I will go up to the mountain." Lonely and weak, he walked up toward that mountain, which in the eye of man seemed verily one of the summits of human things, far above all power to touch or shake it; and with his own feeble voice he began saying, "Be thou removed, be thou removed!" And the world looked on and laughed.

A celebrated clergyman, looking down from his high place in the Edinburg Review, was much amused with the spectacle of that poor man down in Bengal, thinking in his simple heart that he was going to disturb Hinduism; and from his high place he cast down a scalding word, which he meant to fall, just as of old boiling lead used to fall upon a poor man from the height of a tower. He called him a "consecrated cobbler." All the wise world laughed, and said he was treated as he ought to be treated. However, he went on saying to the mountain, "Be thou removed, be thou removed!" and one joined him, and another joined him; the voice grew stronger; it was repeated in more languages than one: "Be thou removed, and be thou cast into the depths of the sea!" and now there is a large company who are uttering that one sentence, "Be thou removed!"

I ask the living representatives of the very men who first smiled at this folly, "What say ye now?" "Well," they answer, "you have not got it into the sea yet." That is true; but do you say that the mountain, during the last forty years, has not moved? No man can say that it is in the same position as it was when William Carey first went up to it. It is moving fast; and I call upon you to swell that voice, the voice of God's church, which seems to say, "Be thou removed; be thou removed, and be thou cast into the depths of the sea!" Cast in those depths it will be; and a day will come when the nations of a regenerated East will write in letters of gold upon the first pages of their Christian history the name of the "consecrated cobbler." [Arthur's Missionary Speech.

PREACHING THE GOSPEL.

Dr. Sprague tells the following anecdote of an evangelical clergyman of the English church, named Jones. The story was given him by the Rev. George Burder:—

Mr. Jones had a college classmate who entered the ministry at the same time with himself, but he was a mere man of the world, and knew little and cared nothing of the true gospel. This man, conversing one day with Mr. Jones, said to him, half jocosely, half seriously—

"Why is it that you are so popular as a preacher, and so few come to hear me, when everybody knows that at the university I was considered greatly your superior?"

"Why," said Mr. Jones, "the reason is that I preach the gospel."

"The gospel!" said the other, "so do I, always every text I preach upon is from Matthew, Mark, Luke, or John."

Said Mr. Jones: "You may do that, and yet never preach Jesus Christ."

"Well," said the other, "lend me one of your sermons, and see what effect it will have."

He did lend him one, and he preached it, as he had engaged to do, and as he was coming out of the church at the close of the service, he was accosted by a man, who, in listening to the borrowed discourse, had been thrown into a state of anxiety in respect to his salvation.

Says the minister, somewhat confused by the strange result of his preaching—"Wait, wait, say nothing about it till the people have gone out."

After the congregation had retired, the anxious inquirer began further to explain himself, when the clergyman interrupted him by saying—

"But what is the matter with you? I see no occasion for making yourself so unhappy."

"Matter," replied he, "why, your preaching has made me feel like a condemned criminal, and I fear there is no mercy for me."

"Well, really," said the minister, "I am very sorry that I have wounded your feelings—I had no intention of doing it; but, since you have got into this uncomfortable state, I advise you to go and see Mr. Jones."

"FOR MOTHER'S SAKE."

A father and son were fishing near New York city recently. The boat was suddenly capsized, and they were thrown into the water. The father, who was not an expert swimmer, while his son could not swim at all, at once commenced to aid the lad. He, seeing that his father was becoming exhausted, calmly said to him, 'Never mind me; save yourself for mother's sake.' God bless that boy, and God be thanked that both his father and himself were rescued from the peril in which they were involved.

'For mother's sake.' There spoke a true son and a true hero. He knew that his tender years ill fitted him to support and sustain her who bore him—that if his father perished, she might be reduced to want as well as steeped in sorrow—that if the oak fell the ivy would fade and die. So he bid his soul be quiet amid the troubled waters, amid the excitement and apprehension that such a scene must engender, and resolved to die for his mother, unless, indeed, some hand was stretched forth for his safety and the safety of his father. It was all right, because it was done 'for mother's sake.'

Would we say the same thing under the same circumstances? Would you, boy? you, young man? you, man of years and sorrows? While you admire the young hero for his intrepidity and affection, do you feel that you would imitate his example if occasion required? Do you love, do you prize your mother?

He who propounds these questions is motherless. Years twain have passed since the wrinkled, gray-haired matron, who called him son, laid off the dusty vestments of earthly travel, and was clothed in the garments of the saints. He tells you—and his words are wrung from suffering experience—that if you love not your mother, do not prize your mother now, you will hereafter. Death opens the fountains of surviving hearts, and loss shows us how little we esteem possession.

It is well to hold up an example like the one we have quoted to the public gaze, for, by so doing, some hard heart may be softened, some vascillating heart confirmed, some warm heart made warmer. A man is safe who inscribes this motto upon his phylactery—'For Mother's Sake.' [Buffalo Express.

RESPONSIBILITY FOR OPINIONS.

Undisguisedly, and with all fidelity, we accord to every man the right of private judgment respecting the meaning of God's word. Neither Pope nor Council has the right to control him in this matter.

We also acknowledge every man's right to tell his opinions to others. But it is clear, that those to whom he tells them have, also, the right of judging whether his opinions are true or false, and of receiving or rejecting them accordingly. Just as clearly, may they take measures to protect themselves against the corrupting influence of his opinions, if they have good reason to think them erroneous. No man has a right to urge his views upon others under the pretext that it is his prerogative to inculcate what he pleases.

When Christians associate themselves together in church organization, a free interchange of views respecting what the Scriptures teach is implied by the very nature of the association. For the object of the association being to edify one another, they must, of necessity, found their mutual counsels and exhortations upon what they suppose to be the teachings of the Bible. Yet, as the right of self-preservation from the pollutions of error includes the right of refusing a hearing to those who inculcate it, it is evident that the interchange of views which church fellowship implies, includes the right of rejecting from fellowship those who do not conform their teachings and exhortations to truth. We do not say, that one should be rejected from fellowship merely on account of his *opinion*, but for his *inculcation* of that opinion. Indeed, so long as he holds his opinion to himself, making no attempt to communicate it, it is evident that it cannot become the ground of church action. It is only when his opinion is published, and becomes a source of danger, that the church can, and ought to, institute proceedings with reference to it.

Some make loud complaints, when any inquiry is raised about their doctrine, assuming that the right of private judgment should shield them in the indulgence of whatever sentiments may be agreeable to them; and if the inquiry is carried to the point of disowning them from church fellowship, they not unfrequently succeed in getting themselves regarded by the unthinking multitude as persecuted for opinion's sake. But they forget that the very nature of church fellowship gives their brethren a right to their opinions. For having banded together for mutual edification, they are bound to watch over, exhort, and instruct one another, and therefore to communicate to one another such views of the Scripture as will contribute to the proposed object. If their views, upon being submitted, are found to be at variance with the truth, and of dangerous tendency, it is the right of their covenant brethren, not only to reject such views, but to reject the brother who inculcates them, if he cannot be reclaimed. For on what reasonable pretext can a man claim to be continued in fellowship, when his opinions render it impossible for him to contribute, any longer, to the object for which the fellowship was established?

In our opinion, no church member has cause to complain when his doctrinal views are looked into by his brethren. It is highly important that they should be; and the importance of it is increased in proportion to the prominence of the position which the member is called to occupy. A minister of the gospel claiming the right of private judgment, in matters of religion, to the extent of being screened from all inquiry as to his views, makes a most unreasonable and preposterous demand upon the forbearance of those to whom he has pledged fellowship. Not that he is under any obligation to surrender his judgment to their's, nor does the inquiry which they may institute imply any such thing. It would not amount to so much, even if the inquiry should eventuate in his dismissal. His brethren do not ask such a thing, when they institute their inquest. All they ask—all they propose by even the extremity of ecclesiastical proceedings—is that the relation between him and them be so modified as to preserve them from his errors, and to clear them from the responsibility of participating in them.

There is a sense, in which men are responsible only to God for their opinions. But it does not follow, that they are, in no sense, responsible to one another. By their opinions they influence one another, for good or evil, and their mutual responsibility is just in proportion to the amount of influence they are capable of exercising. And since this responsibility exists, it is clear that the right of private judgment must be exercised in harmony with it. Such absolute exemption from responsibility as some men dream of, is sanctioned neither by reason nor Scripture.

T. B. B.

Missions in Polynesia.—It is remarked that Protestant Missions in the Islands of the Pacific have been more successful, judging by the number converted and brought into the Christian church, than in any other part of the world; though we may hope ere long to hear of myriads of converts in Turkey and China. According to the last enumeration there were 119 missionaries (English and American,) 45,929 communicants, and 54,708 scholars. And connected with the stations were 239,900 **Protestants, so far as speculation is concerned.**

LETTERS FROM PALESTINE—NO. 15.

Journal continued from the last number.

Jerusalem, June 15th, 1855. The close and impure air within the walls of the city, which is builded as a city that is compact together, (Ps. 122: 3,) obliges us to seek daily the fresh sea breeze without the walls. We generally walk out an hour or two hours before sundown, and find the exercise very refreshing. In these walks we frequently meet with some to whom we speak of the Saviour and His love to dying men. Our address is short but pointed, and generally understood. Thus little by little, with line upon line, and precept upon precept, and accompanied by prayer, we do hope to produce conviction, and by the aid of the Spirit to lead some to Christ. Taking my daughter out of Zion's gate, where I wished to point out to her objects of interest in Bible history, we met a Catholic priest just arrived from Italy. He said he had there suffered in prison for reading the Bible. He was still in the church, but expressed a strong desire to get away from her control. He appeared anxious to go to America. I turned the conversation upon the mediation of Christ and of salvation alone through His shed blood. Before leaving him, I endeavored to show him the truth of God upon the subjects of the Sabbath and Baptism. He showed me some Protestant tracts which he had received from that good man and successful independent missionary, Bro. A. Roberts, the same who accompanied us on our first trip to Jerusalem. In order to have more religious conversation, I invited the priest to my house, to partake with us of our evening repast.

16th—Sabbath. Rev. Mr. C. and lady called just as the Sabbath was drawing nigh. Bro. K., my Hebrew teacher, called and spent most of the forenoon conversing upon religious subjects. Held a meeting in the afternoon at Mr. S. R.'s, where Bro. Saunders is stopping. Spoke from John 4: 24. Thought we had a good time. After service Mr. R. put a number of questions to me on the Sabbath. I tried to answer them in a brief but plain manner. He denied the Sabbath to the Gentiles—that it was impossible to keep the Sabbath in cold countries; then the Sabbath had been changed to First-day; and then, again, it had been abrogated; the seventh-day Sabbath, like circumcision, belonged to the old dispensation; we have now the First-day as a commemoration of the Saviour's resurrection, and Baptism has come in the place of circumcision!! Such is the belief of a convert from Judaism and a member of the English Church.

17th. As usual, rose at four o'clock and studied till seven. Attended Arabic service at eight, and English service at ten. At the latter, Rev. Mr. Nicolayson preached a very good sermon from Rom. 8: 24. If I am rightly informed, he has been in the country about twenty-five years. He is a man of languages, but to the disadvantage of his hearers, his voice is feeble and indistinct. To his extensive and critical knowledge, it may be added that he is acknowledged to be a man of deep piety and a successful missionary. For exercise in the evening, self and daughter walk around the city wall. This, including some delay by the way, occupied one hour and five minutes.

18th. Received the *Recorder* of May 24th. If it was mailed on the 22d ult., at 3 P. M., then the time occupied by the mail has been twenty-five and a half days to Jaffa, or twenty-six and a half days to Jerusalem. This is making quick time.

20th. In my evening walk met with sister Minor, who is here on a visit, a little distance west of the city. From the top of a rock she was busy sketching a view of the western wall, Mount Zion, &c. It is remarkable with what correctness and ease she transfers the likeness of nature to paper. Her view of the Temple-place, v.s. Mount Moriah, from Mount Olivet, is one of the best I have seen. For some days past we have heard of war at Hebrosa. Now we hear that there is trouble at Nablous. This evening, saw two hundred soldiers, a dozen camels, and as many horses, with two field pieces, marching off to Nablous.

22d. The Pasha and suite left this afternoon for Nablous, to settle the difficulties there.

23d—Sabbath. Rev. Mr. McLeod, from Montreal, L. C., preached for me this P. M. Text John 17: 15. A good practical sermon.

24th. Mr. McLeod preached at Mr. Diness'. A sermon full of Gospel truth, founded on Heb. 6: 19.

26th. By requst, accompanied Mr. L. to the height of Gihon, sometimes called Mount Gihon, west of the city. Hence one has a splendid view of the town and much of the country around.

28th. Was introduced to Dr. Murray and to another gentleman whose name I forget, both of whom are just arrived from Shanghae on their way to England via Mount Sinai, the Desert, and the Holy Land. They are acquainted with and speak well of our missionaries at Shanghae. Away in this desert land, this interview was really interesting. It seemed to bring me still nearer to those beloved laborers in the Flowery Land.

29th. Self and family were shown, by Consul S. Murad, the Mosque of Omar and its grounds from the top of the barracks, or, as the Catholics call it, Pilate's Judgment Hall. This building is on the north side of the Temple arena, and close by the site of the celebrated castle of Antonia. Near by, on the opposite side of the street running to St. Stephen's gate, we entered a small Catholic church. On the wall of the enclosed court is written in Latin that Pilate here scourged Jesus. We also visited the Abyssinian and Armenian churches, and the convent of the latter, which is the most extensive and the richest building of the kind in Jerusalem. A little south of Zion gate without, the traveler is shown the house of Caiaphas! Inside is a small room, perhaps four feet square, where the priest assured us that Jesus was kept prisoner all night. But enough of these legends. The Catholics, Greeks, and Armenians, *know* these, but if they KNEW THE BIBLE *more, they would know these less.* The trappings and glittering fixtures of the altars and interior of their churches differ materially from the Catholic churches in the cities of our country. Our friend, who is an Armenian, introduced us to the Patriarch. We were treated very politely, and in turn endeavored to draw him into a conversation upon justification by faith through Christ, but without success.

July 3d. Visited Neby Samuel, or, as is supposed, the tomb of the Prophet Samuel. Here is an Arab village of perhaps fifty inhabitants, an old dilapidated mosque and tower. This is supposed to be Mizpah, where Saul was anointed king. It is a high mountain peak north-west of Jerusalem about three hours ride, with the valley of Ajalon on the west, and the village of Gibeon on a small conical mountain which rises out of the midst of the valley. On the sides of this mountain we counted about twenty terraces. The outline of this valley and the mountain is really interesting, rich, and varied, and apparently well cultivated.

4th—*Independence day.* As I afterwards learned, our friends, through the American Consul, enjoyed a festival day at Jaffa. In the P. M., in company with a Christian friend, I walked to the Mount of Olives, and after viewing Jerusalem from different points, we descended to Bethany, and from thence returned to the city by the road which it is supposed (and with good reason from the make of the ground) our Saviour traveled when he made his triumphant entry into Jerusalem. We here fell into a discussion of the Sabbath question, and continued it for an hour, closing it at the point of the "descent" to which our Saviour came when he beheld the city and wept over it. Luke 19: 37, 41.

5th. Rev. Mr. L. and self walked to Bethlehem. Mrs. J. accompanied us on a donkey. Visited the so called Holy Places underneath the convent. Nothing of interest there save the room in which Jerome translated the Bible into Latin. The order and proximity of the place of the Saviour's birth, the manger, the place where the star rested, and where the magi were seated when they beheld the child of Mary, to my mind condemns the whole affair. That Jesus was born in this village is true; but that place of that the inn, its court and manger, is now known, is really absurd. Most travelers with whom I have conversed are of the same opinion. We called for dinner and were provided with dry bread, old cheese, and a bottle of Bethlehem wine. Tried to show the way of life through Christ to two poor creatures, but fear they did not comprehend my meaning. The monk, who provided us with dinner, was anxious we should believe in *one church.* In turn I was full as urgent that we all should receive and read *one Bible.* As often as he repeated *una chiesa*, I replied *una Biblia.* At length he nodded assent, and thus our discussion ended. The teacher of the convent school gave me some account of their operations in the way of schools, printing, &c. A dinner is given the children every day; their books and tuition are gratuitous. Having seen all that was to be seen of interest, we returned to Jerusalem, where we arrived at sundown, after a walk of one hour and a half.

W. M. JONES.

CIRCULAR.

To the Seventh-day Baptist Churches and Brethren:—

It is already announced to you, that at the late sitting of the General Conference, measures were recommended for the relief of Dea. John Maxson, the publisher of the *Protestant Sentinel;* and that the duty of taking the first steps in the premises was devolved upon the church in Scott. We therefore give a brief statement of the facts, and commend their consideration to the brethren at large.

The church of Scott having considered this matter, the following was presented through their delegates to the General Conference:

"Whereas, Dea. John Maxson commenced the publication of the *Protestant Sentinel* in 1830, the first weekly periodical ever published in America for the advancement of the interests of the Seventh-day Baptist denomination, and published the first six volumes of that paper at an actual loss of $3,334 49, (for proof of which see 52d No. 7th volume of that paper, a report of a committee consisting of H. Crandall, J. Spencer, W. D. Cochran, B. C. Church, and S. Carpenter;) and whereas, Bro. Maxson published the denominational paper the two succeeding years at a sacrifice of $861, the amounts put together making $4,124 69, which, with the interest simply computed, makes the gross sum of about $10,000, the last payment of which, through many difficulties, he was enabled to make two years since; which sacrifices have cost him all the savings of an active and energetic life; therefore,

Resolved, That to the efforts and sacrifices of Bro. Maxson we are indebted, in a good degree, for the present healthful and flourishing condition of our Literary and Scientific Institutions, which, before the publication of said paper we had not; missionary enterprise has sprung up among us, and many able men have been constrained, after reading our publications, to embrace our denominational views.

Resolved, That we do sympathize with Bro. Maxson, and are willing to do our part towards remunerating him in his declining years for his labor of love and sacrifices in sustaining our denominational publications, upon which hang the cause of education, the cause of missions, the advance of our peculiar views on the subject of the Sabbath, and the general interests of the cause of Christ in the Seventh-day Baptist denomination.

Resolved, That we present the foregoing preamble and resolutions before the General Conference, at its next session, requesting that body to take such action thereupon as shall if possible lead the churches in the denomination to remunerate Bro. Maxson in some degree.

The above having been presented to the General Conference by the church of Scott, and that body having recommended the churches to take some action in the matter, in carrying out the recommendation of the Conference to obtain relief for Dea. Maxson, we propose to set forth the facts relative to the commencement of the publication of the denominational paper. From what has been stated, and which is abundantly corroborated, we come to the conclusion, that the publication of the *Protestant Sentinel* was commenced as a department of Christian labor, and not as a mere business enterprise. And it is well known, by the elderly members of our denomination, that before the publication of the *Protestant Sentinel* we as a people were at least a quarter or half a century behind the denominations surrounding us. We had no medium of communication through which we could make known our sentiments, feelings, and desires; our literary and scientific institutions, which have sprung up all over the denomination, did not exist, and in all probability would not have had an existence, had not some one entered the field as a pioneer, with strong faith and energetic action, to brave the storm of opposition that attended every enterprise of Seventh-day Baptists in those days.

In making the computation of sacrifices by Bro. Maxson, it should be borne in mind, that no contingent expenses are included, but it is based on the lowest computed expense of the necessary bills in publishing the paper, and without any additional percentage to cover the loss of time and money in removals, traveling expenses, general agency in making settlements, purchasing materials, the losses by fire, insurances, &c., &c., which constitute an important item in all business transactions, so that every person may know exactly out of what the amounts counted do arise.

With regard to the losses on the seventh and eighth volumes, of $861, as above mentioned, we would refer you to the report of a committee, consisting of L. P. Babcock and others, who reported the eighth volume, which report was published and sent to the associated one hundred, who had become responsible for the losses.

To correct the misapprehension that Bro. Maxson commenced and published the paper as a mere business enterprise, out of which he expected to make money, we would refer those interested to the early statements of the publisher, that he expected to make sacrifices, and reap no pecuniary advantages, in prosecuting the work. And we cite you to the fact that in 1832, after two years experience in the business, Bro. Maxson proposed to give the paper and office, worth some $600, to the denomination, if the Conference would take up and prosecute the work. If, then, this branch of Christian labor was undertaken for the advancement of the cause of Christ, with pecuniary losses and embarrassments, it certainly should be considered in the light of a missionary and benevolent enterprise, and no one individual should be allowed to bear the whole burden of sacrifices.

Some years since, Dea. Maxson became a party in a suit which involved the test of the law for the protection of Sabbath-keepers from legal prosecution and arraignment on the Sabbath, the traversing of which might be attended with costs. Counsel was asked of churches and brethren, and he was advised to traverse it. The case was traversed, lost, carried up, and again lost, involving, besides his personal loss in the lower court, nearly $200. The matter was presented to the General Conference, which adjudged the amount due him from the churches, and that he be remunerated. Of this amount over one hundred dollars and the interest remains unpaid, which neglect has made additional cost, which doubles that amount.

We have been thus minute in detailing the case, to prevent the assumption that the sacrifices for which we ask relief have been stated without due regard to knowledge of facts on our part. We commend the whole subject to the consideration of our benevolent brethren, asking them to decide whether it is consistent with their sense of justice to allow this matter to remain as it is—whether it is proper that one who has spent his life and fortune to prepare the soil and sow the seed which is now maturing, to be harvested by those now on the stage of action and their children, should go down to the grave with the reflection that such favors are unacknowledged? What if Bro. Maxson has declined to consider his sacrifices on the six first volumes not a matter for remuneration, having devoted near $9,000 as stock in the great Christian enterprise to enlighten and evangelize the world?—still there has been a large amount which he has assumed, and which he nor his friends anticipated would fall on him, of over one thousand dollars, and that amount doubled by interest accruing. We name interest, because he has had to pay interest as well as principal. The amount has been expended for denominational purposes, and has accrued to the advantage of our people; and the principal and only fault is, that he trusted to the honor and integrity of his brethren without requiring bonds to their pledges. Did it fall on some one abundantly able to sustain the loss, and still enjoy abundance, the case might appear less imperative; but it is otherwise. His involuntary losses subsequent to the publication of the sixth volume have been the cause of long and painful embarrassments.

To prevent any misapprehensions in relation to the *manner* in which this subject has come before the churches at this time, it is due to Bro. Maxson to state, that there existed in the minds of members of the Scott church a general knowledge of the foregoing facts; the subject was taken up by the church without consulting him, and without his knowledge, and he has only furnished us, by our request, materials, of which the details are made.

Should it be deemed necessary to have further explanations on particular points, they can be furnished by addressing the undersigned, with vouchers, if desired, for all the statements above made.

By order and in behalf of the church,

D. F. RANDOLPH, } Committee.
H. C. HUBBARD, }

SCOTT, Oct. 12th, 1855.

American Bible Union.—In the *Recorder* of October 11th, a "Letter from the Mill-Yard Church," (London,) appears, in which it is stated, that the "principles" of the American Bible Union are "unsound," and that the revisers are "inadequate" to their undertaking. Admitting the possibility of the correctness of the statement, and desiring to profit by it, will the "Mill-Yard Church" please point out the "unsound principles," and the "inadequacy" of the revision so far as it has gone? Or, if this would be too great a task, please go as far as convenient, and so confer a favor on one who desires a more perfect translation of the Holy Scriptures.

N. V. H.

Religious Destitution in South America.—The Rev. G. D. Carlow, Methodist minister at Buenos Ayres, says:—

"After passing the town of San Jose de Flores, there is not, with the single exception of the little Scotch chapel, lately completed, one building devoted to the public worship of God, on the long line of country stretching from a point within two leagues of the gates of the city to the base of the Andes, a distance of at least six hundred miles. You may easily judge what must be the moral character of a population utterly destitute of religious privileges. The natives retain a few of the Roman Catholic rites, but are in a state of most deplorable ignorance; and without check of any kind upon their inclinations, they are living in a state of nature. Excepting the confused notions they have of the existence of one God, [illegible] I verily believe, on all the African continent, a tribe or nation in a more abject state of heathenism than are the mixed race of men inhabiting these old grounds of the Spanish conquerors."

Religious Liberty in Turkey.—At the late Meeting of the American Board of Commissioners for Foreign Missions, the following resolution was passed:—

Resolved, That the Prudential Committee be and are hereby requested to forward to his Excellency, Franklin Pierce, President of the United States, a memorial to be signed by the Executive Officers of the Board, and by so many of its members as may have an opportunity of attaching their names thereto, requesting him to instruct the Minister of the United States at Constantinople, (Turkey,) to avail himself of the first and every opportunity, to call the attention of the Ottoman Government to the duty of abrogating the laws of the Empire, whereby the penalty of death is denounced against the Mussulman who embraces Christianity, and also to induce the Sultan, if practicable, to grant entire religious liberty to all his subjects, without distinction, as a measure, not only just, but eminently grateful to the American people."

Governor's Grant for Missions.—Sir George Grey, lately Governor of New Zealand, now Governor of the Cape of Good Hope, is seeking to avert Caffre wars, and secure the peace and prosperity of the Colony over which he is placed, by means of civilization and Christian education. He proposes to expend £30,000 a year in Missions, the Missions to extend beyond the limits of the Colony, and the grants being intended to call forth, and be met by, corresponding efforts on the part of religious bodies, prepared to enter largely into the work. Various religious denominations at the Cape have already availed themselves of the offer, and the Bishops of Cape Town and Graham's Town write home to the Society for the Propagation of the Gospel, pressing upon that Society to take immediate advantage of Sir George Grey's munificent proposal.

Ordination of Missionaries.—On the 6th October, the following missionaries were ordained at Rutland, Vermont: Messrs. Geo. Edward Aiken, son of Dr. Aiken, of Rutland, Vt.; C. Knapp, of Benson, Vt.; and Chas. C. Torry, a nephew of Prof. Torry, of Burlington, Vt. These gentlemen go out under the patronage of the American Board. Mr. Aiken is a graduate of Dartmouth College, and is destined to the Syrian Mission. Mr. Knapp graduated at Middlebury, and Mr. Torry, Vermont University. Mr. Knapp goes to the Assyrian Mission, and Mr. Torry to the Choctaw.

A Second Whitefield.—Recent English journals mention that a young preacher of the Methodist Church is creating as much excitement as Irving and Whitefield did in their day. The London correspondent of the New York *Sunday Times* says:—"His name is Spurgen, and he can scarcely have reached his 22d or 23d year, I should think. His eloquence is extraordinary—it overwhelms you with its force and brilliancy; and his voice has the characteristics which Whitefield's is said to have possessed—a ringing tone, and capable of being heard by an assemblage of ten thousand persons."

RELGIOUS INTELLIGENCE.

Rev. Mr. Emerson, of Salem, Mass., who is now in the fifty-first year of his pastorate, preached in the South Church pulpit, on a late Sunday, to the aged, from the text, "When I am old and gray headed, O God, forsake me not." The venerable doctor, who claimed the right to address his aged friends with propriety, on the score of being one of them, stated the remarkable fact, that in his congregation there were yet living *eighty persons who were upwards of seventy years of age.*

The Philadelphia Baptist Association, (the oldest in America) held its anniversary the first week in October. The *Christian Chronicle* says the letters from the sixty churches composing the body, showed great coldness among the churches, and in many cases a declinature in the membership. Six hundred and twenty-three have been baptized, and the present number is 11,069. An unusual number of deaths were reported, and among others, several ministers' wives. The Sabbath schools have been prosperous, with quite a number of conversions among them.

The last number of the *London Critic*, in a notice of American literature, says: "In one respect we must do the Americans justice, as regards foreign literature. They have done more of late years to popularize the best authors of Germany than all England beside. To the Americans we are indebted for many excellent translations of the best German classics."

We were favored, says the *Southern Presbyterian*, with a call by Rev. W. States Lee, of Edisto Island, who mentioned the somewhat remarkable fact—remarkable in these days of shifting pastorates—that during a ministry of thirty-four years, in which he had been connected with the Edisto Island church, he had not been absent from service more than one Sunday at a time.

Congregational singing has been introduced in Dr. Alexander's church, Fifth avenue, New York. The choir has been dismissed, and the fine organ removed so as to face the people. A gentleman stands at the side of the minister to lead the singing of the old tunes, which are exclusively sung.

A worthy and valuable member of the Presbytery of Geneva, Rev. P. S. Van Nest, has recently taken a dismission from his pastoral charge over the Presbyterian church in Romulus, N. Y., and has left to engage in the work of an exploring missionary in Iowa, under the direction of the Assembly's Extension Committee recently appointed, together with the Iowa City Presbytery.

Mr. Stephen C. Pixley was ordained as a missionary of the American Board, on Tuesday, 25th ult., in Plainfield, Mass. Mr. P. expects to sail for South Africa in a few weeks, to join the Zulu Mission. He is the fourth male missionary which the church in Plainfield has sent forth to labor among the heathen—more than can be said of most churches in the land.

It is stated, says the Louisville *Presbyterian Herald*, that a large number of the New School Presbyterian churches in Kentucky are now vacant, and in search of pastors. [illegible] in their treasury, to aid feeble churches in supporting pastors, but cannot obtain the men to expend it upon.

The celebration of the one hundredth birthday of the Rev. John Sawyer, was attended in Bangor, Maine, on the 9th inst., by a great concourse of people. The services were at the Central Congregational church, where the venerable centenarian delivered an address of an hour and a quarter in length, without apparent fatigue.

In Ireland, the conversions from the Romish church continue to multiply, and the movement is now extending to the cities and larger towns, no less than among the country population. In Dublin, it is reported, there are large numbers of tradesmen, of respectable position and intelligence, who are only awaiting a favorable opportunity to abandon the corrupt church in which they have been reared.

According to the English *Leeds Mercury*, Col. Rawlinson has just discovered among the ruins of ancient Babylon an extensive library—not indeed printed on paper, but impressed on baked bricks—containing many and voluminous treatises on astronomy, mathematics, ethnology, and several other most important branches of knowledge.

The *Examiner* learns with deep regret of the rapidly failing health of Stephen W. Taylor, LL.D., President of Madison University. He has lost the use of his lower limbs, and there is little reason to hope that he can resume his duties in the University, or that he can long survive the disease which seems to be hastening him to the grave.

During the past year the Protestants of Great Britain, the Continent, and America, raised for Missionary, Bible, Tract, and Educational Societies, $7,530,000. Roman Catholics in the same countries raised for the propagation of the faith about $787,000.

Last June the American Reform Tract and Book Society offered a premium of $100 for the best Anti-Slavery Sunday-School book. Thirty-two manuscripts have been sent in by competitors for the premium. This shows a good deal of literary activity, as well as Anti-Slavery zeal.

Two gentlemen in Philadelphia recently disputed about the ownership of a sum of money, and not being able to agree, compromised the matter by remitting the amount to the Home Missionary Society.

A revival of religion, which occurred in the Congregational church in New Canaan, Conn., during the last spring and early part of the summer, resulted in the hopeful conversion of fifty or more souls.

Our Southern exchanges indicate, by a fullness of their revival notices, considerable of a revival spirit abroad in the Methodist Episcopal Church South.

George A. Pollard, a graduate of Bangor Theological Seminary, was ordained as a missionary to Western Asia, at the South Congregational Church in Hallowell.

The New Orleans *Creole* states that the Board of Missions of the Methodist Church South, have declined receiving a donation from the Southern Aid Society.

The *Presbyterian Herald* says a Congregational Association, composed of six ministers, was organized at Lawrence, Kansas Territory, on the 6th ult.

Rev. Nathan Brown, D. D., of the Assam Mission, and the Rev. J. S. Beecher, of Bassein Mission, have arrived in this country.

General Intelligence.

European News.

By the steamship Atlantic, which arrived at New York on the 18th inst., we have one week later news from Europe.

Concerning the movements of the hostile armies, we have no very satisfactory data. All direct communication with the Crimea has been cut off, in consequence of the electric cable having been broken in the Black Sea, and the commanders in chief say nothing about their plans for the future.

Marshal Pelissier reports that, on the 29th of September, a cavalry skirmish took place near Eupatoria between the French and Russians, in which the latter were defeated with a loss of 60 killed and 150 taken prisoners.

The news that the Allies were threatening the Russian army from Eupatoria and the valley of Baidar is confirmed, and contradictory statements are given about the alledged intention of Prince Gortschakoff to evacuate the North Forts.

The Allies are reported to have established 120 mortars at Sebastopol, with which it was expected they would soon render the north side untenable.

A secret naval expedition had sailed from Sebastopol, and its destination was supposed to be Odessa.

The semi-official Austrian correspondent publishes news from Constantinople, of the 27th ult., to the effect that the Russians before Kars had captured a Turkish convoy of provisions, destined for the garrison, together with 1,000 horses and 300 men.

Various Russian and Prussian accounts state that the war is to be carried on with the greatest determination, and that the Crimea is to be defended to the last extremity. Gen. Monravieff, now in Asia, will, it is intimated, take the place of Prince Gortschakoff, who is to become Minister of War.

The Czar had been to Moscow, where he issued an address to his people. Thence he traveled to Nicolaieff, and by last advices he was said to be *en route* for the Crimea, to inspirit his troops by his presence.

The first Russian account that has reached us of the Fall of Sebastopol is contained in a general order addressed by Prince Gortchakoff to his troops. The Russian General admits—what the most exaggerated rumors did not lead us to expect—that during the thirty days preceding the attack on Malakoff, he lost from 500 to 1,000 men per diem.

The popular interest in the War has given place, in a measure, both in England and France, to the financial consequences which it has directly or remotely brought upon their respective national banks. The recent trouble originated in Paris; on the Bourse, or in the gigantic speculations of the *Credit Mobilier*, in aid of one or both of which the Bank of France was brought under immense advances upon the Public Funds, in a season of war, when its whole resources should have been directed to the preservation of its own safety. To correct the error or series of errors of the past two years, a forced attempt is made to replenish its exhausted strong-box from the Gold of England. Several wealthy Jewish houses were employed to accomplish the hazardous undertaking. The process, never a sensible one, nor reasonably sure of even temporary success, was at first carried on secretly. The English Bank, for nearly a whole month, felt the blow, without being able to ascertain whence it came. Week after week, the drain continued, the Continental Exchanges meanwhile ruling in favor of London, and week after week a half per cent. was added to the Bank rate of interest in order to arrest it. The secret, according to most London authorities by this mail, now stands confessed. The Bank of France has been buying Gold at a heavy cost in London by forced sales of English bills and stocks. The magnitude of the operation is said to be twenty millions of dollars. It has not answered the intended purpose. The Bank is poorer in the end than at the beginning. It held a reserve of fifty-six millions in September. It counts less than fifty millions in October. The Gold, if not lost to both countries, when it was most needed for war purposes, has gone to enrich the neutral States of Germany, or to sustain Russia. The English ministerial organ, the *Morning Post*, insists that the common enemy has mainly profited by the movement.

We have interesting news from China. A combined force of British and American boats had attacked and signally defeated a large fleet of Chinese Pirates. The American officers and men belonging to the *Powhatan* behaved in the most gallant manner.

The Fair.

The American Institute is now fairly open, and attracts a large number of visitors. The Sixth-avenue cars, and all the other conveyances running to the Crystal Palace, are thronged. By far the larger number of visitors, however, attend in the evening, when to the other attractions are added the grand spectacle of the Palace illuminated by gas, and the enlivening music of Dodworth's Brass Band. The display of articles, scientific, ornamental and useful, is very fair. The number and beauty of the Fire Extinguishing Machines is especially note-worthy. The department of Millinery, Straw, and Fancy Goods, must be especially interesting to the ladies. Mr. John S. Willard, of No. 440 Pearl-street, contributes a magnificent display of Looking-glasses, Picture-frames, &c.; and some specimens of artistic Embroidery, by Mrs. Wilcox, of Albany, elicit great admiration. The machinery department embraces many of the specimens that were on exhibition at the World's Fair. But of course the principal attraction for the majority of visitors, centres around the picture-gallery and the fine collection of statuary, which includes Thorwoldsen's famous group of Christ and the Twelve Apostles. Altogether the Fair is well worth a visit either for pleasure or profit.

[N. Y. Times.

THE CHINESE IN CALIFORNIA.—It is said that efforts for the Christianization of the Chinese in Sacramento continue to be blessed. Rev. J. L. Shuck writes to the San Francisco *Recorder* :—

"As a church we are now moving on in love, harmony, and palpable encouragement. Last Lord's day was our monthly season of communion; and our chain of monthly additions to our church membership continues unbroken from the time of my arrival in Sacramento to the present. Our prospects for the future, as a church, never were brighter. We have several interesting cases of serious concern in our midst, and we are looking forward with prayerful solicitude to our contemplated protracted meeting. We still have good congregations also in the Chinese Chapel. One man has recently handed in a written avowal of his faith in the new religion. Many are attentive, and some few are more or less interested. But a Chinese heart is not 'born again' in a day."

NEW YORK HISTORICAL SOCIETY.—A fire-proof building for the Library of the New York Historical Society is now in course of erection on the corner of Second avenue and Eleventh street. The corner-stone was laid on the 17th inst., with appropriate ceremonies and speeches. The dimensions are to be as follows, viz.: The front on Second avenue 55 feet, the depth on Eleventh street 92 feet, the external height of the building 64 feet from the sidewalk. The basement is 10 feet high—the first story 16 feet; the second story in the Library-room is 31 feet, exclusive of the dome, which is 16 feet, making a total height from floor to dome of 47 feet. The Librarian's office and vestibule, in the front part of the second story, is 20 feet 6 inches, and the map and chart room is 10 feet high; the first story is elevated 5 feet above sidewalk. The materials with which the building is to be constructed are as follows, viz.: The exterior of the front, the side on Eleventh street, and the return of twenty feet on the south side, is to be built with New Brunswick B. P. stone, from the quarries of the Dorchester Company, being a fine grained sand-stone of a uniform light drab color. The walls are to be built hollow, to obviate the use of the usual wood-furring, (to keep out damp,) thereby rendering the building more fire-proof. The beams are to be of wrought-iron, and arched between each beam (which are to be four feet apart) with brick-work, and cemented on top, and covered with yellow pine floor-plank bedded in sand. The staircases are to be of iron throughout the building, and the roof is to be constructed entirely of iron of a very novel construction, combining lightness of material with great strength, and covered with corrugated sheet iron. The skylights are also to be of iron and thick plate glass, and the windows are all to be secured by sliding iron shutters.

MURDER IN WISCONSIN.—In Milwaukee, Wis., Oct. 16th, an attempt was made upon the lives of two well known and respectable citizens, Herman C. Adams and George Papendeik, the former of whom was wounded in the groin by a pistol shot, from which he cannot possibly recover. The following are the particulars:

A German, named John Feiner, went into the banking-house of Mr. H. C. Adams, with a certificate of deposit for $147, in the Germania Bank, (which failed last year,) and demanded the money of Mr. Papendeik, who was the proprietor of that institution. Mr. P. replied, that the assets of the bank were no longer under his control, but offered the man $25 to relieve his present necessities. This Feiner refused, and demanded $50, threatening to shoot Papendeik if his request was not complied with. Here Mr. Adams interfered, [illegible] procuring an officer to remove Feiner, and moved toward the door for that purpose, when the German fired and shot him, as above described, and, turning quickly round, fired a second time at Papendeik, fortunately, however, without success.

Immediately after firing these shots, the German walked up stairs into the police office, laid his pistol on the table, and quietly awaited the coming of the officers, who soon after removed him to prison.

At last accounts Mr. Adams had died, and the Coroner's Jury found a verdict of "willful murder" against Feiner. The excitement was intense, and fears were expressed for the safety of the murderer.

THE SICKNESS IN INDIANA.—The following paragraph from the Indianapolis (Indiana) *Daily Journal*, is in confirmation of the statements made before, on the authority of private information, respecting the prevalence of an extraordinary sickness in Indiana: "We have no doubt there is more sickness in Indiana this Fall than ever before. Not of a fatal character, it is true, but distressing and expensive. The chills have come, like locusts in Utah, devouring the accumulated health of many summers. Those who have boasted themselves chill-proof, have shaken like a coward entering a battle, and many a robust constitution has felt its clammy coldness overspreading them like a November drizzle. From every quarter of the State we hear the gruntings of back-aching, side-racked patients, and the combined fevers of all the afflicted would make a heat sufficient to set up a young volcano."

JOHN B. GOUGH.—This truly eloquent apostle of temperance has recently returned from near two years' sojourn in England and Scotland, where he has been pursuing very successfully his labors as a temperance reformer. He expresses himself, in his lectures since his return, as prizing more highly than ever the rights and privileges enjoyed by the people of this country. High privileges bring high duties and responsibilities. The opportunity of molding and shaping our institutions to the highest moral and religious principle, through the instrumentality of the ballot, should not be undervalued, but should be prized and acted upon until rum-selling is made a criminal offense and banished the country.

A dispatch dated Boston, Friday, Oct. 19th, says: "Arrangements for the great Exhibition of the United States Agricultural Society, in this city, next week, are nearly completed, and everything promises a brilliant display. The grounds are beautiful, and are daily visited by thousands of citizens and strangers. The entries of stock are very large, and embrace some of the finest animals in the country. Quite a large number of cattle and horses have already arrived. If the weather is favorable, it is calculated the exhibition will surpass anything of the kind ever seen in this country.

Since the application of steam on the Western waters, there have been 39,672 lives lost by steamboat disasters, 381 boats and cargoes lost, and seventy boats seriously injured, amounting in the aggregate to the enormous sum of $67,000,000.

SUMMARY.

The Boston Natural History Society has received from the executors of the late James Brown, a valuable donation of costly works. Among them are *Gould's Ornithology*, in sixteen volumes, folio, and *Gray's Genera of Birds*, in three volumes, royal quarto. For many years the Society has been in want of these rare works, but from their great cost, probably not less than two thousand dollars, has been unable to obtain them. They constitute the most valuable donation ever made to the library, and give a completeness to the ornithological department unsurpassed in any collection in this country, excepting perhaps that of the Academy of Natural Sciences of Philadelphia.

A New York Grand Jury, some days ago, presented six members of the Common Council, a City Judge, and a few less important officials. On the 20th inst., in closing up their business, they brought in indictments against nearly the entire lot of heads of departments, contractors, and their subordinates. The foreman of the Grand Jury was going on with the reading of the presentments, when he was stopped short by Recorder Smith, who refused to hear another word, or permit the public to be made acquainted with the most extraordinary and astounding facts which the Grand Jury had brought to light.

The *Nebraskian* gives the following description of the Capitol of Nebraska about to be erected in Omaha City: "The building will be of brick, with a tin roof, surmounted with a beautiful observatory, and the whole is calculated to be done in the most thorough and substantial manner. The extreme length is 137 feet; extreme width 93 feet. The body of the building is 109 1-2 feet long by 65 1-2 wide and 62 1-2 feet in height to the apex, presenting four fronts, with a colonnade portico on each 14 feet wide and 65 feet long."

The Macon (Geo.) *Telegraph* says: "A young gentleman, yclept Alonzo Griffin, having expressed setiments hostile to 'the peculiar institution,' and given various indications more congenial to the atmosphere of Massachusetts than Georgia, was ordered out of this City on Friday last, and was escorted to the cars on Saturday, by a large company of our citizens. In consequence of his youth and weak head, no violent measures were resorted to, the people only demanding that he should make tracks Northward."

A Georgia paper, called the *Corner Stone*, announces that a gentleman in that State proposes to be one of a thousand persons, each of whom is to contribute a hundred dollars towards forming a fund which is to be used in sending men and slaves from the South to Kansas. Five hundred subscribers to the fund have already been obtained. Mr. Allen Eiland, of Crawford, in Alabama, proposes that southern emigration societies be established in every town in the Southern States, with a view of sending forward slaveholders to Kansas, and to purchase lands in that territory, which are only to be resold to slaveholders.

There have been 215,800 claims filed for bounty lands under act of March 3d, 1855, of which 37,000 were filed in March, 75,000 in April, and 45,000 in May. Thus far the commissioner of pensions has only been able to issue about 30,000 warrants of all sizes, and at the rate at which they are now issuing warrants it will take over two years to complete the cases on hand. Claimants who are anxiously awaiting the receipt of their warrants will have to be patient.

At a recent examination of the students in the military academy at West Point, the cadets having been ordered to construct a bridge from timbers prepared for the purpose, in 21 minutes put together a bridge 150 feet long, extending into the Hudson, resting on pontoons where the water was deep, that was passable for artillery and troops. On being required to take it up, the timbers were taken up, and piled up in an orderly manner, in exactly nine minutes. The bridge was the one which was in the train of General Scott, in his march to the city of Mexico.

The elections yet to take place are as follows: Louisiana, Monday, Nov. 5, State officers and five Representatives to Congress; Mississippi, Monday, Nov. 5, State officers and five Representatives to Congress; New York, Tuesday, Nov. 6, State officers, but no Governor or Lieutenant Governor; Wisconsin, Tuesday, Nov. 6, State officers; Maryland, Wednesday, Nov. 7, six Representatives to Congress; Massachusetts, Monday, Nov. 12, State officers. In Tennessee, Alabama, California, Wisconsin and Pennsylvania, the Legislatures in each State elect one United States Senator.

A California paper mentions the discovery of a spring in El Dorado County in that State, whose waters flow from a bed of arsenic. The mineral deposit is thirty feet thick, and crops out of the surface of the earth. Veins in it abound with gold, and specimens of this auriferous ore have been shown to the editor of the "Placerville American." The name "Death Spring" has been given to the stream. The existence of it is supposed to account for the mortality among the gold miners at the early period of the California epidemic.

A dispatch dated Baltimore, Tuesday, Oct. 16, says: Dr. Hadell, of Cumberland, and his clerk, named Graff, were both murdered on Sunday last, near that place, by a German. They were enticed out to attend a sick woman, and their bodies were found this morning horribly mutilated. The murderer has been arrested, and the clothing, watch and pocket-books of the victims were found in his possession. The Doctor was formerly Commissioner of Health in this city.

A correspondent of the Milwaukie *News* writes from Olympia, Washington Territory, that gold in very large quantities has been found in various sections of that country. He states that extensive mines have been found, which will employ thousands of men for many years to come. An exploring party reports finding gold throughout an extent of upwards of three hundred miles of country, and that the mines will pay to work.

The total valuation of Boston this year is two hundred and forty million three hundred and forty-nine thousand two hundred dollars, showing an increase over the valuation last year of fifteen millions three hundred and thirty-six thousand dollars.

The total population of the State of New Jersey, according to the official returns of the recent census taken in that State, is 569,499, showing an increase on the census of 1850 of 80,518.

Full reports from the Election in Kansas, held on the 9th inst., show that it resulted in the triumphant election of Ex-Governor Reeder as Delegate to Congress. The Pro-Slavery Party seems not to have contested the election, relying, doubtless, on the previous canvass, which resulted in the choice of Whitfield. It will be for the next House of Representatives to decide which of the two is the real Representative of the people of Kansas.

A dispatch dated Chicago, Tuesday, Oct. 16, says: The steam tug-boat Seneca, while towing a vessel through Randolph street bridge, exploded her boilers, and was torn to pieces. The Captain (Donaldson,) was killed. Wm. J. Vaughan, the Engineer, is probably mortally wounded. C. D. Spards, the owner of the boat, was badly scalded and otherwise wounded.

A British paper says that the rigid observance of the Sunday is relaxed in London and the larger cities, and continental habits are rapidly gaining strength. The failure of the Sunday bill in Parliament, on account of the popular opposition to its passage, has given new force to the general current.

At Macknaquack, New Brunswick, a revival has been enjoyed. Says a correspondent of the *Christian Visitor*, the Lord has done great things for us, whereof we are glad; his work still continues among us. I have now since the first of April baptized sixty-five in the above mentioned place.

A dispatch dated Baltimore, Saturday, Oct. 20, says: A duel was fought near Savannah Saturday last between John Chapin, formerly a Lieutenant in the United States Navy, and Dr. Kirk, his brother-in law. The latter was killed at the third shot. Chapin was slightly wounded.

Japan threatens us with trouble, by taking advantage of a slight indefiniteness in the late treaty negotiated by Commodore Perry. The governors of Simoda and Hokodadi have published regulations which will greatly restrict, if they do not render wholly valueless, the permission to trade, which the treaty was supposed to secure.

A project is on foot at Buffalo to tunnel the Niagara River, and estimates of the probable cost of the undertaking have been submitted to the Common Council of that city by an engineer named William Wallace. He considers the plan entirely feasible, at a cost of less than $900,000, including three miles of railway.

The Acting Commissioner of the General Land Office has issued instructions to the Register and Receiver at Winchester, Oregon Territory, to reserve from sale or entry about a section of land on Rogue River, opposite the Rogue River Indian reservation, and immediately surrounding Fort Lane, for military purposes.

The Chestertown (Md.) *News* states that on the 15th ult. ten valuable negro slaves stole three horses and a double carriage belonging to Mr. Edward Ringgold, and a carriage belonging to Mr. John Greenwood, and fled, probably for the North. No clue to their course had been discovered on the 20th, and it was supposed that they had made good their escape.

The "Golden Age," a splendid clipper ship, which sailed from Liverpool for Australia, with a large number of passengers and a full cargo, in December last, has not been heard of since. It is said that fifty per cent. has been offered to the under-writers of Glasgow to insure her.

It is a penal offence to deposit in any post office, to be conveyed in the mail, any envelop or packet containing letters addressed to different persons. The law upon which the above is based is frequently violated by persons who are perhaps not aware of its existence.

The question of a hospital for the City of Providence, is again brought before the public by the liberal proposal of Rev. Dr. Hedge to appropriate for the purpose the entire proceeds of his course of lectures on several subjects, pertaining to the condition of Europe in the middle ages.

On Friday morning, Oct. 19th, a fire broke out at No. 12 State st., New York, by which three women and two children were burned or suffocated to death, and another woman was so badly burned that her recovery is doubtful.

A dispatch dated Utica, Wednesday, Oct. 17, says: The Grand Jury now in session here have refused, by a vote of 13 to 4, to find any indictments upon the Prohibitory Liquor law.

A writer in the *Lancet* proposes to fill the shaft of a stethoscope with water, secured by plugs of cork, as a means of increasing the capacity of the instrument for the transmission of sound.

The American Tract Society have published a 12mo volume (pp. 556) containing a sketch of the Life and Labors of Rev. Dr. Justin Edwards, written by Mr. Hallock, of New York.

The Jailor in Hampshire Co., Mass., says that he has a little more than one-fifth as many commitments since the new prohibitory law went into operation as he had the last year during the same period of time.

The Thomaston *Journal* states that there will be launched during the present month, in Thomaston, about 9000 tons of shipping. Among the vessels to be launched are five ships, ranging from 1100 to 1600 tons.

One hundred and fifty thousand acres of land were sold at the Dubuque Land Office during one week; of this 125,000 was in land warrants, and 25,000 in cash; leaving only about 100,000 acres unsold in that district.

The Santals in India are in a state of insurrection, and a vast extent of country is at their mercy. The loss of life has been great, both among them and those opposed to their movements.

The Syracuse *Journal* says that about one hundred and forty fugitive slaves have passed through Syracuse on the way to Canada, since January.

In one week no fewer than thirty-eight Chinese left Melbourne, each with gold-dust valued at $3700 besides other property.

The Nile has risen two fathoms higher this year than last. This is considered an augury of an abundant harvest.

Sixteen negroes have just been emancipated by Arthur Allen of North Carolina. They have gone to Ohio.

The *Christian Index* of Sept. 27th, has five letters giving accounts of revivals in different parts of the State.

Hundreds of thousands of dollars' worth of Chocolate manufactured in Massachusetts is sold in America every year.

There are said to be 1,064 guns in the fortifications about New York, and 894 in those about Sevastopol.

New York Markets—Oct. 22, 1855.

Ashes—Pots $6 00; Pearls 7 25 a 7 37.

Flour and Meal—Flour 8 37 a 8 75 for various grades of State, Michigan, and Ohio 8 75 a 10 00 for extra Ohio and Michigan, 9 25 a 11 00 for extra Genesee. Rye Flour 6 00 a 7 25 for fine and superfine. Corn Meal 4 75 for Jersey.

Grain—Wheat 1 85 a 1 95 for Western red, 2 10 a 2 20 for choice Canadian white. Rye 1 25 a 1 30. Barley 1 30 a 1 35. Oats 47 a 49c. for Western, 45 a 47c. for River and Canal, 42 a 43c. for Jersey. Corn 92 a 94c. for Western mixed. White Beans 1 62 a 1 75.

Provisions—Pork 21 00 for prime, 23 00 a 25 00 for mess. Beef 11 50 a 12 00 for country prime, 13 00 a 14 00 for country mess. Lard 12c. Butter 14 a 18c. for Ohio, 19 a 23c. for common to good State, 23 a 25c. for choice. Cheese 9 a 10½c.

Hay—75 a 80c. for shipment.

Seeds—Clover 10½ a 11c. Timothy 2 87 a 3 00 per bushel. Rough Flaxseed 2 00 a 2 10 for 56 lbs.

Tallow—12½ a 13c.

Wool—35 a 37c. for low, 43 a 45c. for medium, 47 a 50c. for fine Saxony.

The N. Y. *Times*, in its weekly review of the Markets, Oct. 18, says:—

Since this day week the low and medium grades of Flour have declined 25c. to 37½c. The finer brands have been offered rather sparingly, which has prevented their depression.

Wheat has likewise fallen off 10 to 15c. per bushel, closing tamely with a small amount of prime quality, but a large stock of undesirable poor lots in the market.

Rye has fallen back to 1 25 a 1 30, sales having been made as high as 1 41, but closes with an increasing demand.

Barley is down to 1 30 a 1 35, and is dull at these rates, though not very abundant.

Corn, Western mixed, is active and buoyant at 93c. a 94c. per bushel, for good to prime quality, which is an advance of 1½c. to 2c.

In Provisions there is no great advance, except in Pork, which, though higher, closed heavily yesterday The stock of provisions is being considerably reduced.

MARRIED,

In DeRuyter, N. Y., Sept. 20, 1855, by Eld. J. R. Irish, PLATT M. GILBERT to MARY JANE WOOD, daughter of Lysaias Wood.

In Griswold, Ct., Oct. 9th, by Eld. P. S. Crandall, Mr. JOEL C. MAXSON, of Hopkinton, R. I., to Miss MARY E. LARKIN, of Griswold, Ct.

In Persia, Cattaraugus Co., N. Y., on the morning of the 11th inst, by O. K. White, Esq., Mr. ALBERT N. BABCOCK to Miss ROSALTHE RANDALL, all of Persia.

In Rockville, R. I., Oct. 13th, by Eld. P. S. Crandall, Mr. JOSEPH S. SHRIEK, of Burlington, Vt., to Miss JANE S. NOONNAN, of Exeter, R. I.

In Hartsville, N. Y., Oct. 16th, by Eld. D. E. Maxson, Mr. ALONZO POTTER, of Hartsville, to Miss TACY A. PALMER, of Brookfield, N. Y.

DIED,

In DeRuyter, Oct. 14, 1855, MARY E. SWIFT, daughter of Heman Swift, aged 19 years. Her brilliant intellect and pleasing address were adorned with the sweetness of rare deferential modesty. With such endowments, she had won a high place in the affections of numerous friends; but as death marked her for his prey, she felt that *one thing was lacking*. That she sought and found in Jesus. He was to her the pearl of great price, and the joy of her countenance. He was manifestly the light of her pathway through "the dark valley." As earth was receding from her view, her weeping father says, [illegible] they tell us that death is the king of terrors." "O no, father," she replied, "it is mild and lovely." Having given her parting exho[illegible]hose around her, she sent messages to h[illegible]her, whom she had previously reque[illegible]at her funeral, enjoining him to warn h[illegible]ds to prepare, while in health, for a dying hour, and above all to meet her with her Saviour in glory. After her vision and hearing had ceased to be attracted by the sights and sounds of earth, she still talked tranquilly; yea, joyfully; and having sweetly testified, "I see angels," she slept in Jesus, without a sigh or struggle. "One thing is needful, and Mary hath chosen the good part."

In Scott, Cortland Co., N. Y., with an affection of the lungs, Miss ELMIRA P. BURDICK, daughter of Benjamin Burdick, of Lincklaen, aged 28 years. Sister Burdick has been from early life a member of the Lincklaen Church.

A. R. C.

WILLIAM M. ROGERS, Treasurer.

Central Railroad of New Jersey.

IN connection with the Lehigh Valley Railroad opened to Mauch Chunk—FALL ARRANGEMENT—Commencing Oct. 1, 1855. Leave New York, for Easton, Mauch Chunk, and intermediate places, from Pier No. 2 North River, at 7 A. M. and 3.15 P. M. For Somerville, at 7 and 11 A. M., 3 15 and 5 P. M.

The above trains connect at Elizabethtown with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt-st., at 7 and 10 A. M., 2.30 and 5 P. M.

Leave Plainfield for New York at 7.07 and 9.18 A. M., and 1.43 and 6 14 P. M.

JOHN O. STERNS, Superintendent.

New Market Seminary.

This Seminary will re-open on the 12th of September, with Mrs. R. H. Whitford, as Preceptress.

This Institution is located in a pleasant section of country, and has a commodious and well arranged building, and is designed to furnish every facility and advantage to the student found in other institutions of this class.

Board for students may be had in families at one dollar and seventy-five cents per week, where all their wants will be kindly cared for. Tuition from $3 to $5 per term, according to the studies pursued. Music, with use of Piano, $10 00.

I. H. DUNN, Sec. of Board of Trustees.

NEW MARKET, N. J., August 26, 1855.

DeRuyter Institute.

This Institution is located in a pleasant and healthy section of country, and in a community comparatively moral and intelligent. It is easy of access from Syracuse, Chettenango, and Homer. Our motto is, *Teach the young to govern themselves—to educate themselves.* Grateful for past liberal patronage, we assure the public we have ample accommodations for more.

Expenses:

Tuition,	from $4 00 to $6 00
Board in families,	from 1 25 to 2 00
" in clubs	from 0 60 to 1 00
Room rent, per term,	from 1 25 to 2 62

Books and Stationery furnished at very low prices.

All bills settled invariably in advance. No bills for less than half a term. No deductions made except in case of sickness.

Board of Instruction.

HENRY L. JONES, A. M., Principal.
AMOS R. CORNWALL, A. B., Prof. Mathematics.
Miss JOSEPHINE WILCOX, Preceptress.
Mrs. SARAH E. JONES, Mrs. BARBARA A. CORNWALL, Miss SARAH E. SHIPPEY, Miss JANE C BURDICK, Assistants in Female Department.

For further particulars, address, Henry L. Jones, Principal; W. D. Wilcox, President; J. B. Wells, Secretary; or C. H. Maxson, Treasurer, De Ruyter Madison Co., N. Y.

CARPETINGS, OIL-CLOTHS, CURTAIN MATERIALS, MATTRESSES, &c.,

at the lowest rates. Purchasers are respectfully solicited to examine the stock.

Misrepresentations, either expressed or implied, are strictly prohibited in this establishment.

YOUNG & JAYNE,
364 Broadway, corner of Franklin-st.

N. B.—Churches and clergymen furnished at wholesale prices. Sept 27—3 m.

Farm for Sale,

CONTAINING about 100 acres, with a fair proportion of woodland, a small orchard of grafted fruit, and a comfortable dwelling and outhouses. It is situated about four miles north of Westerly, R. I., and within a mile of each of the flourishing manufacturing villages of Potter Hill and Ashaway. There are several other manufacturing establishments near, affording a ready market, in the immediate vicinity, for every species of produce. It is convenient to the first Hopkinton Church, as well as to the very excellent male district school.

It will be sold with or without the stock and farming implements, and possession given the ensuing winter or spring, if desired. To those wishing to secure a quiet home in an enterprising neighborhood, and surrounded by such comforts as can only be found in an old settled and thickly populated country, this affords an opportunity seldom offered. For terms and other particulars apply to the subscriber on the premises, or address JOHN E. POTTER, No. 15 Sansom-st., Philadelphia. Pa. BENJAMIN POTTER, Ashaway, R. I.
11tf.

Good Crops, Good Prices, Good Books, and Good Times.

BELCHER'S HISTORY OF ALL THE RELIGIOUS DENOMINATIONS IN THE UNITED STATES. Large Octavo 1,024 pp. and nearly 200 engravings.

FLEETWOOD'S LIFE OF CHRIST AND HIS APOSTLES. 704 pp. and 25 engravings.

Probably there has never been a more favorable opening for the sale of books than the present. Large crops have been produced throughout the country, and these are bringing good prices; every body is in good spirits.

The above volumes are printed on fair paper, clear, large type, are handsomely illustrated, and bound in a neat and attractive style. More than all, their contents bear the ring of the true metal, enabling the agent to sell them to the highest in the land as well as the humblest, with the gratifying feeling on his part that he is conferring a favor rather than receiving one. They have gained and are gaining a world-wide fame; and being sold exclusively by subscription, the agent has the entire benefit of their popularity.

Canvassers, and those wishing to become such, will find it for their interest to secure an agency. We can offer them with other popular works on the most favorable terms. For further particulars apply to, or address either of the Publishers, { JOHN E. POTTER, Philadel., Pa. / NOYES SPICER, Indianapolis, Ia.

Magnificent Floral Gift.

SUBSCRIBERS to the "CHRISTIAN DIADEM" for 1855, are entitled to a splendid steel engraving, the ☞ LILLY AND THE ROSE PERSONIFIED, being given *gratis* to all old and new subscribers who send us only ONE DOLLAR, by mail or otherwise.

Six Copies for Five Dollars.

The Diadem is a strictly moral and religious work—designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address E. P. HATCH, Publisher, 9 Spruce street, New York. May 24—3m.

State of New York,

SECRETARY'S OFFICE, Albany, August 25, 1855.—To the Sheriff of the County of New York: Sir—Notice is hereby given, that at the General Election to be held in this State on the Tuesday succeeding the first Monday of November next, the following officers are to be elected, to wit:

A Secretary of State in the place of Elias W. Leavenworth;

A Comptroller in the place of James M. Cook;

An Attorney-General in the place of Ogden Hoffman;

A State Engineer and Surveyor in the place of John T. Clark;

A State Treasurer in the place of Elbridge G. Spaulding;

A Canal Commissioner in the place of Frederick Follett;

An Inspector of State Prisons in the place of Darius Clark;

A Judge of the Court of Appeals in the place of Addison Gardiner;

All whose terms of service will expire on the last day of December next.

Also, a Judge of the Court of Appeals in the place of Charles H. Ruggles, Resigned;

Also, a Justice of the Supreme Court for the first Judicial District, in the place of Edward P Cowles, whose term of office will expire on the last day of December next;

Also, a Senator for the Third, Fourth, Fifth, and Sixth Senate Districts, in the place of Thomas J. Barr, Thomas R. Whitney, Mark Spencer and Erastus Brooks, whose term of office will expire on the last day of December next.

COUNTY OFFICERS ALSO TO BE ELECTED FOR SAID COUNTY.

Sixteen members of Assembly;

A Sheriff in the place of John Orser;

A County Clerk in the place of Richard P. Connolly;

Four Coroners in the places of Robert Gamble, Joseph Hilton, Hieronymus N. Wilhelm, and William O'Donnell;

A Comptroller in the place of Azariah C. Flagg;

A Street Commissioner in the place of James Furey;

A Commissioner of Repairs and Supplies in place of Bartholemew Purdy;

Two Governors of the Alms House in the place of Patrick Henry add John J. Herrick;

City Inspector in place of Thomas K. Downing.

A Counsel to the Corporation in place of Robert J. Dillon;

Two Justices of the Superior Court in the place of Wm. W. Campbell and Murray Hoffman;

A Justice of the Marine Court in place of Chas. E. Birdsall;

A Police Justice for the Sixth Judicial District in the place of Geo. W. Pearcy;

A Judge of the Court of Common Pleas in the place of Lewis B. Woodruff.

Yours respectfully,
E. W. LEAVENWORTH, Secretary of State.

SHERIFF'S OFFICE, New York, August 28, 1855.

The above is published pursuant to the notice of the Secretary of State and the requirements of the statute in such case made and provided.

JOHN ORSER,
Sheriff of the City and County of New York.

☞ All the public newspapers in the county will publish the above once in each week until the election, and then hand in their bills for advertising the same, so that they may be had before the Board of Supervisors, and passed for payment. Sep—13.

Miscellaneous.

The Fall of Sebastopol.

The following graphic description of the events connected with the fall of Sebastopol is given by the correspondent of the London *Times*, under date of Sept. 10th:—

The contest on which the eyes of Europe have been turned so long is nearly decided—the event on which the hopes of so many mighty empires depended is all but determined. Sebastopol is in flames! The fleet, the object of so much diplomatic controversy, and of so many bloody struggles, has disappeared in the deep. One more great act of carnage has been added to the tremendous, but glorious tragedy, of which the whole world, from the most civilized nations down to the most barbarous hordes of the East, has been the anxious and excited audience. Amid shouts of victory and cries of despair—in frantic rejoicing and passionate sorrow—a pall of black smoke, streaked by the fiery flashings of exploded fortresses, descends upon the stage, on which has been depicted so many varied traits of human misery and of human greatness, such high endurance and calm courage, such littleness and weakness—across which have stalked characters which history may develop as largely as the struggle in which they were engaged, and swell to gigantesque proportions, or which she may dwarf into the pettiest dimensions, as unworthy of the part they played.

The last and decisive cannonade was begun on the morning of Wednesday, September 5, by the French, against the Russian right, consisting of the Quarantine Batteries, the Bastion Centrale, and the Bastion du Mât, with great vigor and effect, and at night began a devastating bombardment, in which all the allied batteries joined. A frigate was fired by a French shell and sunk at night. On the morning of the 6th the English and French together opened the cannonade, between which the Russian batteries were almost broken to pieces, and which they did not dare to answer. In the evening the bombardment was renewed and kept up all night; a fire appeared behind the Redan, and the enemy seemed by their constant signaling to be in much uneasiness. It was observed that great quantities of forage were being sent across the [illegible]e from the north to the south side, [illegible]gh there were no cavalry in the latter. On the 7th the cannonade was continued in salvoes, as before, and it was remarked that [illegible] town began to show in a most unmistakable [illegible]ner the terrible energy of the nightly bombardment. Nearly every house within range was split and in ruins. The bridge between the north and the south side was much crowded all day with men and carts passing to and fro, and large convoys were [illegible] entering and leaving the town at the north side. Towards evening the head of the great dockyard shears, so long a prominent object from our batteries, caught fire, and burnt fiercely in the high wind, which was raging all day. A two-decker was set on fire by the French shells, and was destroyed, and a steamer was busily employed towing a large dismasted frigate to the dockyard, out of range. In the middle of the day there was a council of Generals, and at 2 o'clock it became generally known that the allies would assault the place at noon on the 8th, after a vigorous cannonade and bombardment. The hour was well selected, as it was certain that the Russians are accustomed to indulge in a siesta about that time. In the course of the night there was an explosion behind the Redan.

On September 8, the weather changed suddenly. This morning it became bitterly cold. A biting wind right from the north side of Sebastopol blew intolerable clouds of harsh dust into our faces. The sun was obscured; the sky was of a leaden wintry gray. Early in the morning a strong force of cavalry, under the command of Colonel Hodge, was moved up to the front, and formed a chain of sentries in front of Cathcart's hill and all along our lines. No person was allowed to pass this line, unless he was a staff officer or was provided with a pass. Another line of sentries in the rear of them was intended to stop stragglers and idlers from Balaklava, and the object in view was probably to prevent the Russians gathering any intimation of our attack from the unusual accumulation of people on the look-out hills.

General Pelissier during the night collected about 30,000 men in and about the Mamelon, to form the storming columns for the Malakoff and Little Redan, and to provide the necessary reserves. The French were reinforced by 5,000 Sardinians, who marched up from the Tchernaya last night. It was arranged that the French were to attack the Malakoff at noon, and, as soon as their attack began, that we were to assault the Redan.

It was, as I have said, a bitter cold day, and a stranger would have been astonished at the aspect of the British generals as they viewed the assault. The Commander-in-Chief, Gen. Simpson, sat in the trenches with his nose and eyes just facing the cold and dust, and his cloak drawn up over his head, to protect him against both. Gen. Jones wore a red nightcap, and reclined on his litter, and Sir Richard Airey, the Quartermaster-General, had a white pocket handkerchief tied over his cap and ears, which detracted somewhat from a martial and belligerent aspect. The Duke of Newcastle was stationed at Cathcart's hill in the early part of the day, and afterwards moved off to the right to the picket-house look-out over the Woronzoff road. All the amateurs and traveling gentlemen, who rather abound here just now, were in a state of great excitement, and dotted the plain in eccentric attire—which recalled one's old memories of Cowes, and yachting and sea bathing—were engaged in a series of subtle manœuvres to turn the flank of unwary sentries, and to get to the front, and their success was most creditable to their enterprise and ingenuity.

A few minutes before 12 o'clock the French, like a swarm of bees, issued forth from their trenches close to the doomed Malakoff, swarmed up its face, and were through its embrasures in the twinkling of an eye. They crossed the seven metres of ground which separated them from the enemy at a few bounds—they drifted as lightly and quickly as autumn leaves before the wind, battalion after battalion, into the embrasures, and in a minute or two after the head of their column issued from the ditch, the tricolor was floating over the Korniloff bastion. The musketry was very feeble at first—indeed, our allies took the Russians quite by surprise, and very few of the latter were in the Malakoff; but they soon recovered themselves, and from 12 o'clock till past 7 in the evening the French had to meet and defeat the repeated attempts of the enemy to regain the work and the Little Redan, when, weary of the fearful slaughter of his men, who lay in thousands over the exterior of the works, the Muscovite general, despairing of success, withdrew his exhausted legions, and prepared, with admirable skill, to evacuate the place.

It was a few minutes after 12 o'clock, noon, when our men left the fifth parallel. The musketry commenced at once, and in less than five minutes, during which the troops had to pass over about 30 yards from the nearest approach to the parapet of the Redan, they had lost a large proportion of their officers, and were deprived of the aid of their leaders. The riflemen advanced admirably, but from their position they could not do much to reduce the fire of the guns on the flanks and below the re-entering angles. They crossed the abottis without difficulty; it was torn to pieces and destroyed by our shot, and the men stepped over and through it with ease. The light division made straight for the salient and projecting angle of the Redan, and came to the ditch, which is here about 15 feet deep.

The party detailed for the purpose placed the laddars; but they were found to be too short. However, had there been enough of them, that would not have mattered much; but some had been left behind in the hands of dead or wounded men, and others had been broken; so that, if one can credit the statements made by those who were present, there were not more than six or seven ladders at the salient. The men, led by their officers, leaped into the ditch and scrambled up the other side, whence they got up the parapet almost without opposition; for the few Russians who were in front ran back and got behind their traversers and breastworks as soon as they saw our men on the top, and opened fire upon them.

Lamentable as it no doubt is, and incredible almost to those who know how the British soldier generally behaves before the enemy, the men, when they got on the parapet, were seized by some strange infatuation, and began firing, instead of following their officers, who now began to fall fast as they rushed on in front and tried to stimulate their soldiers by their example. Notwithstanding the popular prejudice to the contrary, most men stand fire much better than closing with an enemy. It is difficulty enough sometimes to get cavalry to charge if they can find any decent excuse to lay by their swords and take to pistol and carbine, with which they are content to pop away for ever, but when cover of any kind is near at hand, a trench-bred infantry man finds the charms of the cartridge quite irresistible. The small party of the 90th, much diminished, went on gallantly towards the breastwork, but they were too weak to force it, and they had to retire and get behind the traverses, where men of different regiments had already congregated, and were keeping up a brisk fire on the Russians, whose heads were just visible above the breastwork. Simultaneously with the head of the storming party of the Light Division, Colonel Windham had got inside the Redan on their right below the salient on the proper left face of the Redan, but in spite of all his exertions, could do little more than the gallant officers of the 90th and [illegible] regiments.

The storming columns of the Second Division, issuing out of the fifth parallel, rushed up immediately after the Light Division, but when they came up close to the apex Brigadier Windham very judiciously brought them by a slight detour on the right flank of the Light Division so as to come a little down on the slope of the proper left face of the Reden. The first embrasure to which they came was in flames, but, moving on to the next, the men leaped into the ditch, and, with the aid of ladders and of each other's hands, scrambled up on the other side, climbed the parapet, or poured in through the embrasure which was undefended. Colonel Windham was the first or one of the very first men in on this side, and with him entered Daniel Mahoney, a great grenadier of the 41st, Killeany and Cornellis of the same regiment. As Mahoney entered with a cheer, he was shot through the head by a Russian rifleman and fell dead across Colonel Windham, and at the same moment Killeany and Cornellis were both wounded. As the alarm of an assault was spread, the enemy came rushing up from the barracks in rear of the Redan, and increased the force and intensity of their fire, while our soldiers dropped fast and encouraged the Russians by their immobility and the weakness of their fusillade, from which the enemy were well protected. In vain the officers, by voice and act, by example and daring, tried to urge our soldiers on. They had an impression that the Redan was all mined, and that if they advanced they would all be blown up, but many of them acted as became the men of Alma and Inkermann, and, rushing to the front, were swept down by the enemy's fire. The officers fell on all sides, singled out for the enemy's fire by their courage. The men of the different regiments became mingled together in inextricable confusion. The 19th men did not care for the orders of the officers of the 88th, nor did the soldiers of the 23d heed the commands of an officer who did not belong to his regiment. The officers could not find their men—the men had lost sight of their own officers. All the brigadiers, save Colonel Windham, were wounded or rendered unfit for the guidance of the attack. The narrow neck of the salient was too close to allow of any kind of formation, and the more the men crowded into it the more they got out of order, and the more they suffered from the enemy's fire. This miserable work lasted for an hour. The Russians were now in dense masses behind the breastwork, and Colonel Windham walked back again across the open space to the left to make one more attempt to retrieve the day. The men on the parapet of the salient, who were firing at the Russians, sent their shot about him, and the latter, who were pouring volley after volley on all points of the head of the work, likewise directed their muskets against him, but he passed through this cross fire in safety, and got within the inner parapet on the left, where the men were becoming thinner and thinner. A Russian officer now stepped over the breastwork, and tore down a gabion with his own hands; it was to make room for a field piece. Col. Windham exclaimed to several soldiers who were firing over the parapet. "Well, as you are so fond of firing, why don't you shoot that Russian?" They fired a volley and missed him, and soon afterwards the field piece began to play on the head of the salient with grepe. Colonel Windham saw there was no time to be lost. He had sent three officers for reinforcements, and above all, for men in formation, and he now resolved to go to General Codrington himself. Seeing Capt. Crealock, of the 90th, near him, busy in encouraging his men, and exerting himself with great courage and energy to get them into order, he said, "I must go to the General for supports. Now mind, let it be known, in case I am killed, why I went away."

The struggle that took place was short, desperate and bloody. Our soldiers, taken at every disadvantage, met the enemy with the bayonet too, and isolated combats took place in which the brave fellows who stood their ground had to defend themselves against three or four adversaries at once. In this melee the officers, armed only with their swords, had little chance; nor had those who carried pistols much opportunity of using them in such a rapid contest. They fell like heroes, and many a gallant soldier with them. The bodies of English and Russians inside the Redan, locked in an embrace which death could not relax, but had rather cemented all the closer, lay next day inside the Redan as evidences of the terrible animosity of the struggle. But the solid weight of the advancing mass, urged on and fed each moment from the rear, by company after company, and battalion after batalion, prevailed at last against the isolated and disjointed band, who had abandoned the protection of unanimity of courage and had lost the advantage of discipline and obedience. As though some giant rock had advanced into the sea and forced back the waters that had buffeted it, so did the Russian columns press down against the spray of soldiery which fretted their edge with fire and steel, and contended in vain against their weight. The struggling band was forced back by the enemy, who moved on, crushing friend and foe beneath their solid tramp, and, bleeding, panting and exhausted, our men lay in heaps in the ditch beneath the parapet, sheltered themselves behind stones and in bomb craters in the slope of the work, or tried to pass back to our advanced parallel and sap, and had to run the gauntlet of a tremendous fire. Many of them lost their lives, or were seriously wounded in this attempt. The scene in the ditch was appalling, although some of the officers have assured me that they and the men were laughing at the precipitation with which many brave and gallant fellows did not hesitate from plunging headlong upon the mass of bayonets, muskets, and sprawling soldiers—the ladders were all knocked down or broken, so that it was difficult for the men to get up at the other side, and the dead, the dying, the wounded, and the sound, were all lying in heaps together. The Russians came out of the embrasures, plied them with stones, grape shot and bayonets, but were soon forced to retire by the fire of our batteries and riflemen, and under cover of this fire many of our men escaped to the approaches.

Farmers' Gold Mines.

A bed of muck upon a farm is a veritable gold mine for him who will use the necessary labor and skill to dig up and appropriate the precious ore. The original elements which form the great bulk of *all* growing plants are the same, and any one plant in its decay will furnish organic food for any and every other plant. These deposits of black earth [illegible] in wamps, along brooks, and in low spots in the meadow or pasture field, are chiefly masses of half-decayed vegetable matter, which should all be gathered and taken to the cultivated fields as food for growing crops.

It is better, however, to mingle muck and peaty matter with the materials of the barnyard. Their decay has been partially arrested by an asphaltic or pitchy coating, and the action of lime, ashes, or other alkalies, or the fermentation of the manure heap, is required to hasten the decomposition and prepare the elements for entering into new organizations.

At this season, before the Autumn floods and the Winter's frosts lock up or render inaccessible those beds of black mold, they should be dug out and thrown into heaps to drain, that they may be ready for carting to the farm-yard at leisure. This is not a trifling matter, to be left to chance—to be attended to or not, as may suit present convenience—but is one of vital importance to every farmer who would thrive in his business. Except upon the new rich lands of the West, the profits of the farmer depend much upon his skill in managing and increasing his manure heap. The amount and richness of this is a fair indication of his probable success or failure. Many are becoming aware of this, and millions are now paid every year for the manurial deposits of the Chincha or Peruvian Islands. Where no nearer or cheaper sources of fertilizers are available, this is doubtless economicrl; but a little examination of their own farms, a little prospecting for the home gold mines, will show thousands of those now endeavoring to enrich their lands from foreign sources, that they can do it at a cheaper rate. A hundred loads of this black muck thrown out to dry *at this season*, and afterwards mingled with an equal bulk of fresh deposits in the barn-yard, will produce two hundred loads of very rich manure, fully equal, bulk for bulk, with the best yard deposits. Experience has fully tested the truth of this assertion, and intelligent theory tells why this is so. As the animal excrements are usually left in the yard, one-half or three-fourths is lost by decay and evaporation into the air, but an admixture of muck or peat checks the too rapid decay, and retains the escaping gases, which constitute by far the richest portions of all manures; and further, during this fermentation, the muck itself becomes decomposed and prepared to enter at once into the plant as food.

Let, then, every one look about his farm for some of these valuable deposits. There is not one farm in a hundred but will furnish more or less of them. Wherever water runs from higher ground and settles into a low spot, it carries down some portions of the vegetable matter and leaves it there. Sometimes these deposits cover dozens of acres, in other cases the black mold occupies but a few feet of surface; but if only a load here and another there can be obtained, it is still abundantly worth looking after, and we repeat, this should be attended to now. If other work occupies all the ordinary farm force, put on an extra hand for a few days till you have heaped up a dozen to twenty loads—the more the better—for every acre to be planted or sown next Summer. As soon as the cold weather suspends the ordinary field work, commence hauling your muck heap to the barn-yard, where it should be piled up under a rude cover if convenient, and then be daily mingled with the droppings from the horse and cattle stalls, and from the hog pen and poultry houses. Such portions as will not be required for this purpose should be shoveled over, with the addition of a bushel or more of freshly slacked lime to each ordinary cart load. In the absence of lime, or, if more convenient, a somewhat larger quantity of unleached ashes may be substituted for the lime and with equally good or better results.

If no rich black muck or earth can be found upon the farm—it is seldom that this is the case—then go to the thickest forest and gather the surface soil and half-decayed leaves which have fallen for a dozen years—perhaps half a century. Everything of organic or vegetable origin is valuable and should be treasured. The outlets of drains or water courses upon the road-side, or at the lower sides of fields, will afford more or less of these vegetable deposits The ground occupied by old fences may be profitably carted to the yard, and used as a ground bed for the absorption of liquid manures. If the uniformly high and dry position of a whole farm deprives it of any of these sources of vegetable matter, a small sum will generally purchase a supply from a near neighbor.

We have called these muck deposits the "*gold mines of the farm*," and such they really are. Whatever will cause the same amount of labor and seed upon an acre of ground to give an increased amount of grain, grass, or other cash-yielding produce, is precisely equal in value to the actual finding of an equivalent amount of metalic gold. And, happily, in this case, these gold mines are not of rare occurrence, found by chance only, upon the lands of a fortunate few. Every farmer has within reach a mine of some kind, and patience, intelligence, and skill will lead unerringly to its discovery. M. P.

Raising Fruit Profitable.

Much has been written upon the profitableness of fruit culture, yet we think this matter is generally too much neglected and its importance too little appreciated. One reason of this is that relatively quite too much attention has been bestowed upon raising fancy fruits. Almost every one who has written upon the subject has devoted himself to describing a new variety or to the best means of raising a small quantity of a great number of fruits. Take apples, for example. We have in our agricultural and horticultural journals chapter upon chapter describing the hundreds of varieties, while little is said upon the importance of producing an abundant supply of some of the leading and long established kinds, such as the Greening, Spitzenburg, Baldwin, Newtown Pippin, Seek-no-further, &c. If public attention has been rightly directed in this matter, why is it that even at this present time, as well as in all past seasons, there is and has always been a scarcity of these fruits in the market, even when they bring prices four times more than what would amply pay for their production? No one can sit down and carefully estimate the cost of raising apples, compared with the amount yielded by other products from the same ground and labor, without being convinced that no branch of industry is so amply remunerating as this, and yet few enter into it as a business.

If we take fruit at its lowest market price, the ground occupied by one apple tree can in no way be made to yield for the same outlay [illegible] that can be gathered from the tree, even if the fruit be used for feeding only.

In addition to the causes of this state of things above mentioned, two others may be given. First, then, it has been feared that everybody else was going into the business; and second, the time required to raise a bearing orchard has led most persons to seek for a more immediately remunerating business.

To the first, it may be said, that when we take into account the value of fruit for feeding stock, there can be no limit to the quantities that may be profitably raised for home consumption; and to the second, that the cost of rearing an orchard is very trifling, before it begins to yield returns. The ground occupied by growing trees is not lost nor materially injured for other purposes; on the contrary, as we know by profitable experience, trees will flourish quite as well on ground that annually produces hoed crops. We raised a thrifty orchard of six acres, containing three hundred trees, and yet every year gathered from the same ground large crops of corn and potatoes, alternately. The trees thrive all the better from the constant cultivation of the ground around them. A few loads per acre of good manure was annually applied, and the corn and potatoes gave a good profit, over and above the entire expense of cultivation, in addition to the cost of plants, grafting, and the annual care required by the trees. At the end of eight years, one orchard was producing an annual crop of more than a thousand bushels of choice apples, requiring only to be gathered and taken to market, and yielding a clear profit of more than fifty dollars per acre. In this orchard we cultivated but six varieties—the harvest apple, August sweet, Fall pippin, Spitzenburg, Greening and Seek-no-further. Each, in its season, found a ready market, at remunerating prices. The produce of that orchard of six acres, now eighteen years old, is to day worth more than eighty dollars an acre, annually, for feeding purposes only. The soil was not unusually favorable; indeed, it was so rocky that it could with difficulty be tilled except with the hand hoe.

The process pursued was very simple. The natural trees raised from seeds by ourselves, were planted out and allowed to grow a year or two, and then grafted upon the stock or larger limbs; many of them were grafted by inoculation, and a few days spent each year in pruning, has been the chief care required by the trees. Each Spring they were formerly well white-washed and the leaning trees tied up to a stake. To guard them from being barked by the traces, four white oak stakes, split out like rails, were driven around the trees. When first set out all the trees were leaned a little to the southwest, so as to brace them against the winds prevailing from that direction. There are few or no soils that will not produce apple trees with a little care in manuring. A cart load of stable manure applied once in ten years, to a plot of ground ten feet square—no matter how poor—will fit it to support a good tree.

An apple tree that costs less than two dollars to plant and rear it, will for many years yield, without after expense, an average propuce of ten bushels a year, worth for feeding alone, two dollars a year; and fifty to eighty such trees may stand upon a single acre.

While on this subject, we will mention a young orchard that we visited last Spring. Several hundred trees were planted upon a soil so barren that it would barely yield grass, but the trees were quite as large and thrifty as any we have seen of the same age. We learned that the only manure they used was about a quart of urine each, annually, though when first planted, a large deep hole was dug for each tree, and filled up with surface soil, mingled with a small quantity of chip manure. [N. Y. Times.

Farm Work for October.

We have approached that autumn month in which the latter harvest is to be secured. Corn and potatoes and the less important roots may be gathered in October, though turnips may remain till November.

Corn must be stored up in high and airy places. Bins in a common corn barn should not be deep. Two and a half or three feet at most are enough, and the outside boards must not be air tight. Never put clapboards on to a corn barn.

October is the right month to carry out manures to be spread on the surface of grass lands. It is not good policy to delay this work till November, for we like to have the ground open for weeks after the dressing is applied, as this gives time for its incorporation with the soil. Low and wet lands are kept in good condition by means of top dressings at less cost than by ploughing and sowing again.

When we have once brought our bog meadows to such a state of consistency that we can turn a fair furrow with the plough, we can manage such lots at small cost. We need not stand in fear of the old dogma that meadows turned into English mowing, "will soon turn into Indian again," and we shall find that these bogs will bear an important part in the rotation system of farming. Such bogs, made to bear a team, are more easily ploughed than the majority of our higher grounds, as they contain no rocks and may be perfectly turned with a proper plough.

The cow yard and hog pens are to be cleared during this month, and then they must be filled again in order to catch and retain all the liquids and other matters that are dropped by the tenants of such abodes. Twice a year should this performance be attended to, as these yards should never be left without a good covering to underlay the whole area where the animals lie and leave their excrements.

October is always a busy month. The best of butter is made in this and the preceding month, and strict attention should be given to the milking of cows and the making of butter. Cows should give milk for ten months in each year. They ought to bring their calves in March or April—but they are not always obedient to our rules. When they are late in bringing their calves they must be milked later in the winter.

Hogs are fattened at less cost in the autumn months than at any other season. Now we have much refuse matter that will be worthless unless it is fed out before winter. Purslane abounds in some rich grounds, and hogs prefer it to the tomato root and to the tobacco plant. Sweet corn cut up and made fine is quite acceptable to swine. Cabbages and turnips are boiled by some farmers and mixed with meal to fatten hogs.

Apple and pear trees may be transplanted in October as well as in the spring, in case good care is taken to cover the roots. Loam or mould is the right article to be placed around the trunks in the fall. It is quite easy to throw as much as a wheelbarrow full of earth around each tree to support it through the winter and keep off the surface water. *The old* mode of making a hollow around a tree to hold water is decidedly wrong, as ice will be formed and the roots will suffer. One or two minutes devoted to each tree will be sufficient to throw a bank around it. This bank may be leveled again in the spring and made to fill the pit from which it was taken. [Ploughman.

Preserving Flour and Meal.—The *Tribune* says that Mr. Thomas Pearsall, of Geneva, N. Y., has invented an improvement on the ordinary flour barrel. All are aware that the tendency to sour is one of the great drawbacks on the shipment of flour, and more especially of corn meal. Millions are annually lost by this souring, rendering the meal both unpalatable and unwholesome, reducing its price considerably and its real value still more. Mr. Pearsall's device is a tube of tin or other material, say two inches in diameter, running through the centre of each barrel and securing a free circulation of cool and drying air. Thus, every portion of the meal is brought within four or five inches of an exterior surface, and the tendency to heat and sour (it is said) completely obviated. The coat, including the slightly increased size of the cask required to hold a given quantity of flour, is some ten or twelve cents per barrel.

The new steamship for the Cunard line—the Persia, of 3800 tons—is now being fitted up in the Clyde, near Glasgow. They call her the largest ship afloat, being 396 feet in length, and her paddle-wheels are 39 feet in diameter. Her cost, when completed, may be about £150,000.

The present population of Chicago, by the enumeration just completed, is eighty thousand and twenty eight—an increase since 1850 of fifty-one thousand four hundred and eight, or 120,09 per cent.

One hundred and fifty thousand acres of land have been sold in the Dubuque Land Office in the last four days. Of this 125,000 was in Land Warrants, and $25,000 cash, leaving only about 100,000 unsold in the district.

The Panama Railroad is now in excellent condition. Heavy trains have been running over it daily for weeks past, continuously, without any accident, and no more than ordinary delays.

Capt. Daniel Chadwick, for many years a successful commander in Grinnell, Minturn & Co.'s line of London packets, committed suicide on Friday, the 14th, near his residence in Lyons, Conn.

The jailor in Hampshire Co., says that he has a little more than one-fifth as many commitments since the new prohibitory-law went into operation as he had last year during the same period of time.

Bradford Sumner, Esq., a well-known lawyer of the Suffolk Bar, died on Tuesday, the 25th ult., at his residence in Cambridge, Mass.

The human hair harvest in Paris—the flowing locks parted with reluctantly by females—amounts to one hundred tons a year.

A quack doctor in Green county, Ind., a few days since, killed his wife by giving her a decoction of the root of May apple plant.

New Steamboat Line for Albany and Troy.

From Pier 15, foot of Liberty-st., at 6 P. M

STEAMER RIP VAN WINKLE, C. W. Farnham, Commander, Monday, Wednesday and Friday, at 6 o'clock, P. M.; steamer COMMODORE, L. Smith, Commander, Tuesday and Thursday, at 6 o'clock, P. M., and SUNDAY, at 5 P. M.

Fares: Saratoga, $1 50; Moreau, $2 15; Fort Edward, $2 15; Whitehall, $2 75; Castleton, $3 10; Rutland, $3; Burlington, $4; Rouses Point, $5 50; Montreal, $7 50.

These Boats will arrive in Albany or Troy in ample time to form connections with all the Railroads, North, East or West, enabling passengers to reach Montreal and intermediate points the same day.

These Steamers are of the first class for strength and speed—well known favorites of the public—having been thoroughly overhauled during the past winter, and offer every accommodation that can be desired by either freighter or traveler.

Through tickets can be obtained on board the boat for Saratoga, Moreau, Fort Edward, Whitehall, Castleton, Rutland, Burlington, Rouse's Point and Montreal.

The Northern Freight Express will give Bills of Lading to all points as above named. Shippers who desire it, can have time receipts, by applying at the office on the Pier. A. A. DYKEMAN.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been, and that the genuine article is—

The Sabbath Recorder,
PUBLISHED WEEKLY
By the Seventh-day Baptist Publishing Society,
AT
NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to
GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

SELF-DECEPTION.

There are very many who assume the form of religion without knowing or receiving its vitality. Christianity, self-knowledge, faith, are not understood, and hence the opening for self-deception in taking the garb of religion. How many so-called Christians have never learned their entire dependence upon the Redeemer for salvation. How many ignorantly trust to self-righteousness for justification. How many will blindly live on, year after year, to find, when probation is over, and eternity dawns, that they are forever excluded from the home of the faithful. Yes, multitudes come up with that earnest cry, "Lord, Lord, open to us," only to learn that Christ owns them not, and had closed the door forever against them. This class must be those who supposed they were following Christ. "Have we not prophesied in thy name, and in thy name cast out devils, and in thy name done many wonderful works?" Alas! they are the self-deceived. What a terrible awakening is their's. What a fearful answer will be that, "I never knew you; depart from me, ye that work iniquity." And yet they supposed they were right, and their heirship sure. How have they been thus blinded? Ah, minister of Christ, watchman, teacher, guide, have you been true to your trust? Have you made the way of life so plain that it could not be mistaken? Have you fully exposed the blackness and deceitfulness of the human heart, and the insufficiency of human efforts in procuring salvation? Oh, have you been faithful to your gospel commission, so faithful that you have thrown all responsibility from yourself? Are you free from the blood of all the self-deceived? If so, it is well for your interest; but I speak from experience when I say, that many, through ignorance of the great truths of religion—the nature of faith and repentance, principally—blindly put on a form of Christianity that can little affect the heart.

I will here relate something of my own experience, thinking perhaps there are others who have been placed in like positions. In the fall of 1845, there was an extensive revival in the town of Scott, Cortland Co., N. Y. My father and family were then residents of that place. I myself was but a child. We had good revival ministers to preach to us, and among the rest many children went forward in baptism. Myself was among the number. Why I took the step when I did, I know not, unless it was from a fear of being finally lost; and then I did not want the other children to leave me outside. I now know I was unprepared for this solemn rite. In the first place, I had not faith. I did not believe, because things had not been explained in such a way that I could understand them. And again, I know I could not have genuinely repented, for I did not bear the after fruits of repentance. Thus I took the third step before the first and second. I cannot remember of trying to live religion for several years afterwards.

In the summer of 1850 I became somewhat awakened—was at that time residing in Rock County, Wisconsin. Cholera and similar diseases prevailed to an alarming extent, and many of my friends were swept away by them. I was aroused, and now my cry became, "What shall I do to be saved?" I remember asking one who should have been able to direct me. The reply was to this effect, Do every duty, (leaving it to myself, of course, to judge what duty was.) Oh, could I then have seen God's plan of saving men! I was considerably awakened, but still saw little of my heart's natural corruption. This guidance stilled conscience, and for four years I endeavored to live up to this idea of trusting to my performance of duty, for acceptance with God. I tried to fill my place in the prayer circle. As now, I then had impressions of duty, which, unheeded, gave me disquiet; but, followed, took away my burdened feelings. The only difference I can recollect was, I then never felt that blissful nearness to the Saviour, that consciousness of his dear smiles, which a Christian will experience when in the performance of duty. Oh, how was I blinded! I *knew* I had a fallen nature, but I did not *realize* it. All this time my pride, my worldliness, my vanity, held undisturbed possession of my heart, and while I thought myself a Christian, I was a mere worlding, ambitious of the honors and emoluments of mortal man.

A year ago last winter I resided in a community where, to my knowledge, none save myself observed the Bible Sabbath. Here I found myself, sometimes, ashamed of my unpopular Sabbath. This wicked feeling served to awaken thought. I felt I was not exactly in the right place, although not sufficiently awakened to see my true position. Soon after came an echo of the third angel's message, (Rev. 14: 9—13.) Now, more than ever, I felt I was not prepared for death, or the closing up of all earthly things. At length a work entitled "*Rise and Progress of Religion in the Soul,*" by Doddridge, fell into my hands. I determined to give it a careful perusal, hoping it might prove of benefit to me. Well, I commenced it, and read on, until I came to a form of self-dedication it contained. Pursuant to the advice accompanying that, I began to transcribe it, with a purpose of adopting it for my own. I wrote until I came to an expression I did not fully comprehend—something relative to the only atoning merits of Christ. I resolved to leave it and finish the book, thinking perhaps I could then conclude the form. I did so; but now my eyes began to open. No one was near to clearly point out the way to life, when I found myself on the broad road to destruction. It is true, I had advice—frequently consulted a resident minister, but he did not present things in such a way that I could receive them. I wanted something tangible, something I could understand; and his religious views were so mystical, that I doubt whether he was really capable of giving it. He thought it very strange I should be so long in finding peace—talked of an effectual calling, &c. Oh, how my mind labored to *feel* my perfect helplessness, and to get into that position where I *knew* I was giving up every thing to the Lord. Night and day I pondered over religious works—man-made theology—but the Bible, my only sure guide, I read little. It seemed as though I already knew all there was in that for me, and the rest I could not understand. I made untiring efforts to feel terror-stricken under the penalty of the law, vainly thinking that might lead me to feel my helplessness, and to trust my salvation entirely to Him. None but God (and I may add satan, who tried in so many ways to confuse and tempt me) knows the full burden and bitterness of those hours. Well, this state of things continued until last fall, when I had an opportunity, in listening to those who are looking for the soon coming of the Lord, of learning the true way. It was now so explained that I could see it all, and it was after all so simple, so real, something I could lay hold upon. It was action on our part instead of feeling; it was works and faith united; it was first faith, repentance, and baptism; then an unwearied struggle to keep in the path of duty; close searchings of one's own heart, propensities and motives, earnest endeavors to overcome all sin and become pure in heart and in all holy conversation and godliness, (2 Pet 3: 11.) I hope I have found the true light, and am trying in our Father's strength to walk by it.

It is a fearful thing to be deceived with regard to truths pertaining to our future well-being. God has made the conditions of salvation plain and explicit. (See Luke 13: 3, and Mark 16: 16.) Will he waive these conditions, in the Judgment, to favor individual cases? Does the Bible hold forth such an idea? As another has said, "What allowance God may make on the plea of ignorance, I know not;" but we who have the law, and opportunity to try ourselves by his word, are assured we shall be judged accordingly. Oh, let us beware lest, having a hope of entering into his rest, we should eventually come short of it. M. E. S.

ROSENDALE, Wis., August 10th, 1855.

CHURCH IN IOWA.

DEWITT, Iowa, Sept. 11, 1855.

To the Editors of the Sabbath Recorder:—

In accordance with a resolution passed by the Seventh-day Baptist Church in this vicinity, I send you the Declaration of this Church, and an abstract of the Records adopted at the organization, Jan. 7, 1855, for publication in the *Sabbath Recorder*, if you think it will subserve the cause of truth and righteousness.

L. A. DAVIS.

Declaration

Of the Seventh-day Baptist Church near Welton, Clinton Co., Iowa.

1st. We hold that the Scriptures of the Old and New Testaments are the Word of God, and are all-sufficient for the well-ordering of the Christian church, both in doctrine and discipline.

2d. That the practice of sabbatizing on the first day of the week is of Romish origin, and is a practical violation of the fourth commandment of the Decalogue; therefore we sabbatize on the seventh day.

3d. That immersion of believers in water is Christian baptism; therefore we practice no other form.

4th. That the use of intoxicating liquors as a beverage is the highway to drunkenness and ruin; therefore we have no fellowship with those who use it as such.

5th. That American Slavery is a violation of the rights of man and of the law of God; therefore we disclaim all fellowship with slaveholders and their abettors.

6th. That the government of the church of Christ is of gospel right administered in his name by a majority vote of the members not under censure, and that to them belongs the appointment of all the officers of the same.

7th. That the officers of the church are elders, deacons, clerks, &c.

Covenant.

Having been taught to know and fear Jehovah the God of heaven and earth, and, as we trust, brought by grace divine to embrace Jesus Christ as our Saviour, Lord and Master; and having publicly avowed the same by our baptism into the name of the Father and of the Son and of the Holy Ghost, we do now solemnly and joyfully covenant with each other to walk together in Him in brotherly love to his glory as our common Lord. We do, therefore, trusting in him for strength to perform all our vows, engage to be governed, in all our conduct and conversation, in the church and in the world, by the law of God, and by the plain intent and requirement of his holy word, as contained in the holy Scriptures; that it shall be our endeavor to walk in all the commandments and ordinances of the Lord blameless; that we will exercise a mutual care, as members one of another, to promote the growth of the whole body in Christ, that we may all stand perfect and complete in all the will of God. Amen.

Records.

1st. Inasmuch as brethren John Davis and L. A. Davis, being of our number, are ordained ministers of our order, therefore we recognize them as elders of this church, with liberty to exercise their gifts as such.

2d. And as brother John Babcock is also one of our number, and has served as deacon heretofore, *Resolved*, That we recognize him as deacon of this church.

3d. *Resolved*, That Leven Hurley be the clerk of this church.

4th. For the sake of preserving order and promoting dispatch, all motions and resolutions involving discussion in this church must be presented in writing, and signed by the mover and a second.

5th. This church elects to have communion once in three months, namely, on the first Sabbath in January, April, July, and October, and church meeting on the first day of the week previous.

REV. MATTHEW WILKS.

There was nothing for which he had a more cordial abhorrence, than an exhibition of dandyism in a young minister; and nothing of this kind ever came in contact with him without meeting with rebuke. On one occasion a young minister of a good deal of pretention and parade, went from the country to London, and carried Mr. Wilks a letter, designed to procure for him an invitation to occupy Mr. Wilks' pulpit.

"Well, young man, said Matthew, with a nasal twang which is perfectly indescribable, but which nobody who has once heard can ever forget, "well, young man, you want to preach in London, don't you?"

"I am going to pass a few weeks here, sir, and if it should suit Mr. Wilks' convenience I should be very happy, indeed, to give his people a sermon while I am here."

"Well," replied Matthew, "you can preach—you can preach; come along next Wednesday morning to the Tabernacle, and you can take my lecture for that morning."

The young man agreed to do so, and was on the ground at the appointed hour. Matthew met him at the door, disgusted as he had been before at his dandy airs, and addressed him thus:

"Go along into the pulpit, young man, and I will be below and look at you, and shall hear every word you say."

[illegible] aisle into the pulpit, in a manner that seemed better to befit a ball-room than a place of worship. He performed the introductory service with an air of insufferable self complacency, and in due time opened the Bible and read the text, which was the last verse of the first chapter of John, "Hereafter ye shall see heaven open, and the angels of God ascending and descending upon the Son of Man." He had written his sermon, and committed it all to memory, as he supposed, to a word; but unfortunately, he had left his manuscript behind. When he had read his text, he found it impossible to remember the first sentence. He hesitated and hemed, and began thus:

"You perceive, my brethren, you perceive—that the angels of God—are here represented—as ascending—and descending." He then set up a good stout cough, in the hope that his memory might get to work in the meantime; but the cough was as unproductive as it was artificial, and he could do nothing but go right over again with the absurd sentence with which he had started. He coughed again and again, but his memory was in too profound a slumber to be awaked by it. After three or four minutes, during which he was a spectacle to the congregation, and especially to Matthew, who was all the time watching and listening according to his promise, he shut the Bible in perfect consternation, and abruptly closed the service. Of course, he came out of the pulpit with a very different air from that with which he entered it. But the worst was to come, he had to meet Matthew, and hear his scathing comments.

"Well, well," said he, "young man, you've preached—you've preached in London—ha'nt you? I've heard you; I've heard every word you've said, and I've only one comment to make; if you had ascended as you descended, then you might have descended as you ascended."

It is needless to say that the young man was by this time entirely cured of his ambition to preach for Mr. Wilks in the Tabernacle.

Another young minister of a similar character paid him a visit, and Matthew observed that he sported what he thought a very indecent number of watch seals. He eyed them for some time, as if scrutinizing the material of which they were made, and then said, with a terribly sarcastic air:

"It seems to me you've got a great many seals to your ministry, considering how young you are."

He was once preaching on some public occasion, when there were not less than fifty persons in the congregation taking notes of his sermon. At length he stopped suddenly for a minute, and the stenographers, having nothing to do, all looked up and were gazing at him with astonishment.

"Behold!" said he, "I have confounded the scribes."

On one occasion, as he was on his way to a meeting of ministers, he got caught in a shower in the place Billingsgate, where there were a large number of women dealing in fish, who were using most profane and vulgar language. As he stopped under a shed, in the midst of them, he felt called upon to give at least his testimonial against their wickedness.

"Don't you think," said he, speaking with the greatest deliberation and solemnity, "don't you think I shall appear as a swift witness against you, in the day of judgment?"

"I presume so," said one of the women, "for the greatest rogue always turns State's evidence."

Matthew, when he got to the meeting, related the incident.

"And what did you say in reply, Mr. Wilks?" asked one of the ministers present.

"What could I?" was the characteristic reply. [Dr. Sprague.

LEAVES AND MEN.

BY EBENEZER ELLIOT.

Drop, drop into the grave, Old Leaf,
  Drop, drop into the grave;
Thy acorns grown, thy acorns sown—
  Drop, drop into the grave.
December's tempests rave, Old Leaf,
Above the forest grave, Old Leaf;
  Drop, drop into the grave!

The birds in spring will sweetly sing,
  That Death alone is sad:
The grass will grow, the primrose show,
  That death alone is sad:
Lament above the grave, Old Leaf,
For what has Life to do with Grief?
  'Tis death alone that's sad.

What then? We two have lived together
  The sunshine and the rain:
And bless'd be He, to me and thee,
  Who sends His sun and rain:
We've had our sun and rain, Old Leaf;
And God will send again, Old Leaf,
  The sunshine and the rain.

Race after race of leaves and men
  Bloom, wither, and are gone:
As winds and water rise and fall,
  So life and death roll on:
And long as ocean heaves, Old Leaf,
And buds and fades the leaves, Old Leaf,
  Will life and death roll on:

How like I am to thee, Old Leaf,
  We'll drop together down:
How like art thou to me, Old Leaf,
  We'll drop together down.
I'm gray and thou art brown, Old Leaf,
We'll drop together down, Old Leaf,
  We'll drop together down.

Drop, drop into the grave, Old Leaf,
  Drop, drop into the grave;
Thy acorns grown, thy acorns sown—
  Drop, drop into the grave;
December's tempests rave, Old Leaf,
Above thy forest grave, Old Leaf,
  Drop, drop into the grave.

LOVE OF PRE-EMINENCE.

Do you know any descendants of Diotrephes? It is thought by some that his posterity are quite numerous. An acquaitance with several families, settled here and there, induces the belief, that their pedigree runs directly back to the ecclesiastic mentioned in John's third epistle. Can you, indeed, name a pastor in the country, who has not found some of them constituents of his congregation?

It is pretty evident, however, that the Dio-[illegible] blood. At an early period, they and the Demas family unquestionably intermarried. The descendants of these two great ancestors are ambitious, not only of pre-eminence, but of acquisition. Some of them, who have been the most penurious, have been the most eager of distinction. There hence enters into their character, a trait delineated in Paul's second epistle to Timothy, "They are covetous, boasters, and proud." Unwilling to impart but little for the support of the Gospel or to advance benevolent enterprises, they are still excessively vain of what they bestow. Whatever of importance is accomplished in society, they wish it understood that they were both the movers and the "doers thereof."

It is quite possible that some may consider such a family unworthy of notice. But there is the highest authority for a contrary opinion. Both branches of the family are distinctively characterized in the sacred Scriptures. If also *antiquity* can render them honorable, they must be worthy of designation. Of one branch of this ancient family the apostle Paul says, "Demas hath forsaken me, having loved this present world." Of the other, the apostle John testifies, "I wrote unto the church; but Diotrephes, who loveth to have pre-eminence among them, receiveth us not. Wherefore I will remember his deeds which he doeth, prating against us with malicious words."

There is another reason for a brief notice of the Diotrephean tribe. Those who lack experience, especially young ministers, should be apprised of what they have to encounter. They may suppose that the family has become extinct; but just so certainly as they prosecute the work of God, they will meet with obstacles thrown in their way by some of its members. For the special benefit of those who are just entering the ministry, let me invite their attention to the habits of a single household, a fair sample of the whole race.

The father of the group now in my mind's eye, according to the testimony of his legitimate representatives, was the first man in the parish. He did more toward building the meeting house and sustaining the society than anybody else. Peace to his ashes! Paintings are not for the dead, but for the living. By the virtues of the sire, however, the children are entitled to distinction. Their parent owned several slips in the church, and they have now weight of character enough to fill the whole of them. Indeed, the leading idea they give you, in talking of society matters, is, "*We* are the congregation." This conviction they exemplify upon every proposition for either permanency or change. What measure is either suggested or adopted, if not first endorsed by these self-constituted wardens of the public weal, is by them anathematized and doomed.

John Diotrephes, who manages the paternal estate, is a man of some worldly enterprise, but of contracted mind and narrow views. His wealth alone entitles him to consideration. He is a merely nominal professor of religion. He is seldom if ever seen at a prayer meeting, and never known to pray, if he happens to be present. Upon all ecclesiastical and parochial matters, however, he is in perfect readiness to wrangle and find fault. Even in the church-yard, or after a solemn, pungent discourse from the pulpit, his voice has been heard, long and loud and earnest as an advocate's at the bar, condemnatory of measures, sermon or minister, as if the welfare of Zion, or even the destinies of the universe were depending on his approbation or dissent.

☞Mr. John Diotrephes lives in a parish which ought to flourish. The population is numerous and wealthy. The climate is salubrious. The location is pleasant. The country around is productive, and the soil in a desirable state of cultivation. But the society, for several years, has been in a wretched condition. For a long while they have had no settled pastor, but have depended upon "stated supplies." These they have exchanged very frequently, never employing the same minister longer than from one to three years. Of course they are settled neither in doctrines, nor in ethics, nor in any system for the support of the Gospel; but, as we used to say of some improvident families, the members of the congregation "live from hand to mouth."

In these destructive mutations, Mr. Diotrephes and his relatives have had more agency than any others. Whatever men or measures, modes of conducting religious services, organization of Sabbath schools, or any secular or religious enterprise, might please the majority, but not originally introduced by them, John and his household have been sure to oppose. *In all such matters, for the sake of peace, the congregation have been accustomed to yield;* because Diotrephes would "have the pre-eminence." Several instances might be named, in which both church and parish were prepared to invite a worthy, judicious, and devoted minister to become their pastor, but Diotrephes was "dead set" against it; and so the will of the congregation was overruled.

How long churches of Christ ought, for the sake of peace, to yield their best interests to the will of the Diotrephean family, is not for me to determine. If, however, the apostle John came among them, he would doubtless treat them as he did their great ancestor, who "who prated against him and his brethren with malicious words." [Independent.

THE ENGLISH AND THE FRENCH.

The French intellect is quick and active. It flashes its way into a subject with the rapidity of lightning, seizes upon remote conclusions with a sudden bound, and its deductions are almost intuitive. The English intellect is less rapid, but more persevering; less sudden, but more sure in its deductions. The quickness and mobility of the French enable them to find enjoyment in the multiplicity of sensations. They speak and act more from immediate impressions than from reflection and meditation. They are therefore more social and communicative; more fond of society, and of public resort and amusement. An Englishman is more reflective in his habits. He lives in the world of his own thoughts, and seems more self-existent and self-dependent. [illegible] loves the quiet of his own apartment, little solitude around [illegible] manner makes a reserve; he moves about shy and solitary, and as it were, buttoned up body and soul.

The French are great optimists; they seize upon every good as it flies, and revel in the passing pleasure. The Englishman is too apt to neglect the present good, in preparing against the possible evil. However adversities may lower, let the sun shine but for a moment and forth sallies the mercurial Frenchman, in holiday dress and holiday spirits gay as a butterfly, as though his sunshine were perpetual; but let the sun beam never so brightly, so there be but a cloud in the horizon, the wary Englishman ventures forth distrustfully, with his umbrella in his hand.

The Frenchman has a wonderful faculty at turning small things to advantage. No one can be more gay and luxurious on smaller means; no one requires less expense to be happy. He practices a kind of gilding in his style of living, and hammers out every guinea into gold leaf. The Englishman on the contrary, is expensive in his enjoyments. He values everything, whether useful or ornamental, by what it costs. He has no satisfaction in show, unless it be solid and complete. Everything goes with him by the square foot. Whatever display he makes, the depth is sure to equal the surface.

The Frenchman's habitation, like himself, is open, cheerful, bustling, and noisy. He lives in a part of a great hotel, with wide portal, paved court, a spacious dirty stone staircase, and a family on every floor. All is clatter and chatter. He is good-humored and talkative with his servants, sociable with his neighbors, and complaisant to all the world. Anybody has access to himself and his apartments; his very bed-room is open to visitors, whatever may be its state of confusion; and all is not from any peculiarly hospitable feeling, but from a communicative habit which predominates over his character.

The Englishman, on the contrary, esconces himself in a snug brick mansion, which he has all to himself; locks the front door, puts broken glass bottles along his walls, and spring-guns and man-traps in his gardens, shrouds himself with trees and window-curtains, exults in his quiet and privacy, and seems disposed to keep out noise, daylight and company. His house, like himself, has a reserved, inhospitable exterior; yet whoever gains admittance is apt to find a warm heart and warm fireside within.

The French excel in wit, the English in humor; the French have a gayer fancy, the English richer imagination. The former are full of sensibility, easily moved, and prone to sudden and great excitement; but their excitement is not durable. The English are more phlegmatic, not so readily affected, but capable of being roused to great enthusiasm. The faults of these opposite temperaments are, that the vivacity of the French is apt to sparkle up and be frothy, the gravity of the English to settle down and grow muddy. When the two characters can be fixed in a medium, the French kept from effervescence, and the English from stagnation, both will be found excellent.

The contrast of character may also be noticed in the great concerns of the two nations. The ardent Frenchman is all for military renown; he fights for glory, that is to say, for success in arms; for, provided the national flag be victorious, he cares little about the expense, the injustice, or inutility of the war. It is wonderful how the poorest Frenchman will revel on a triumphant bulletin; a great victory is meat and drink to him; and at the sight of a military sovereign bringing home captured cannon and captured standard, he throws up his greasy cap in the air, and is ready to jump out of his wooden shoes for joy.

John Bull, on the contrary, is a reasoning, considerate person. If he does wrong, it is in the most rational way imaginable. He fights because the good of the world requires it. He is a moral person, and makes war upon his neighbor for the maintenance of peace and good order and sound principles. He is a money-making personage, and fights for the prosperity of commerce and maunfactures. Thus the two nations have been fighting, time out of mind for glory and good. The French, in pursuit of glory, have had their capital twice taken; and John, in pursuit of good, has run himself over head and ears in debt. [Washington Irving.

DYING WORDS OF DISTINGUISHED MEN.

Napoleon—"Head of the army."

Byron—"I must sleep now."

Sir Walter Scott—"I feel as if I were to be myself again."

Washington—"It is well."

Franklin—"A dying man can do nothing easy."

Jefferson—"I resign my soul to God, and my daughter to my country."

Adams—"Independence forever."

J. Q. Adams—"It is the last of earth."

Daniel Webster—"I still live."

Jackson—"Now Lord lettest thou thy servant depart in peace."

Taylor—"I have endeavored to do my duty."

Queen Elizabeth—"All my possessions for a moment of time."

Sir Thomas More—(Ascending the scaffold,) "May I pray you see me safe up; for coming down let me shift for myself."

Goethe—"Let the light enter."

PHYSICIANS.—The editor of the *American Medical Gazette* estimates that one physician is required for every 700 inhabitants. This would give over 30,000 in the nation. It is probable that the average life of a physician is not over thirty years, after he enters his profession. Hence it follows by computation, that the waste, by deaths alone, is one thousand physicians a year. But more are lost by change of business than by death; and this loss might be estimated, without exaggeration, at 300. We have, then, an actual loss of 1,300 physicians annually, which must be made up. Again, the increase of population in the United States is about 700,000 a year, which it requires an increase of 1,000 physicians to supply. There are, therefore, actually required twenty-three hundred new [illegible] the schools, and about 300 foreigners, making in all 1,700, and leaving an actual deficiency of 600 a year, to be supplied by irregular practitioners.

BENEFITS OF ABSTINENCE.—The following is from the biography of Sydney Smith, recently published:—

"Let me state some of the good arising from abstaining from all fermented liquors. First, sweet sleep; having never known what sweet sleep was, I sleep like a baby or a ploughboy. If I wake, no needless terrors, no black visions of life, but pleasing hopes and pleasing recollections; Holland House, past and to come! If I dream, it is not of lions and tigers, but of Easter dues and tithes. Secondly, I can take longer walks, and make greater exertion without fatigue. My understanding is improved, and I comprehended political economy. I see better without wine and spectacles than when I used both. Only one evil ensues from it; I am in such extravagant spirits that I must lose blood, or look out for some one who will bore and depress me. Pray leave off wine; the stomach quite at rest; no heartburn, no pain, no distension."

DOCTRINE OF IMPUTATION.—Has Jesus Christ been slain as a sacrifice of *propitiation* for us? Then how vain, how uncomfortable and perilous, is the opinion of those who deny the *imputation* of his righteousness to believers; for hereby they endeavor to sap the foundations of the Christian's *hope*, and shut up the springs of his joy; hereby they oppose the continued series of Revelation both in the Old and New Testament. To deny the Imputation of Christ's righteousness to believers, is *the same thing* in effect, as to deny his being *sacrificed* for them, and equally unreasonable. If Christ has not died for our redemption, our *faith* is vain—we are without *hope, help, comfort!* But, blessed be God, though the doctrine of Christ crucified be to the Jews a stumbling-block, and to the Greeks foolishness, yet, to those that believe, it is the wisdom of God and the power of God.

[Gilbert Tennent, 1749.

THE CONVICT REPRIEVED.—"I once saw," said the Rev. Dr. Innes, of Edinburgh, "so much joy produced by the sense of deliverance from a great dreaded evil, as may diminish our surprise at the same effect resulting from the first discovery of pardoning mercy. In the town where I resided, reprieve was expected for a man under sentence of death. I requested the chief magistrate to let me know when it arrived, as I should like to be the first messenger of the good news to the criminal. He did so. I went in and communicated to the poor man the glad tidings. He instantly fell on his knees on the cold earthen floor of his dungeon, and, clasping his hands, and lifting up his eyes to heaven, while the tears rushed down his cheeks, he prayed that the seven days of reprieve might be to him as seven thousand years of genuine turning to God. This man afterwards received a pardon."

RESPONSIBILITY FOR OPINION.

We are ready to admit, that the doctrine set forth in our leader, last week, is one which it may be difficult, sometimes, to apply in practice. But the truth of the doctrine in the abstract cannot, we think, be successfully controverted. To argue that a church member is not responsible for his religious opinions, is to argue that he may be a member of the church, and yet contribute nothing in the way of counsel, instruction, or exhortation, to the edification of his fellow communicants. For if he does contribute anything in this way, it is a matter of necessity that he do it by means of his religious views, which he relates to them, from time to time. Hence, he cannot hold his opinions as mere private property; he must let them be known for the sake of those with whom he is associated. Or, it is to argue that a person may be a church member, and not be held under censure, though he should publish views which are corrupting to piety and destructive of good morals. It is to argue that, dangerous as his opinions are known to be, his covenant brethren are bound to sustain that relation which gives him the most decided advantage for moulding them over to his views. In other words, they are bound to give him a hearing, whenever he may claim it, notwithstanding it may be clear to them, that to hear him is only to expose themselves, particularly the weaker ones of ther fraternity, to the danger of apostasy from the faith! They must forego *their own* liberty of *hearing* what they choose, for the sake of *his* liberty of *speaking* and *publishing* what he chooses!

Yet, as we have intimated, the practical application of our doctrine calls for a good deal of discretion. We have no doubt that the creed system has been most outrageously abused. Besides a substantial *unity*, churches have sometimes demanded of their members the most exact *uniformity* of views. Together with agreement in a few simple and easily understood principles, fundamental to the Christian religion, they have aimed at the nicest concurrence in a multiplicity of articles. And in trials of their members for departure from the standards, they have often exercised a rigidness not warranted by the charity of the Gospel. Did not the Apostle Paul inculcate forbearance towards them that were "weak in the faith?" (Rom. 14: 1, &c.)

We have no doubt that a man *may* hold erroneous views, even upon some important points, and yet be at heart a Christian. Such a case would call for the utmost forbearance. Long-suffering, counting him not as an enemy, but as a brother, might reclaim him, or at least so far modify him that his continuance in the church would be to his own benefit, if not to that of the rest. Sometimes a man is, as we say, "better than his creed." Not that a man's views do not exercise an inflnence upon his practice, but that he sometimes holds to antagonistic and contrary systems. Underlying the heterodox creed which he has lately imbibed, and which he talks about with the zeal which usually marks one's conversion to new views, are sentiments which have matured with his growth, but of an entirely different character. These underlying sentiments, about which he says nothing—which, indeed, he has learned to repudiate in words—are the foundation on which his practice rests, though he is not conscious of it himself. His new-fangled, heterodox doctrine fails, therefore, to exert any important influence upon his life. And by a skillful forbearance, it may be, that his deep-seated and interior sentiments will be brought to assert their supremacy.

But even to this forbearance there must be a limit. The peace of a church, and the soundness of its members in the faith, are not to be always imperiled for the sake of an errorist, because he is a Christian. When everything that can be done for his restoration, has been attended to without effect, discipline must take its course.

In exercising discipline, it is evident that there must be some standard which the whole body of the church shall acquiesce in as authoritative. This standard, it is sometimes said, should be the Bible, and nothing but the Bible. We admit that it should; but in the minds of those who are often most forward to plead this doctrine, it not nnfrequently means what we are not all at disposed to allow. A denier of Christ's Divinity, or of his Atonement, or of the Future Judgment, professes to found his views upon the Bible. But certainly, in any ecclesiastical trial in which he may be involved for such denial, the final decision whether his views are according to the Bible or the contrary, is to rest with the church, not with himself. Now whether the church, when it enters on the trial, has already a written Confession of Faith, or not, is not material. It is very clear that, on the particular point of doctrine on which the trial hinges, it will have one, by the time it gets through with the proceeding and records its decision, if it never had before. So that, for a teacher of heterodoxy to complain that he is not tried by the Bible, simply because he is tested by the received Confession of Faith, is to complain that he is not tried by a church which has never set forth any opinion on the subject which his heterodoxy concerns. And when it is sifted to the bottom, it will be found to be a complaint that the church, instead of acting on *his* views of Bible doctrine, acted on *their own*.

LETTERS FROM PALESTINE—NO 16.

Journal continued.

Jerusalem, July 7th, 1855—Another glorious day of rest to bless those who delight in the commandments of God. One person only met with us to unite in prayer and praise to our heavenly Father.

10th. Spent two hours in the evening conversing with a minister of the gospel on the Sabbath. We had also an hour's discussion upon baptism. Throughout, the discussion was conducted in a very kind spirit. My friend appeared to want to know the truth, and in the main acknowledged that as Seventh-day Baptists we had the weight of the argument on our side.

12th. Some travelers who have been stopping in the city for a few weeks came and bade us farewell. Said one of them, "Rest assured, I shall read all the tracts you gave me." The Lord grant him light according to his need.

13th. Dr. Duff, from India, who has been here for a week only, leaves to-day. Ill-health obliged him to refuse calls from many who were anxious to see him. Two rabbis called at my house. Had a talk with a Jew about sanctifying the Sabbath. It is a sin for a Jew to give food to a horse on the Sabbath, but perfectly proper for a Gentile. His views, like those of most of his people, are very exclusive; the commandments and promises are all for the Jews and none for the Gentiles. Endeavored to show him that we are alike responsible to God, and must all soon give account to Him for the deeds done in the body. In the afternoon called upon a Jewish family.

14th—*Sabbath*. Five persons present at meeting.

17th. Visited Miss Cooper's School of Industry for Jewish women. Saw about seventy-five, in three rooms, busy at spinning and sewing. In each room there was in attendance a young lady to prepare and oversee the work. Those who were at work with the needle were seated *a la Turque* around the sides of the room. The spinners were seated at the small flax wheel, and seemed quite to understand the business. The wages given vary according to the skill of the operative, from one to four piastres per day. The clothing made in the institution is sold for the benefit of the same. Miss C. remarked to us, that she hoped to make the institution pay its own way. As conducted now, it is a benevolent work, requiring much diligent, patient oversight. Half an hour every day is spent in reading to them out of the Old and New Testaments. In this way much gospel truth is disseminated among them. The hope may be indulged that ere long good fruits will appear, to the honor and glory of God.

20th. As in Bible times on the approach of any great person, so at the present, the people go out of the cities in multitudes to welcome the Prince and the Banker. Sir Moses Montefiore arrived to-day, and pitched his tents without at the north-west corner of the city. About two thousand Jews went, two and three miles to meet him and accompany him to the city. The poor are expecting much from him.

31st. The Jews are pouring in their petitions to Sir Moses. Many are complaining that he does not reply. Within a short time four Jews have requested me to write petitions for them. One requested a loan of money to improve his garden in the Plains of Sharon; another, a proselyte to the Jews, makes the same request; another, a blind man, a baker by trade, requests aid to go to Vienna to be healed; and yet another, pale and sickly, having evidently seen better days, asks for work. His story is a pitiful one. He and his family suffer for the want of food. Accepted an invitation to dine at the missionary tents, about two miles west of the city. Rev. Mr. Crawford, and Bishop Gobat, and their families, are here spending the summer months. The place they occupy is on the brow of a mountain, under olive trees, with a good sprinkling of sumac; the valley of Hanina is on the west at their feet, and a little north of west rises the interesting mountain of Mizpah, or Neby Samuel. It is a beautifully romantic spot, and one which seems well suited to recruit the exhausted energies of the care-worn missionary.

Aug. 1st. To-day is the anniversary of West India Emancipation. If I mistake not, it is now twenty-one years since those poor slaves, eight hundred thousand in number, sent up the glad shout of liberty to the God of freedom. At Kettering, Jamaica, thousands assembled to celebrate the first dawn of liberty. Eld. Knibb says that his house was open to all, without restriction, for days together. Not a fork nor a spoon was missing. All at once they had forgotten to steal. A general massacre is often predicted as the consequence of giving slaves their freedom, but in this and other instances these fears have proved groundless. The negroes at Kettering were grateful to God and to their earthly deliverer. Again and again did they shout, and sing, and pray. Earth had not witnessed the like since the day when Moses sang his song of deliverance from Pharaoh and his host. Not the least significant in the signal triumph of that day, was the merry cry of "Hurra for Massa Knibb, and de fust of Augus foreber!" While this is a day of rejoicing for thousands in the Antilles of the West, it is a day of woe and lamentation to millions on the continent. How long, O Lord, how long? O when will liberty be granted to the oppressed of my native land? Slavery exists in Palestine and throughout the Turkish Empire, but in a mild form. The slave appears to dwell where it pleases him best. Yet, however much modified, slavery shows itself as an evil, a sin, and a shame, and the sooner repented of the better for both master and slave.

2d Called upon Mr. J., mentioned in a former letter. He keeps himself very much secluded from society; he spends much of his time in reading the Bible and prayer. He still refuses to go out into the highways and persuade men to come to Christ. I tried to persuade him to believe that God's time is *now*. To an invitation to go to Jaffa and purchase and work a garden, he replied, that he loved agriculture, and had the means to enter upon such a work, but as yet his duty was to wait a special call from God. Received a call to-day from Rev. ——. We had an interesting conversation about the Jews. It is evident that their minds are not at rest. Every little while some one inquires after the truth of Christianity. At present, many having had hope in Montefiore, and being disappointed, come with their complaint to the missionary. He tells them, Silver and gold have I none; believe in Jesus Christ; in Him you will find true consolation. Report says that Sir Moses wishes to employ the Jews in factories and upon farms, and in the event of being obliged to engage Christians to superintend said work, they must covenant not to speak of religion or of the Bible. Verily, such a condition cannot be accepted by any real disciple of Christ. Let the wants of the poor Jew be supplied, but not at the expense of a denial of, or even a silence about, our Lord and Master. Mr. Lebet called. He is a Sabbatarian from Neuchatel, Switzerland. He embraced the Sabbath some years since, and while quietly pursuing his trade (watch making) on First-day, he was arrested by the police, knocked down and taken to prison, where he remained a few days, and was released upon paying a fine. He then went to England, but soon returned to his native land to sell his property and come to Palestine. He has been here about two months, and talks of making Jerusalem his home.

5th. Attended Episcopal service; Mr. Crawford preached an excellent discourse from Col. 2: 1, 2, after which Bishop Gobat, assisted by Mr. Nicolayson, proceeded to ordain to the work of the ministry Mr. Hefter, a convert from Judaism, and somewhat noted as a Talmudist.

8th. Accepted an invitation to dine with Mr. Graham, Secretary to the English Mission, at his residence on the Mount of Olives. Thence we had a fine view of Jerusalem. Mr. G. showed us some fine photographs of the Mosque of Omar, which he had taken by permission of the Pasha, who seems very much inclined to favor the Franks and break down Mohammedan superstition. The Temple-place has been shut for centuries against Christians and Jews. No one dares enter it on pain of death. This year the new Pasha has opened it to the Prince of Belgium, to Admiral ——, brother of the Emperor of Austria, and to Sir Moses Montefiore; each one was accompanied by as many of his friends as he was pleased to invite, which was not a few. This is regarded as evidence of the decline of Moslem power before the rising glorious light of the Sun of Righteousness.

W. M. J.

WESTERN COLONY SOCIETY.

In the *Sabbath Recorder* of the 18th ult., a request was inserted, in the notice of the proposed meeting of the officers of this Society, for "all persons interested in the enterprise, and desirous of enjoying its advantages, to communicate at once their wishes to the Corresponding Secretary." This Circular is designed to answer the inquiries and correct the misapprehensions of some correspondents, and, at the same time, furnish to many others the desired information in regard to the principles and plan of operations adopted by this Society.

1. *To gather into one or more settlements our Sabbath-keeping brethren who are emigrating to the West.* It is found that many families are moving west from some of our eastern churches, and many more intend to move, who wish to settle in a fertile and heathy region, where cheap or government land can be obtained. Some, in getting desirable locations for themselves, stray away, like sheep without a shepherd, and live isolated from Sabbath-keepers. Thus they are lost to our churches, and their influence as Christians, in a great measure, is diminished, because they do not labor in connection with any society existing in the community where they live. It is proposed, by making this movement sufficiently general, and showing its advantages, to induce Sabbath-keepers emigrating to the West, to settle where a church may be formed, and the other facilities of a well-organized community be immediately enjoyed.

2. *To secure a permanent settlement, where may be carried on a flourishing business.* The Society proposes to select a location near some navigable stream, or on the probable line of a railroad. The committee, to whom is referred the business of securing for the Society a desirable location, have now under negotiation the purchase of several thousand acres of cheap land, in a place where will be combined in all probability both the facilities of steamboat navigation and a railroad.

3. *To establish a School.* It is expected, soon after the settlement of the members of the colony on the land purchased for them, to open a school of some kind. At first, it may be nothing more than a family or select school. But should there seem to be a demand, the accomodations for the school may be enlarged, as the community advances in wealth and influence. That is, a suitable building may be erected, teachers obtained, and apparatus bought. The advantage of starting a school in the beginning of the settlement, will be obvious to every one on serious reflection. The colony makes itself the nucleus of a very strong and growing influence. It holds out the best inducements for others to settle in the vicinity, where they can immediately enjoy the benefits of good instruction. Now, it is sincerely believed, by the projectors of this enterprise, that the Society can in an equitable and satisfactory manner raise a small fund, which will enable it in the beginning to establish a school on a sure and prosperous basis. Other colonies from the East have done so with remarkable success. Nearly twenty years ago, an association of about *thirty* families emigrated from Central New York and settled in one of the Western States, and had in view the establishment of a school in some respects similar to the one contemplated by this Society, and have been so blessed by God that they now have their Institution not only well-endowed, but attended yearly by several hundred students. This Society may not succeed as they have, but it can do likewise. Should a school be established in this manner, it is confidently hoped, that under the guidance of Providence, it will become, at some future day, all its friends now wish—a well-supported and influential Seminary of Learning.

4. *To buy a large tract of cheap or government land, and dispose of it to settlers at a slight advance upon cost.* After the purchase of land, it will be divided into farms and village lots, and sold at auction to the highest bidder. In selling the farms, the lowest bid allowable will be the original cost per acre; in selling the village lots, the lowest bid per lot is to be fixed hereafter by the Society. The surplus revenue, that arises from the sale of the farms and village lots, after remunerating the first purchasers for the use of their money, the labor they have performed, and the risk they have run, will be appropriated in the colony towards the establishment of the school. It is believed that the fund which will necessarily accrue from the sale of the land at auction, cannot be applied to any other purpose so satisfactorily to all.

All persons wishing for more information in regard to the operations of the Society, or to unite with its members in securing a new settlement of Sabbath keepers in the West, may direct their cammunications to the Corresponding Secretary, care of Geo. B. Utter, No. 9 Spruce street, New York.

W. C. WHITFORD, Cor. Sec.

FROM THE LAND OF CANAAN—NO. 5.

MY DEAR SISTERS—Through the tender mercy of our kind heavenly Father, we are all in good health, and happy in our work. After three weeks of our sojourn at Jerusalem, with deep interest, and I trust with profit, we returned to our home. Since then my time has been most fully occupied with my duties, most of which have been with the sick. I have been much puzzled in trying to devise ways and means for the want of medicines, and have been hoping that we should have a supply sent to us. Much suffering might be relieved here, had we suitable remedies at hand. The medicines which brother Joseph H. Potter gave, have done much good here, for which I have no doubt that the Lord will bless him abundantly; for "he that hath pity upon the poor lendeth unto the Lord, and that which he hath given will he pay him again." I have now a very intricate case, which gives me great solicitude, not having medicines and other things convenient and suitable to meet its emergencies. I trust that the Lord's work will not be hindered here for the want of that which is needful and requisite, when the earth is his, "and the fullness thereof."

MARTHA SAUNDERS.

COLLECTING AGENCIES.

It is very difficult for the officers of benevolent societies to regulate their collecting agencies so as to leave no room for fault-finding. To dispense entirely with such agencies is generally considered impossible in the present state of the churches, and to continue them seems only to perpetuate what all regard as in some sense an evil. In several of our exchanges, of late, we have seen the subject discussed, and in a number of ecclesiastical bodies it has received more or less attention. At a recent meeting of the Hartford North Association (Congregationalist), a lengthy report on the subject was adopted, from which we copy a few paragraphs:—

"Take the following National Societies, the A. B. C. F. M., Home Missions, Bible, Tract, Education, with the Society for Collegiate and Theological Education at the West, and the Protestant Society, now with the Foreign Evangelical Society merged in the Christian Union, and we shall find their annual expenses on their whole receipts to be about 22 per cent.; on all donations, so far as they can be distinguished, 38 per cent. Leaving out the Foreign and Home Missionary Societies, the expenses will be about 50 per cent. on all donations. And if we deduct the income of these two societies from Legacies, Funds, &c., the rate of expense on the annual donations of them all will not vary much from 50 per cent.

The annual expenses of the American Board, exclusive of appropriations for missionary objects direct, are about 12 per cent. on the receipts; of the Home Missionary Society, 14 per cent.; of the Bible Society, 16 per cent. on receipts and 45 on donations; of the Tract Society, 11 per cent. on all receipts and 27 on all donations; of the Education Society, 27 per cent. on receipts and 50 on donations; of the Society for Collegiate and Theological Education at the West about 50 per cent., or 18 per cent. by the showing of their report, which included only the salary of the secretary, postage, printing, and incidentals; of the Protestant Society, now merged in the Christian Union, over 70 per cent. on all donations.

The natural inquiry in view of these facts is, where shall retrenchment begin, if not with the expenses of collecting agents? The average salaries of the agents, including traveling expenses, is about $1,000 a year, a trifle short of $20 per week.

It is believed by your committee, that the reformation of the world and its conversion to God, are as much a part of the Gospel to be ministered to men, as the doctrines of faith, of repentance, and of salvation by grace; and that this part of the service might be as well, yea, better, done by the pastors and churches, with such organizations as might be needful for the reception and disbursement of funds, as by the present system of collecting agencies. It is believed, also, that the pastors and churches will do this work when it shall be given into their hands."

THE MINISTRY.

The fiftieth anniversary of the ministry of Rev. John Angell James in the Carr's Lane Chapel, Birmingham, England, was recently celebrated in a very pleasant manner. The contributions taken on the occasion were appropriated to the building of a new house of worship to bear the name of Mr. James, who delivered an address at the laying of the corner stone. The following is an extract from that address:—

"Without unduly magnifying my office as a minister of the gospel, I may boldly, and without fear of contradiction, affirm, that one truly faithful and zealous preacher of God's word, to whatever section of Christ's church he may belong, does more to check the progress of vice and crime, to promote obedience to law, to aid the advancement of individual virtue, and to maintain social order, than a hundred political, moral, and philosophical essays, or than the utterance of the strictest views of justice, or the severest inflictions of judgment. It is thus that the beautiful imagery of the prophet is realized. Instead of the thorn shall come up the fir tree, and those who were once their country's terror and disgrace, become its ornaments and defense. Blind is that country, and wretched must it be, when the worth of a faithful preacher is not known, till the want of this friend of humanity is proclaimed by the abounding of iniquity, the prevalence of strife, confusion, and every evil work. The pulpit—and let it not be considered as a vain boast—next to the Bible, which it is intended to explain and enforce, is the strongest pillar of human society; it is the great break-water which keeps back the mighty surgings of ungodliness, and preserves the land from an inundation of ruin; it is that alone which can be depended upon amid the revolutions of human affairs and the clash of human passions, to secure to the monarch his crown, to the noble his honors, to the rich man the enjoyment of his wealth, and to the workman the reward of his labor. What lover of his species, then, must not uphold the ministry of the word—an institution which, for eighteen centuries, has taught the poor to suffer want, the afflicted in patience to possess their souls, the anxious to be careful for nothing, and the fearful to hope in God."

RELIEF FOR MINISTERS.—Few pastors are able to save from their scanty salaries any property for their families, and we have known families of eloquent and successful ministers reduced at their death to actual want and straitened for the very neeessaries of life. Such facts, (says the *Presbyterian*,) are an everlasting reproach to the churches they have served, and in these days of life-insurances, when by the annual payment of a small policy, a competence may be secured to the family of a pastor, cut down in the midst of his usefulness, churches ought to provide for such contingencies. We have (continues that paper) before appealed to congregations to secure for their pastors what he is thus unable to do for himself. All that most ministers receive from their people, is present sustenance. Would it be too much to ask, of any congregation, that, in addition to the stated salary, they should pay a small amount annually for a policy, which would serve as a permanent provision for all their pastors in succession? To the individual contributors the tax would be a mere pittance, while the comfort to the minister, in removing from his soul a mountain of care as to the uncertain future, would be more than tongue can tell. We trust that some, at least, will take the hint.

WHETHER AN IRISHMAN CAN BE SAVED IN AMERICA.—A Roman Catholic clergyman of the diocese of Cashel, says the London *Watchman*, has received a letter from an Irish priest, the Rev. Thomas Reardon, pastor in Eastern Pennsylvania, in the course of which the writer imploringly entreats his correspondent to use all his influence to check what he designates the insane spirit of emigration to America which seems to possess the people of Ireland. "They are rushing," says the writer, "on the almost certain ruin of their soul, while their temporal condition is at best but little improved. I have had much experience of the mode of life into which nearly all our people are drawn, and I solemnly believe, that if the vessels which bring them over were suddenly to founder and carry every creature on board to the depths of the ocean, they would have a better chance of salvation than they have after they have lived for some time in this country. So entirely convinced am I of the fearful havoc of souls which is the result of coming here, that were the Almighty God to give me power of building a wall of fire round Ireland to prevent its people from leaving it, it should be built before the ink with which I am writing this line would dry. For the love of Jesus try to keep your people at home, for every individual you keep you snatch a soul from hell."

A UNIVERSITY IN NEBRASKA—a country but of yesterday. We are assured such an institution is needed there. Immigration is flowing thither in unprecedented numbers. Of ten steam ferries on the Missouri, we learn that not one is idle, while it is no unusual occurence for as many as *three hundred immigrants*, with their cattle and household gear, to cross at one of them in a single day. Towns which, twelve months ago, existed only on paper, now contain a population ranging from three hundred to a thousand souls. One of these towns is Fontenelle, situated upon the Elkhorn River near its junction with the Platte. Seventy-five houses will be built in Fontenelle the present year. It is proposed to build a University at that place. The Territorial Legislature has given to it a corporate existence. It will obtain, by-and-by, two townships of land under a general law of Congress. The people of Nebraska have subscribed $10,000 towards its construction. It is proposed to raise by contribution in the States, $20,000 more, and the work will have been accomplished.

THE WILLIAMSON CASE.—Rev. Geo. B. Cheever, in an article relative to the case of Passmore Williamson, published in last week's *Independent*, says:—

A righteous man, falling down before the wicked, is as a troubled fountain and a corrupt spring; how much more a judge perverting judgment. A ton of arsenic thrown into the Croton Reservoir could not accomplish half the mischief by poisoning the men, women, and children of the community, that a single corrupt judicial decision may accomplish, in debauching the conscience and corrupting the morals of the people. The social state that will permit the most sacred defenses of personal freedom to be turned to the support of slavery, and innocent men to be thrown into prison by arbitrary power, while the judge that has done these two things is permitted still to occupy the bench of justice, and keeping his victim in jail without indictment, law, trial, bail, or jury—is already far gone towards the establishment of despotism. Bold, unscrupulous blows, at a favorable juncture, as has been demonstrated in France, are all that will be needed to complete it.

In our country, judicial decisions supported by a subtle sophistry are fast arraying precedent and expediency against equity and law, to perpetrate a thorough usurpation by the United States Federal Court, in the hands of the slave power, over all the free State courts in the Union. When this object is gained, slavery will no longer be the creature of municipal and local, but of national and universal protection, power, and law; free to go where it pleases; sanctioned wherever it goes; and not to be resisted, or even spoken against, but at the peril of our personal liberties. Already this is realized, even in Pennsylvania.

DR. BARTH.—By the London *Athenæum* of Sept. 15, we learn that this distinguished traveler had returned to Europe after an absence of five years in the interior of Africa, and when his friends had ceased to hope for his return. He was expected in London on that day.

He left Europe December 8th, 1849, visited Lake Tsad, Sudan, Kuka, and Timbuktu, which city he entered on Sept. 7th, 1853, and in which he resided nearly a year. During his absence he has made discoveries which have greatly increased our knowledge of Central Africa, and of the countries east and southeast of Lake Tsad as far as the basin of the Nile. In his unparalleled journey to Timbuktu he discovered two large empires, Gando and Hamd Allaki, of which not even the names were known previously, and gained a complete insight into the history and present state of Timbuktu, its people and all the surrounding countries, made, for the first time, a minute survey of the middle course of the river Konara, and altogether created a new era in the history of African discovery and regeneration. Dr. Barth's only companion died on the borders of Lake Tsad, Sept. 27th, 1852, since when he has pursued his dangerous journeys alone.

IMPOVERISHMENT OF SLAVERY.—A southern correspondent of the *Christian Inquirer* says that slavery is a cancer, slowly preying upon the vitals of the body politic. His testimony is worth reading, when so many southern statesmen glorify the "peculiar institution" as the bulwark of American civilization. He says:—

"The evils of the 'peculiar institution' fall heaviest on the white population, strange as it may appear. I have lived fifty years in the midst thereof, and believe I have a right to know. There are a few infatuated, worldly-minded men, who pretend that they cannot see any thing that is not right about it; but the bulk of the people, rich and poor, would be glad to be rid of it, if there was any plausible way of effecting its abolition, or rather removal. A plain proof of this is the fact that, from the portion of the country where I live, four-fifths of the emigration westward goes to the Free States, and three-fifths of my relations and early associates have emigrated."

REAL AND PERMANENT DISTINCTON.—The *Christian Inquirer* expresses surprise at the sensitiveness of Unitarians, when the evangelical denominations deny their claim to Christian orthodoxy. It defends these denominations from the charge of narrowness and bigotry, and says with great pertinence:—

"It has always seemed to us that the Calvinistic party was right, and the Unitarian party wrong in this matter. If Christianity be a system of doctrines, Unitarianism is not Christianity if Calvinistic views are right, more than Calvinism is Christianity if Unitarianism be the religion of the New Testament, as we believe it is."

LECTURES ON TURKEY.—Mr. Orcanyan, of Constantinople, (but who received his education in this country,) is at present giving a course of lectures upon Turkay and her Institutions, political and social, at the Mercantile Library Rooms, Astor Place, New York. The stirring events now taking place in the East make Turkey an object of deep interest. Great changes, moral and religious, are in prospect in that country. What a field for missionary labor!

General Intelligence.

European News.

The steamer Africa, with one week later news from Europe, arrived at Halifax, Oct. 24th.

The political intelligence is but meagre, the only item of interest being the rumored alliance between Prince Napoleon and the Princess Royal of England, uniting the houses of Hanover and Bonaparte, and holding out a prospect of a matrimonial fusion of the interests of France and England.

The war news is not of decided importance, but affairs wear a more encouraging aspect for the Allies, and from the position of the naval expedition before Odessa, and the military operations towards Perekop, we may look for highly important intelligence by the next arrival.

The Russians are making powerful efforts to maintain their position in the Crimea, while the operations of the Allies show that it is their intention to break, if possible, the Russian line of communication and supply.

The Czar has been at Nicolaieff, where the Russians appear to be concentrating their forces to repel an anticipated attack from the Allies.

French troops were being concentrated on the Danube, and Odessa was expected to be immediately bombarded by the Allied fleet, which was before its wall.

The Russian fire from the batteries on the north side caused Gen. Simpson some little annoyance, but has not prevented work from being carried on. By the explosion of a kind of infernal machine, numbers of which had been dug up in various parts of the town and around the batteries, an officer and nineteen men were wounded.

Gen. Simpson, in his last dispatch, dated Sebastopol, Sept. 29, says that 9,500 men were employed daily in making a road from Balaklava to the camp. Fatigue parties in the town were engaged in getting timber and other materials from the ruins, in order to get shelter for the troops ere bad weather sets in.

A letter from Sebastopol, in the Frankfort *Gazette*, states that the sunken Russian ships can be raised without difficulty, as the Russians closed them in every part, but one, and attached hose to the hulls, so that the water can be pumped out when required.

The *Invalide Russe* gives a detailed account of the losses of the Russian garrison on the 8th of September, as follows: Killed, 2,684; wounded, 6,058; contusions, 1,205; missing, 1,754—total, 11,701. The same journal states that the Russians lost 1,500 men on the 10th of August, and 1,000 men per day every day up to Sept. 5. Thus it would appear that the losses of the garrison for the last three weeks of the siege amounted to 32,000 men, irrespectively of disease.

Rights of Belligerents.

A dispatch from Washington, dated Oct. 23d, says that Attorney-General Cushing has rendered an official opinion in regard to the recent violation of our neutrality laws by Minister Crampton and several British Consuls, presenting the following points, which embody the views of the Administration in the case:

1. It is a settled principle of the law of nations, that no belligerent can rightfully make use of the territory of a neutral State for belligerent purposes, without the consent of the neutral government.

2. The undertaking of a belligerent to enlist troops of land or sea in a neutral State, without the previous consent of the latter, is a hostile attack on its national sovereignty.

3. A neutral State may, if it please, permit or grant to belligerents the liberty to raise troops of land or sea within its territory; but for the neutral State to allow or concede the liberty to one belligerent, and not to all, would be an act of manifest belligerent partiality, and a palpable breach of neutrality.

4. The United States constantly refuse this liberty to all belligerents alike, with impartial justice; and that prohibition is made known to the world by a permanent act of Congress.

5. Great Britain, in attempting, by the agency of her military and civil authorities in the British North American Provinces, and her diplomatic and consular functionaries in the United States, to raise troops here, committed an act of usurpation against the sovereign rights of the United States.

6. All persons engaged in such undertaking to raise troops in the United States for the military service of Great Britain, whether citizens or foreigners, individuals or officers, except they be protected by diplomatic privilege, are indictable as malefactors by statute.

7. Foreign Consuls are not exempted, either by treaty or the law of nations, from the penal effect of the statute.

8. In case of indictment of any such Consul, or other official person, his conviction of the misdemeanor, or his escape by reason of arranged constructions and contrivances to evade the operation of the statute, is primarily a matter of domestic administration, altogether subordinate to the consideration of the national insult or injury to this Government, involved in the fact of a foreign Government instructing its officers to abuse, for unlawful purposes, the privilege which they happen to enjoy in the United States.

Insurance Frauds.

There seems to be no end of the fraudulent devices by which cunning sharpers fleece the public. The latest and most popular contrivance, is that of sham Insurance Companies, by which thousands and tens of thousands of dollars are filched from the farmers, mechanics, and business men of the country, in the form of *premiums* for a pretended insurance on their property—while the Companies insuring are utterly bankrupt and unable to pay a single dollar of any loss they may incur.

The State Comptroller, Hon. James M. Cook, has been doing a thriving business for some months past, in detecting and exploding these Peter Funk establishments. He has already crushed some half a dozen of the viperous brood; and is actively engaged in a hunt for the rest. The last thus far detected is one doing business in New York, under the name of the *Tontine Insurance Company*, which was organized in May last, and has extensive agencies throughout this State, as well as in other sections of the Union, and which was just getting under good headway with its experiment on public credulity. Mr. Cook directed Mr. Barnes to investigate the affairs of the Company; and the result is made public.

It seems, from the report of Mr. Barnes, that the Tontine Company was organized with a capital of $200,000—James Pirsson, its President, and John W. Freeborn, its Secretary, swearing that the whole amount of the capital had been *paid in cash*, and was then on deposit to the credit of the Company, in the Bank of the Republic—and that there was no intention, design, or purpose, on the part of any person or persons whatsoever, to withdraw any portion of the same except for investment. Their affidavit is given, and is just as full and explicit as language can make it. The *facts* of the case, as shown by the investigation, were these: John Thompson deposited $200,000 to the credit of the Company on the 12th day of May, the day the affidavit was made; and within four days thereafter every dollar of that amount was repaid to Mr. Thompson by the Company's checks! It is further shown, that at the very time they swore that no person had any design or purpose to withdraw any portion of the $200,000, John Thompson held their agreement with the Bank, which enabled him to withdraw the whole at pleasure. The whole transaction was just this:—The Company paid, or agreed to pay, John Thompson $2,500 for allowing $200,000 to lie to their credit in the Bank, long enough for them to swear that it was there as their *bona fide* capital. After that oath had been made, the money was withdrawn, and the Company has been doing business ever since without a dollar of capital, or any means of paying losses they might incur, except the premiums they might receive.

Singular.—The Gloucester *Telegraph* states that the schooner Shooting Star, of that port, was recently taken upon a marine railway for the purpose of discovering a leak in her bottom. Upon examination, a place about one foot in length and eight inches in width was discovered to be worn nearly to the thinness of a wafer. After taking off the plank, two pebble stones, each a little larger than a hen's egg, were found, and their constant rolling, caused by the motion of the vessel, had worn the plank, which was upwards of two inches thick, nearly through. It is supposed that they were dropped inside of the ceiling when the vessel was built, and remained there. Had the vessel gone to sea again without discovering the leak, she might have suddenly filled, and no cause could have been assigned for it.

SUMMARY.

The National Agricultural Exhibition at Boston last week was a grand affair. On the 25th of October, the number present was estimated at from 60,000 to 100,000 persons. The receipts were over $20,000. A great many could not get in on account of the inability of the ticket takers to collect their tickets. The Show commenced with a grand cavalcade of truckmen, between six and seven hundred, making a magnificent appearance. Then came an exhibition of the various classes of horses—among them, the blood horses *Logan*, *Fashion*, and *Matchless*—and also an exhibition of splendid blood stock. In the afternoon there was a trot, in which eight horses took part, for purses of $200 and $100.

The slope of Messrs. Tyson & Co., near Llewellen, Schuylkill County, Pa., was again the scene of a very serious and fatal accident on Saturday. An incautious workman, with an open light, ignited the fire-damp, and produced a tremendous explosion, killing one man almost instantly, and seriously wounding and burning several others. The fire thus produced set fire to some of the timber, which, in a few minutes after, caused another explosion, still greater than the first, but, in consequence of the previous escape of the men, no injury was done except to the mine itself.

Hon. Robert Toombs, U. S. Senator from Georgia, has accepted the invitation of the committee on the slavery lectures to deliver a lecture on the 24th of January, 1856, in the Tremont Temple, Boston, on the subject of slavery. He announces as his subject the consistency of African slavery with the Constitution of the United States and republican institutions, and the effect of the American Revolution upon the African race.

Rev. H. Dunham, pastor of the Presbyterian church of Cortlandville, N. Y., has been voted leave of absence for six months, for the recruit of his health. "Mr. Dunham," writes a correspondent, "is a herculanian worker in the ministry, and seems scarcely conscious of self-injury as long as he sees any thing to do, either in his own congregation or within his Presbytery. Others estimate more adequately the importance of saving such a man to the church than does Mr. D. himself."

Gold has been found in Oregon. A correspondent of the St. Louis Republican says: "The country is greatly excited at this time, by recent discoveries of gold near Fort Colville, in the country of the Upper Columbia. Nearly half the population of Oregon and Washington Territories is on the wing for the new mines. But I fear the rush in that direction, and in such numbers, is premature."

At a meeting recently held by the colored people of Boston, a committee was appointed to guard the community, as far as possible, from the imposition daily practiced, especially in regard to pretended fugitive slaves, and to persons seeking funds ostensibly to redeem others from slavery, and other swindling operations.

Ten employees of the New York Central Railroad have been arrested on a charge of abstracting articles from packages of freight carried over the Niagara Falls branch of the road. At the house of Wm. Hopper, in Rochester, there were found beautiful crape shawls, silks, satins, velvets, laces, gloves, furs, silver ware, knives and forks, japan ware, and about every thing else imaginable.

The Messrs. Appleton of New York have in press a volume of the "Songs and Ballads of the American Revolution," with notes and illustrations, collected by F. Moore. The volume will comprise the romantic, patriotic and political songs, written during the period embraced between the passage of the stamp act and the return of peace in 1783, both loyal and revolutionary.

The workmen employed in the lime manufactory of E. C. Warner & Sons, West Troy, recently discovered a suspicious hole in the railroad bridge crossing the canal at West Troy, and upon examining it they drew therefrom $2000 in counterfeit money upon the Merchant's Bank of Salem, Massachusetts.

The late murder of Mr. Adams in Milwaukee, Wis., of which we published a full account, has created the most intense excitement. A call for a mass meeting, signed by many influential citizens, has been circulated, to demand from the Legislature the restoration of the Death Penalty. The meeting, in the words of the call, will be held, "to express full and heartfelt condolence and sympathy for the widow and orphan children of the deceased, who are thus cruelly robbed of a husband and father, and also to petition the next Legislature of this State for the repeal of the present law for the punishment of the murderer, and the enactment of the Death Penalty, believing that it is the only safeguard against personal danger and mob-law."

Three eminent poets have now volumes in the press of Ticknor & Fields, which will be given to the public next month. Longfellow's "Song of Hiawatha" is nearly printed, and will soon appear. The author of "Festus" has sent over his new book, and that is nearly ready also. It contains three long poems, and their titles are: "The Mystic," "A Spiritual Legend," and "A Fairy Tale." Robert Browning's new volume of poems he has christened "Men and Women," and that is also on the eve of publication.

A well-informed gentleman in Maine expresses to the Journal of Commerce a strong confidence that the effort to build a ship of 600 tons, through the liberality of citizens of that State, as a pioneer vessel on a line to be established between the United States and Liberia, will be successful. The citizens of Bath have subscribed $5,000 toward the enterprise—there having been three subscriptions of $1,000 each, one of $500, one of $250, and several of $100 and $50.

The New Haven Palladium records another case of the complete cure of erysipelas by the simple application of raw cranberries pounded fine. The patient was a young lady, one side of whose face had become so swollen and inflamed that the eye had become closed and the pain excessive. A poultice of cranberries was applied, and, after several changes, the pain ceased, the inflammation subsided, and, in the course of a couple of days, every vestige of the disease had disappeared.

The Sanitary or Relief Committee of Philadelphia have resolved to appropriate the amount left in their hands among the doctors, apothecaries and nurses of that City who volunteered their services during the late epidemic in Norfolk and Portsmouth. As the volunteers have lost much time, and expended their money, this donation will no doubt prove acceptable. It is probable that the Relief Committees of other cities will adopt a similar course.

A patient at the Utica Lunatic Asylum, who was formerly a doctor, while out upon a stroll, was attracted by the cries of a poor girl who had fallen and broken her arm. He immediately went to work and set and splinted the broken limb, and told the destitute mother of the child that his bill was nothing, and went on his way.

Bartlett pears have been selling in New York market at wholesale for $9 per barrel. One cultivator of this delicious fruit realized at the rate of $2200 per acre from his orchard; he plants 104 standard and 336 dwarf pear trees on each acre. From one nursery near Rochester, N. Y., fruit trees to the value of $15,000 have already been sent west this fall.

In Warwick, Cecil Co., Md, Oct. 18th. an Irish row occurred, which was not quieted until five men had received their death wounds. The Irishmen had been to a funeral, and in returning called at a store for grog. Because it was refused, they made an attack upon the premises, and in the *melee* many were wounded, five fatally.

An Englishman has taken out a patent for an ingenious method of transferring designs of graining on choice wood, such as mahogany, rosewood, yew, &c., from engraved metalic heated rollers, or flat surfaces of common woods, such as pine, whereby a close imitation of choice and expensive woods is produced.

On Monday, Oct. 22d, a sloop arrived at New York, bringing from the Jersey shore 40 tons of iron machinery constructed for use in Scotland, and the same is now being shipped direct to Glasgow. It is designed for the manufacture of India rubber goods, a process in which America is ahead of all the world."

The Mayor and Aldermen of the City of Savannah lately voted to T. J. Charlton, J. E. Godfrey, and J. T. McFarland $100 each as a token of appreciation for their services during the late epidemic at Norfolk. The gentlemen, in declining the donation, say that they feel fully paid "if their conduct has been such as to merit the approval of the city."

A quantity of bayonets and spear-heads were turned up in digging a grave in the yard of the Second Presbyterian Church at Charleston, S. C., a few days since. They are supposed to have been buried in 1822 by the then Sexton of the Church, who was implicated in a projected insurrection of the slaves.

The papers contain full details of the recent fight between Texas Rangers and Lipan Indians. The battle occurred on the Mexican side of the Rio Grande, and lasted three hours. Although beaten, the Indians were not dispersed, and maintained a threatening attitude.

A dispatch dated Baltimore, Tuesday, Oct. 23, says:—A schooner owned by Thomas Adams & Co., of Smithfield, Virginia, was capsized in Chesapeake Bay during a storm on Friday night last, and all hands are supposed to have been drowned. The schooner was bound to Baltimore.

Miss Castle, grand-daughter of Admiral De Grasse, of Revolutionary memory, and Miss Shubrick, daughter of Commodore Shubrick, of our Navy, both took the veil as Sister of Mercy, at Louisvilles on the 9th ult.

William Oder, a lad sixteen years of age, recently climbed a flagstaff in Nantucket, which is 127 feet in height, "shinning" the last 20 feet while the pole swayed to and fro. He went up for the purpose of reeving the halyard.

Gen. Harney arrived at Fort Laramie on the 17th of September. The Sioux Indians continued their warlike proceedings, and had attacked several parties, run off with Government and other herds, and committed depredations of all kinds.

Information has been received at the Indian Office of the safe arrival of Superintendent Cumming and Gov. Stevens at Fort Benton.

Potatoes of all kinds—sweet potatoes, Mercers, Junes, &c., are in the greatest abundance in New York, and at prices comforting to the consumer and yet high enough to reward the producers, especially when the yield per acre is so large as it has been this season. Sweet potatoes are little more than half the price they commanded one year ago.

Hon. Robert H. Morris, one of the Justices of the Supreme Court for the First District, who has been for some time ill, deceased at his residence in this City, Oct. 24th. Judge Morris has occupied a prominent place in public affairs. He was at one time Postmaster of this City.

The British representative at Boston has discovered a secret circular of the Irish Emigrant Aid Association, whose object is to aid Ireland to free herself from England's rule, now while the latter is engaged in the Eastern War.

The bids for the new State Canal Loan of New York, in a six per cent. Stock, were opened Oct. 24th, pursuant to the advertised notice of the Canal Fund Commissioners, and from the gross bids the awards were made for the full sum of $1,250,000 at rates ranging from 115 50 to 119 01.

In Montreal, on the night of the illumination in honor of the fall of Sebastopol, a Mr. Thompson, with more patriotism than humanity, showed in his window a real live bear, with his mouth muzzled, and one of his legs broken and the remainder tied.

There are now sixty orphans in the House of Refuge at Norfolk, with none to claim them, besides those that have been provided for in families in the city. Richmond and Petersburg also have charge of a considerable number.

A dispatch dated Cincinnati, Wednesday, Oct. 24, says: Barnum's Baby Show in this City has turned out a grand failure. He says it was brought about by the strictures in the "Commercial," and has brought a suit against that paper, claiming $10,000 damages.

Zion's Advocate chronicles the baptism at South Berwick, Me., by Rev. J. Richardson, of Rev. William Beavins, formerly a Methodist preacher. The Advocate states on the authority of its informant, that Mr. B. "is a man of piety and of very respectable talents."

The Postmaster General has directed that each distinct circular, no matter how many may be printed on a sheet, must be charged with postage as one circular, or the whole, if sealed, with letter postage.

Mons. Godard, the aeronaut, has been imitating some of his Parisian brethren. Last Thursday, at Cincinnati, he made an ascension on horseback.

Gov. Clark has appointed Thursday, the 29th day of Nov., to be observed throughout the State of New York as a day of praise, thanksgiving and prayer.

Nothing has yet been heard of Mr. Winchester, who went up in a ballon from Norwalk, Ohio, on the 2d ult.

New York Markets—Oct. 29, 1855.

Ashes—Pots 6 37½, Pearls 7 25.

Flour and Meal—Flour 8 50 a 8 75 for various grades of State, 8 56 a 8 68 for Western mixed, 8 62 a 8 87 for Ohio and Indiana, 9 50 a 11 00 for extra Genesee. Rye Flour 6 25 a 7 50. Corn Meal 4 75 for Jersey.

Grain—Wheat 1 81 a 1 92 for Western red, 2 10 a 2 16 for Canadian white, 2 12 for Gennsee white. Rye 1 25. Barley 1 30 a 1 40. Oats 46 a 48c. for State, 48 a 50c. for Western. Corn 92 a 93c. for Western mixed.

Provisions—Pork 21 00 for prime, 23 00 for mess. Beef 11 50 for country prime, 13 00 a 14 00 for country mess. Butter 14 a 18c. for Ohio, 19 a 23c. for common to good State, 23 a 25c. for choice. Cheese 9 a 10½c.

Hay—75 a 80c. for River for shipment, 95c. a 1 00 for local use.

Potatoes—1 25 a 1 75 per bbl. for Mercers and Pinkeyes, 1 25 a 2 00 for Sweets.

Seeds—Clover 11 a 11½c. Timothy 2 75 a 3 00 per bushel for new reaped. Rough Flaxseed 2 00 a 2 10.

Wool—32 a 33c. for common, 41 a 43c. for medium, 44 a 48c. for fine.

Apples—Apples are in better supply and are lower; 3,000 bbls Western fall fruit sold at $1 62½; 500 bbls. fall pippins at 4 25; river greenings at 1 25 a 1 50; Newton pippins at 2 00 a 2 50 in orchard, and 5 00 a 7 00 in bbls. tierces, packed for shipment. Golden pippins at 1 37½, and 20 bbls. at 2 25 a 2 50; bell flowers, 1 50 a 1 75; Spitzenbergs, 1 75.

MARRIED,

In Genesee, N. Y., Oct. 17th, by Eld. H. P. Green, Mr. Elam Springer to Miss Betsey Ann Smith, both of Genesee.

In Church, at Rockville, R. I., on the evening of Oct. 20th, 1855, by Eld. P. S. Crandall, Mr. J. S. Maxson, of Richburg, N. Y., to Miss Rebecca L. Crandall, of Hopkinton, R. I.

By Eld. Charles M. Lewis, at his residence in Hopkinton, R. I., on the morning of the 22d ult., Mr. William T. Arnold, of North Kingstown, to Miss Abby A. Brown, of Westerly.

LETTERS.

Daniel Burdick, Charles M Lewis, Henry P Green, A S Davis, J E Potter, E R Clarke, S S Griswold, H V Dunham.

RECEIPTS.

FOR THE SABBATH RECORDER:

WILLIAM M. ROGERS, Treasurer.

Central Railroad of New Jersey.

IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—FALL ARRANGEMENT—Commencing Oct. 1, 1855. Leave New York, for Easton, Mauch Chunk, and intermediate places, from Pier No. 2 North River, at 7 A. M., and 3.15 P. M. For Somerville, at 7 and 11 A. M., 3.15 and 5 P. M.

The above trains connect at Elizabethtown with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt-st., at 7 and 10 A. M., 2.30 and 5 P. M.

Leave Plainfield for New York at 7.07 and 9.18 A. M., and 1.43 and 6.14 P. M.

JOHN O. STERNS, Superintendent.

New Market Seminary.

This Seminary will re-open on the 12th of September, with Mrs. R. H. Whitford, as Preceptress.

This Institution is located in a pleasant section of country, and has a commodious and well arranged building, and is designed to furnish every facility and advantage to the student found in other institutions of this class.

Board for students may be had in families at one dollar and seventy-five cents per week, where all their wants will be kindly cared for. Tuition from $3 to $5 per term, according to the studies pursued. Music, with use of Piano, $10 00.

I. H. Dunn, Sec. of Board of Trustees.

New Market, N. J., August 26, 1855.

Receipts for Missions.

The Treasurer of the Seventh-day Baptist Missionary Society acknowledges the recept of the following sums since his last report through the *Recorder:*

Great Central Route.

THE Through Ticket and Freight Office of the GREAT WESTERN RAILWAY, MICHIGAN CENTRAL RAILROAD, and their Railroad and Steamboat connections to Chicago, Milwaukie, Galena, Burlington, St. Louis, Cairo, and all points West and South-west, via Suspension Bridge, Buffalo, or Oswego, is at No. 173 Broadway, New York, corner of Cortlandt-st.

DARIUS CLARK, Agent.

New York and Erie Railroad.

ON and after Wednesday, Sept. 19, and until further notice, Passenger Trains will leave the pier foot of Duane-st., New York, as follows:

Dunkirk Express at 6.30 A. M. for Dunkirk.

Buffalo Express at 6.30 A. M. for Buffalo.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations. Passengers by this Train will remain over night at Owego, and proceed the next morning.

Rockland Passenger at 3 P. M. (from foot of Chambers-st.) via Piermont, for Sufferns and intermediate stations.

Way Passenger at 4 P. M. for Newburgh and Otisville and intermediate stations.

Night Express at 5½ P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5½ P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c., and with first-class splendid steamers for all ports on Lake Erie.

D. C. McCALLUM, General Sup't.

DeRuyter Institute.

This Institution is located in a pleasant and healthy section of country, and in a community comparatively moral and intelligent. It is easy of access from Syracuse, Chettenango, and Homer. Our motto is, *Teach the young to govern themselves—to educate themselves.* Grateful for past liberal patronage, we assure the public we have ample accommodations for more.

Expenses:

Tuition,	from $4 00 to $6 00
Board in families,	from 1 25 to 2 00
" in clubs	from 0 60 to 1 00
Room rent, per term,	from 1 25 to 2 62

Books and Stationery furnished at very low prices.

All bills settled invariably in advance. No bills for less than half a term. No deductions made except in case of sickness.

Board of Instruction.

HENRY L. JONES, A. M., Principal.

AMOS R. CORNWALL, A. B., Prof. Mathematics.

Miss JOSEPHINE WILCOX, Preceptress.

Mrs. SARAH E. JONES, Mrs. BARBARA A. CORNWALL, Miss SARAH E. SHIPPEY, Miss JANE C. BURDICK, Assistants in Female Department.

For further particulars, address, Henry L. Jones, Principal; W. D. Wilcox, President; J. B. Wells, Secretary; or C. H. Maxson, Treasurer, De Ruyter Madison Co., N. Y.

N. B.—Churches and clergymen furnished at wholesale prices. Sept 27—3 m.

Farm for Sale,

CONTAINING about 100 acres, with a fair proportion of woodland, a small orchard of grafted fruit, and a comfortable dwelling and outhouses. It is situated about four miles north of Westerly, R. I., and within a mile of each of the flourishing manufacturing villages of Potter Hill and Ashaway. There are several other manufacturing establishments near, affording a ready market, in the immediate vicinity, for every species of produce. It is convenient to the first Hopkinton Church, as well as to the very excellent male district school.

It will be sold with or without the stock and farming implements, and possession given the ensuing winter or spring, if desired. To those wishing to secure a quiet home in an enterprising neighborhood, and surrounded by such comforts as can only be found in an old settled and thickly populated country, this affords an opportunity seldom offered. For terms and other particulars apply to the subscriber on the premises, or address John E. Potter, No. 15 Sansom-st., Philadelphia, Pa. Benjamin Potter, Ashaway, R. I.

11tf.

Good Crops, Good Prices, Good Books, and Good Times.

BELCHER'S HISTORY OF ALL THE RELIGIOUS DENOMINATIONS IN THE UNITED STATES. Large Octavo 1,024 pp. and nearly 200 engravings.

FLEETWOOD'S LIFE OF CHRIST AND HIS APOSTLES. 704 pp. and 25 engravings.

Probably there has never been a more favorable opening for the sale of books than the present. Large crops have been produced throughout the country, and these are bringing good prices; every body is in high spirits.

The above volumes are printed on fair paper, in clear, large type, are handsomely illustrated, and bound in a neat and attractive style. More than all, their contents bear the ring of the true metal, enabling the agent to sell them to the highest in the land as well as the humblest, with the gratifying feeling on his part that he is conferring a favor rather than receiving one. They have gained and are gaining a world-wide fame; and being sold exclusively by subscription, the agent has the entire benefit of their popularity.

Canvassers, and those wishing to become such, will find it for their interest to secure an agency. We can offer them with other popular works on the most favorable terms. For further particulars apply to or address either of the

Publishers, { John E. Potter, Philadel., Pa.

Magnificent Floral Gift.

SUBSCRIBERS to the "CHRISTIAN DIADEM" for 1855, are entitled to a splendid steel engraving, the ☞ LILLY AND THE ROSE PERSONIFIED, being given *gratis* to all old and new subscribers who send us only ONE DOLLAR, by mail or otherwise.

Six Copies for Five Dollars.

The Diadem is a strictly moral and religious work—designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address Z. P. HATCH, Publisher, 9 Spruce street, New York. May 24—3m.

State of New York,

SECRETARY'S OFFICE, Albany, August 25, 1855.—To the Sheriff of the County of New York: Sir—Notice is hereby given, that at the General Election to be held in this State on the Tuesday succeeding the first Monday of November next, the following officers are to be elected, to wit:

A Secretary of State in the place of Elias W. Leavenworth;

A Comptroller in the place of James M. Cook;

An Attorney-General in the place of Ogden Hoffman;

A State Engineer and Surveyor in the place of John T. Clark;

A State Treasurer in the place of Elbridge G. Spaulding;

A Canal Commissioner in the place of Frederick Follett;

An Inspector of State Prisons in the place of Darius Clark;

A Judge of the Court of Appeals in the place of Addison Gardiner;

All whose terms of service will expire on the last day of December next.

Also, a Judge of the Court of Appeals in the place of Charles H. Ruggles, Resigned;

Also, a Justice of the Supreme Court for the first Judicial District, in the place of Edward P. Cowles, whose term of office will expire on the last day of December next;

Also, a Senator for the Third, Fourth, Fifth, and Sixth Senate Districts, in the place of Thomas J. Barr, Thomas R. Whitney, Mark Spencer and Erastus Brooks, whose term of office will expire on the last day of December next.

COUNTY OFFICERS ALSO TO BE ELECTED FOR SAID COUNTY.

Sixteen members of Assembly;

A Sheriff in the place of John Orser;

A County Clerk in the place of Richard P. Connolly;

Four Coroners in the places of Robert Gamble, Joseph Hilton, Hieronymus N. Wilhelm, and William O'Donnell;

A Comptroller in the place of Azariah C. Flagg;

A Street Commissioner in the place of James Furey;

A Commissioner of Repairs and Supplies in place of Bartholemew Purdy;

Two Governors of the Alms House in the place of Patrick Henry add John J. Herrick;

City Inspector in place of Thomas K. Downing.

A Counsel to the Corporation in place of Robert J. Dillon;

Two Justices of the Superior Court in the place of Wm. W. Campbell and Murray Hoffman;

A Justice of the Marine Court in place of Chas. H. Birdsall;

A Police Justice for the Sixth Judicial District in the place of Geo. W. Pearcy;

A Judge of the Court of Common Pleas in the place of Lewis B. Woodruff.

Yours respectfully,
E. W. LEAVENWORTH, Secretary of State.

Sheriff's Office, New York, August 28, 1855.

The above is published pursuant to the notice of the Secretary of State and the requirements of the statute in such case made and provided.

JOHN ORSER,
Sheriff of the City and County of New York.

☞ All the public newspapers in the county will publish the above once in each week until the election, and then hand in their bills for advertising the same, so that they may be had before the Board of Supervisors, and passed for payment. Sep—18.

Miscellaneous.

The Grinnell Exploring Expedition.

The following is a copy of the official report of Dr. Kane, commanding the second Grinnell expedition in search of Sir John Franklin, to the Secretary of the Navy :—

Our little party have returned in health and safety.

We reached the Danish settlements of Upernavik on the 6th of August, after an exploring travel of thirteen hundred miles. During this journey, which embraced alternate zones of ice and water, we transported our boats by sledges, and sustained ourselves in animal food exclusively by our guns. We entered port after eighty-four days' exposure in the open air.

I have the honor to subjoin a hurried outline of our operations and results, in advance of more detailed communications.

My previous dispatches make the Department acquainted with our arrival at the northern settlements of Greenland. Thence I crossed Melville Bay without accident, and reached Smith's Sound on the 5th of August, 1853. Finding Cape Hatherton, the seat of my intended beacon, shut out from the Sound by the more prominent head and of Littleton Island, I selected this latter spot for my Cairn, erecting a flag-staff, and depositing dispatches.

To the north the ice presented a drifting park of the heaviest description, the actions of hummocking having in some instances reared barricades of sixty feet feet in height. In my efforts to penetrate this drift, being driven back and nearly beset in the pack, I determined (as the only means of continuing the search) to attempt a passage along the land where the rapid tides (here of twelve to sixteen feet rise and fall) had worn a precarious opening. Previous to this responsible step, a depot of provisions with a metalic life-boat (Francis) was carefully concealed in a large inlet in latitude 78° 26′.

The extreme strength of the Advance enabled her to sustain this trying navigation. Although aground at the falling of the tides, and twice upon her beam-ends from the pressure of external ice, she escaped any serious disaster. After a month of incessant labor, cheered, however, by a small daily progress, the new ice so closed around us as to make a further penetration impossible. With difficulty we found a Winter Asylum at the bottom of a bay which opened from the coast in latitude 78° 44′. Into it we thankfully hauled our battered little brig on the 10th September, 1853. From this point, as a center, issued the explorations of my party.

The Winter was of heretofore unrecorded severity. Whisky froze as early as November, and mercury remained solid for nearly four months. The range of eleven spirit thermometers, selected as standards, gave temperatures (not yet reduced) of sixty to seventy-five degrees below zero, and the mean annual temperature was 5° 2′ Fahrenheit, the lowest ever registered.

The extreme cold, combined with 120 days of absence of sun, gave rise to an obscure but fatal form of tetanus (lockjaw.) The exertions of Dr. Haven, the Surgeon of the expedition, had readily subdued the scurvy, but these fearful tendencies to tonic spasm defied our united efforts. This disorder extended to our dogs, fifty-seven of which perished, thus completely breaking up my sledge organization.

The operations of search were carried on under circumstances of peculiar hardship. We worked at our sledges as late as the 24th of November, and renewed our labor in March. Much of this travel was in darkness, and some at temperatures as low as 50°. The earlier Winter travel was undertaken by myself in person, but by the aid of a single team of dogs, and the zealous coöperation of my officers, we were enabled to replace the parties as they became exhausted, and thus continued the search until the 12th of July. It is believed that no previous parties have been as long in the field. Messrs. Brooks, McGeary, Bonsall, Haven and Morton successively contributed to the general result. The men worked with fidelity and endurance.

I briefly detail the explorations of our party.

Smith's Sound has been followed and surveyed throughout its entire extent. It terminates to the northeast in a gulf 110 miles in its long diameter.

Greenland has been traced to its northern face, the coast tending nearly due east and west, (E. 17° N.) Its further penetration towards the Atlantic was arrested by a glacier, which offers an impassable barrier to future exploration. This stupendous mass of ice issues in 60° west longitude. It is coincident with the axis of the peninsula, and is probably the only obstacle to the insularity of Greenland. It rises three hundred feet in perpendicular face, and has been followed along its base for eighty miles in one unbroken escarpment. This glacier runs nearly due north, and cements together by an icy union the continented masses of Greenland and America. It explains the broken and permanently frozen character of Upper Smith's Sound; its abundant icebergs, and, to a certain extent, its rigorous climate. As a spectacle, it was one of the highest sublimity.

The northern land into which this glacier merges has been named Washington, and the bay which interposes between it and Greenland I have named after Mr. Peabody.

Peabody Bay gives exit at its western curve (latitude 80° 12′) to a large channel, which forms the most interesting geographical feature of our travel. This channel expands to the northward into an open and iceless area, abounding in animal life, and presenting every character of an open Polar sea. A surface of three hundred square miles was seen at various elevations free from ice, with a northern horizon equally free. A north wind, fifty-two hours in duration, failed to bring any draft into this area.

It is with pain that I mention to the Department my inability to navigate these waters. One hundred and twenty-five miles of solid ice, so rough as to be impassable to boats, separated them from the nearest southern lead. My personal efforts in April and May failed to convey one of the smallest India-rubber boats to within ninety miles of the channel.

My party, including myself, were completely broken; four of them had undergone amputation of toes for frost bite; nearly all were suffering from scurvy, and the season had so far advanced as to render another journey impossible. To the north of latitude 81° 17′ the shores of the channel became precipitous, and destitute even of passage to the sledge. William Morton, who, with one Esquimaux and a small team of dogs, had reached this spot, pushed forward on foot until a mural cape, lashed by a heavy surf, absolutely checked his progress.

It was on the western coasts of this sea that I had hoped to find traces of the gallant martyrs whose search instigated this explosion. The splendid efforts of Dr. Ray—now first known to me—would have given such a travel a merely geographical value. Reviewing conscientiously the condition of my party, it is perhaps providential that we failed in the embarkation.

The land washed by this sea to the northward and westward has been charted as high, as latitude 82° 30′ and longitude 76°. This forms the nearest land to the pole yet discovered. It bears the honored name of Mr. Grinnell.

As the season advanced, it became evident that our brig would not be liberated. Our immediate harbor gave few signs of breaking up, and one unbroken ice surface extended to the sound. It was now too late to attempt an escape by boats; our fuel was deficient, and our provisions, although abundant, were in no wise calculated to resist scurvy. At this juncture I started with five volunteers on an attempt to reach the mouth of Lancaster Sound, where I hoped to meet the English expeditions, and afford relief to my associates. During this journey we crossed the northernmost track of William Baffin, in ——, but finding a solid pack extending from Jones' Sound to Hakluyt Island, with difficulty regained the brig.

The second Winter was one of extreme trial. We were obliged, as a measure of policy, to live the lives of the Esquimaux, enveloped in the walls of moss, burning lamps, and eating the raw meats of the walrus and bear. At one time every member of our party, with the exception of Mr. Bonsall and myself, was prostrate with scurvy and unable to leave his bunk. Nothing saved us but a rigorously organized hunt, and the aid of dogs, in procuring walrus from the Esquimaux, the nearest settlement of which people was 70 miles distant from our harbor.

With these Esquimaux—a race of the highest interest—we formed a valuable alliance, sharing our resources, and mutually depending upon each other. They were never thoroughly to be trusted, but, by a mixed course of intimidation and kindness, became of essential service.

I have to report the loss of three of my comrades—brave men who perished in the direct discharge of their duty. Two of these—acting carpenter, Christian Onlsen, and Jefferson Baker—died of lockjaw; the third, Peter Shubert, of abscess following amputation of the foot. Mr. Ohlsen was a valuable adviser and personal friend. He acted in command of the brig during my absence upon the sledge journeys.

Knowing that a third Winter would be fatal, and that we were too much invested by ice for an expedition from the Sound to liberate us in time for the present season, I abandoned the Advance on the 17th of May, and commenced a travel to the South. The sick—four in number—were conveyed by on dog-sledge. I had to sacrifice my collection of natural history, but saved the documents of the expedition.

The organization of this journey was carefully matured to meet the alternate contingencies of ice and water. It consisted of boats cradled upon wooden runners, with lesser sledges for the occasional relief of cargo. With the exception of reduced allowances of powdered breadstuff and tallow, we depended upon our guns for food; but a small reserve of Borden's meat biscuit was kept unused for emergencies. Our clothing was rigorously limited to our furs. We walked in carpet moccasins.

Our greatest difficulty was the passage of an extensive zone of ice which intervened between the brig and the nearest southern water. Although this belt was but eighty-one miles in liner extent, such was the heavy nature of the ice and our difficulties of transportation, that its transit cost us thirty-one days of labor, and an actual travel of three hundred and sixteen miles.

From Cape Alexander we advanced by boats, with only occasional ice passages at the base of glaciers. At Cape York I erected a cairn and pennant, with dispatches for the information of vessels crossing Melville Bay; and then after cutting up my spare boat for fuel, embarked for the North Greenland settlements.

We arrived at Upernavik (as before stated) on the 6th of August, without disaster, and in excellent health and spirits. Throughout this long journey my companions behaved with admirable fortitude. I should do them an injustice if I omitted to acknowledge their fidelity to myself and gallant bearing in times of privation and danger.

From Upernavik I took passage for England, in the Danish brig Marianne; but, most fortunately, touching at Godhavn, (Disco,) we were met by our gallant countrymen, under Capt. Hartstein. They had found the ice of Smith's Sound still unbroken, but, having met the Esquimaux near Cape Alexander, had heard of our departure, and retraced their steps. They arrived at Disco but twenty-four hours before our intended departure for England. Under these circumstances, I considered it obligatory upon me to withdraw my contract for passage in the Marianne, and return with the Release and Arctic.

The present season is regarded as nearly equal in severity to its predecessors. The ice to the north is fearfully extended, and the scrape of the searching squadron from besetment is most providential. The rapid advance of Winter had already closed around them the young ice, and but for the power of the steamer and the extraordinary exertions of Capt. Hartstein an imprisonment would have been inevitable. Not only Smith, but Jones and Lancaster Sounds were closed with an impenetrable pack; but in spite of these difficulties, they achieved the entire circumnavigation of Baffins' Bay, and reached the Danish settlement by forcing the middle ice."

Mercantile Fluctuation.—The Philadelphia *Ledger* in an article on business matters, well says: "If a man would see gray hairs upon his head before their time; beggary and ruin, the sole legacy left to a wife and children, now rolling in every luxury, and brought up to it all; if he wants to see defrauded and indignant creditors, an old age of penury and dependence, a family driven by debt and false ideas into every degradation and crime, then let him spread all sail which he can borrow, give credit to every reckless customer, boast of his sales, live in brown stone and rosewood, surround himself with carved furniture and costly imported luxuries of all kinds; let him bring up his children to be waited upon by troops of servants—the end will come sooner than he expects; he will be caught in some nip of the ice, and sunk like lead in the mighty waters."

Magnificent Farming.

The following very interesting account of the large and excellent farm of John Singerson & Brother, near St. Louis, is copied from the *Valley Farmer*. There are much larger farms in the Union, but none, perhaps, where there is so profitable a combination of diversified crops—and the enterprise and energy of the Sigersons are worthy of imitation.

The Sigerson farm is situated south of the River de Peres, in what is known as the Carondelet Common Fields, and consists of one thousand acres, all under fence and nearly all in cultivation. When the commencement was made there, about ten years ago, the whole tract was covered with a stout growth of black jack, hickory, hazel, etc. The Gravois runs through the entire tract, diagonally from south-east to north-west, affording abundance of water for stock. The ground is quite undulating, and on it are found numerous sink-holes through which the water drains off by subterranean passages in the limestone ledge which underlies the whole section into the Mississippi river. The soil is a rich, sandy loam, very deep, upon a clay sub-soil, and on being worked becomes very friable, and is easily pulverized. It is admirably adapted to the growth of fruit, and also, corn, wheat, potatoes—in fact every thing cultivated in this region.

They have now an apple and peach orchard in bearing, of over 160 acres, embracing some 40,000 trees; they have 5,000 pear trees in bearing, besides nectarines, apricots, cherries, plums, quinces, etc., in great numbers. They have 200 acres of meadow, 60 acres of wheat, the finest we have seen this season; 60 acres of oats; 100 acres devoted to the nursery, in which they have this year planted about five bushels of apple seeds, and thirty bushels of peach stones; they have in it 50,000 budded peach trees, which will be ready for sale this fall; a larger quantity of apples; 300,000 grape cuttings; 30,000 evergreens, besides large quantities of quinces, pears, etc., as well as ornamental and shade trees, roses, dahlias, and every variety of hardy and exotic flower and shrub. They have twenty-five acres of strawberries, from which they have daily gathered from one to two hundred gallons of strawberries for two weeks past.

Besides supplying a large amount of food for the St. Louis market, the Messrs. Sigerson are intending this year to send large quantities to Chicago, Milwaukie, Galena and other cities north of us. By our railroad facilities this can now be accomplished so as to contribute vastly to the comfort of our northern neighbors, and be a source of profit to the enterprising men engaged in it. They expect to have from twenty to thirty thousand bushels of peaches to dispose of this season.

Mr. H. F. French gives the following account in the "New England Farmer" of the Farm of Mr. Darius Claggett :—

Good husbandry and energetic farming are not limited to New England men. I yesterday accepted an invitation from a leading merchant of this city, Mr. Darius Claggett, to visit his farm on the Rockville plank-road, about five miles from Washington. His family reside on the farm in summer, and Mr. Claggett himself comes to his city business every day except Sunday and Friday.

I have rarely seen a place which gave so decided evidence of good taste and good judgment, and withal, of such preserving faith in our good mother earth, as this. Six years ago Mr. Claggett purchased three hundred acres of land, mostly covered with a small growth of yellow pine, entirely unimproved. In this short period of time he has cleared and put under the plough one hundred and fifty acres, a large part of which is covered with a choice variety of fruit trees of all descriptions that the climate will produce. His trees appear to be judiciously selected, carefully pruned and protracted, and making a growth far beyond what I have ever seen at the North. He has already 2500 apple trees, 450 pears, 1600 paches, 150 apricots, and as many plums.

The apple trees are set forty feet apart, and the land among them planted with wheat in drills, with bare strips of a few feet in width along the rows. They are making generally a better growth than we get in New Hampshire. I saw upon them marks of our old enemy, the borer, and far worse marks of the seventeen-year-locusts of 1852. According to the theory, they will not be here again until 1869, by which time our friend will, it is hoped, have been paid by the fruit of his trees for all his labors. He said that when the locusts had possession of his trees, he could scrape from the body of a newly-set apple tree a pint of the insects at once! His pear trees, however, far excel his apples. Indeed, I have never seen so large a number of pears together that appeared so healthy, as we say at home, so thrifty as these. I saw no signs of the sap-blight or winter-killing, but the trees seemed full of life, and many of them were full of fruit already set. The peach orchard is already set for a large crop. In 1853, Mr. C. sent to the market 700 baskets of peaches, and his crop this year will probably far exceed that quantity. He has this year in grass, about 26 acres, in wheat about the same, in corn about 40 acres, and in potatoes about 12 acres, besides large tracts of vegetables and small fruits, among the rest two acres of strawberries. He manures all his crops with Peruvian guano, 300 pounds to the acre, ploughed in, and thinks this will insure him abundant crops.

Plant a Grape Vine.

Every person who has the control of a square rod of ground whereon plants may grow, can scarcely do better than to get a grape vine of the Concord, Isabella, or Dianna varieties. The first cost is trifling, and the after-care of them more of a pleasure than a task. The grape is not only palatable and nutritious for those who are well, but is exceedingly grateful to the sick, giving tone to the digestive organs, and healthy action to the whole alimentary canal.

Before setting the root, throw out the earth to the depth of two or three feet, and fill up ten inches with coarse manure of any sort, old bones, oyster shells, &c., and then throw in rich loam; into this rake a few quarts of house ashes, then fill up with loam and composted manure, and the soil is ready for the root.

After the plant is set, scatter on strawy manure, or leaves, and through the summer occasionally throw upon this the contents of the tubs on washing days. A. J. Downing, late editor of the *Horticulturist*, says: 'I have seen the Isabella grape produce 3,000 clusters of well-ripened fruit in a season, by the liberal use of soap suds from the weekly wash.'

The effect of soap suds on other plants is sometimes surprising. A cypress vine which had remained stationary for a fortnight, when about two inches high, immediately commenced growing after a good watering with soap suds, and grew up six inches the first five days. With a little care this may all well be done by any one who has never attempted it before. Under this treatment in the course of three or four years you will be amply repaid by a most beautiful crop of luscious grapes and a vine greatly ornamental to the grounds and dwelling.

Pruning.—The Grape vine bleeds readily. Never prune at all, until the vine has grown one or two years, for it needs the aid of the small branches in order to push forward large and vigorous roots. Late in October or November is a proper time—never when the sap is in motion in the spring. As the fruit grows on new wood every year, in pruning it is necessary to cut back the branches to within two or three eyes of the main stem. The cultivator will find plain directions in *Cole's Fruit Book*, which costs fifty cents, and it will enable him to see the whole operation illustrated by engravings.

Never pinch off the leaves to aid the ripening of the fruit, as they are placed there for the very purpose you desire to accomplish.

Plant a grape vine, and before long some of you will be thankful to him who gave you the hint. [New England Farmer.

Russian Storms.

A traveler in Russia says, that the storms of that country are divided into three classes, the first and mildest kind is called the Miatsel; the second, more severe, the Samjots: and the third, which is absolutely terrific, the Winga. In a conversation between himself and a priest, the latter is thus described :—

"What, then," cried I, "is the Winga?"

"A prelude to the last day." answered the priest. "Fortunately, unmistakable indications announce its coming for some days beforehand. Then nobody sets out upon a journey, not even to the next village, though it be but a verst or two off. Precautions are taken for the safety of the house, by protecting it, on the north side with heavy stones, and by propping it up, as well as barns and stables, on the south side. The *tubunen* (troops of wild horses) scamper in all haste to the nearest forest; droves of cattle and flocks of sheep seek shelter wherever it is to be found. Whatever the storm overtakes upon the open plain, man or beast, caravans drawn by oxen, or caravans drawn by horses, is lost, without a chance of rescue.

"An icy shower of snow is the forerunner of the terrible blast; it falls so thick, and drives so horizontally through the air, that to withstand it is impossible, whilst it avails little to suffer one's self to be driven before it. For if one escapes for a while this prelude to the hurricane, he is infallibly overtaken by the formidable blasts and circling whirlwinds which succeed it, and which gather up from the earth, like chaff from the threshing floor, the objects exposed to their violence, and hurl them to and fro in the air. And yet the rage of the unfettered element is not here at its height; for when the storm seems to have exhausted its fury in the manner I have described—often raging thus during a period of several days—then, first begins the real tempest, a blast which *nothing* can resist. It uproots whole forests, tosses the loftiest fir-trees into the air like blades of straw, and often conveys them high above the earth, whole versts away. It levels stables and barns, unroofs houses, and throws down church towers, so that the district it has visited looks, after its destructive passage for distances of several days' journey, like a land ravaged by fire and sword. On all sides are seen herds of dead cattle, trees uprooted, villiages overthrown. In exposed situations, this wind has been known to tear up isolated stables, to transport through the air their fragments and the cattle they contained, and far, far from the spot, to hurl these down shattered upon fields and roofs. With varying fury the monster rages for some days, leaving behind him, on his departure, death, destruction, and lamentations. Happily he comes but seldom; his visits are not for every generation; but when he does come, all that his icy breath touches is devoted to annihilation.

"That is the Russian *Winga!*"

Great Cities.

According to a late geographical work, there are but three cities in christendom containing a greater population than New York. They are London, 2,323,141. Paris, 1,053,253. Constantinople, 786,990. New York has over 700,000. But if the world stands until New York shall become as old a city as London is, and its population continues at the rate of its present annual increase, who can compute the number of its inhabitants, or measure its territorial extent?

London dates back to the generation that saw Julius Cæsar. In the reign of Nero, less than half a century after Christ, it was a place of considerable importance.

Paris, the next largest city in the world, was spoken of by Cæsar, who lived fifty years before Christ, and when taken by the Franks, 500 years after, was a large, beautiful city.

Constantinople is still older than either of the above. It was founded 356 years before Christ, and was re-built by Constantine, A. D. 328.

The foundation of New York, on the other hand, is of quite a recent date. It received its name in honor of John, Duke of York, in 1664, at which time it was captured from the Dutch by the English. It then contained a population of about 3,000. The first permanent settlement made on Manhattan Island, was by the Dutch, in 1615, and the first public wharf was built as late as 1658.

But little more than 200 years have elapsed since the first permanent occupancy of the spot on which now stands New York, and in less than two centuries her population has increased from 3,000 to nearly three-fourths of a million.

Fight between a Rattlesnake and Hogs.—The *State Rights Democrat*, published at Elba, Ala., narrates the following: "Two gentlemen were lately in the woods when their attention was attracted by an uproarious noise of hogs. Thinking that something uncommon was to pay, they repaired to the spot, and found that the hogs had been in a fight with a very large rattlesnake. The fight, from appearances, had been a long and desperate one. The snake was torn to pieces, three hogs dead and a fourth dying. They say that as the last hog would groan, the snake would raise his head, being unable to do any thing else. The snake and fourth hog soon died. They report that for thirty yards around, the grass and ground was torn up. The snake was six and a half or seven feet long. The hogs, in the fight, had demolished all the rattles except two."

Winter Care of Fruit Trees.

Yesterday we crossed an orchard, by chance, the owner of which was already preparing his trees to endure the frosts of Winter—as *he* supposed. But, according to our experience, as well as theory, he was taking the most direct method of giving them the least possible chance for "living through." As he was but a beginner, we could the more readily excuse him for following what at first thought might seem to be a feasible plan. "Somebody" had told him that the frost would have less effect upon the roots if they were kept imbedded in water through the Winter, and he was heaping up and packing solid a circular bank of earth four or five feet distant from the body of each tree, so as to hold a pool of water even with the surface of the ground. Nothing could be more unphilosophical, as a little reflection will show.

Every healthy, vigorous tree or plant, is supplied with an almost infinite number of fibrous roots, which penetrate every part of the soil, and gather sap, and along with it a supply of organic, and, perhaps, of inorganic food. The expansion and contraction of the soil during Winter, tear and break great numbers of the minute roots, a majority of which are so small as to be imperceptible to the unaided eye. Where there is a great number of alternation of heat and cold, so many of these roots are broken as to leave the tree in a sickly condition in the Spring, and it should be a careful study to protect them from such action of frost. Should there be but a slight degree of frost, not more than enough to freeze water half an inch to an inch in depth, a body of water around the roots would doubtless act as a preserver, and from this fact probably arose the practice above alluded to. But in this climate we have to guard against foot-deep instead of inch-deep frosts.

A simple experiment will show the difference between a dry and a wet soil around the base of a tree. Take three cups, each nine inches deep; fill each of them within one inch of the top—the first with water, the second with earth saturated with water, and the third with moist but nearly dry earth—all three to cold enough to freeze them solid. In the first, the water in changing to ice will expand so as to fill up the entire measure. The moist earth in the second will have expanded nearly as much, while the comparatively dry earth will scarcely expand an eighth of an inch.

The experiment, or the principle which it illustrates, viz., that water in freezing expands about one-eighth of its bulk, while dry solids do not thus expand, has a direct bearing upon the Winter treatment of trees. Instead of retaining water around them, it is better to dig a ditch (at a sufficient distance to avoid cutting the roots,) to convey the water away and leave the soil dry.

It is sometimes even advisable to bank up the earth eight or ten inches high around the body of the tree, and slope it off for a few feet. This will both carry off the water and afford additional warmth to the roots.

For giving increased warmth it is well worth while to mulch the ground well with straw, muck, or sods; that is, put on a thick coating of any of these substances, to be in part removed in the Spring, and in part worked into the soil. This will keep out the frost, and thus save the roots from the breaking, tearing effect of frost, and also give additional richness to the soil. When straw is used it should be wet, and even a little rotten, and not be placed too thick against the body of the tree, lest it should furnish a nest for mice.

We repeat, the most essential considerations in the Winter protection of trees, are to keep the soil dry, and shield the roots from frost.

What we Eat.—The London *Times*, after a long report of Mr. Scholefield's Committee, says: "As to Turkey rhubarb, one of the witnesses enlightens us by saying, 'One manufacturer at Banbury, near Oxford, produces twenty tons of rhubarb per annum; it is inferior to Turkey rhubarb, as fetching 4d. a pound, while Turkey is 11s. 6d.; China rhubarb, 7s. 6d. Cod liver oil is immensely adulterated; only 5 per cent. of genuine cod liver oil will answer all the usual chemical tests. Mustard has 30 per cent. of lime or chalk as adulteration; chloroform undergoes decomposition, but is not much adulterated; quinine is very much adulterated with starch and manna.' Another witness stated he had found crystals of alum in English bread the size of peas, the 4lb. loaf often containing 500 grains. German yeast is said to be the source of the furunculoid epidemic, or epidemic of boils, in England. Ordinarily so-called 'chemists' know nothing whatever of chemistry; they, of course, could not or did not wish to know anything of adulterations." The *Times* gives a long description of Dr. Hassall's evidence, too copious for extraction. The chief articles poisoned with lead and copper were, yellow sweets for children with chromate of lead, and pickled with verdigris. [Dublin Medical Press.

The Prefect of the department of "Lee Landes," in France, has just published a regulation which is likely to diminish the chances of mischief in the dispensing of actively poisonous substances. The pharmaciens are directed to use red paper, for the labels of bottles which contain dangerous fluids, the words "for external use" being written thereon. The labels of ordinary medicine bottles, for internal use, are to be white. In this country, chemists are generally very careful to write "for external use" and "poison," when necessary; but the distinctive color is certainly an improvement, as the bottles may sometimes fall into the hands of persons who cannot read.

A number of the New York City officials, 3 Aldermen, 3 Councilmen, and 2 Police Justices, have been indicted for taking bribes, and other illegal practices.

The last remaining debtor confined in the Boston jail was discharged on Tuesday last. It is something for the "modern Athens" to be proud of.

New Steamboat Line for Albany and Troy.

From Pier 15, foot of Liberty-st., at 6 P. M

STEAMER RIP VAN WINKLE, C. W. Farnham, Commander, Monday, Wednesday and Friday, at 6 o'clock, P. M.; steamer COMMODORE, L. Smith, Commander, Tuesday and Thursday, at 6 o'clock, P. M., and Sunday, at 5 P. M.

Fares: Saratoga, $1 50; Moreau, $2 15; Fort Edward, $2 15; Whitehall, $2 75; Castleton, $3 10; Rutland, $3; Burlington, $4; Rouses Point, $5 50; Montreal, $7 50.

These Boats will arrive in Albany or Troy in ample time to form connections with all the Railroads, North, East or West, enabling passengers to reach Montreal and intermediate points the same day.

These Steamers are of the first class for strength and speed—well known favorities of the public—having been thoroughly overhauled during the past winter, and offer every accommodation that can be desired by either freighter or traveler.

Through tickets can be obtained on board the boat for Saratoga, Moreau, Fort Edward, Whitehall, Castleton, Rutland, Burlington, Rouse's Point and Montreal

The Northern Freight Express will give Bills of Lading to all points as above named. Shippers who desire it, can have time receipts, by applying at the office on the Pier. A. A. DYKEMAN.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

ATONEMENT.

Since writing my former article on Atonement, an article has appeared in the *Independent*, somewhat criticising the Princeton Theology, as set forth in a sermon by E. C. Wines, D. D. My object in referring to it is to still further confirm the fact, that the Atonement, among the orthodox, has not attained such a finality as has settled it beyond all controversy. The *Independent* says:

"The New England theory of atonement makes the sufferings of Christ vicarious or substituted sufferings—substituted for the penal sufferings of all who accept the offered salvation; but it does not represent Christ as the literal substitute of those who are redeemed by his death. Christ's sufferings are not, in any scientific accuracy of speech, the penalty of the law in[illegible]d upon the innocent instead of the guilty, but they are substituted for the execution of the penalty."

Bro. Brown says: "Christ suffered the proper penalty of the law of revealed religion." The *Independent* says, He did not. I also said he did not. Who is right?

The Princeton Theology says: "The Lord Jesus is the representative of his people, and the method by which he redeems them is that of substitution—the substitution of his obedience for their obedience—the substitution of his death for their death. Christ took the place of a chosen people—paid their debts, satisfied the claims of justice, and redeemed them from death and hell. He is the surety, then, of the saved only—the elect. He can be the surety of none else." "On the ground of the atonement, God has made an unlimited offer of saving mercy to the whole human family. But all spurn the offer. Foreseeing this, God determined to put forth a gracious influence upon the will of *many* sinners, and *constrain* them to accept the offer of salvation."

Upon the Princeton theory of atonement, the *Independent* asks: "Where then is the sense, where the ingenuousness or sincerity of pretending that there is any *possibility* of salvation for any other than the elect? *Can* any man be saved for whom there is no atonement? Is there an atonement for any but that chosen company whose law place Christ took, whose debts he paid, and for whom he satisfied the claims of justice?" The *Independent* adds: "Inconsistency is a blessed thing in theology. Blessed is that man who is willing to be inconsistent, and even to contradict the most venerated dogmas of his traditional orthodoxy, for the sake of offering to sinners, in the name of Christ, a free and full salvation."

Atonement—what is it? From the frequency with which the word is used, and the anathemas fulminated for denying its vicariousness, one might conclude that it occurred in almost every verse in the Bible, and that its orthodoxy had been fixed by a special decree from heaven itself. But what are the facts? The word occurs but *once* in the whole of the New Testament, in the English version, and there it is a mistranslation of the Greek term; for in the verse preceding, the same word is rendered *reconciled*. See Romans 5: 10, 11. From this fact, as well as from the different views which have obtained among even true Christians as to what atonement consists in, it would seem that charity would indicate, at least, the patient instructing of those who are thought to be out of the way, ere they are unchristianized.

Atonement (or at-one-ment, in contradistinction to at-two-ment) signifies reconciliation, as the reader will see by referring to the marginal reference of Romans 5: 11. Mr. Barnes, in his notes on that verse, says: "This (reconciliation) was the ancient meaning of the English word *atonement—at-one-ment*, being *at one* or reconciled." Atonement, then, signifies, that reconciliation which is effected between two or more who have been at variance or in a state of unreconciliation, or *at-two-ment*.

> "He seeks to make atonement (at-one-ment,)
> Between the Duke of Glo'ster and your brother."
> [Shakspeare.

In 2 Cor. 5: 18—20, the words *reconciled, reconciliation, reconciling*, should have been rendered *atoned*, at-one ed—*atonement*, at-one ment—*atoning*, at-one-ing, if the translators had been uniform, as they rendered the Greek in Romans 5: 11. In 2 Cor. 5, we have the true idea of what atonement means. It means reconciliation. Thus the Apostle says, "God was in Christ reconciling (atoning, at-one-ing) the world unto himself." Now, who was Christ? He was that God-man whose dual nature was the unition of the divine and the human. In Emanuel the two natures (the divine and the human) were fully represented, while the object of this manifestation was the reconciling (atoning) of the human to the divine. For it will be found to be one of the fundamentals of salvation, that it can only be secured by the inflowing of the divine into the human—the impartation (not imputation) of the infinite to the finite. As the divine dwelt in the human in the man Christ Jesus, sanctifying the human and bringing it into a perfect union with the divine, so in a certain sense must the divine indwell each and every one of those who are finally saved. As God dwelt in Christ, so is Christ to dwell in us, in order to preserve us from being reprobates. See 2 Cor. 13: 5, also 1 Cor. 3: 16, 17.

This reconciliation of humanity to divinity, is properly and truly the atonement. The procuring cause and medium by and through which this state of reconciliation or atonement is effected, was the incarnation, by which the divine *Logos* (Word, or God) became flesh—the Divinity entabernacled in Humanity. The incarnation thus became a medium through which the divine could flow into the human; for until the human nature of the God-man was glorified, the Holy Ghost, or divine influence, or nature, was in a measure withheld or obstructed. See John 7: 39, Acts 2: 23, last clause.

Sin being a state of unreconciliation to God, must ever hinder the free, full, and perfect manifestation or flowing down of the divine nature, until such unreconciliation is removed. When, therefore, all unreconciliation is overcome, either individually or collectively, there will be the realization of God being all and in all; for, as in Christ dwelt all the fullness of the Godhead, and as the Spirit was not given by measure unto Him, and as Christ is head over all things to the church, which is his body, may not said body one day be filled with all the fullness of Him who filleth all in all? Or, in other words, may not the body (the church) be finally as perfectly reconciled or atoned to God as was the human body of the God-man to the divine, and thus of the twain make one new man, (Eph. 2: 15,) and reconcile (atone) both unto God in one body, and so make peace. By atonement, then, I understand that state of reconciliation of the soul to God, which is produced by faith in Jesus Christ—an atonement which brings unreconciled sinners into harmonious union and at-one-ment with the divine will. The soul that has thus received the atonement can sing—

> "To God I'm reconciled;
> His pardoning voice I hear;
> He owns me for a child;
> I can no longer fear.
> With filial trust, I now draw nigh,
> And Father, abba Father, cry."

Although in this article I have only sketched the outlines of the Atonement, yet I trust it is sufficiently explicit to let "my brethren know how I stand," or whether I am a "true Christian" as respects my view of the atonement.

S. S. G.

WHAT GOOD PEOPLE YOU OUGHT TO BE.

During the time I was in Asia, (said my friend,) I had occasion to cross a part of the Arabian desert, toward the Red Sea. Of course on this journey it is necessary to have not only a guide, but a body guard; and mine was composed of eight or nine as wild and picturesque looking Bedouins as you could wish to see—true sons of the desert, and Ishmaelites of pure descent; there could not be much doubt about that.

They were faithful to me, however; and it was pleasant to gallop day after day amidst this lawless troop, sometimes conversing with the sheik in such Arabic as I had contrived to pick up, and at other times witnessing such feats of horsemanship as my guards pleased to exhibit for my amusement, or to practice for their own. In the heat of the day we struck our tents (such tents!) and rested, as we did also at night. Our mid-day slumber was often the most profound and the most prolonged.

One evening we had encamped as usual beside a muddy fountain, secured our horses, lighted our fire, and drank our coffee. My guards were seated around the fire, smoking and talking, while I made an effort to sleep under cover of the tent provided for my special use. It was all in vain. The sheik had advised me of the probability of a night attack from a party of marauders, not of his tribe, whom he supposed to be in our neighborhood, but had begged me not to be alarmed, for my life was precious in his sight, and safe in his hands; he would defend me to the last drop of his heart's blood.

It might be that I half believed the report, and more than half distrusted my respectable friend's bravery; or it might be that my siesta had taken off the edge of drowsiness, or that thoughts of home kept my mind busy, or that the coffee I had drunk served as an anti-soporific, or that the loud talking of my Bedouins disturbed me. In short, I could not sleep, and, tired of inaction, I left my tent and drew near to the fire, which was pleasant; for, hot as are the days of desert traveling, the nights are often chilly.

My guards made room for me as I came near; and seating myself beside the sheik, I had lighted my pipe, and looking at the grim countenances of the ragged fellows around me, each of whom was armed with pistols stuck into the belt, and a musket within reach of his hand, I wondered what my friends in England would think, if, at that moment they had seen me.

My presence did not much disturb the loquacity [illegible] guards; but I paid little heed to the[illegible] conversation, till the sheik, turning [illegible]enly round upon me, exclaimed, "What strange men you Englishmen are."

"How so?" I asked, "why strange?"

"You never fast," said he.

"Not often," I replied, laughingly; "that is, when we can get anything to eat."

My Arab friend laughed too, for that evening we had supped sparingly from necessity; "but," said he, "is it not part of your religion? You don't pray; you don't give alms; you do nothing."

That was a home thrust, and my conscience felt it. I had looked upon the poor fellows as so bigoted in their faith, and had considered myself so completely in their power, that I had deemed it prudent to avoid every topic that might rouse their passions. In my solitary tent, at mid-day, I had read the word of life; but I had concealed with jealous care from my guards the knowledge that I carried about with me the "Christian's Koran;" and when at morning and night I commended myself in prayer to God my Maker, through Christ my Saviour, I had drawn close around me the curtain of the tent, and whispered low and fearfully, lest I should be overheard.

"You have no religion," said the sheik; "you don't pray; you do nothing."

"God forgive me," I thought. "The rebuke is not altogether unjust."

"Now we," continued my reprover—and he went on boastingly to tell what their prophet required of them, and how faithful was their obedience in matters of devotion, charity and self-denial; and while he spoke I lifted up my heart to God, and sought courage to bear a feeble testimony to his word. When the sheik paused, I put my hand into my bosom, and drew forth a New Testament.

"I have religion," I said "Would you like to hear what it teaches me on these high matters?"

"Certainly; would I tell him?"

By this time the attention of all my guard was directed to me. Their quick, sparkling eyes were fixed fiercely, as I thought, upon me, their dark visages looking more grim by the flashing fire around which they were seated; and their hands were ready to bring down vengeance upon the head of the infidel dog who should dare to blaspheme their prophet.

"Listen," I said, as I opened the Testament at the sixth chapter of the Gospel according to St. Matthew. "You speak of alms-giving, hear what my Koran says about giving alms;" and I rendered into Arabic the first four verses: "Take heed that you do not your alms before men, to be seen of them," etc. When I stopped I looked up, and the dark countenances around me were glistening, but not with anger.

"Good!" exclaimed the sheik; "this is very good; go on."

I gathered courage, and read again: "And when thus prayest," etc. I read, translating as I read, to the fifteenth verse. Again I looked around me.

"Bismillah! but this is wonderful! wonderful!" exclaimed one to another, stroking their black beards; "wonderful!" and every harsh and forbidding feature was softened down to quiet, calm attention. "More, more."

I read on; "Moreover, when ye fast," etc.

"Bismillah?" exclaimed the sheik again—"but this *is* wonderful!"

I needed no further urging on. Verse by verse, paragraph by paragraph, I read on to the close of the chapter, interrupted by the exclamations of wonder and approbation.

"Wonderful!" said my swarthy friend, the sheik, when at length I closed the book; "but this is wonderful! *And what good people you Christians ought to be!*"

I never, continued my friend, forgot, and I hope I never shall forget, the lesson taught me by that desert fire. In the first place, I saw, as I had never before seen, that caution may degenerate into cowardice; and I learned, in the second place—the enemies of Christianity themselves being our judges—that if the professed followers of Christ were but in all things what they ought to be, "likeminded one towards another, according to Jesus Christ," then would they "with one mind and one mouth glorify God, even the Father of our Lord Jesus Christ;" and the constrained verdict of the unbelieving world would be, "Nay, but this is wonderful!"

[London Tract Magazine.

THE LORD'S PRAYER.

A friend tells us an anecdote of Booth, the great tragedian, which we do not recollect having seen in print. It occurred in the palmy days of his fame, before the sparkle of his great black eye had been dimmed by that bane of genius—strong drink.

Booth and several friends had been invited to dine with an old gentleman in Baltimore, of distinguished kindness, urbanity, and piety. The host, though disapproving of theaters, and theater-going, had heard so much of Booth's remarkable powers, that curiosity to see the man, had, in this instance, overcome all his scruples and prejudice. After the entertainment was over, lamps lighted, and the company reseated in the drawing-room, some one requested Booth, as a particular favor, and one which all present would doubtless appreciate, to read aloud the Lord's prayer. Booth expressed his willingness to afford them this gratification, and all eyes were turned expectantly upon him.

Booth rose slowly and reverently from his chair. It was wonderful to watch the play of emotions that convulsed his countenance. He became deadly pale, and his eyes, turned trembling upwards, were wet with tears. As yet he had not spoken. The silence could be felt. It became absolutely painful, until at last the spell was broken, as if by an electric shock, as his rich-toned voice, from white lips, syllabeled forth, "Our Father who art in Heaven," &c., with a pathos and fervid solemnity that thrilled all hearts. He finished. The silence continued. Not a voice was heard or a muscle moved in his rapt audience, until from a remote corner of the room a subdued sob was heard, and the old gentleman (their host) stepped forward with streaming eyes and tottering frame and seized Booth by the hand: "Sir," said he, in broken accents, "you have afforded me a pleasure for which my whole future life will be grateful. I am an old man, and every day from my boyhood to the present time, I thought I had repeated the Lord's Prayer, but I never heard it before, never!"

"You are right," replied Booth; "to read that prayer as it should be read, has cost me the severest study and labor for thirty years, and I am yet far from being satisfied with my rendering of that beautiful production. Hardly one person in ten thousand comprehends how much beauty, tenderness, and grandeur can be condensed in a space so small, and in words so simple. That prayer of itself sufficiently illustrates the truth of the Bible, and stamps upon it the seal of Divinity."

So great was the effect produced (says our informant, who was present,) that conversation was sustained but a short time longer in subdued monosyllables, and almost entirely ceased; and soon after, at an early hour, the company broke up, and retired to their several homes, with sad faces and full hearts.

THE RIGHT MUST WIN.

Oh! it is hard to work for God,
To rise and take his part
Upon this battle-field of earth,
And not sometimes lose heart.

He hides himself so wondrously,
As though there were no God;
He is least seen when all the powers
Of ill are most abroad.

Or, He deserts us at the hour
The fight is almost lost;
And seems to leave us to ourselves
Just when we need him most.

Ill masters good; good seems to change
To ill with greatest ease;
And, worst of all, the good with good,
Is at cross purposes.

It is not so, but so it looks;
And we lose courage then;
And doubts will come if God hath kept
His promises to men.

Ah! God is other than we think;
His ways are far above,
Far above reason's height, and reached
Only by child-like love.

The look, the fashion of God's ways
Love's life-long study are;
She can be bold, and guess, and act,
When reason would not dare.

She has a prudence of her own;
Her step is firm and free;
Yet there is cautious science, too,
In her simplicity.

Workman of God! O lose not heart,
But learn what God is like;
And in the darkest battle-field
Thou shalt know where to strike.

O, bless'd is he to whom is given
The instinct that can tell
That God is on the field when He
Is most invisible!

And bless'd is he who can divine
Where real right doth lie,
And dares to take the side that seems
Wrong to man's blindfold eye!

O, learn to scorn the praise of men!
O, learn to love with God!
For Jesus won the world through shame,
And beckons thee his road.

God's glory is a wondrous thing,
Most strange in all its ways,
And of all things on earth, least like
What men agree to praise.

Muse on his justice, downcast soul!
Muse and take better heart;
Back with thine angel to the field;
Good luck shall crown thy part!

God's justice is a bed where we
Our anxious hearts may lay,
And, weary with ourselves, may sleep
Our discontent away.

THE DRUNKARD AND HIS STORY.

From the New York Five Points' *Monthly Review* we select the following scene from real life:—

A few Sunday's since, at morning service, one of the most degraded specimens of humanity that ever greeted my vision, came staggering into the chapel of the House of Industry. His wild and frightful looks, ragged and dirty beyond description, his face bruised and swollen, rendered him an object of disgust and terror. He seemed to look at the children with wonderful interest, occasionally muttering to himself, "Beautiful! beautiful! O, that mine were here!" He sat an hour or two more, and then, with a long earnest look at the children, staggered out of the chapel, and went up to the dark "valley of the shadow of death"—Cow Bay.

As the bell rang for service in the afternoon, and while the childred were clustering together, the same wild-looking man staggered in once more. He surveyed the faces of the children with the closest scrutiny, and at length his eyes rested on two bright-eyed little girls, who were singing one of their little hymns. He sat immovable as a statue during the whole service, gazing intently on the faces of these two children.

The service closed, the congregation dispersed, yet he lingered, and the tears came coursing down his face thick and fast.

Dr. S—— asked him, "what was the matter?"

"I am a drunkard! A wretch—an outcast, homeless, and without a penny. Once I had a home and friends—father, mother, wife, children, and hosts of friends, who loved and respected me. Time passed on, and I became a drunkard! One friend after another left me; still I drank on, and down, down I fell. Father and mother both went down to their graves with broken hearts. My poor wife clung to me when all others deserted me. I still drank on, pawned one article after another till all was gone, and when my wife refused to give me her wedding ring, which she had clung to with the tenacity of a death grasp, I felled her to the earth, seized her finger, tore off the ring, and pawned it for rum. That fatal blow maddened her, and, in despair, she too drank, and together we wallowed into the gutter. Penniless, we begged our way from Vermont to this great city. Here we hired a small cellar, in a dark, dismal street, and sent our children out to beg. Many a weary day we spent in that dreary cellar, while our children were wandering in the streets, begging for their drunken parents. About forty days since my little girls went out to beg, and from that hour to this I have not seen them. Without food or fire I clung to my dismal abode, till hunger forced me out to search for my children. My degraded wife had been sent to Blackwell's Island as a vagrant, and alone I went to the Island, to the House of Refuge, to the Tombs, and in despair I wandered to the Five Points, and for the last few days I had lived in Cow Bay, among beggars and thieves. To-day I saw two children, who, if they had not looked so clean, and sung so sweetly, I would have called them mine. O! would to God they were!"

"Tell me the name," said Dr. S——, "and I will see."

In a few moments two interesting little children were led toward him. At the sight of this fearful looking man they shrank back. The poor man sprang to his feet, exclaiming, "They are mine, my dear children, don't you know your poor old father? Come to me, my children. Father loves you; he won't hurt you." He reached out his arms; the little ones were timid at first, but they soon climbed up their father's knee, while the tears were streaming down his face.

"Kiss your poor drunken father, my children." But the face of the man was so black and filthy, not a place could be found. Soon they forgot the dirty face, and remembered their poor degraded father; and each entwining their little arms around his neck, and fondly kissing him, the elder one said, with a voice that touched every heart, "Father, we are so happy here that we want to stay. Won't you come and live here too, papa? What makes you drink so? Dear papa, do sign the pledge, and not drink any more. Mr. Pease found us in the street, begging, and now we are happy. Do, papa, come and live here, and be good us as you used to be."

The father's heart was overwhelmed—he sobbed and groaned aloud. For more than an hour they sat together, till at last the old man arose, still clinging to his children, and exclaimed: "The pledge! the pledge! I will never drink again!"

I gave him the pledge, and from that hour he has faithfully kept it. He is now a man again, engaged in business, earning ten dollars per week, and none could recognize in the well-dressed man—who still boards in the house—the degraded original, whose portrait can still be seen at the House of Industry, daguerreotyped in its striking deformity and squalor.

RETRIBUTION FOR SIN.

Men cannot sin with impunity, for an omniscient God discerns, and an omnipotent God will punish all wrong-doing. Sentence against an evil work may not be executed speedily, but the way of the transgressor is hard, and the reward of his hands shall surely be given him. A watchful Providence often endures with much long-suffering the vessels of wrath, fitted for destruction, but in due time their feet slide, and they are brought to desolation in a moment, and utterly consumed with terror. We clip from one of our exchanges a striking illustration of this truth in our own century

Among the intellectual giants of this country, stood Aaron Burr, a grandson of the giant theologian, Jonathan Edwards, nurtured in the bosom of piety and prayer, with choicest privileges for a Christian education, with the master minds of the New England church, such as Bellany and Hopkins, corresponding with him in his youth, and endeavoring to secure him to the cause of Christ. At length, all his early impressions of Christianity were effaced with violence. He went out an unblushing infidel, scoffer and blasphemer—gathering thick upon him the guilt of murder and adultery. He gave lessons in profaneness to his only daughter, who by nature was as gifted as himself. He was accustomed to bring her in to display her acquisitions and show her skill in blasphemy, for the amusement of his visitors, as we should do with performances in music—thus showing to what end he had devoted himself and educated his child. Though elevated to the second civil office in the nation, nothing in the form of political crime was too mean or wicked for him. In social life he was a very monster. In the betrayal of confidence and in the ruin of families he scrupled nothing. Infidelity and malignity advanced with his years, in the form of spite against the religion of Christ.

At length the judgments of God overtook him. His wealth vanished; his political fortunes were broken; his social position was lost; and he became a vagabond. Society thrust him out from its bosom as its sworn enemy. His daughter, then the wife of one of the State Governors—the daughter whom he had schooled to blasphemy—was, in a voyage at sea, taken by pirates. She begged for her life and offered great rewards; but the stern reply was—"Dead men tell no tales." She was bidden to walk the plank; she sunk to rise no more. Thus began the recompense on the parent and child—on her for the abuse of her splendid gifts and her defiance of God above—on him for rearing his child for such an end. Here too was a recompense in kind, for the domestic ruin and desolation which he had caused to others. Stricken of God, and abhorred by men; well nigh without a friend on earth; a Vice President of the United States went down to an unhonored grave. Such was a beginning, though only a beginning to him of the results of crucifying the Son of God afresh."

OUTSIDE GLITTER AND INSIDE GLOOM.

Many homes are elegantly furnished, with small addition to domestic comfort. The *Marysville Tribune* gives an amusing sketch of the inner life of one these comfortless households.

"I declare, Mr. Smith! this is too bad. Here you are stretched out on the sofa, mussing it up, and my nice carpet is all spoiled by the tramp of your coarse boots. I shall be ashamed to bring any one into the parlor again—and I have taken so much pains to keep everything nice! I do think, Mr. Smith, you are the most thoughtless man I ever did see—you don't appear to care how much trouble you give me. If I had no more care than you have, we would have a nice looking house—it would not be long till our new house and furniture would be just as bad as the old," said John Smith's wife to him, as she saw him in the parlor taking a nap on the sofa.

Mr. Smith rose up early and answered: "I was tired and sleepy, Mary, and the weather so hot, and this room so quiet and cool, and the sofa looked so inviting, that I could not resist the temptation to snooze a little. I thought when we were building a new house, and furnishing it thus, that we were doing it because the old house and furniture were not so comfortable and desirable, and that I and my own dear Mary, would indulge ourselves in a little quiet leisure in these nice rooms, and if we chose, in lounging on the sofas and rocking in these cuishioned arm-chairs, away from the noise of the family, and the smell of the cooking stove.

"I did not dream of displeasing you, Mary, and I thought it would give you pleasure to see me enjoying a nap on the sofa, this warm afternoon. I noticed when Merchant Swell, or Col. Bigman, and their families, are here, you appear delighted to have sofas and cushioned arm chairs for them to sit in or lounge upon. I thought the house and the sofas were to use—that we were seeking our own pleasure when we paid a large sum of money for them; but I suppose I was mistaken, and that the house and furniture are for strangers, and that we are to sit in the old kitchen, and if I want to take a nap, or rest a little when fatigued, I am to lie down on a slab in the woodhouse; and if you want to rest, can go to the children's trundle-bed, in the little close bed-room, where the flies can have a chance at you."

The irony of Mr. Smith's reply only provoked his wife, and seeing himself threatened with repetition of Mrs. Smith's speech, with unpleasant additions and variations, and knowing that he would get tired of gaining victories over her argument, before she would think of getting tired of defeat, he took himself out, and left Mrs. Smith to fix up and dust out, and lock him out of his own house, and took a seat on an old chair in the kitchen, which Mrs. Smith said was good enough to use [illegible]ry day—in the kitchen where no one sees it.

Poor mistaken Mrs. Smith, thought I. And yet many are like her. They want a fine house, and when they get it they want an out-house built to live in, and they confine their families to a few small rooms, poorly furnished, while the main room, well furnished, is never seen by the family only when visitors come! Both house and furniture are too grand for use. The carpet is too fine for their husband to walk on—the mirrors are too fine for him to look into—the furniture is all to fine for him to see or use. Just so it goes—we dress, we women, I mean, and I am sorry that many men are as foolish as we are, to please others, or rather to excite their remarks—we build houses and furnish them for those outside of the family, and live as poorly when we are rich as we did when we were poor; as poorly in the new house as in the old.

It is a fatal day to enjoyment when a family gets a house and furniture too fine for use; and yet many have an ambition to have it so. Better would it be if they were contented with such a house and such furniture as is suited to every-day use—the house large enough to accommodate one's friends, and the furniture such as all use when at home.

THE UNHAPPY REPLY.

"I do not think it a selfish act, if I occupy this whole seat myself, as I am to travel all this long day!" said I to a lady nearest me, one sultry morning, as I took the out-of-the-way end seat, in the cars at Buffalo for Albany.

"Certainly not," was the reply, as I put my shawl, books, papers, fan, boquet, &c., in the one end, and nestled myself down in the other. I soon wearied of conversation and reading, and had sunk into a fitful slumber, when a gentle tap on my shoulder, and a low "Please, Miss," made me wake with a sudden start.

The car was filled to overflowing, a newly arrived party had entered, and a pale little woman, with a fretful baby in her arms, stood asking permission to sit beside me. With more of pity than of pleasure, I shared my seat with her; yet I spoke but few words, and sulkily forbore taking the restless little creature to ease her poor wearied arms; but merely smoothed its yellow hair, and patted its pale baby cheeks, and said Mary was a good and sweet name.

For my own comfort, I had opened the window, that I might more distinctly catch those picturesque views, that flitted by so quickly that they seemed like glowing pictures, without one imperfection to mar, when my attention was drawn to my companion, who was incessantly coughing.

"I wish you would let down that window," said she, "the coal smoke makes my cough so much worse."

I am ashamed to confess it now, but I felt the angry blood burn in my cheek, and a flashing of the eyes, as I replied, "I am quite sick and wearied, and hungry, and thirsty, and crowded, and here you come as an intruder, and keep me from the mite of cool, fresh air, that I am trying to get. Do you think you are doing as you would be done by?" said I tartly, and without waiting for a reply, I rose and was letting down the window with an angry crash, as a naughty child would slam a door shut, when she laid her poor wasted little hand on my arm, and said, "*O, don't do it, then*," and burst into tears, and leaned her head on her baby, an cried bitterly. The woman in my heart was touched; but putting on the injured air of a martyr, I compressed my lips, and took up a paper, pretending to read. Pretty soon my eyes grew dimmed. I could not see without crushing the tears often, and I resolved to ask her pardon for my unkindness. But minute after minute glided away, and we soon reached her place of destination, and she rose to leave. I rose, too, and the words were on my lips, when a gentleman came to assist her out.

She turned her gentle, tearful eyes upon me, with a sad expression, and bowed so sweetly, that my hand was almost upraised to appeal for the forgiveness; the words were just dropping from my lips; but she was gone, it was too late, and I, a woman, with a woman's heart, was left with that stinging little barb sticking in it, and the sweet words, and wasted little hand, that alone could remove it, were gone from me forever. I sank back in my seat, and wept bitterly.

The gentleman returned from assisting her, and as the car was full, he took the place she had vacated. I inquired who the lady was, and he replied, "Her home is in Wisconsin, and she has returned to the home of her childhood to *die*. The whole family of brothers and sisters died of consumption, and she, the last one left, is going too."

O, I turned away, sick at heart, and tried to shut out from remembrance that palid, appealing face, as I resolved and re-resolved, never again, in this poor life of mine, to speak an unkind word.

A WORD ON CREEDS.

Our remarks upon Responsibility for Opinions have led, by a very natural association, to an allusion to the use of Creeds. We do not wonder that many good Christians have repudiated them—considering how often they have been the occasion of sectarian animosity. But we are well satisfied that, without one, or without the adoption of some policy which amounts to the same thing, no church can long secure itself against the elements of dissolution.

Admitting that Articles of Faith are unauthorized by the New Testament, it is very certain that agreement in cardinal points is made a matter of direct inculcation. "*Now I beseech you, brethren, by the name of our Lord Jesus Christ, that ye all speak the same thing, and that there be no divisions among you; but that ye be perfectly joined together in the same mind and in the same judgment.*" (1 Cor. 1: 10.)

Let us now imagine a church assembled together for mutual conference and exhortation. One after another, the brethren tell what experience they have had of the sinfulness of their own hearts—how they have been brought to abhor themselves, in a sense of their vileness, and to feel that they were deserving of "wrath to the uttermost" because of their backslidings from a God of Love—how delightfully soul-satisfying it has been to them to rest in the atoning blood of Jesus Christ, and to know that He is an all-sufficient Saviour—and each one concludes by exhorting his fellow communicants to cling still more closely to the Redeemer, and to acknowledge Him as "God over all, blessed forever." On the supposition that there is no jarring of sentiment here, such an interview is delightful, and contributes to the great end for which their organization was entered into, namely, their edification in the gospel.

But suppose one of their number starts up, and says, "This language is mere fanaticism. The inner and native depravity of the heart, of which you all profess to have had experience, is a doctrine in which I do not believe; neither do I believe in the doctrine of Atonement, as commonly held. I do not believe that Christ by his death rendered satisfaction to Divine Justice, nor do I believe in his true and proper Divinity." It is evident that the announcement of such views, and their repitition from time to time, would contribute to unsettle the minds of some of the members The remainder, regarding them as unsound and dangerous, would feel that something must be done to protect the body of the church from being entirely corrupted by them. How then would they proceed, if they had no articles of faith? How would they set aside from their communion the heterodox brother?

We do not dispute the possibility of disposing of the case, without any written formula, or confession of faith. We admit the possibility of disposing of it just as equitably and fairly, and just as much in accordance with truth, without a formula as with one. Nevertheless, it could not be done without resulting in a clear and unequivocal expression of the faith of the church, in regard to the doctrine in question. For, admitting that "the Bible alone" is resorted to, in order to the decision of the case, it is still the province of the church to determine what the Bible teaches. And suppose that the church, in deference to the offending brother, goes into a long and labored investigation of what the Bible sets forth in regard to human depravity, the doctrine of atonement, and the Divinity of Christ; suppose that it listens patiently to all his arguments, gives him abundance of time to defend himself, and allows him the closing speech; suppose that it examines and re-examines every phase of the question that he can present,—it must, nevertheless, come to some decision in the end. And this decision, whatever it may be, will be the confession of faith, or creed, which the church puts forth, in regard to the subject in hand. And it will be a *written* confession; for the church will have its clerk to record all the proceedings, and this record will stand as a witness of what the church is pledged to do hereafter, in all similar cases. Like the decision of a civil court upon a point of law, which is always recognized as authoritative, in subsequent trials of a similar character, this decision of the church will be recognized, and will stand quite as much in the way of future investigation as though an article upon the disputed point, or points, had been written and adopted when the church was first organized.

It is very clear, that other points would be settled in the same way. Should any member, contrary to the belief of the whole body of the church, contend that there is no future punishment to the wicked, or that the soul is not immortal, or that the law of the Sabbath is not obligatory, it would be necessary to interrogate the Scriptures directly about it. But the answer being once obtained, and made a matter of record as affecting the case of the brother undergoing trial, would be another *written article* added to that already minuted, of which there would be just as much ground to complain as of a formula of faith originated at the constitution of the church.

Why then is such an outcry raised about creeds, as if they were antagonistic to and destructive of the only rule of faith, the Bible? As well might the records of the church be complained of on the same ground.

T. B. B.

THE RESURRECTION.

There is probably no doctrine asserted in the Scriptures, that is further removed from human comprehension than that which teaches the resurrection. No human philosophy has been able to determine how it will be accomplished; or to ascertain with what body the dead shall come forth from the grave in the final resurrection of the dead. The supposed impossibility of the human body being restored to its original identity, after the lapse of ages, in which it has been itimately mingling with the earth of which it was originally formed by the hand of the Creator, has led many good men to adopt sentiments on this subject, which do not require so implicit (or, as they term it,) *so blind* a faith in the Word of God, as is required to believe that the dead will be literally restored again to life. I propose in this, and perhaps in a subsequent article, a brief investigation of the subject.

Let us, in the first place, ascertain what sentiment the Scriptures inculcate on the subject.

But before presenting the direct Scripture declarations relative to the resurrection of the dead, allow me to notice some of the evidences of the antiquity of this sentiment among the pious Jews, before the coming of Christ, from the apocryphal Scriptures. Some account of the persecutions of the Jews is given in the seventh chapter of second Maccabees, from which we learn that one of these suffering Israelites said to his merciless persecutor, "Thou, like a fury, takest me out of this present life; but the King of the world shall raise us up who have died for his laws, unto everlasting life." Another said to his tormentor, when he was about to die, "It is good, being put to death by men, to look for hope from God to be raised up again by him." The mother of these suffering sons comforted them in these words: "Doubtless the Creator of the world, who formed the generation of man, and found out the beginning of all things, will also, of his own mercy, give you breath and life again, as ye now regard not your own selves for his laws' sake." Again, it is said, in 2 Esdras 2: 16, "And those that be dead will I raise up again from their places, and bring them out of the graves." Verse 23, "Wherever thou findest the dead, take them and bury them, and I will give thee the first place in my resurrection." Again, verse 31, "Remember thy children that sleep, for I shall bring them out of the sides of the earth, and show mercy unto them." And it is said of Judas, 2 Mac. 12: 43, that "he was mindful of the resurrection." St. Paul, in referring to the persecutions mentioned above, said, Heb. 11: 35, "Women received their dead raised to life again, and others were tortured, not accepting deliverance, that they might obtain a better resurrection." And it is evident from the popularity of the belief of a future resurrection in the time of our Saviour, that it was not a new doctrine, inaugurated by the preaching of the gospel.

But to come more directly to the proof of the resurrection contained in the inspired Scriptures. From the words of Martha to Christ respecting her brother Lazarus, who was dead, (John 11: 24,) "I know that he shall rise again in the resurrection at the last day," we may infer that the sentiment was common in Judea at that time, excepting with the *Sadducees*, who were an infidel sect. An evidence of the great antiquity of this sentiment is found in the case of Abraham. Though commanded to offer up his only son Isaac a burnt offering, through whom God had promised that he should be the father of many nations, he believed the promise, and hesitated not to obey the command, "accounting that God was able to raise him up, even from the dead, from whence he received him in a figure." Heb. 11: 19. The ancient patriarch Job bears witness to the doctrine of the resurrection, in that memorable passage, Job 19: 26, 27, "And though, after my skin, worms destroy this body, yet in my flesh shall I see God, whom I shall see for myself, and mine eyes shall behold Him, and not another, though my reins be consumed within me." The marginal reading of this passage is thus "After I shall awake, though this body be destroyed, yet out of my flesh shall I see God." In relation to this passage we are told that *Grotius*, *Le Clerk*, *Warburton*, and other learned men, not conceiving that an Arabian patriarch could know anything of a resurrection from the dead, have endeavored to apply it to a temporal prosperity. *Kennicot* saw the absurdity of this, yet restrains it to the appearance of God in the whirlwind for the vindication of his character. But his wishing for death as the end of all his trouble, shows very plainly, that he had no expectation of any temporal deliverance. *Dr. Priestly* says that Christians in general, from the earliest times, maintained that Job, in this passage, declares his faith in a happy resurrection. He evidently refers to the same thing in chapter 14th, verses 13 and 15, where he says, "O that thou wouldst hide me in the grave, that thou wouldst keep me in secret until thy wrath be past, that thou wouldst appoint me a set time, and remember me. Thou shalt call and I would answer thee. Thou wilt have a desire to the work of thine hands." The same doctrine is advanced in ch. 21, v. 20. He here says, "The wicked are reserved to the day of destruction; they shall be brought forth to the day of thy wrath." The prophet Daniel is too plain on this point to be misunderstood. He says, ch. 12, v. 2, "And many of them that sleep in the dust shall awake, some to everlasting life, and some to shame and everlasting contempt." For the sense of the word *many*, as used in this place, I will refer the reader to Rom. 5: 19. Isaiah also affirms the same doctrine in ch. 26, v. 19. He says, "Thy dead men shall live; together with my dead body shall they arise. Awake and sing, ye that dwell in dust. For thy dew is as the dew of herbs, and the earth shall cast out the dead." Bishop *Louth* supposes this to represent a moral and political resurrection; but says, "It appears that the doctrine of the resurrection of the dead was at that time a common and popular doctrine; for an image which is assumed in order to express or represent any thing in the way of allegory or metaphor, whether poetical or prophetical, must be an image commonly known and understood, otherwise it will not answer the purpose for which it is assumed."

The resurrection of the body is affirmed in Psalm 16: 9, 10—"My flesh also shall rest in hope: for thou wilt not leave my soul in hell; neither wilt thou suffer thine Holy One to see corruption." Although this passage is referred by the Apostle Peter, Acts 26: 27, to the resurrection of Christ, it equally sustains the doctrine of the resurrection; for, by Paul's reasoning in 1 Cor. 15th chapter, whatever goes to establish the resurrection of Christ, proves also the certainty of the general resurrection of the dead.

We may infer that it was a sentiment common to the pious Jews, in our Saviour's time, from the words of Martha respecting her brother Lazarus, John 11: 24, "I know that he shall rise again in the resurrection at the last day." Had she been mistaken in relation to the resurrection, or as to the time when this grand event would take place, we may be assured Christ would have been as ready to correct her error, as he was that of the Sadducees, who said, 'there was no resurrection.' His manner of disposing of the subject was equivalent to confirming the truthfulness of what she said.

In the 22d chapter of Matthew, we have an account of the Sadducees attacking our Lord with what they evidently considered a perplexing and confounding question concerning the woman who had had seven husbands, as to whose wife she would be in the resurrection. After correcting their error as to the condition of the resurrection state, he said to them, verse 31, "As touching the resurrection of the dead, have ye not read that which was spoken unto you by God, saying, I am the God of Abraham, and the God of Isaac, and the God of Jacob? God is not the God of the dead, but of the living." As the Sadducees denied that there are any angels or spirits, they held, as a consequence, that there could be no resurrection of the dead; for they held, as our modern Sadducees assert, that the soul is not immortal, and therefore perishes with the body. Our Lord therefore told them, that those patriarchs were not dead, as they supposed, but living, otherwise God could not be their God, thus overthrowing the very basis of their non-resurrection heresy. For it is evident, that God could hold no relation to a nonentity. And Christ gave this instruction for the express purpose of convincing his hearers that there would be a resurrection of the dead, and not, as some assert, for the purpose of showing that the spirit lives in a separate state from the body, or that there is a future life. For his answer to the Sadducees, as recorded by St. Luke, chapter 20th, says, "Now that the dead are raised, even Moses showeth at the bush, when he called the Lord the God of Abraham, and the God of Isaac, and the God of Jacob." In Luke 14: 14, Christ not only affirms the truth of the doctrine of the resurrection, but that the full reward of pious benevolence to the poor is reserved till that event. He said, "Thou shalt be recompensed at the resurrection of the just." By the way, I would observe, that other portions of the Scriptures go to the same point. See the parable of the ten pounds, Luke 19: 11—27. Also the parable of the ten virgins, Matthew, 25th chapter. The same is lucidly explained in our Lord's description of the last judgment, Matt. 225: 31 to the end.

Our Lord says, in John 5: 28, 29—"Marvel not at this, for the hour is coming in the which all that are in their graves shall hear his voice, and shall come forth, they that have done good unto the resurrection of life, and they that have done evil unto the resurrection of damnation."

The doctrine of the resurrection of the dead is one of the most prominent inculcated by the apostles. "They taught the people, and preached through Jesus Christ the resurrection of the dead." Acts 4: 2. St. Paul was charged with being "a setter forth of strange gods, because he preached Jesus and the resurrection." Acts 17: 18. "It may seem strange to an English ear," says the erudite Thomas Williams, "that they should take the resurrection for a deity; but this is not so wonderful when we consider that they were total strangers to both the doctrine and the name, which, being feminine in the Greek language, might easily be mistaken for a goddess; for the Athenians worshiped *Shame*, *Fame*, *Desire*, &c., for goddesses." In his defense before Felix, he said, "Touching the resurrection of the dead I am called in question by you this day." Acts 24: 21. In the 15th verse he says, "And have hope toward God, which they themselves (his accusers) also allow, that there shall be a resurrection of the dead, both of the just and unjust." "Why should it be thought a thing incredible with you," said Paul to Agrippa, "that God should raise the dead?" Acts 26: 8. "But if the Spirit of Him who raised up Jesus from the dead dwell in you, He that raised up Christ from the dead shall also quicken (make alive) your mortal bodies, by his Spirit that dwelleth in you." Rom. 8: 11. "And not only they, but ourselves also, who have the first fruits of the Spirit, even we ourselves groan within ourselves, waiting for the adoption, *to wit*, the redemption, (that is, the resurrection,) of our bodies," v. 23. On this place the Cottage Bible has some appropriate remarks, to which the reader is referred. "And God hath both raised up the Lord, and will also raise up us by his own power." 1 Cor. 6: 14, and 2 Cor. 4: 14. "If we believe that Jesus died and rose again, even so them that sleep in Jesus will God bring with him." 1 Thess. 4: 14. "For the Lord himself shall descend from heaven, with a shout, with the voice of the archangel and the trump of God, and the dead in Christ shall rise first. Then we which are alive and remain shall be caught up together with them in the clouds, to meet the Lord in the air, and so shall we ever be with the Lord. Wherefore comfort one another with these words." Verses 16, 17, 18. "Now, if Christ be preached, that he rose from the dead, how say some among you, that there is no resurrection of the dead? If there be no resurrection of the dead, then is Christ not risen; and if Christ be not risen, then is our preaching vain, and your faith is also vain; yea, and we are found false witnesses of God, because we have testified of God, that he raised up Christ, whom he raised not up, if so be that the dead rise not. For if the dead rise not, then is Christ not raised. And if Christ be not raised, your faith is vain; ye are yet in your sins, and they which have fallen asleep in Christ are perished." The atonement of Christ is of no avail if it be not accepted of God, and the evidence of this acceptance rests on his resurrection. So important is this doctrine, that on it depends our hope of eternal life. The author of the epistle to the Hebrews, ch. 6, v. 2, speaks of the resurrection as a fundamental doctrine of the gospel, a denial of which is equivalent to a rejection of the gospel, as the following passage in 2 Tim. 2: 18, shows: "Who concerning the truth have erred, saying that the resurrection is past already; and overthrow the faith of some." Rev. 20: 1, "Blessed and holy is he that hath part in the first resurrection; on such the second death hath no power, but they shall be priests of God and of Christ, and shall reign with him a thousand years."

With such an array of inspired testimony in favor of the resurrection of the dead, it would seem impossible for any friend of Christ, or believer in the inspiration of his mission to our earth, to call it in question, or hold it in doubt. But such is the rage for speculation in divine things, that no subject, however sacred or mysterious, but what is subjected to the test of human philosophy, and "science falsely so called." Even the resurrection of the dead is thereby denounced as a thing incredible; as though God, who originally made man of the dust of the earth, could not re-organize man's physical structure after it had fallen into ruin.

W. B. M.

FREE DISCUSSION.

To the Editors of the Sabbath Recorder:—

I am aware that free discussion is quite popular at the present time, and that those who would propose a restriction of correspondents in the privilege of publishing what they please, on whatever subject, would by some be charged with a desire to suppress the truth, and shut out the light from others. This view of the subject might, under some circumstances, be correct; still, I am of the opinion, that in a paper published as the organ of a religious community, and a family visitant, the same license should not be given as in some others. It is pleasant in a family paper to see variety in the literary department, and liberality in the original or correspondents' department; but it is the opinion of the writer, that a discreet censorship should be exercised by the editors, so that the received or established *opinions, practices, doctrines*, or *duties* of the people, whose organ it is, should not be invaded without some important reason; and even then, never without its being accompanied by a complete explanation or disclaimer. Some may think these straight lines; but I will ask, Would it be wise to spread contagion in the community, because it is believed that a remedy is known?—or to allow an adversary to throw missiles into the citadel, because it is supposed that it cannot be destroyed? I believe the old adage that "an ounce of prevention is better than a pound of cure," should be the motto in such cases.

Now I think that it is not only unwise and impolitic to spread before our families doubtful and objectionable doctrines, and doubtful and objectionable positions in science, or innovations upon our established practices or usages, (without some very good reasons,) in order to controvert the position of the people whose organ the paper is, but that it is unjust to the patrons and subscribers, who have become such on the assurance of its moral and religious position, and who ought not to be obliged, in addition to seeing discussion of doubtful character introduced, calculated to shake the faith of some, and disturb the equilibrium of all, to see it done at his own expense. I would modestly suggest, concerning those who wish to establish positions in science, or doctrines in religion, new or unadmitted by the people, let them write them in a book, at their own expense, and the church will be more quiet, and that course, I believe, more satisfactory.

ONE OF THE SUBSCRIBERS.

THE IRVINGITES.

Edward Irving was one of the most eloquent and popular preachers of England during the early part of the present century—a preacher whose manner had in it so much of the solemnity and grandeur of the old prophets as to draw to his church the nobility and statesmen, although their sins and follies were rebuked with the utmost severity. He went down to his grave under a dark cloud; but he left disciples, who took his name, and continue to the present time. A correspondent of the *N. Y. Evangelist* gives the following account of them:—

"Of the Christian sects which owe their origin to the nineteenth century, the *Irvingites* are perhaps the most remarkable, both for their system and the personal characters of their members. They disclaim the name by which they generally go, and call themselves the 'Catholic and Apostolic Church,' not in an exclusive sense, however, but simply as belonging to that body, which embraces all the baptized. So far from professing to be another sect in addition to the numerous divisions of Christians, they believe themselves called upon to reunite the scattered members of the one body of Christ. They hold that the peculiar offices and supernatural gifts of the apostolic church were intended to be perpetual; that they have not been entirely lost, but greatly impaired by the fault of the church; and that they are now revived again in their midst, in order to prepare and perfect the church in holiness for the second coming of the Lord, which is near at hand. They have twelve apostles, not elected or ordained by men, as they believe, but called, sent forth, immediately by God—(one of them, Mr. Drummond, is at the same time a member of the English Parliament, a rather singular combination of offices)—and under their supreme guidance a number of prophets, evangelists, angels, presbyters, and deacons. They acknowledge only the three ecumenical creeds, the Symbolum Apostolicum, Nicæno Constantinopolitanum, and Athanasianum. They agree doctrinally more with the Roman Catholic system, while their personal sympathies are more with the Protestants, especially the Episcopalians and Lutherans. Their liturgy is a very skillful compilation of the old Catholic prayers, and the whole worship is of the high liturgical and ceremonial order, as much so almost as the Roman mass. But it is conducted, of course, in the vernacular tongue, and leaves room at the same time for the manifestation of the extraordinary gifts of the brethren, such as prophesying and speaking in tongues. Their progress thus far has been rather slow. The obligation of the tithe, and especially their high claims as to the revival of real apostles, stand in their way. They now number thirty-two congregations, with about 600 members, in England, and some small congregations in Scotland, Ireland, Germany, Switzerland, France, and in the State of New York."

Christian Resignation.—We have rarely (says the *Watchman and Reflector*) met with a more touching illustration of Christian fortitude and submission than is furnished in the following extract from a letter of Prof. Richardson, of Freehold, N. J., who has recently become blind. In writing to a friend in Boston, after speaking of his loss in burying a beloved child, he adds:—

"But now I have been called to part with all on earth; all, however dear, have been banished from my sight; the earth and sky are gone; light and beauty have given place to darkness; even my own form has perished from my sight. The sun no longer rises and sets. Perpetual night reigns, but a starless night. I *feel* the breath of heaven as it passes by; I hear its mournful music; indeed, I live only in a world of sound. Death seems to have begun his work, and left it half finished. The darkness of the grave surrounds me; the forms of loved ones have vanished; but their voices still sound in my ear. Time is at an end, and there is no longer succession of days—the next light I am to behold will be that of the eternal world—the next morning that bursts upon my vision, that of the Resurrection. But this is a welcome thought. My mind runs forward and anticipates with joy the scenes next to open upon my sight. When my spirit sinks within me as I think of what I have lost in this world, then I find an unfailing source of consolation in anticipating the light, the joy, the friends of our earlier days who have gone to Heaven."

Preaching for the Times.—In these days, when so much is said about "preaching for the times," it would do good for all to read and ponder the words of John Angell James, (a name honored wherever English Christianity is known,) who, at the recent jubilee in honor of his half-century of labor, gave the following emphatic testimony:—

"Here are two of us old in the service of Christ; one a laborer of 60 years, and the other 50; both honored and respected in the church, both having to thank God for more usefulness than they ever expected. And how, my brethren, has it been accomplished? By the simple, earnest preaching of the old gospel. Remember that. We want no new doctrines; but we want new power to set forth old doctrines. It is by the simple exhibition of Christ crucified, and this alone This is the thought I am anxious to impress upon the minds of all the younger ministry, who look up to us with any degree of respect or attachment. I am lost in wonder, gratitude, and love, and this is all I can say."

Religion among the Slaves.—The Southern *Episcopalian* gives the following account of the interesting and successful mission of the Rev. William C. Williams among the colored race on the extensive rice pla[illegible] of the Ogeechee river, near Savannah.

"Though the day (Sunday, 19th August) was very inclement, yet the church was as full as it could hold, and a larger number of communicants partook of the eucharist than ever before. It was a most solemn and interesting occasion. I baptized forty-six adults, making ninety baptized since our convention in May. I was looking over my record-book to-day. It exhibited the following encouraging facts: In the first five years I baptized only 17 adults; the sixth year 27; at the end of nine years 109; this year, the tenth, 118. Thus you will see that the fifth year exceeded all the preceding years, while the tenth year exceeds all the preceding nine. Is not this encouraging?"

Gilded Bibles.—The American Bible Society makes the following statement, in the *Bible Record*, respecting the ornamental style of binding their books:—

"The friends of the Society who have ordered books the past year, will perceive that much less gold leaf than formerly is put upon the covers of the finer Bibles. The change was made from a conviction that so much ornament does not become the character of the Society or the Sacred Volume, and from finding that it is not generally desired by those best qualified to judge in such a matter. In England, where more Bibles are made and used (leaving our own country out) than in all the world beside, one seldom sees a gilded cover to this book. Great pains are taken as to paper, type, ink, and the material of the cover. Gold leaf is put on the edges of the leaves on account of durability, while the covers are of some rich color, with no embellishment except in the way of embossing, at times. When gold leaf is put on the covers, it is usually done with a view to the American market, and even then it is used sparingly.

"Some few of our auxiliaries and friends have expressed a desire to have books highly ornamented, as of old; but this is not usually the case, and we trust that before long all will be satisfied, and not only satisfied, but gratified with the change which has been made. It will be the aim of the Board to have their more expensive books of the best quality as to material, strength, and appropriate taste."

Minutes and Reports.—Of the Conference Minutes, a parcel has been put up for each church assessed by the Conference. Of the Reports of the Missionary and Tract Societies, parcels have been put up for each church in the denomination. They will be forwarded by the first chance that offers.

RELIGIOUS INTELLIGENCE.

Mrs. Judd, wife of Dr. Judd, late Prime Minister at the Sandwich Islands, has arrived in the United States. She and her husband were among the first missionaries to the Sandwich Islands, and now, after an absence of nearly thirty years. Mrs. Judd has returned to visit her numerous friends, from whom she has been separated. She is accompanied by her two eldest daughters and her eldest son.

Rev. Dr. Burchard, of New York, while at Rome lately, took the liberty to seat himself in the throne of St. Peter. The devout spectators were paralyzed, but a sentinel had presence of mind to rush forward and expel the American doctor at the point of the bayonet. A little extra incense for fumigation, and a prayer or two, doubtless made the sacred seat all right again.

The Episcopal Bishop of Oregon writes: "A year ago we assembled in the humble school-house which had been used for our service in this place. To-day we meet in a very neat and appropriate sanctuary, dedicated to the service of Almighty God, the Father, the Son, and the Holy Ghost. Its consecration took place on Sunday, 24th September last, in presence of a full congregation."

Rev. Abel Stevens, now in Europe, writes a letter from Paris to Dr. Peck, which is published in the *Christian Advocate and Journal*, calling in earnest tones upon American Methodism to furnish $1,000, with which to start a French Methodist Book Concern in Paris. He thinks that, through books and the press, Methodism might accomplish untold good in France.

The last General Assembly of the Church of Scotland declined accepting the grants of money from the India Government in aid of its mission schools in India, on the ground that acceptance of such aid inhibited the missionaries from giving religious instruction.

Mr. H. D. Kellogg, of Bridgewater, has recently donated to the Faculty of Hamilton College $500, to be invested as a prize fund for the classical department of that institution. This is the only general department of literature in which there have been no prizes awarded heretofore.

A Baptist mission chapel has recently been erected in Twentieth-st., near the Second-av., New York, nearly the entire cost of which—ten thousand dollars—was contributed by a single individual, Mr. William Colgate, a member of the Tabernacle Baptist church.

Rev. Stephen C. Pixley, of Plainfield, Mass., and Mrs. Louise Pixley, of Northampton, Mass., embarked at Boston recently, in the Springbok, Capt. Mayo, for Cape Town, to join the mission of the American Board among the Zulus. The religious services were conducted by Rev. Anson Gleason, a missionary among the New York Indians.

It is said that the executors of the estate of Mrs. Emily C. Judson have made arrangements with the Rev. Rufus W. Griswold, D.D., to prepare a memoir of her life and letters. It is expected the book will be published next spring.

The Albany *Argus* says: Decidedly the finest dwelling in Albany, is the new one erected for Bishop McClosky on Lydius-st., near the Cathedral. In extent of appointments, conveniences and elaborateness, it has no superior.

A Methodist minister writes from Buenos Ayres, "I verily believe there is not, on all the African continent, a tribe or nation in a more abject state of heathenism than are the mixed race of men inhabiting these old grounds of the Spanish conquerors," a commentary on the religious influence of Romanism.

There is now in progress an interesting revival of religion in connection with the Congregational church of West Boylston. "What must I do to be saved?" is a question asked by many.

Dr. Duff is gradually recovering his lost health, and, although not yet entirely reinstated, he designs soon to set out for the field of his labors in India.

Rev. Nathan Brown, D. D., of the Assam Mission, and Rev. J. S. Beecher, of the Bassein Mission, have arrived in this country.

The venerable Lyman Beecher, D.D., passed to the 81st year of his age on the 12th ult., and is enabled to preach every week.

The Presbyterians have opened a church edifice on West Arch Street, Philadelphia, which cost, including lot, $100,000.

No less than thirty-seven Episcopal missionaries proclaim the Gospel in the Irish language, besides all that is doing by the Presbyterians, Independents, Wesleyans, and Baptists.

General Intelligence.

European News.

The steamship Baltic, with European dates to Oct. 20th, arrived at New York on the 3d inst.

The Allied expedition which left the Crimea on the 6th, after making a show before Odessa, bombarded and captured Kinburn, an important Russian position at the mouth of the Dnieper and Bug.

The Allies have also destroyed two towns. Laman and Phanagria, in the Straits of Kertsch.

According to the latest from the Crimea, the advanced posts of the Allies were within five leagues of Baktchi Serai. The Russians were retiring slowly, Gen. Lipandri intending evidently to depend the line of the Belbec. A battle soon anticipated here.

The north of Sebastopol has been surrounded with new fortifications, and placed in a state to support a siege.

A telegraphic dispatch has been received at the Foreign Office from Viscount Stratford de Redcliffe, dated Therapia, Oct. 12, stating that the Russians attacked Kars on Sept. 29, and were repulsed, after a conflict of seven hours, with a loss of 2,500 killed, and twice that number wounded. Upwards of 4,000 muskets were left on the field. The loss of the Turks was about 700, killed and wounded.

The Allies are extensively engaged in road-making and hut-building, not only along the plateau de la Khersonese, but all along the Tchernaya line, up to Alsu.

The English have found in the Karabelnaia immense Russian stores of ammunition and clothing, valued at £70,000.

The Daily News says that General Eyre has been recommended by Gen. Simpson as his successor, but that Government will not accept Simpson's resignation.

Sir Henry Ward, Governor of Ceylon, has been assassinated.

The Bank of England announced on Thursday, the 18th, an increase in the rate of discount to 6 per cent. for 60 days' bills, and to 7 per cent. for paper of a longer date. The greatest alarm has been created in commercial circles, as these are higher rates than those which preceded the panic of 1847. An immediate suspension of the restrictive clause of Peel's bank bill is looked for, and an immediate issue of some kind of paper money.

California News.

The steamer George Law, from Aspinwall, arrived at New York on the 30th ult., bringing California news to Oct. 5th, 550 passengers, and $1,670,477 in treasure.

A letter dated Acapulco, Oct. 14th says:—The steamer Sierra Nevada, of the Nicaragua line, with the passengers who left New York on the 5th of September, put in here about a week ago in distress for water. The cholera had broken out on her to a frightful extent. It was reported by the passengers who came on shore, that seventy-one deaths had occurred up to the time of their arrival here, and that twenty-four had died while in this port. The authorities refused to let them bring their dead on shore, or even bury them in the harbor, so they were compelled to keep them until they got to sea again.

The California State Agricultural Fair opened in Sacramento on the 25th, and was quite successful, although the display is said to have been inferior to that of the previous year. A new feature of the exhibition, male and female equestrian sports, added considerable interest to the occasion. Prizes were awarded to four ladies for their excellence on horseback. During the trial of skill with the lasso, a portion of the fence where the wild steers were confined, broke down, and the animals breaking loose, one of them gored Mr. Abram Irving in a horrible manner, causing death within a few minutes. An address was delivered by Ex-Governor H. S. Foote, before the close of the Fair.

Numerous shooting affrays are reported in the interior. In Sacramento, on the 29th, a man named Hunnewell attacked one Reeser with a revolver, but the latter drawing his weapon also, Hunnewell was killed. The other was acquitted. Domestic troubles caused the affair. In Auburn, a miner named Hall was stabbed by James Redmund, in a bar-room. The latter challenged him to fight, and when he commenced shooting, Redmund drew a knife and rushed on him. The usual number of casualties in the mines have occurred.

The sales of Japanese goods, recently arrived in San Francisco, occupied several days; the first day the articles brought ridiculously high prices. The total amount realized was $25,000; whereas, the cargo originally cost $3,500.

A daring attempt to poison the family of Colonel Watkins, of Alameda, was discovered just in time to save the lives of the parties. A solution of strychnine was found in the tea the cook had prepared for their supper.

The flourishing mining village of Jamestown, (Tuolumne Co.,) was entirely destroyed by fire on the 2d ult. The loss is estimated at $75,000, and falls principally on the merchants of the place.

The majority against the Prohibitory Liquor Law proposition will exceed 4,000.

From Oregon, we learn that Governor Stevens had reached Fort Benton. The rumors of his massacre are believed to have been started by the Indians.

The military expedition under Major Haller had returned to the Dalles. The expedition was sent out by the Government at home, for the purpose of chastising those blood-thirsty Indians who committed the inhuman butchery of the Ward family and party, on the plains near Fort Boile, last year. They captured ten of the murderers, tried and hung four, shot three, wounded one and brought in two prisoners.

The rate of taxation in Oregon this year is ten cents on each $100 of valuation.

The grasshoppers are making sad havoc with the orchards and cornfields in parts of Benton County.

In Washington Territory, the vote on the Prohibitory Liquor Law was as follows: Against Prohibitory Law, 650; for Prohibitory Law, 564. The entire vote of the Territory, distributed over fifteen counties, is 1,502. Rather small vote.

The Governor elect of California is only 30 years old, the youngest Governor and the youngest State in the Union.

Important Decision.

A decision was rendered in the U. S. District Court at St. Louis, a few days ago, in the following case: In 1849 a large amount of cotton was shipped at Memphis for New Orleans in the steamer Convoy, which was burnt, with her cargo—not through any negligence of the master or owners. The bills of lading under which the cotton was to be carried said "dangers of river only excepted."

The Memphis Insurance Company had insured the cotton against "loss by fire." They paid the loss, and brought this suit against the owners of the boat to recover the value of the cotton, claiming to be equitably subrogated, or entitled to all the rights of the original owners of such cotton.

The Court held:

1. That the complainants were entitled to sue in equity to recover, if the defendants were liable.

2. That the exception in the bill of lading of "dangers of the river only," did not include fire—fire was not a danger of the river within the meaning of the bill of lading, though it did not proceed from any fault or neglect of those managing the boat.

A decree was accordingly rendered against the defendants for the value of the cotton.

The question will, doubtless, be carried to the Supreme Court of the United States.

Dreadful Railroad Accident.—A dispatch from St. Louis, Mo., dated Nov. 2d, says:—

An excursion train, consisting of eleven cars, left here yesterday morning on the occasion of the opening of the Pacific Railroad to Jefferson City, and while the train was crossing Gasconade River, about one hundred miles from here, the bridge fell, precipitating ten cars a distance of nearly thirty feet into the water. Upwards of 700 persons were on the train, including many of our first citizens. Upwards of twenty are supposed to have been killed, and some twenty to fifty others badly wounded Thomas S. O'Sullivan, Chief Engineer of the Road, was on the locomotive, and is among the killed. Few if any strangers were on the train.

The following is a list of the killed as far as could be ascertained, when the train detailed for the purpose of bringing the injured to St. Louis, left the scene of the disaster:

Thos. Gray, Capt. O'Flaherty, E. C. Blackburn, Henry Chouteau, E. C. Jeffrees, Representative of Franklin County; Adolph Abeles, Rev. Dr. Bullard, Mr. Mott, Representative of Dunklin County; Mr. McCullough, of Dunklin; Capt. C. Case, E. C. Yosti, (firm of Shield & Yosti,) Thomas S. O'Sullivan, Chief Engineer; B. B. Dayton, (reported dead,) Mann Butler, Joseph Harris, of St. Louis County; —— Chappell, father of J. T. Chappell; Geo. Ebeele.

A Hint to Judge Kane.—We cut the following paragraph from the New York *Sunday Courier*:—

"It is customary with great potentates and Asiatic tyrants to commemorate any happy domestic events by liberating State prisoners, and other acts of clemency and mercy. Why should not Judge Kane, the tyrant of Philadelphia, by way of a thank-offering to Providence for the safe return of his two sons, open the prison doors and let Passmore Williamson go free? The sole crime of Passmore was the wickedness of telling a poor black woman that, by the laws of Pennsylvania, she was entitled to her freedom, and we should say that he had been shut up in a dungeon quite long enough for such an offense as that. If there was any of the spirit remaining in Philadelphia which manifested itself there in July, 1776, Passmore Williamson would not long remain in Moyamensing Prison. But the men who made the Declaration of Independence—Jefferson, Franklin, Adams, and Hancock—were not Pennsylvanians."

Sabbath Accident at Niagara Falls.—The Niagara Falls *Gazette* of Oct. 31st, says:—

A sad accident occurred on the river, a short distance above this village, on Saturday, by which three lives were lost. The facts are these:—Mr. Samuel Tompkins, of La Salle, Mr. Wm. Philpott, Mr. Wm. Murphey, and two Germans from this village, started about noon from Philpott's sawmill to go up the river to La Salle, or Cayuga Creek. They proceeded up the river in a sail boat, and when opposite Schlosser Landing, some ten or twelve rods from the shore, Mr. Tompkins observed that they had too heavy sail and had better keep nearer shore. The direction of the boat was changed, and they had approached to within about three rods of the landing, when the bow of the boat was fairly driven under the water, and the inmates left to the mercy of the stream. Mr. Tompkins struck for the shore and reached the dock in safety, as did Mr. Philpott. Mr. Murphey and the two Germans clung to the boat a few moments, after which Mr. Murphey tried to reach the dock, and only went down when within a few feet of it. The two Germans not being good swimmers, went down before assistance could be procured.

Trouble in Nicaragua.—By the steamship Star of the West, which arrived at New York on the 3d inst., we have news of trouble in Nicaragua. It seems that the steamboat San Carlos, with the New York passengers by this ship, on arriving before the Fort at the junction of the River San Juan and Lake Nicaragua, was ordered, as usual, to come to, and whilst lying to, was fired into with a thirty-two pound shot from the Fort, killing instantly a lady and child, besides seriously injuring the machinery of the boat. These passengers, however, met with no further molestation, and reached in safety the steamship Uncle Sam, at San Juan del Sur. Also, on the night of the 19th ult., a most murderous attack was made upon the returning California passengers at Virgin Bay, by the Government forces from Rivas, killing four of them, and severely wounding eight others—both acts appearing to be dictated through a spirit of revenge, for the success of Walker, who has now complete possession of the country.

Scarcity of Horses in Europe.—A correspondent of the *Spirit of the Times*, writing from Paris under date of May 31st, remarks on the state of the London horse market as follows: "Ladies' saddle horses are not to be had, neither are carriage horses, which will surprise you. In thirteen days' search I could not find a decent pair for sale at any price. If this war lasts another year, the Europeans will be importing horses from America, and it would be well worth the attention of our farmers and breeders to raise large horses, fit to draw a heavy carriage, or carry a heavy man. Good saddle horses for gentlemen, are still to be found by paying for them; a first-rate one stands you $300." A Utica, N. Y., paper states that a gentleman is now in that city purchasing carriage and saddle horses for the Paris market.

A Daring Slave Refugee.—A slave named Jacob Green ran away last August from Mr. Parsons of Romney, Va., into Pennsylvania. A few weeks after, he returned under cover of night, stole a horse, and carried off five of Mr. Parsons's slaves. Two weeks ago he again returned, and carried off five slaves from the same place belonging to Mr. Stump. This induced Stump, Parsons, and a nephew of Mr. Parsons, to start in pursuit of them. In Bedford county, Pa., two of Stump's shaves were overtaken and sent back. Green discovered Parsons in the cars, and jumped out, and Parsons followed and secured him, though he was heavily armed. Col. Piper, Gen. Potts and other Abolitionists interfered, and forced Parsons away. The release of the fugitive effected, Potts went before a magistrate, and made oath against Parsons for attempting to kidnap. Parsons procured bail. The slave Green, it is thought, is in Canada by this time.

The Troy University.—The citizens of Troy, N. Y., have subscribed $100,000, in order to secure the charter of a collegiate institution in that city, named the Troy University. Not content with this, they are now endeavoring to raise another hundred thousand, with special reference to free scholarships. The payment of a hundred dollars is to secure to the subscriber forty years of free tuition, which he may assign to any pupil of the college, according to his pleasure. Two hundred dollars, the free tuition of two scholars for fifty years; three hundred dollars, the free tuition of one student in the college forever—and so on. Sixty thousand, of the one hundred thousand required, have already been raised. It is proposed to place the college buildings on Mount Ida, overlooking the city and the valley of the Hudson. Thirty-six acres of land have been secured on that eminence for the use of the University.

A Southern Church.—The *Baptist Memorial* for September contains "Reminiscenses of the First African church, Richmond, Va.," which numbers 2,650 members. From October, 1841, to July 10, 1855, it appears 2,382 colored persons were received into it by baptism. An account of the manner of receiving the colored people is furnished: "Each applicant for baptism is required to converse first with a deacon and to obtain his approval. He is then expected to bring from his master, if he is in bondage, a testimonial of his general propriety of conduct, or of his recent improvement in that respect. He is then carefully examined by the pastor in relation to his views of doctrine, his experience of evangelic truth, and his purposes of future consecration to God."

Fire and Loss of Life.—A fire broke out on the morning of the 30th ult., in a large five story factory in Cordaville, Southboro' Mass., which speedily destroyed the building. The factory was owned by M. H. Sanford, Esq., and occupied by the Cordaville Manufacturing Company. The flames communicated to a saw-mill, dry-house, and other buildings, all of which were entirely destroyed, and the depot building on the Worcester railroad, was in imminent danger of sharing the same fate at the time the train passed. The saddest part of the story is, that in their fright, after the alarm of fire was given, some of the operatives in the factory leaped from the upper windows, and at least three of their number were killed almost instantly, while several others had their limbs fractured and were otherwise injured.

A new State out of Texas.—A writer from Western Texas says that the German, French, Swiss, Hungarian, and other European settlers in North-western Texas are to a man in favor of forming a new State out of the western portion of that State; and to a man they are opposed to Slavery. There are many settlers from the Northern States among them, too, and together he thinks they can command ten thousand votes already. The letter is written by Mr. Wilcox, a member of Congress from Mississippi, who has lately returned from a visit to Texas. By the act annexing Texas it is provided that it may be divided into two or more States, and it is quite probable that such a division will ere long be demanded.

Departure of Missionaries.—The following persons sailed from Boston on Saturday, Nov. 27th, in the Georgiana, Capt. Crowell, for Smyrna: The Rev. George C. Knapp and Mrs. Knapp, with Henry B. Haskell, M. D., destined to the Assyrian mission; the Rev. O. P. Allen and Mrs. Allen, destined to the Armenian mission; the Rev. Edward Arken and Mrs. Arken, destined to the Syrian mission. The usual services were held in the forenoon, the Rev. Silas Arken, D. D., father of one of the missionaries, officiating on the occasion. This is the third embarkation of missionaries of the American Board during the week.

Passmore Williamson at Liberty.—Passmore Williamson is at last at liberty. After spending some three months in prison, for no other offence then that of having told the *truth*, he is now release. It appears from the proceedings in Court, that he has simply repeated, in another form, the very statement which led to his imprisonment. He repeats his assertion that he had no control over Colonel Wheeler's slave, and could not therefore produce them. Judge Kane avails himself of the repetition, to escape from the position in which he placed himself by his original act.

On the express train over the Chicago and Galena Railroad, recently, a sad accident occurred at Oak Bridge. A lady, while stepping from one car to another, slipped and fell between the cars. The cars were moving slowly at the time, and the wheels passed over both her legs, between the knees and ankles, severing them from the body. The brakeman of the train immediately jumped from the cars, and springing under the moving train, pulled the woman under the brake rod, and sustained her until the train stopped, and thus saved her life.

SUMMARY.

A dispatch dated Philadelphia, Monday, Oct. 29, says: Judge Kane made an order in the case of Passmore Williamson this morning, refusing the leave asked for by counsel, because he is still in contempt, and by the petition he seeks to present, does not purge himself. To the end, however, that he may purge himself, the Judge also ordered that whenever Williamson shall declare, under oath or affirmation, that he is willing to answer such interrogations as may be addressed him by the Court touching matters heretofore inquired into by the habeas corpus, that the Marshal shall bring him before the Judge in Court or Chambers, to abide the further action of the Court.

A dispatch dated Bangor, Me., Tuesday, Oct. 30, says: There is considerable excitement in our community, in consequence of the discovery that some of the liquors seized under process of law, are missing, from the fact that the houses of the members of the police have been searched, without any considerable quantity of liquor being found. The City Marshal is charged with giving up some parcels of liquor without legal authority to do so, to persons from whom they were seized, upon the payment to him of certain sums of money.

The Austin Times of the 13th inst., mentions the destruction by fire of the office of the Adjutent-general of Texas, including the army rolls and every important paper in relation to the military affairs of Texas. There is no means, it says, to procure duplicates, and the burning of no other archieves could have been a greater loss to Texas, as it will open the door to the defrauding of many persons.

At Cincinnati, the other day, a German boy named Martin Bristo, fifteen years of age, who had a spite against another boy of about the same age, named Sweiger, procured a short German pipe, and filling it with powder, invited him to smoke. The result was an explosion, by which Sweiger's face was dreadfully injured, one of his eyes being hurt so badly that he will probably lose it.

In a few days a store will be opened in Boston, with a capital of $15,000, as an agency for the sale of flour at Western prices, with the addition of the cost of transportation and incidental expenses. The Boston Post says "some of the better class of our moneyed men are ready to advance sums for the purpose of establishing stores of this description."

The N. Y. Post notes, as an important sign of Eastern progress, an official notification, dated the 9th of September last, from the Sublime Porte, of its intention to introduce an extensive system of railroad improvements into the Turkish empire, and its readiness to receive proposals from capitalists, native or foreign, who are disposed to become interested in them.

The Wheeling Times states that about thirty colored persons of both sexes, who were lately emancipated by the executor of the late Miss Taliaferro, of King William county, Virginia, passed through that city on Monday morning on their way to Mt. Pleasant, Ohio, nine miles west of Wheeling, where they are to be located among a society of Friends.

The New Haven Register notices a Family Meeting which came off on Monday afternoon, to celebrate the 50th anniversary of the wedding-day of Rev. Samuel Merwin and wife. This worthy couple are the parents of two sons and five daughters, (never having lost a child) all of whom are married, and were present with their families on this occasion!

Two new guano islands are said to have been discovered off the coast of Guayaquil, one of which is reputed to contain 43,000 tons of guano, and the other 12,000 tons. The parties who are alledged to have discovered the islands were in negotiation at Guayaquil for an American vessel to proceed to the islands.

A large proportion of the powder used by the allied armies in battering down the almost impregnable fortifications at Sevastopol, was made at Hazard's and Dupont's mills in Connecticut and Delaware. Two clipper ships belonging to Grinnell, Minturn, & Co., were dispatched during the summer with full cargoes of powder for the Crimea.

Prof. Johnston, the distinguished author and chemist, died at Durham, England, Sept. 10th, at the age of 59. He was one of the best chemists of the age, and is widely known in this country, especially from the fact that he devoted himself very earnestly to the chemistry of agriculture.

The suit of Dr. Carrington vs. Flagg, Caldwell & Co., for damages received by the upsetting of a stage between Lynchburg and the South Side railroad, in the month of August, 1854, was decided at a recent term of the Circuit court for Campbell county, and a verdict of $5,000 rendered for the plaintiff.

A dispatch dated Washington, Monday, Oct. 29, says: The President has received by the Africa a circular from the Danish Government, inviting a settlement of the Sound Dues question by a Congress of Nations to meet in November.

Citizens of the United States, in common with all other foreign Christians, enjoy the privilege of exterritoriality in Turkey, including Egypt; the same in the Turkish Regencies of Tripoli and Tunis; and also, in the independent Arabic States of Morocco and Muscat.

Among the passengers by the ship Star of Empire, which arrived at Boston, from Liverpool, were about sixty Scotch girls, engaged to work in the factories here. They were mostly young, neatly dressed, and some of them are quite good looking.

It is stated that the father of Passmore Williamson has paid four thousand dollars for legal proceedings in the case of his son. A gentleman in New York has offered one thousand dollars towards defraying the expenses.

A bill is now pending before the Tennessee Legislature for the erection of statues of Washington and Jackson in the State Capitol at Nashville, the statues to be the work of an American artist.

Inoculation for the yellow fever is reported to have been tried in more than one thousand cases at New Orleans, during the past Summer, with perfect success.

The Springfield (Ill.) Journal estimates the population of that State at 1,200,000, thus placing Illinois the fifth in rank of all the States in the Union.

The Surveyor General of Kansas and Nebraska, in a letter to the Commissioner of the General Land Office, states that he has made contracts for the subdivision into townships of the eastern portions of the Kickapoo lands, and the lands of the Sacs and Foxes ceded to the United States, to be sold for their benefit. The surveys are to be completed by the 1st of December next.

The Rothschilds, according to their own estimate, possess $700,000,000 in personal property, exclusive of real estate, seignories, mines, &c., which amount to at least half as much more, making the enormous sum of over $1,000,000,000, or an amount much higher than the entire valuation of New York city.

The whole number of applications for Bounty Land Warrants at the Pension office under the late act is 222,800, and of Warrants issued, 50,043. The applications are now decreasing, only 5,500 having been received during October.

Mr. Thompson, of Kansas, has just completed, so it is stated, a prairie ship or wagon, to be propelled by wind, in which he proposes to make a voyage to the Rocky Mountains. Thirty passengers will embark in June next on the voyage.

On and after Monday, 29th October, the steamers of the several Sound Lines for Boston—the Fall River, the Stonington, and the Norwich Lines—will leave New York at 4 o'clock, P. M., instead of 5 as heretofore.

At Lancaster, Pa., on Saturday, in the case of Wilson vs. Pennsylvania Railroad company, four thousand five hundred dollars damages were awarded. The accident by which Wilson lost his life was caused by the breaking of a rail.

We learn from the Montgomery (Ala.) *Advertiser and Gazette*, that a couple of Abolition incendiaries were dealt with in that city, on the night of the 17th, according to the statute made and provided in such cases, Judge Lynch presiding.

New York Markets—Nov. 5, 1855.

Ashes—Pots $6 37; Pearls 7 37.

Flour and Meal—Flour 9 00 a 9 37 for various grades of State, 8 87 a 9 00 for Western mixed, 9 50 a 11 25 for extra Genesee. Rye Flour 6 25 a 7 50. Corn Meal 4 75 for Jersey.

Grain—Wheat 1 98 a 2 03 for Western red, 2 12 a 2 22 for Canadian white, 2 00 for California white. Rye 1 22. Barley 1 28 a 1 37. Oats 45 a 49c. Corn 94 a 96c. for Western mixed.

Provisions—Pork 21 00 for prime, 22 50 for mess. Beef 9 50 a 10 00 for country prime, 16 00 for extra State mess. Lard 11¾ a 12c. Butter 16 a 20c. for Ohio, 20 a 25c. for State. Cheese 9½ a 10½c.

Apples—1 25 a 1 75 for Greenings and Spitzenbergs, 1 50 a 2 50 for fall Pippins, 1 50 for Gilliflowers and Sweets, 75 a 1 25 for common.

Hay—70 a 80c. per 100 lbs. for shipping, 87 a 95c. for local use.

Potatoes—87c. a 1 12 per bbl. for common, 1 25 a 1 50 for Pinkeyes, 1 50 a 1 75 for New Jersey Mercers.

Seeds—Clover 11 a 11½c. Timothy 2 75 a 3 00 per bushel. Rough Flaxseed 1 95 a 2 05 for 56 lbs.

Wool—32 a 33c. for common, 35 a 43c. for medium, 44 a 49c. for fine.

MARRIED,

In Watson, Oct. 18th, by Eld. Marsellus Allen, Mr. Wells L. Green, of Hounsfield, to Miss Lois L. Davis, of Watson.

Also, by the same, and at the same time and place, Mr. Edwin F. Davis to Miss Martha E. Pierson, all of Watson.

In Alfred, Oct. 28th, by Eld. N. V. Hull, Mr. Robert West to Mrs. Almina Gillman, all of Alfred.

DIED,

In Brookfield, N. Y., on the 21st of October, Mrs. Zipporah Bassett, wife of Mr. Samuel C. Bassett, in the 39th year of her age. Sister Bassett's disease was inflammatory rheumatism, complicated with erysipelas, which was rapid in the work of its mission, and in a few days carried its suffering victim to the grave. It will afford satisfaction to her distant friends to learn that she anticipated her departure with Christian composure and strong confidence in Christ, in whom she had put her trust.

At her residence in Michigan, on the night after the 17th Oct., Adaline C. Andrews, wife of Abram R. Andrews, formerly of Clarence, Erie Co., N. Y.

In Groton, Ct., Oct. 23, Edwinna A. Burdick, aged 5 months and 7 days, the only child of Stillman Burdick.

In Verona, Oneida Co., N. Y., on the 26th of Oct., Mr. Numa Leonard, aged 44 years and 8 months. He was a grandson of Dea. Thomas Williams, and has left a beloved companion to mourn the loss of a kind and affectionate husband. D. P. C.

In Plainfield, Otsego Co., N. Y., on the 29th of Oct. Edson Hamilton, son of Hamilton J. and Sarah Ann Whitford, aged one year, four months, and twenty-nine days.

In Milton, Wis., Sept. 24th, after a short illness, Harriet Eliza, daughter of G. N. and Eusebia N. Coon, aged eight months and two days.

Great Central Route.

THE Through Ticket and Freight Office of the GREAT WESTERN RAILWAY, MICHIGAN CENTRAL RAILROAD, and their Railroad and Steamboat connections to Chicago, Milwaukie, Galena, Burlington, St. Louis, Cairo, and all points West and South-west, via Suspension Bridge, Buffalo, or Oswego, is at No. 173 Broadway, New York, corner of Cortlandt-st.

DARIUS CLARK, Agent.

Carpet Warehouse.

YOUNG & JAYNE, No. 364 Broadway, corner of Franklin Street, (opposite Taylor's Saloon,) offer for sale a very choice and extensive assortment of

CARPETINGS, OIL-CLOTHS, CURTAIN MATERIALS, MATTRESSES, &c.,

at the lowest rates. Purchasers are respectfully solicited to examine the stock.

Misrepresentations, either expressed or implied, are strictly prohibited in this establishment.

YOUNG & JAYNE,
364 Broadway, corner of Franklin-st.

N. B.—Churches and clergymen furnished at wholesale prices. Sept 27—3 m.

Farm for Sale,

CONTAINING about 100 acres, with a fair proportion of woodland, a small orchard of grafted fruit, and a comfortable dwelling and outhouses. It is situated about four miles north of Westerly, R. I., and within a mile of each of the flourishing manufacturing villages of Potter Hill and Ashaway. There are several other manufacturing establishments near, affording a ready market, in the immediate vicinity, for every species of produce. It is convenient to the first Hopkinton Church, as well as to the very excellent male district school.

It will be sold with or without the stock and farming implements, and possession given the ensuing winter or spring, if desired. To those wishing to secure a quiet home in an enterprising neighborhood, and surrounded by such comforts as can only be found in an old settled and thickly populated country, this affords an opportunity seldom offered. For terms and other particulars apply to the subscriber on the premises, or address John E. Potter, No. 15 Sansom-st., Philadelphia, Pa. Benjamin Potter, Ashaway, R. I.

11tf.

Good Crops, Good Prices, Good Books, and Good Times.

BELCHER'S HISTORY OF ALL THE RELIGIOUS DENOMINATIONS IN THE UNITED STATES. Large Octavo 1,024 pp. and nearly 200 engravings.

FLEETWOOD'S LIFE OF CHRIST AND HIS APOSTLES. 704 pp. and 25 engravings.

Probably there has never been a more favorable opening for the sale of books than the present. Large crops have been produced throughout the country, and these are bringing good prices; every body is in high spirits.

The above volumes are printed on fair paper, in clear, large type, are handsomely illustrated, and bound in a neat and attractive style. More than all, their contents bear the ring of the true metal, enabling the agent to sell them to the highest in the land as well as the humblest, with the gratifying feeling on his part that he is conferring a favor rather than receiving one. They have gained and are gaining a world-wide fame; and being sold exclusively by subscription, the agent has the entire benefit of their popularity.

Canvassers, and those wishing to become such, will find it for their interest to secure an agency. We can offer them with other popular works on the most favorable terms. For further particulars apply to or address either of the

Publishers, { John E. Potter, Philadel., Pa.

Magnificent Floral Gift.

SUBSCRIBERS to the "CHRISTIAN DIADEM" for 1855, are entitled to a splendid steel engraving, the ☞ LILLY AND THE ROSE PERSONIFIED, being given *gratis* to all old and new subscribers who send us only ONE DOLLAR, by mail or otherwise.

Six Copies for Five Dollars.

The Diadem is a strictly moral and religious work—designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address Z. P. HATCH, Publisher, 9 Spruce street, New York. May 24—3m.

New Market Seminary.

This Seminary will re-open on the 12th of September, with Mrs. R. H. Whitford, as Preceptress.

This Institution is located in a pleasant section of country, and has a commodious and well arranged building, and is designed to furnish every facility and advantage to the student found in other institutions of this class.

Board for students may be had in families at one dollar and seventy-five cents per week, where all their wants will be kindly cared for. Tuition from $3 to $5 per term, according to the studies pursued. Music, with use of Piano, $10 00.

L. H. Dunn, Sec. of Board of Trustees.
New Market, N. J., August 26, 1855.

New York and Erie Railroad.

ON and after Wednesday, Sept. 19, and until further notice, Passenger Trains will leave the pier foot of Duane-st., New York, as follows:

Dunkirk Express at 6.30 A. M. for Dunkirk.

Buffalo Express at 6.30 A. M. for Buffalo.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations. Passengers by this Train will remain over night at Owego, and proceed the next morning.

Rockland Passenger at 3 P. M. (from foot of Chambers-st.) via Piermont, for Sufferns and intermediate stations.

Way Passenger at 4 P. M. for Newburgh and Otisville and intermediate stations.

Night Express at 5½ P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5½ P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c., and with first-class splendid steamers for all ports on Lake Erie.

D. C. McCALLUM, General Sup't.

DeRuyter Institute.

This Institution is located in a pleasant and healthy section of country, and in a community comparatively moral and intelligent. It is easy of access from Syracuse, Chettenango, and Homer. Our motto is, *Teach the young to govern themselves—to educate themselves.* Grateful for past liberal patronage, we assure the public we have ample accommodations for more.

Expenses:

Tuition,	from $4 00 to $6 00
Board in families,	from 1 25 to 2 00
" in clubs	from 0 60 to 1 00
Room rent, per term,	from 1 25 to 2 62

Books and Stationery furnished at very low prices.

All bills settled invariably in advance. No bills for less than half a term. No deductions made except in case of sickness.

Board of Instruction.

HENRY L. JONES, A. M., Principal.
AMOS R. CORNWALL, A. B., Prof. Mathematics.
Miss JOSEPHINE WILCOX, Preceptress.
Mrs. SARAH E. JONES, Mrs. BARBARA A. CORNWALL, Miss SARAH B. SHIPPEY, Miss JANE C. BURDICK, Assistants in Female Department.

For further particulars, address, Henry L. Jones, Principal; W. D. Wilcox, President; J. B. Wells, Secretary; or C. H. Maxson, Treasurer, De Ruyter Madison Co., N. Y.

Miscellaneous.

An Agricultural Speech by Edward Everett.

During the National Agricultural Exhibition at Boston, a grand banquet was spread in the mammoth tent, at the conclusion of which speeches were made by Robert C. Winthrop, Edward Everett, and others. We copy entire the speech of Mr. Everett:—

If this were a geological instead of an agricultural society, and if it were your province not to dig the surface, but to bore into the depths of the earth, it would not be surprising if, in some of your excavations, you should strike upon such a fossil as myself. But when I look around upon your exhibition—the straining course—the crowded, bustling ring—the motion, the life, the fire—the immense crowds of ardent youth and emulous manhood, assembled from almost every part of the country, actors or spectators of the scene—I feel that it is hardly the place for quiet old-fashioned folks, accustomed to quiet old-fashioned ways. I feel somewhat like the Doge of Genoa, whom the imperious mandate of Louis XIV. had compelled to come to Versailles, and who, after surveying and admiring its marvels, exclaimed, that he wondered at every thing he saw, and most of all at finding himself there.

Since, however, Sir, with that delicate consideration toward your "elder brethren," which I so lately had occasion to acknowledge at Dorchester, you are writing to trust yourselves by the side of such a specimen of pale ontology as myself, I have much pleasure in assuring you that I have witnessed, with the highest satisfaction, the proof afforded by this grand exhibition, that the agriculture of our country, with all the interests connected with it, is in a state of active improvement. In all things, Sir, though I approve a judicious conservatism, it is not merely for itself, but as the basis of a safe progress. I own, Sir, there are some old things, both in nature and art, and society, that I like for themselves. I all but worship the grand old hills, the old rivers that roll between them, the fine old trees bending with the weight of centuries. I reverence an old homestead, an old burying ground, the good men of old times. I love olden friends, good old books, and I don't absolutely dislike a drop of good old wine for the stomach's sake, provided it is taken from an original package. But these tastes and sentiments are all consistent with, nay, in my judgment, they are favorable to a genial growth, progression, and improvement, such as is rapidly taking place in the agriculture of the country. In a word I have always been, and am now, for both stability and progress, learning from a rather antiquated but not yet wholly discredited authority, "to prove all things, and hold fast to that which is good" I know, sir, that the modern rule is "try all things, and hold fast to nothing." I believe I shall adhere to the old reading a little longer.

But, Sir, to come to more practical, and you will probably think, more appropriate topics. I will endeavor to show you that I am no enemy to new discoveries in agriculture, or any thing else. So far from it, I am going to communicate to you a new discovery of my own, which, if I do not greatly overrate its importance, is as novel as brilliant, and as auspicious of great results as the celebrated discovery of Dr. Franklin; not the identity of the electric fluid and lightning, I don't refer to that, but his other famous discovery; that in the latitude of Paris, the sun rises several hours before noon; that he begins to shine as soon as he rises; and that the solar ray is a cheaper light for the inhabitants of large cities than the candles and all which they are in the habit of preferring to it. I say, Sir, my discovery is somewhat of the same kind; and I really think full as importable. I have been upon the track of it for several years; ever since the glitter of a few metallic particles in the gravel washed out of Capt. Sutter's mill-race first led to the discovery of the gold diggings of California; which for some time past have been pouring into the country fifty or sixty millions of dollars annually.

My discovery, Sir, is nothing short of this—that we have no need to go or send to California for gold, inasmuch as we have gold diggings on this side of the Continent, much more productive, and consequently much more valuable than theirs. I do not, of course, refer to the mines of North Carolina or Georgia, which have been worked with some success for several years, but which compared with California, are of no great moment. I refer to a much broader vein of auriferous earth, which runs wholly through the States on this side of the Rocky Mountains, which we have been working unconsciously for many years, without recognizing its transdescendant importance, and it is actually estimated will yield, the present year, ten or fifteen times as much as the California diggings; taking their produce at $60,000,000.

Then, sir, this gold of ours not only exceeds the California in the annual yield of the diggings, but in several other respects. It certainly requires labor, but not nearly as much labor to get it out. Our diggings may be depended on with far greater confidence for the average yield on a given superflies. A certain quantity of moisture is no doubt necessary with us, as with them, but you are in the placers of California to stand up to your middle in water all day, rocking a cradle filled with gravel and gold dust. The cradles we rock in our diggings are filled in a different way. Another signal advantage of our good over the California gold is, that after being pulverized and moistened, and subjected to the action of moderate heat, it becomes a grateful and nutritious article of food; whereas no man—not the long-eared King of Phrygia himself—could masticate a thimbleful of the California dust, cold or hot, to save him from starvation. Then, Str, we get our Atlantic gold on a good deal more favorable terms than we get the California. It is probable, nay it is certain, that for every million of dollars' worth of dust that we receive from San Francisco we send out a full million's worth in produce, in manufactures, in notions generally, and in freight; but the gold which is raised from the diggings this side, yields, with good management, a vast increase on the outlay—some thirty fold, some sixty, some a hundred. But besides all this, there are two discriminating circumstances of a most peculiar character, in which our gold differs from that of California, greatly to the advantage of ours. The first is this:

On the Sacramento and Feather Rivers, throughout the placers, in all the wet diggings and the dry diggings, and in all the deposits of auriferous quartz, you can get but one solitary exhaustive crop from one locality; and in getting that you spoil it for any further use. The soil is dug over, worked over, washed over, ground over, sifted over—in short turned into an abomination of desolation, which all the guano of the Chincha Islands would not restore to fertility. You can never get from it a second yield of gold, nor any thing else, unless probably a crop of mullen or stramonium. The Atlantic diggings, on the contrary, with good management, will yield a fresh crop of the gold every four years, and remain in the interval in condition for a succession of several other good things of nearly equal value.

The other discriminating circumstances is of a still more astonishing nature. The grains of the California gold are dead, inorganic masses. How they got into the gravel; between what mountain mill-stones, whirled by elemental storm winds on the bosom of oceanic torrents, the auriferous ledges were ground to powder; by what Titanic bands the coveted grains were sown braod cast in the placers, human science can but fatally conjecture. We only know that those grains have within them no principle of growth or reproduction, and that when that crop was to be put in, Chaos must have broken up the soil. How different the grains of our Atlantic gold, sown by the prudent hand of man, in the kindly alternation of seed time and harvest; each curiously organized; hard, horny, seeming lifeless on the outside, but wrapping up in the interior a seminal germ, a living principle. Drop a grain of California gold into the ground, and there it will be unchanged to the end of time, the clods on which it falls is not more cold and lifeless. Drop a grain of our gold, or our blessed gold, into the ground, and lo! a mystery. In a few days it moistens and swells, it shoots upward, it is a living thing. It is yellow itself, but it sends up a delicate spire, which comes peeping, emerald green, through the soil; it expands to a vigorous stalk, revels in the air and sunshine, it arrays itself more glorious than Solumon in its broad, fluttering, leafy robes, whose sound, as the west wind whispers through them, falls as pleasantly on the husbandman's ear as the rustle of his sweetheart's garment; still towers aloft, spins its verdant skeins of vegetable floss, displays its dancing tassels, surcharged with fertilizing dust, and at last ripens into two or three magnificent balons like this, (an ear of Indian corn,) each of which is studded with hundreds of grains of gold, every one possessing the same wonderful properties as the parent grain, every one instinct with the same marvelous reproductive powers. There are 720 grains on the ear which I hold in my hand. And now I say, Sir, of this transcendent gold of ours, the yield this year will be at least ten or fifteen times that of California.

But it will be urged, perhaps, Sir, in behalf of the California gold by some miserly old fogy, who thinks there is no music in the world equal to the chink of his guineas, that though one crop only of gold can be gathered from the same spot, yet once gathered it lasts to the end of time; while (he will maintain) our vegetable gold is produced only to be consumed, and when consumed is gone forever. But this, Mr. President, would be a most egregious error both ways. It is true the California gold will last forever unchanged, if its owner chooses; but while it so lasts, it is of no use, no, not as much as its value in pig iron which makes the best of ballast; whereas gold while it is gold, is good for little or nothing. You can neither eat it, nor drink it, nor smoke it. You can neither wear it, nor burn it as fuel, nor build a house with it; it is really useless till you exchange it for consumable perishable goods; and the more plentiful it is, the less its exchangeable value. Far different the case with our Atlantic gold—it does not perish when consumed, but is transmitted by consumption to a higher life. "Perish in consumption," did the old miser say? Thou foul, that which thou sowest is not quickened except it die. The burning pen of inspiration, ranging heaven and earth for a similitude, to convey to our poor minds some not inadequate idea of the mighty doctrine of the Resurrection, can find no symbol so expressive as "bare grain, it may chance of wheat or some other grain." To-day a senseless plant, to morrow it is human bone and muscle, vein and artery, sinew and nerve—beating pulse, heaving lungs, toiling, ah, sometimes over-toiling brain. Last June it sucked from the cold breast of the earth the waters, nourishment of its distending sap-vessels; and now it clothes the manly form with warm cordial flesh, quivers and thrills with the five-fold mystery of sense, purveys and ministers to the highest mystery of thought. Heaped up in your grainaries this week, the next it will strike in the stalwart arm, and glow in the bushing cheek, and flash in the beaming eye;—till we learn at last to realize that the slender stalk which we have seen bending in the corn-field under the yellow burden of harvest, is indeed the "staff of life" which, since the world began, has supported the toiling and struggling myriads of humanity on the mighty pilgrimage of being.

Yes, Sir, to drop the allegory and speak without a figure, it is this noble agriculture, for the promotion of which this great company is assembled from so many parts of the Union, which feeds the human race and all the humbler orders of animated nature dependent on man. With the exception of what is yielded by the fisheries and the chase, (a limited though certainly not an insignificant source of supply.) Agriculture is the steward which spreads the daily table of mankind. 27,000,000 of human beings, by accurate computation, awoke this very morning in the United States, all requiring their "daily bread," whether they had the grace to pray for it or not, and under Providence all looking to the agriculture of the country for that daily bread, and the food of the domestic animals depending on them a demand perhaps as great as their own. Mr. President, it is the daily duty of you farmers to satisfy their hungry millions—of these starving millions, I might say, for if by any catastrophe the supply were cut off for a few days, the life of the country—human and brute—would be extinct.

How nobly this great duty is performed by the agriculture of the country, I need not say at this board. The wheat crop of the United States, the present year, is variously estimated at from 150,000,000 to 175,000,000 bushels; the oat crop at 400,000,000 bushels; the Indian Corn, our precious vegetable gold, at 1,000,000,000 bushels. Of the other cereal and of the leguminous crops I have seen no estimate. Even the humble article of hay—this poor timothy, herds' grass and red top, which, not rising to the dignity of the food of men, serves only for the subsistence of the mute partners of his toil—the hay crop of the United States is probably but little, if any, inferior in value to the whole crop of cotton, which the glowing imagination of the South sometimes regards as the great bond which binds the civilized nations of the earth together.

After some further remarks on the importance of the present Exhibition, Mr. Everett concluded by expressing his cordial good wishes for the prosperity of the United States Agricultural Society.

Putting Down Butter.

When butter is designed for keeping a number of months, it is of the highest degree of importance that it should be worked free from all remains of buttermilk. Pure butter is an oil which will keep equally as well as lard or tallow. Buttermilk, on the contrary, contains casein, a nitrogenous compound, which decays very soon when in contact with air. Were it possible to remove every particle of the buttermilk, and all traces of impurities or foreign substances, no salt would be required, nor would it be necessary to pack butter away from the air.

In salting butter, the salt itself should be of the purest kind, and it should be so thoroughly worked in that every particle of the remaining buttermilk be left in direct contact with a particle of salt. A very simple method of purifying salt for butter or cheese is, to add a pint of boiling water to four or five pounds of salt; stir them well now and then for an hour or more; drain off the water, and hang the undissolved salt in a bag to drain and dry. (The drainings may be used for salting animals, or putting upon hay.) In this process the water dissolves out the bitter, disagreeable portions of the salt—the chloride of magnesium and calcium—which are more soluble than pure salt. A little care of this kind is a thousand times remunerated in the sweeter taste and better quality, both of butter and cheese.

The amount of salt to be added to butter depends upon its freedom from casein—that is, upon the amount of working and washing it has received—and upon the length of time it is to be kept; and also upon the manner of packing and the climate or degree of heat to which it is to be subjected. If butter is thoroughly freed from casein and packed in vessels nearly air-tight, with the salt well worked in, and when not to be subjected to high temperature in warm climates, it will keep well with less than half an ounce of salt to the pound. Where none of these conditions are met, one and a half ounces, or even more, are required.

Many of the best butter-makers recommend to add one half of the salt, and let it stand twenty-four hours; then work over again, and add the other half. This process removes more of the water, and, as a consequence, more of the casein To secure uniformity in adding the salt, spread the butter in a thin sheet, sprinkle a little salt all over the surface, roll it together, and repeat the process, till all is added.

In packing for home use, stone-ware vessels are undoubtedly the best. For transportation to distant markets, wooden vessels must be used. These should always be made of perfectly seasoned timber, and be water-tight. There is so much danger of "flavor" from the wood that we have recommended heating the inside of the butter-tubs nearly to charring, and then soaking them in a strong brine for a few hours or days. The heating can be done by placing them over a small coal furnace, or by kindling a fire of shavings on the inside. No harm will be done if the entire inside is charred. The aromatic sap of the wood will, by this means, be destroyed, and the tubs will be all the more durable. After burning, the inside should of course be scraped clean. The importance of this recommendation will be appreciated when we state, that one-fourth to one-half of all the butter carried to market in this country is more or less changed in flavor by the packing-tubs. In putting down the butter, let it be thoroughly pressed together to free it from confined air, and then let its surface be kept as much as possible from access of air. If the tubs or firkins can be headed up, so much the better. We have kept butter in a tub unchanged for an entire year, by covering it with a strong brine, and laying a cloth over it.

Colored Men in New York.

At the late meeting of colored men in Philadelphia, it was stated that there were of colored men working at their trades and professions here:

House-carpenters, 15—apprentices, 5; hat-straw makers, 16; cabinet-makers, 1; blacksmiths, 6; ship-carpenters, 4; machinists, 10; masons, 7; printers, 4—apprentices, 2; hatter, 1; milliners, 2; tailors, 3—apprentices, 1; second-hand clothing stores, 27; painters, 4; japanner, 1; chair-matters, 6; coopers, 6; merchants, 4; peddlers, 6; clergymen, 21; physicians, 7; drug storekeepers, 7—2 practical chemists, the rest kept by physicians—4 drug clerks and chemists and 3 apprentices; tinsmiths, 5—apprentices, 3; musicians, 18; engineers, 2; watchmakers and jewelers, 2—apprentices, 2; dressmakers, 100; tailornesses, 10; shirtmakers and seamstresses, 11; preserve manufacturers, 4—2 clerks, 2 stores; gold watch-case makers, 1; caulker, 1; upholsters, 2—1 apprentice; artist and engraver, 1; straw hat presser, 1; soap boiler, 1; horse shoer, 1; baker, 1; confectioners, 10; tobacconists, 2; speculators in general merchandize, 7; teachers, 35; ship brokers, 4; stock and land brokers, 4; lawyer, 1; professor in college, 1; silver plater, 1. Total, 429.

Of those not working at their trades and professions: Boot and shoemakers, 45; carpenters, 28; blacksmiths, 24; ship carpenters, 3; machinists, 8; masons and bricklayers, 13; wheelwrights, 4; printers, 10; hatters, 4; milliners, 10; tailors, 15; painters, 7; coopers, 5; sailmakers, 4; joiners, 2; musicians, 15; engineers, 3; dressmakers, 35; tailoresses, 20; caulkers, 5; upholsters, 4; type founders, 1; soap boilers, 3; stone cutters, 4; brass founders, 4; horse shoers, 5; bakers, 11; confectioners, 13; tobacconists, 4; caulkers, 6; ship builders, 2. Total 325.

Important Geographical Discovery.—A great inner sea is said to have been discovered in equatorial Africa by Dr. Rebmann, one of the travelers with whose persevering labors in that remote region the newspaper public have become acquainted. He has sent to Europe a small map, on which the sea occupies the vast space between the equator and ten degrees of south latitude, and between twenty-three degrees and nearly thirty degrees longitude east from Greenwich, having at its southeastern extremity Lake Nyassa, attached to it like a tail piece. Mr. Augustus Peteemaum, in a letter to the London *Athenæum* respecting the discovery, says:

"The immense body of water, with an area about twice as large as the Black Sea, (with the Sea of Azof,) as inscribed with the names of Ukerewe, or Inner Sea of Uniamezi, its narrow elongated southeastern end bearing that of Lake Nyassa; and the discovery is said, in the accompanying letters, to have been arrived at by the concurrent testimony of various natives dwelling on or close to the lake, both on its eastern as well as on its western shores, with whom the missionaries came in contact. Some of these natives that came down to trade on the coast, at Tanga, in particular, gave a clear account of it, while at other points of the coast, from Tanga southwards for six degrees of latitude, corroborative information was obtained."

Expenses of the War.

A letter from Paris, published in the *National Intelligencer*, makes the following estimates of the cost of the present war:—

"To give you some idea of the frightful expense of this war I will note some of the more prominent items. They are my own estimates but, from my opportunities of knowing, I do not think they are exaggerated:

1,200,000 shells, weighing on an average ninety lbs. each, at an average cost of 30 fr. each	francs	36,000,000
The mere inland transportation of them to Marseilles and Toulon is one-fourth the above sum.		
Cannon balls	francs	30,000,000
Cannon mortars, small arms and powder	fr	70,000,000
70,000 horses, average cost of 500 francs each	francs	35 000 000
Equipment of the horses, attendance, forage, and other charges up to the time of embarking, 250 francs each	francs	17,500,000
1,000 transports, at the low average of 500 tuns each, 500,000 at twenty francs per tun per month (many receive as high as twenty-five francs) is ten millions of francs per month, or for a year	francs	120,000,000
200 steamers (the number is said to be 240) ranging from 500 to 3,000 tuns each or at a low average of 1.000 tuns, at an average cost, including coal, of 120 000 francs per month, is 24,000,000 francs per month, or per year	francs	200,000,000

"Some of the large British steamers receive as high as £8,000 (200,000 francs) per month besides being furnished coal, of which they consume 100 to 140 tuns daily in full speed. The Arabia, one of the Cunard line, receives the above compensation and coal. Now, to the above, add for tents, camp equipage, houses, stalls, timber, forage, and provisions for 270,000 men and 70,000 horses, and see what a fearful aggregate it will make We may safely put down the expenditures for this war by France at three hundred millions of dollars per annum, and as much more for England.

Buying Lottery Tickets.

A poor but industrious mechanic had been laboring for years to accumulate sufficient money to purchase a homestead for himself and family. On returning home each week he would place his weekly wages in the hand of his wife, and requested her to lay it by. A few months since, knowing that he must have saved a couple of thousand dollars by his industry and frugality, and learning that a piece of property was for sale in the upper portion of the city, which would be an advantageous investment, he called upon the owner, and it was offered to him at a bargain. Overjoyed with his good fortune, he hastened home to his wife, and conveyed to her the glad news, and asked for the money to close the purchase. But alas! there was no joyful response in the countenance of his better half, but bursting into tears, she wept most bitterly, and refused to be comforted. The husband was astonished, and asked for an explanation. With head averted and voice interrupted by heart-broken sobs, she made known to her husband the startling fact—which fell like a thunderbolt upon him, crushing his brain, and causing reason to totter and reel from its throne—that she had wasted all his hard earnings in the purchase of Havana lottery tickets! The vacant stare from the eyes of her husband which met this astonishing disclosure plainly showed that he was no longer capable of appreciating his loss, but with a maniac laugh, wild and startling, he left his home, his wife and little ones, never more to return. A few days more passed, and his body was taken from the river. The Coroner held an inquest upon it, and a verdict of "suicide" informed the public how he died; but why he died remained a secret.

Inventive Genius of the Americans.—Few are aware of the marvelous triumphs constantly going forward in this country. A cotemporary says:—

"We have seen lately, as a specimen of rare American mechanical genius, a machine costing not over five hundred dollars, invented by a working man, which takes hold of a sheet of brass, copper or iron, and turns off complete hinges at the rate of a gross in ten minutes, hinges, too, neater than are made by any other process; also, a machine that takes hold of an iron rod and whips it into perfect bit-pointed screws with wonderful rapidity and by a single process. This is also the invention of a working man; and both these machines are superior to any thing of the kind in the world. No other process can complete with them."

Cargoes from South America.—Twenty thousand bullock shank-bones are imported monthly into Southampton, England, from South America. The best of them are picked out for cutlers' purposes, and all the rest are ground for manure. Large cargoes of bullocks' bones are continually arriving from Southampton, to be ground down for manure in that town. The shank bones are conveyed to this country at so much per gross; the other bones are brought over at so much per tun. A firm engaged in Southampton as manufacturers of manure have an establishment at Buenos Ayres, where thousands of head of black cattle are slaughtered, skinned, and then boiled down whole for the purpose of extracting the fat and separating the bones from the flesh.

The Paterson (N. J.) *Guardian* learns that the private agent of Santa Ana was in that place last week, looking for a suitable residence for the Mexican.

Postage Statistics.

The following is a comparative statement of the amount received for letter postage at some of the principal cities in the United States, during the years ending 31st March, 1853 and 1855:—

	1853.	1855.
Boston	$149 272 64	$183,322 83
New York	455,133 05	564,530 34
Philadelphia	151,961 70	179,669 79
Baltimore	86,573 98	107,840 11
Washington	26,449 26	30,045 40
New Orleans	74,304 52	77,819 30
St. Louis	32,041 37	46 021 52
Cincinnati	58,045 05	76,514 80
Chicago	20,521 94	14,392 48

The following is a statement of the amount of postage on letters sent to the respective offices named, there to be remailed and sent to other offices:—

	1853.	1855.
Boston	$250,837 04	$313,494 38
New York	781,378 25	913,971 54
Buffalo	37,002 03	112,200 91
Philadelphia	71,429 36	95,991 90
Baltimore	36,256 04	43,648 46
N w Orleans	63,897 73	63,264 22
St. Louis	36,211 81	89,461 22
Louisville	48,825 84	56,234 06
Cincinnati	50,098 77	62,330 29
Cleveland	61,202 64	88,616 82
Indianapolis	50,841 02	76,659 22
Chicago	141,202 64	282,876 90

Feeding Corn in Ear.

A very intelligent Irish man tells the following incident of his first experience in America:—

I came to this country several years ago, and as soon as I arrived hired out to a gentleman who farmed a few acres. He showed me over the premises, the stables, cows, and where the corn, hay, oats, &c., were kept, and then sent me in to get my supper. After supper he said to me:—"James, you may feed the cow, and give her *corn in the ear*."

I went out and walked about, thinking, "what could he mean? Had I understood him?" I scratched my head, then resolved I would inquire again; so I went into the library, where master was writing very busily, and he answered without looking up:

"I thought I told you to give the cow some corn *in the ear*."

I went out more puzzled than ever. What sort of animal must this Yankee cow be? I examined her mouth and ears. The teeth were good, and the ears like those of kine in the old country. Dripping with sweat, I entered my master's presence once more.

"Please, Sir, you bid me give the cow some corn *in the ear*, but didn't you mean in the *mouth?*"

He looked at me a moment, and then burst into such a convulsion of laughter, I made for the stables as fast as my feet could take me, thinking I was in the service of a crazy man.

[American Farmer.

New Car Brake.—A car brake has been invented by Mr. William Longbridge, of Pittsburg, Pa., the advantages of which are thus summed up by him:

1. The engineer can at any speed apply or reverse all the brakes in the train in twelve feet on the track.
2. Every wheel in the train receives an exactly equal pressure.
3. The brakes are applied to the hindmost car in the train first, stretches out the train and keeps the bumpers apart until the engine stops.
4. The power applied to the brakes can be graduated from one pound up to locking the wheel.
5. The machine can be set to throw off the motive power at any desired point, preventing the possibility of locking wheels unless desired.
6. The hand brakes work in combination with the new, or separate if desired.
7. The cars can be drilled or turned as usual.

Surgical Operations.—Dr. McDowell, of St. Louis, recently performed a very delicate surgical operation, which is thus described by one who witnessed it:

"The subject was a small boy, not more than ten or twelve years of age. Several years ago he received a blow upon the side of the head, fracturing the skull, and producing compression of the brain, and as a consequence of the injury, has been afflicted ever since with epileptic fits. Dr. McDowell, who was the operator, after dissecting away the scalp, applied the trephine, removing a circular piece of bone about three quarters of an inch in diameter, near the centre of its internal face. There was a projection of bone from a quarter to half an inch long, pressing down upon the *dura mater* of the brain, and doubtless was the cause of the epilepsy. I have no doubt a permanent cure of the disease will be the result."

How to wash windows.—The nicest article for washing windows is a deer-skin, as no particles come off to adhere to the glass and make it look as if washed with feathers. There is no need of any thing larger than a hand-basin for washing windows. The great splashing some people make in the exercise of their art is entirely useless, and is, moreover, deleterious. When the water is permitted to run in great quantities over the glass it dissolves the putty and soon loosens the panes from their setting, and also stains the glass. Two pieces of wash-leather and a bowl of suds are all that are necessary. Wipe the glass first with the wet cloth or leather, and after it becomes dry with the clean cloth, and then it will look clear, and far more so than if rinsed in a dozen pails of water.

Sheep-Skin Mats.—These are prepared by stretching the fresh skin, well furnished with a coat of wool, with the wool side down, by means of tacks at the edges, and then rubbing the skin well with a powdered mixture of equal parts of common salt and alum—repeating the operation twice afterwards on the two following days. It should remain exposed to the air, but not to the sun, till well dried.

Rev. Dr. Stiles, General Agent of the Southern Aid Society, has received from the people of Newark, in behalf of said Society, within the present month, more than twelve hundred dollars.

New Steamboat Line for Albany and Troy.

From Pier 15, foot of Liberty-st., at 6 P. M

STEAMER RIP VAN WINKLE, C. W. Farnham, Commander, Monday, Wednesday and Friday, at 6 o'clock, P. M.; steamer COMMODORE, L. Smith, Commander, Tuesday and Thursday, at 6 o'clock, P. M., and Sunday, at 5 P. M.

Fares: Saratoga, $1 50; Moreau, $2 15; Fort Edward, $2 15; Whitehall, $2 75; Castleton, $3 10; Rutland, $3; Burlington, $4; Rouses Point, $5 50; Montreal, $7 50.

These Boats will arrive in Albany or Troy in ample time to form connections with all the Railroads, North, East or West, enabling passengers to reach Montreal and intermediate points the same day.

These Steamers are of the first class for strength and speed—well known favorities of the public—having been thoroughly overhauled during the past winter, and offer every accommodation that can be desired by either freighter or traveler.

Through tickets can be obtained on board the boat for Saratoga, Moreau, Fort Edward, Whitehall, Castleton, Rutland, Burlington, Rouse's Point and Montreal

The Northern Freight Express will give Bills of Lading to all points as above named. Shippers who desire it, can have time receipts, by applying at the office on the Pier. A. A. DYKEMAN.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

GEOLOGY AND THE BIBLE.

To the Editors of the Sabbath Recorder:—

I have read with much pleasure, and I hope profit, the various articles published by you on the subject of *Geology and the Bible.* It is a question in which, as a Sabbatarian, I have formerly felt much solicitude. There *was* a point at stake with me, as I doubt no there may be still with many of our brethren, and that was of this nature: If God did not create all things in six literal days, the seventh day, by parity of reasoning, was not a literal day, and so our sabbatizing on the seventh day, in commemoration of those events, is a *hoax.* Many a time have I turned from an argument on the Sabbath question, confounded by objections to the very possibility of the truth of my position by the *facts*, as *they asserted*, derived from the science of Geology. Statements at least they were of a nature and character that commended them to my reason, though warring against my faith. I had as yet read nothing on Geology, and knew not how to get out of the dilemma. But I determined in my own mind, that, be the statements of Geologists facts or fictions, they could not be against the Bible, though they might be against my interpretation of it. I felt assured *that the Scriptures were true, in the sense that God intended them to be understood.* What that sense was, was to be the study of our mortal life.

I am assured of the sacredness of the Sabbath, from the fact that our Lord, who was one with the Father when the worlds were created, and who was the indicter of Moses' writings, himself recognized the Sabbath as a *fact*, and not as a *figure.*

But I have no purpose to give you my experiences on this question, nor reasons for believing this or that view of it; but to introduce to your readers, with your permission, a writer on the question who claims nothing short of Divine Inspiration for his authority —for his *ipse dixit.* If his interpretation of the chapter is true, we need give ourselves no trouble about geological developments of the earth's history. Whether he speaks the truth or not is for every one to judge for himself—*after a patient reading.* For myself, I think there is sufficient reason for believing his rendering, and especially his Divine Mission, to make it *the duty* of those able to master his peculiar style, and the intricacy of his views, to give him a fair and dispassionate hearing.

The extracts which I send you are from the beginning of *The Heavenly Arcana* of Emanuel Swedenborg—a work devoted to explaining the spiritual sense of Genesis and Exodus, extending to above five thousand pages octavo, of which the extracts are about *ten*—a large space, I know, to ask of you, but I know not how to do him justice by quoting less. The comments on the first five verses, together with the last of the 1st chapter of Genesis, are the least that will give an understanding of the rationale of his assertions.

In Christian affection, yours truly,

PAUL STILLMAN.

---

1. That the Word of the Old Testament includes arcana of heaven, and that all its contents, to every particular, regard the Lord, his heaven, the church, faith, and the things relating to faith, no man can conceive who only views it from the letter. For the letter, or literal sense, suggests only such things as respect the externals of the Jewish church, when, nevertheless, it everywhere contains internal things, which do not in the least appear in those externals, except in a very few cases, where the Lord revealed and unfolded them to the apostles—as that sacrifices are significative of the Lord—and that the land of Canaan and Jerusalem are significative of heaven, on which account they are called the heavenly Canaan and Jerusalem—and that Paradise has a like signification.

2. But that all and every part of its contents, even to the most minute, not excepting the smallest jot and tittle, signify and involve spiritual and celestial things, is a truth to this day deeply hidden from the Christian world; in consequence of which little attention is paid to the Old Testament. This truth, however, might appear plainly from this single circumstance; that the Word being of the Lord, and from the Lord, could not possibly be given without containing interiorly such things as relate to heaven, to the church, and to faith. For, if this be denied, how can it be called the Word of the Lord, or be said to have any life in it? For whence is its life, but from those things which possess life? that is, except from hence, that all things in it, both generally and particularly, have relation to the Lord, who is the very Life Itself. Wherefore whatsoever does not interiorly regard Him, does not live; nay, whatsoever expression in the Word does not involve Him, or in its measure relate to Him, is not divine.

3. Without such a living principle, the Word, as to the letter, is dead. For it is with the Word as it is with man, who, as all Christians are taught to believe, consists of two parts, an external and an internal. The external man separate from the internal is the body, which, in such a state of separation, is dead; but the internal is that which lives and causes the external to live. The internal man is the soul; and thus the Word, as to the letter alone, is like a body without a soul.

4. It is impossible, whilst the mind abides in the literal sense only, to see that it is full of such spiritual contents. Thus, in these first chapters of Genesis, nothing is discoverable from the literal sense, but that they treat of the creation of the world, and of the garden of Eden which is called Paradise, and also of Adam as the first-created man; and scarcely a single person supposes them to relate to any thing besides. But that they contain arcana which were never heretofore revealed, will sufficiently appear from the following pages; where it will be seen that the first chapter of Genesis, in its internal sense, treats of the New Creation of man, or of his Redemption, in general, and specifically of the most ancient church; and this in such a manner, that there is not a single syllable which does not represent, signify, and involve something spiritual.

5. That this is really the case, in respect to the Word, it is impossible for any mortal to know, however, except from the Lord. Wherefore it is expedient here to premise, that, of the Lord's divine mercy, it has been granted me, now for several years, to be constantly and uninterruptedly in company with spirits and angels, hearing them converse with each other, and conversing with them. Hence it has been permitted me to hear and see things in another life which are astonishing, and which have never before come to the knowledge of any man, nor entered into his imagination. I have there been instructed concerning different kinds of spirits, and the state of souls after death—concerning hell, or the lamentable state of the unfaithful—concerning heaven, or the most happy state of the faithful —and particularly concerning the doctrine of faith, which is acknowledged throughout all heaven; on which subjects, by the divine mercy of the Lord, more will be said in the following pages.

---

1. In the beginning, the God created heaven and earth.

2. And the earth was vacuity, and emptiness, and darkness was upon the faces of the abyss. And the Spirit of God moved upon the faces of the waters.

3. And God said, Let there be light: and there was light.

4. And God saw the light, that it was good: and God divided between the light and darkness.

5. And God called the light day, and the darkness he called night. And the evening and the morning were the first day.

6. And God said, Let there be an expanse in the midst of the waters, and let it divide between the waters in the waters.

7. And God made the expanse, and divided between the waters which were under the expanse, and between the waters which were above the expanse: and it was so.

8. And God called the expanse heaven. And the evening and the morning were the second day.

9. And God said, Let the waters under the heaven be gathered together into one place, and let the dry *land* appear: and it was so.

10. And God called the dry land earth, and the gathering together of the waters called he seas: and God saw that it was good.

11. And God said, Let the earth bring forth the tender grass, the herb yielding seed, and the fruit-tree bearing fruit, after its kind, whose seed is in itself, upon the earth: and it was so.

12. And the earth brought forth the tender grass, the herb yielding seed after its kind, and the tree bearing fruit, whose seed was in itself, after its kind: and God saw that it was good.

13. And the evening and the morning were the third day.

14. And God said, Let there be luminaries in the expanse of the heavens, to distinguish between the day and the night; and let them be for signs, and for seasons, and for days, and for years:

15. And let them be for luminaries in the expanse of the heavens to give light upon the earth: and it was so.

16. And God made two great luminaries, the greater luminary to rule by day, and the lesser luminary to rule by night; and the stars:

17. And God set them in the expanse of the heavens, to give light upon the earth;

18. And to rule over the day, and over the night, and to divide between the light and the darkness: and God saw that it was good.

19. And the evening and the morning were the fourth day.

20. And God said, Let the waters bring forth abundantly, the creeping thing, the living soul; and let the fowl fly above the earth, upon the faces of the expanse of the heavens.

21. And God created great whales, and every living soul that creepeth, which the waters brought forth abundantly after their kind, and every winged fowl after its kind; and God saw that it was good.

22. And God blessed them, saying, Be fruitful and multiply, and fill the waters in the seas, and the fowl shall be multiplied in the earth.

23. And the evening and the morning were the fifth day.

24. And God said, Let the earth bring forth the living soul after its kind; the beast, and the thing moving itself, and the wild beast of the earth, after its kind: and it was so.

25. And God made the wild beast of the earth after its kind, and the beast after its kind, and every thing that creepeth on the ground after its kind: and God saw that it was good.

26. And God said, Let us make man in our image, after our likeness; and let them have dominion over the fish of the sea, and over the fowl of the heavens, and over the beast, and over all the earth, and over every creeping thing that creepeth upon the earth.

27. And God created man in his own image, in the image of God created he him; male and female created he them.

28 And God blessed them, and God said unto them, Be ye fruitful, and multiply, and replenish the earth, and subdue it: and have dominion over the fish of the sea, and over the fowl of the heavens, and over every living thing that creepeth upon the earth.

29. And God said, Behold, I give you every herb bearing seed, which is upon the faces of all the earth, and every tree in which is fruit; the tree yielding seed, to you, it shall be for meat,

30. And to every wild beast of the earth, and to every fowl of the heavens, and to every thing that creepeth upon the earth wherein there is a living soul, every green herb for meat: and it was so.

31. And God saw every thing that he had made, and behold, it was very good. And the evening and the morning were the sixth day.

---

6. The six days, or times, which are so many successive states of the *regeneration* of man, are in general as follows.

7. The *first* state is that which precedes, including both the state of infancy, and the state immediately before regeneration. This is called vacuity, emptiness, and darkness, and the first motion, which is the Mercy of the Lord, is the Spirit of God moving upon the faces of the waters.

8. The *second* state is when a division takes place between those things which are of the Lord, and such as are proper to man. The things which are of the Lord are called in the Word remains, and are here principally the knowledges of faith, which have been learnt from infancy, and which are stored up, and are not manifested till man comes into this state. This state at the present day seldom exists without temptation, misfortune, or sorrow, by which the things appertaining to the body and the world, that is, such as form the *proprium* or *self-hood of man*, are brought into a state of quiescence, and, as it were, of death. Thus the things which belong to the external man are separated from those belonging to the internal. In the internal man are the remains, stored up by the Lord till this time, and for this purpose.

9. The *third* state is that of repentance, in which the regenerating subject, from the internal man begins to discourse piously and devoutly, and to do good actions, like works of charity, but which nevertheless are inanimate, because they are supposed to originate in himself. These good actions are called tender grass, and also the herb yielding seed, and afterwards the tree bearing fruit.

10. The *fourth* state is when man becomes affected with love, and illuminated by faith. He indeed previously discoursed pisusly, and produced the fruit of good actions; but he did so in consequence of the temptation and straightness under which he labored, and not from a principle of faith and charity; wherefore faith and charity are now enkindled in his internal man, and are called two luminaries.

11. The *fifth* state is when man discourses from a principle of faith, and thereby confirms himself in truth and goodness; the things then produced by him are animated, and are called the fish of the sea, and the birds of the heavens.

12. The *sixth* state is when, from a principle of faith, thence of love, he speaks what is true, and does what is good; the things which he then produces are called the living soul and the wild beast. And because he then begins also to act from a principle of love, as well as of faith, he becomes a spiritual man, and is called an image. His spiritual life is delighted and sustained by such things as relate to knowledges respecting faith, and to works of charity, which are called his meat; and his natural life is delighted and sustained by such things as belong to the body and the senses; from whence a combat or struggle arises, until love gains the dominion, and he becomes a celestial man.

13. Those who are regenerated do not all arrive at this state. The greatest part, at this day, only attain to the first state; some only to the second; others to the third, fourth, and fifth; few to the sixth; and scarcely any one to the seventh.

14. In the following work, by the Lord, is solely meant Jesus Christ, the Saviour of the world, who is called the Lord, without other names. He is acknowledged and adored as the Lord throughout all heaven, because he has all power in heaven and earth. He also commanded his disciples so to call him, when he said, "Ye call me Lord, and ye say well, for so I am." John 13: 13. And after his resurrection his disciples called him Lord.

15. Throughout all heaven they know no other Father than the Lord, because he and the Father are one—as he himself said: "I am the way, the truth, and the life. Philip saith, Lord, show us the Father. Jesus saith unto him, Have I been so long time with you, and yet hast thou not known me, Philip? He that hath seen me hath seen the Father; and how sayest thou then, Show us the Father? Believest thou not that I am in the Father, and the Father in me? Believe me, that I am in the Father, and the Father in me." John 14: 6, 8—11.

16 Verse 1. *In the beginning God created the heaven and the earth.* The most ancient time is called *the beginning;* by the prophets it is usually called the ancient days, and also the days of eternity. *The beginning* also implies the first time when man is regenerating, for then he is born anew and receives life; it is from this ground that regeneration is called a new creation of man. *To create, to form, to make,* in almost all parts of the prophetic writings, signify to regenerate, yet with a difference of signification; as in Isaiah: "Every one that is called by my name, I have *created* him for my glory, I have *formed* him; yea, I have *made* him." Ch. 43: 7. Wherefore the Lord is called the Redeemer, the Former from the womb, the Maker, and also the Creator; as in the same prophet: "I am Jehovah, your Holy One, the Creator of Israel, your King." Ch. 43: 15. And in David: "The people which shall be created shall praise the Lord." Psalm 102: 18. And in the same: "Thou sendest forth thy spirit, they are created; and thou renewest the face of the earth." 104: 30. That *heaven* signifies the internal man, and *earth*, before regeneration, the external, may be seen from what follows.

17. Verse 2. *And the earth was vacuity and emptiness, and darkness was upon the faces of the abyss. And the spirit of God moved upon the faces of the waters.* Man before regeneration is called *earth, void,* and *empty,* and also *ground,* wherein nothing that is good or true is sown; it is said to be *void* where there is nothing of good, and *empty* where there is nothing of the true. Hence comes darkness, or a dullness and ignorance as to all things which belong to faith in the Lord, consequently, respecting spiritual and celestial life. Man in this state is thus described by the Lord in Jeremiah: "My people is foolish, they have not known me; they are sottish children, and they have no understanding; they are wise to do evil, but to do good they have no knowledged. I beheld the *earth,* and lo, it was *vacuity* and *emptiness;* and the heavens, and they had no light." Ch. 4: 22, 23.

18. *The faces of the abyss* are the lusts of the unregenerate man, and the falsities thence originating, of which he consists, and in which he is totally immersed. In this state, having no light, he is like a *deep abyss,* or something obscure and confused. Such persons are also called *abysses,* and *depths of the sea,* in many parts of the Word, which are dried up, or wasted, before man is regenerated; as in Isaiah: "Awake as in the ancient days, in the generations of old. Art not thou he who hath dried the *sea,* the waters of the *great abyss;* that hath made the *depths of the sea* a way for the ransomed to pass over? Therefore the redeemed of Jehovah shall return." Ch. 51: 9—11. Such a man also, when he is seen from heaven, appears like a black mass, destitute of vitality. The same expressions likewise in general imply the vastation of man, frequently spoken of by the prophets, which precedes regeneration; for, before man can know what is true, and be affected with what is good, there must be a removal of such things as hinder and resist their admission; thus the old man must needs die, before the new man can be conceived.

19. By *the Spirit of God* is meant the mercy of the Lord, which is said to *move,* or brood, as a hen broods over he eggs. The things over which it *moves,* are such as the Lord has hidden and treasured up in man, which in the Word throughout are called remains or a remnant, consisting of the knowledges of the true and of the good, which never come to light, or day, until external things are vastated. These knowledges are here called *the faces of the waters.*

20. Verse 3. *And God said, Let there be light, and there was light.* The first [state] is when man begins to know that the good and the true are of a superior nature. Men who are altogether external do not even know what good and truth are; for they fancy all things to be good which relate to self love and the love of the world, and all things to be true which favor those loves; not being aware that such goods are evils, and such truths falses. But when man is conceived anew, he then begins to know that his goods are not goods, particularly when he is enlightened to see that the Lord is, and that He is the good and true itself. That men ought to know that the Lord is, he himself teaches in John: "Except ye believe that I am, ye shall die in your sins." Ch. 8: 24. Also, that the Lord is good itself, or life, and the true itself, or light, and consequently, that there is neither goodness nor truth except from the Lord, is thus declared: "In the beginning was the Word, and the Word was with God, and the Word was God. All things were made by him, and without him was not any thing made that was made. In him was life, and the life was the light of men. And the light shineth in darkness. He was the true light, which lighteth every man that cometh into the world." John 1: 1, 3, 4, 9.

21. Verses 4, 5. *And God saw the light, that it was good; and God divided between the light and the darkness. And God called the light day, and the darkness he called night. Light* is called good, because it is from the Lord, who is good itself. *Darkness* means all those things, which, before man is conceived and born anew, appeared like *light,* evil in that state seeming like good, and the false like true; nevertheless all is *darkness,* consisting merely of the things proper to man himself, which still remain. Whatsoever is of the Lord is compared to *day,* because it is of the *light;* and whatsoever is man's own is compared to *night,* because it is of *darkness.* These comparisons frequently occur in the Word.

22. Verse 5. *And the evening and the morning were the first day.* What is meant by *evening,* and what by *morning,* is hence now discoverable. *Evening* means every preceding state, or that of shade, or of falsity and of no faith; *morning* is every subsequent state, being one of light, or of truth and of the knowledges of faith. *Evening,* in a general sense, signifies all things which are of man's own; but *morning* whatever is of the Lord; according as it is said by David: "The spirit of Jehovah spake by me, and his word was in my tongue; the God of Israel said, the Rock of Israel spake to me; he is as the light of the *morning,* when the sun ariseth, even a *morning* without clouds; as the tender grass springeth out of the earth, by clear shining after rain." 2 Sam. 23: 2—4. As it is evening when there is no faith, and morning when there is faith, therefore the coming of the Lord into the world is called *morning;* and the time when he comes, because then there is no faith, is called *evening,* as in Daniel: "And he said unto me, unto two thousand and three hundred days. The vision of the *evening* and the *morning.*" Ch. 8: 14, 26. In like manner, the *morning* is used in the Word, to denote every particular coming of the Lord; consequently, it is an expression which has respect to new creation.

23. That *day* is used to denote time itself, appears from many passages in the Word; as in Isaiah: "The *day* of Jehovah is at hand. Behold, the day of Jehovah cometh. I will shake the heavens, and the earth shall remove out of her place, in the wrath of the Lord of Hosts, and in the *day* of his fierce anger. Her time is near to come, and her *days* shall not be prolonged." Ch. 13: 6, 9, 13, 22. And in the same prophet: "Her antiquity is of ancient *days.* And it shall come to pass in that *day,* that Tyre shall be forgotten seventy years, according to the *days* of one king." Ch. 23: 7, 15. Forasmuch as *day* is used to denote time, it is also used to denote the *state* of that time; as in Jeremiah: "Woe unto us, for the *day* goeth away, for the shadows of the evening are stretched out." Ch. 6: 4. And again: "If ye can break my covenant of the *day,* and my covenant of the night, and that there should not be *day* and night in their season," &c. Ch. 33: 20, 25. And again: "Renew our *days* as of old." Lament. 5: 21.

24. Verse 6. *And God said, Let there be an expanse in the midst of the waters, and let it divide between the waters in the waters.* After the spirit of God, or the mercy of the Lord, has brought forth into day the knowledges of the true and of the good, and has communicated a perception that the Lord is, that he is the good itself, and the true itself, and that there is no goodness and truth but from Him, he then distinguishes the internal man from the external, consequently the knowledges which are in the internal man, from the scientifics which appertain to the external. The internal man is called an *expanse;* the knowledges which are in the internal man are called the *waters above the expanse;* and the scientifics appertaining to the external man are called the *waters beneath the expanse.* Man, before he is regenerated, does not even know that any internal man exists, much less is he acquainted with its nature and quality. Being occupied with corporeal and worldly things, in which also the faculties of his internal man are immersed, he cannot conceive of any difference between this and his external, and thus he forms a confused and obscure something, from two perfectly distinct existences. It is on this account that it is first said, *Let there be an expanse in the midst of the waters,* and further, *Let it divide between the waters in the waters,* but not, Let it divide between the waters which are *under* the expanse and the waters which are *above* the expanse, as it is afterwards said in the next verses: *And God made the expanse, and divided between the waters which were under the expanse, and the waters which were above the expanse, and it was so. And God called the expanse heaven.* Verses 7, 8. The next thing therefore which man observes in the course of regeneration, is, that he begins to know that there is an internal man, or that the things which are in the internal man are goods and truths, which are of the Lord alone. Now, as the external man, when he is being regenerated, is of such a nature that he still supposes the goods which he does to be done of himself, and the truths which he speaks to be spoken of himself, and whereas, being such, he is led by them of the Lord, as by things of his own, to do good and to speak truth, therefore mention is first made of a division of the *waters under the expanse,* and afterwards of those *above the expanse.* It is also an arcanum of heaven, that man, by things of his own, as well the fallacies of the senses as the natural appetites, is led and inclined of the Lord to what is good and true; and thus that each and every moment of regeneration proceeds from evening to morning, thus from the external man to the internal, or from earth to heaven; wherefore now the expanse, or internal man, is called heaven.

* * * * *

60. Verse 31. *And God saw every thing that he had made, and behold it was very good. And the evening and the morning were the sixth day.* This state is called *very good,* the former being merely called *good;* because now the things which are of faith make one with those which are of love, and thus a marriage is effected between what is spiritual and what is celestial.

61. All things relating to the knowledge of faith are called spiritual, and all which are of love to the Lord and our neighbor celestial; the former belong to man's understanding, the latter to his will.

62. The times and states of man's regeneration in general and in particular, are divided into six, and are called the days of his creation; for by degrees he is elevated from a state in which he possesses none of the qualities which properly constitute a man, until by little and little he attains to the sixth day, in which he becomes an image of God.

63. During this period the Lord fights continually for him against evils and falses, and by combats confirms him in the true and the good. The time of warfare is the time of the Lord's operation, wherefore the regenerate person is called by the prophets *the work of the fingers of God;* and he resteth not until love becomes his ruling principle, and then the combat ends. When the work is so far perfected, that faith is conjoined to love, it is then called *very good,* because then the Lord acts upon man as his *likeness.* At the close of the sixth day the evil spirits depart, and the good succeed in their place, when man is introduced into heaven, or the celestial paradise, which is the subject of the following chapter.

64. This then is the internal sense of the Word—its very essential life, which does not at all appear in the sense of the letter; but the arcana contained therein are so numerous, that volumes would not suffice for their explication. Here only a very few things are related, yet enough to show that it treats of regeneration, and that regeneration proceeds from the external man to the internal. It is thus the angels perceive the Word. They know nothing of the letter, not even what a single expression proximately signifies, much less the names of countries, cities, rivers, and persons, which occur so frequently in the historical and prophetical parts of the Word. They only have an idea of the things signified by the words and names; thus by *Adam in Paradise* they understand the Most Ancient Church, not indeed as a Church, but as to its faith in the Lord. By *Noah* they understand the Church remaining with the descendants of the Most Ancient Church, and continued till the time of Abram; by Abraham, never that individual, but a saving faith which he represented, and so in other instances—thus they have a perception of things spiritual and celestial, altogether abstracted from words and names.

65. Certain spirits who were taken up to the entrance of heaven, and conversed with me from thence whilst I was reading the Word, said, that they did not understand any thing of the word, or of the letter, but only what was signified thereby in the proximate interior sense, which they described as so beautiful, following in such order, and affecting them so powerfully, that they called it glory.

66. There are in general four different styles in which the Word is written. The *first* was in use in the Most Ancient Church, whose method of expressing themselves was such, that when they mentioned earthly and worldly things, they thought of the spiritual and celestial things which they represented, so that they not only expressed themselves by representatives, but also reduced their thoughts into a kind of series, as of historical particulars, in order to give them more life; and in this way they found their greatest delight. This style is meant when Hannah prophesied, saying, "Speak ye what is high, high, let what is ancient come forth from your mouth." 1 Sam. 2: 3. Such representatives are called by David, *dark sayings of old* [*enigmata ab antiquitate.*] Psalm 78: 2, &c. From the posterity of the Most Ancient Church, Moses received what he wrote concerning the creation, the garden of Eden, &c., down to the time of Abram. The *second* style is the historical, occurring in the books of Moses from the time of Abram, and afterwards in those of Joshua, Judges, Samuel, and Kings, in which the historical facts actually occurred as they are related in the letter, although all and each of them contain things altogether different in the internal sense, of which, by the divine mercy of the Lord, we shall speak in order in the following pages. The *third* style is the prophetical, which took its rise from that which was so highly venerated in the Most Ancient Church. This style, however, is not connected, and in appearance historical, like the Most Ancient, but broken and interrupted, being scarcely ever intelligible except in the internal sense—in which are contained the greatest arcana, succeeding each other in a beautiful and orderly connection, and relating to the external and internal man, the various states of the church, heaven itself, and in their inmost to the Lord. The *fourth* style is that of the Psalms of David, which is intermediate between the prophetical style and that of common speech. Here, the Lord is treated of in the internal sense in the person of David as a king.

I MUST BE USEFUL.

John Thomas was called by Divine grace when young. Being brought out into the liberty of the gospel, his heart glowed with love, and he felt something which led him to say, "I must be useful." But he was in humble life, and naturally shy, and these two things greatly hindered him. He made up his mind to speak to some one, but just when about to do so it was suggested, "It would be unbecoming in one, in your circumstances, to do so," and he refrained. He furnished himself with a number of tracts, fixed upon a row of houses where he would distribute them; but when he begun his work, his natural shyness began to operate, and he felt as if he could not knock at a single door, and, with the exception of a tract or two given to some children, the effort was a failure. Satan prevailed, and no good was done. Plans were constantly formed, attempts made, but all ended in nothing. At length, hearing a perverted gospel, distorted views of the doctrine of election quieted his mind: "I see," he said, "God will have his own; if I work, only the elect will be saved; and if I do not work, God will not allow his elect to perish, because I am inactive." Thus all effort ceased, and the impulse in his heart which made him feel, "I must be useful," died away.

But God did not leave him, but by a long course of discipline, his views were corrected, the old flame revived, and again he felt as if he could not live if he was not useful. He believed the doctrine of election as firmly as ever, but he saw that it was no rule for his conduct. It was for his comfort, not his guide. He came to the conclusion, that it was his duty to work as if everything depended on his work; and when he had done all, to rest for success on the power of the Holy Spirit alone. This fed the fire, this fanned the flame, and, "I must be useful" was like and an impulsive power in his heart. He wrote letters, spoke in private, at length published tracts, and in the end preached the gospel. Many have been converted, comforted, and established through his instrumentality; and though the former part of his Christian life was thrown away, he has labored assiduously since. John Thomas still lives, his pen is not laid aside, nor his tongue silenced, consequently his usefulness is not at an end. He has risen above his shyness, understands his divine sovereignty does not interfere with man's duty, and feels the impulse within him often, as if his whole inner man exclaimed, "I must be useful."

UNHONORED HEROES.—When I see a man holding faster his uprightness in proportion as it is assailed; fortifying his religious trust in proportion as Providence is obscure; hoping in the ultimate triumphs of virtue more surely in proportion to its present afflictions; cherishing philanthropy amidst the discouraging experience of men's unkindness and unthankfulness; extending to others a sympathy which his own sufferings need, but cannot obtain; growing milder and gentler amidst what tends to exasperate and harden; and through inward principle, converting the very incitements to evil into the occasions of a victorious virtue; I see an explanation, and a noble explanation, of the present state. I see a good produced, so transcendent in its nature as to justify all the evil and suffering under which it grows up. I should think the formation of a few such minds worth all the apparatus of the present world. I should say that this earth, with its continents and oceans, its seasons and harvests, and its successive generations, was a work worthy of God, even were it to accomplish no other end than the training and manifestation of the illustrious characters which are scattered through history. And when I consider how small a portion of human virtue is recorded by history, how superior in dignity, as well as in number, are the unnoticed, unhonored saints and heroes of domestic and humble life, I see a light thrown over the present state which more than reconciles me to all its evils. [Channing.

THE SANDSTONE FOOT-PRINTS.—The Middletown *Sentinel* publishes a letter from Prof. Silliman, senior, in relation to the pretended discovery of a human foot-print in the solid sandstone of the Portland quarries, at a depth of more than one hundred feet below the surface of the solid rock. Infidelity was most happy in the discovery of this foot impression, as it went to show the creation of man long previous to the period assigned in Scripture to the origin of the human race. Professor Silliman writes that the foot mark "is the result merely of an acccidental curvature, made in the materials of the rock when they were originally deposited, and the filling in of the cavity made a copy in relief." The Professor adds: "Although there is some rude resemblance to the impression that might be made by a very large human foot covered by a thick sock, there is not the slightest trace of any organization whatever. On the contrary, in the numerous tracks of animals, birds, and probably reptiles, in the Portland rock, and in those of numerous other places in the valley of the Connecticut, the joints of the feet are accurately copied, and often the delicate corrugations of the skin, and the very nails at the end of the toes. There need be no hesitation, therefore, in concluding, that the impression in question is neither brute nor human."

THE INJUSTICE OF OUR RULERS.

Can any good reason be offered why there should not be a revolution of our Government? Certainly, the oppressions which prompted the rebellion of the Thirteen Colonies against the Mother Country were not worthy of being named in comparison with the injustice of the United States Government towards its own citizens. Such an outrage as that committed by Judge Kane, in the imprisonment of Passmore Williamson, was never perpetrated under British rule. Language breaks down, when one attempts to set forth the iniquity of the thing. Yet we presume that the outrage will be sustained, and that all attempts to effect the impeachment of the petty tyrant who committed it will end in miscarriage. Not but what we are willing to have the attempt made; we sincerely hope it will be. But we have no confidence in the virtue of the body to whom the appeal will be made. An assembly that lent its sanction to the invasion of Mexico, and to the robbery which wrested from that government a large territory, for no other purpose but to swell and strengthen the interests of slavery; that repealed the Missouri compromise, for the same unhallowed purpose; that helped to put in force the infamous act for the recovery of fugitives from bondage; that so long spurned the right of petition, and still treats it with contempt; is not to be relied on in the present case. For though not exactly the same assembly, individually, we fear that it is but little different, morally and politically.

Yet, let the attempt to impeach Judge Kane be tried. The friends of human rights can lose nothing by the attempt, even if they gain nothing. But they *will* gain *something*. They will gain something to *themselves*, in the additional invigoration which labor in a good cause always imparts to one's moral character. They will gain something for the *heroic martyr* who has lain in the Moyamensing jail, in the encouragement, hope, and comfort, which well-directed sympathy always gives to the suffering. They will gain something for *collective humanity;* for no battle was ever yet fought in behalf of truth, without contributing to the ultimate emancipation of mankind from the shackles of oppression and sin. The individuals, or communities, whose wrongs furnish the occasion for the struggle, may not always be benefited in the way desired, but the failure in this respect is always compensated by the furtherance given to the cause elsewhere.

So then let the struggle be made. If it serves no other purpose but to develop anew the oppressiveness of American Slavery, it will not be in vain. We sit quietly under wrongs, till they assume a form too revolting for virtue to sleep any longer. Legislators and judges are tolerated, till their enormities reach an extreme beyond farther endurance. Those who know themselves to be engaged in a bad cause, will fight under the most trifling provocation, hoping by the prestige of their chivalry to decoy the virtuous public from an investigation of the real merits of the question. But the advocates of righteousness are proverbially forbearing. Their love of righteousness impels them to do right things in a right way. Hence, they never resort to violence, till all hope of effecting their object by the simple power of truth is gone. We do not suppose that the friends of equal rights, in this Union, are restrained from revolutionary movements against the General Government so much by a sense of physical weakness, as by their allegiance to that principle which identifies righteousness with peace. But it is not in outraged humanity to sit quiet forever. Justice too long abused rouses a wrath which knows no sleeping. And as surely as there is a righteous Lord who loveth righteousness, so surely will his attributes espouse the cause of injured innocence.

There are those who regard the United States Constitution as an anti-slavery document, that is, as containing no clause which, literally construed, sanctions the enslavement of men and women for life; and we are not sure but that, explained according to the vocabulary of men strictly virtuous, it is really so. But it happens, unfortunately, that the men who framed the Constitution framed the dictionary to interpret its terms; and in their dictionary, which the country seems not yet prepared to discard, a fugitive from *service* or *labor* means a fugitive from *slavery.* We cling to the hope, however, that the day is not very distant, when this old, antiquated dictionary will be supplanted by that of a virtuous school, and the Constitution interpreted accordingly; or the Constitution itself amended, so as to embody an everlasting inhibition of property in human beings.

We are not yet quite ready for revolution. We mourn the outrages perpetrated in the name of Law, but we have not forgotten that there is a God in heaven, who is able to clothe truth with such a power that it will eventually silence the cavilings of the most wicked. We have not forgotten, too, that He is the God of judgment, and can summon winds, pestilence, and earthquakes to his aid, when He makes battle with the oppressors of mankind. In the mean time, let the friends of justice labor on, remembering those that are in bonds as bound with them. T. B. B.

GLIMPSES OF DOMESTIC LIFE IN CHINA—NO. 14.

Shanghae after the raising of the Siege.

Supposing you to have received, and "read with interest," several sheets, in which I endeavored to give you a view of the suffering of the people among whom we dwell, during the reign of Rebellion, you will undoubtedly be interested in the winding up of the drama, when at last that Rebellion has passed away, as it now happily has, from our midst.

General features, such as are common to an insurrection everywhere, need not be detailed here. Our war-cursed earth has furnished too many of these sad pictures for the past year. All I design is to sketch a few particulars, apparently peculiar to this field of strife, upon which we ourselves have had a constant abiding place, and where we have shared the excitement, as well as the dangers, incident to our location. Few, comparatively, of the fighting men, have been natives of Shanghae, the warriors having been brought from other provinces. But the inflictions upon the natives, and their consequent passive suffering, has been great. Disasters from accident have been numerous, and yet as nothing compared to the cruel and often most wanton oppression of the belligerents on either side. Heart-rending would be the details of even the little that came to the knowledge of foreigners, and it is well known how carefully all was concealed, when there was no particular incentive to exposure. The Rebels had the best of reasons for keeping their own secrets, within the city walls, while without, the oppressed people were Imperialists by nature, and bore their wrongs as necessary evils, inseparable from the presence of armed legions, the armies of their sovereign, their protectors from aggression, the restorers of their rights. Occasionally an account would reach us, of some frightful accident within the city, a spent ball striking off the head of a child at play, or killing some aged woman in her quiet arm chair, or (as during the bombardment of the city by the French in January last) of a whole family destroyed by the bursting of a shell. Outside, the catalogue was much the same, only that a greater proportion of the sufferers were men, from the fact that many were shot down while standing idle spectators of a strife in which they had no wish to engage. No sooner would a coming battle be announced, as it was sure to be by the beating of gongs and the flourish of flags, than one general rush would take place, and every mound in the vicinity, not wanted for battle ground, was soon covered with spectators, at the peril of life and limb, which were often sacrificed to the chance shot of one or other of the contending parties. "The most stupid exposure," you would say; and so many another said, and with the scarce uttered word, perhaps, joined the lookers on, or with the deprecating word on his lips, ascended some still higher point of observation, the terrace of the nearest house, or the loftiest lookout of some contiguous verandah, just to see for himself. The balls would whiz-whiz about his ears; he saw the dust clouds rising from the spot where they ploughed up the earth; and he knew, as groups here and there scattered off, like frightened sheep, it was because a ball had fallen in their midst, or near by them; and still he continued to look on. It was *so picturesque*—the broad face of the level country blossoming with banners of every hue, flaunting in the breeze, dancing about in every direction, waving an answering defiance to the defiance that was waved at them from the city walls; the blaze of the cannon; the smoke cloud, as it hovered about, and slowly died away; the advance and retreat of thousands with smaller artillery; the brandishing of spears; the springing out from among the tombs, and the quick retreat thereunto. Who could otherwise than gaze on the exciting scene? And then the comfortable and most conclusive argument, "No foreigner has yet been injured by a chance shot, and therefore shall not I." That there was danger, the most reckless knew, but the most prudent could not always foresee it, in time to hide himself. He felt that his preservation was due to an over-ruling Hand, and, thanks to that Hand, the scourge was stayed at length. The wearisome night of suspense and peril is over, but desolate indeed is the scene upon which the dawning sun of peace looks down.

For a cursory view of the whole, you should station yourself at the attic windows of our mission house in the heart of the city. You look away, over heaps of broken brick and tiles, interspersed with fragmentary remains of walls, and occasionally a granite tablet, surmounting its massive columns, with their pedestals of crouching lions. Those ancient monuments to the honored dead have passed unscathed the ordeal of flame, even as they have withstood the waves of time, whose surges have swept over them—who shall say how long?

Here and there are men busily removing the rubbish, perhaps in quest of buried treasures, perhaps with the sole object of laying bare the well-trod pavement of the long-loved home; or, more sadly still, to seek beneath the recumbent brick, for some relic of the ill-fated occupant, who perished miserably in the terrible burning of the city, as many a poor creature did. In some cases the half-consumed body was afterwards discovered; in others, no vestige could be traced amid the general wreck. You will fancy yon desolate wanderer, as he looks hopelessly around him, after a late return from his eighteen-months' self-inflicted exile, saying to the sympathizing missionary, "Teacher, I left my mother here, and now seeking I find her not."

Further on, you see the encircling wall, with its battered ramparts, its uneven bastions, showing the various devices of the late Rebel authorities to secure themselves from frequent attacks. Here and there are abundant proofs of the confused haste with which repeated breaches were repaired. Bags of sand, tea-chests filled with earth, crimson trunks, and chests, and baskets, filled, and piled up after the same sort, as well as doors, windows, &c., inwrought most curiously, giving you original ideas of the way in which a besieged city can take care of itself. You smile to think such obstacles have proved formidable to a besieging army, and find yourself saying, "Why, if but a fox go up thereon, he shall even break it down."

And there, too, are the ruins of those idol temples, which stood like sentinels upon the city wall. Their glory is laid in the dust, and their idols within them. Beyond the wall you look in vain for the once populous suburbs. The wing of the destroyer has passed over, and left—here a blank, and there a wreck. And where are the brown hamlets that rested so quietly in the bosom of the green fields beyond? Many of them razed to the ground, and their inmates scattered. You miss the graceful willows that shaded the numerous canals, the luxuriant fruit trees, the beautiful peach orchards, and the verdant hedgerows, that marked the boundary line of many a family seat. All have been cut down to supply fuel to the Imperial soldiers, during their late campaign. Years must pass over before an approximation to its former beauty can again gladden the face of this our adopted land. We visit the hamlets around, and they point us to the darkened rooms, whose windows and doors are replaced by the rude and hasty wall, those having also been carried away for the same purpose, to furnish fuel to the soldiery; and we are told how they entered and took possession of these cottages, in the bitter cold of winter, and the owners were driven out, with aged and infirm parents, and helpless little children, to seek a shelter anywhere in the wide, wide world, living witnesses to the character of Imperial protectionism.

But more revolting than all this, if not so heart-sorrowing, is the violence done to the remains of the dead, which has so fearfully prevailed. One would scarce expect this of a people whose reverence for the departed constitutes their highest form of worship; yet, under pretext of seeking for secreted Rebels, but most likely in quest of hidden treasure, one general and most disgusting work has been accomplished upon the unburied coffins, with which both city and country abound. That several Rebels were thus found secreted, within the city, is doubtless true. But why was the search prosecuted without? I shall not shock your feelings by even a glance at the varied phases of this sacrilegious work. One only instance shall be particularized here, as it occurred in the course of a ramble on the city wall. We were making our way among the ruins of one of the temples through which we had often passed when it was in its glory, and we stopped to survey in detail the ruins around. There in a nich were perched a number of mutilated gods; here, amid fragments of bricks, altars, and offerings, was twined the cast-off scaly coat of a huge serpent, who, wiser than the gods, in whose honors and homage he had long been a co-recipient, and more efficient than they, had doubtless made good his escape; while midway in our path stood a little coffin, which at first we were near mistaking for a rummaged trunk of winter clothing. The lid was crowded upwards by a bundle of quilted garments, which, on being drawn out, had dragged the little body with them, being still closely bound therein, but so far protruding, that the shoulders rested upon the edge of the coffin, and the head and face being entirely uncovered, were fully exposed to view. At first we would not believe it a human head; it might be wood carved and colored to its present form, or clay hardened to perfect solidity. The plump little cheeks and round chin, the forehead, even the nose and mouth, were like a perfect little model in clay, of a deep brown color, and we only assured ourselves, after repeatedly pressing and moving it in different ways, that it was the genuine corpse of an infant. But why was this little coffin thus desecrated? One would scarce seek for rebels in the narrow house of an infant of two short summers; and then, by what process had the little body been kept from decay? It might have been mistaken for an orthodox mummy. The Chinese tell us, without attempting to explain the cause, that cases of this kind are known occasionally to occur, as one to several hundreds, and that at night the unwasted figure comes out of its coffin, and walks abroad in the pale moonlight; but as our informants do not claim to have encountered them, we may find enough to astonish us in the *unrevealed mystery*, the fact of the strange preservation of that unburied and now uncoffined form. L. M. C.

April, 1855.

Sermons for the Times.—A correspondent of the London *Athenæum* says that having been annoyed by the nonsensical character of the sermon in his own parish church on the late Thanksgiving Sunday morning, he sought in the evening of the same day for improved spiritual food in the church of the adjoining parish. There, in due time, to his horror and amazement, he reheard the same text given out, and was condemned to sit through the same identical sermon, delivered over again, word for word, by another clergyman. He was at first inclined to believe that this was mere evidence of the good understanding between the rector of one parish and the curate of the other, a proof of a kind of intercommonage between those reverend worthies, by which one set of sermons was made to do duty for two preachers. But, chancing the following morning to take up one of the clerical newspapers, his attention was arrested by the following advertisement: "*To the Clergy*—Sebastopol—Sermons ready for Sunday next, being the day appointed for offering prayer and thanksgiving for the capture of Sebastopol." Curiosity led the correspondent to expend half a crown in the purchase of one of the ready-made ecclesiastical articles. On looking at it he found that it was the very same identical thing, without religion or patriotism, that he had been twice entrapped into listening to on the day before.

LETTERS FROM PALESTINE—NO. 17.

Jerusalem, August 29, 1855.

The work of evangelization, here, as elsewhere, is attended with continual trials and crosses. No small amount of grace is required to rise above them; but it is sweet, yea, blessed, to obtain the victory, and to feel that one seeks not his own honor, but the honor of Him who has sent him as the bearer of glad tidings to dying men. He looks not for an inheritance upon earth, but in heaven, "incorruptible, undefiled, and that fadeth not away." The faithful Christian has meat to eat, the nature of which is unknown to the world. To love to do the will of God is better than sacrifice; afflictions and heart-breaking trials are as nothing compared to the blessedness of being able to obey and keep, with all the heart, the commandments of God and the testimony of Jesus Christ. And while waiting long in order to reap the fruit of his labor, the Christian husbandman is sustained by the fulfillment of the promised presence: Lo, I am with you always.

An instance of the reward of patient, persevering labor, was related to me a few evenings since, by Dr. McGowan, while enjoying a visit with his family. This gentleman has been thirteen years in this country, laboring as missionary physician in the English hospital and among the people. "The Moslems were then, (thirteen years ago,) very insulting to foreigners, often stoning them in the streets, and there was no law to protect the right of public worship. The missionaries who had labored long and hard, and under very many discouragements, felt that it was time to erect a house of worship. A lot was purchased, and the foundation laid; but as they were proceeding to carry up the walls, an order from government suddenly put a stop to the work, and thus it remained for seven years, during which time they feared the building lot might be wrested from them. But it was not. After seven years patient waiting, they were permitted to recommance and finish their chapel. For years the prejudices of the Mohammedans have been gradually giving way to a more kind and respectful behavior towards the Franks. The right of public Christian worship is now protected by a firman from the Sultan. However, in case a Moslem should embrace Christianity, it is generally thought, that death would be the consequence; yet it is supposed that this severe penalty is fast becoming a dead letter, and that the time is close at hand when the followers of the false prophet may venture, without fear of molestation, to think, act, and worship according to the dictates of conscience, enlightened by the gospel. The firman in question looks to the toleration of all religions. The Turks have always respected their treaties with Christians. It is true, that a foreigner cannot legally hold real estate in his own name; yet such property is conveyed to the Frank, and the bargain between him and the native is solemnly respected. The time is at hand when foreigners expect from government all the protection they wish in regard to title to property. The change in the bearing of the government and the people towards Franks within the past ten years is regarded as almost miraculous. The hand of God is in it."

On the 19th inst., by request, myself and family called upon Sir Moses Montefiore, at his tents in the valley of Gihon, on the west side, and opposite the lower pool. He received us very cordially, and spoke with much feeling of his desire to benefit his people. He believes that the time must come when all the earth shall keep holy the Sabbath unto the Lord God. As one of the signs of that blessed time, he had remarked the change on this subject in the English mind. Less business is done on Sabbath in England than formerly. He thought he should be willing to end his days at Jerusalem. He proposes the building of a hospital for the Jews, and has purchased a tract of land for this purpose where he has now pitched his tents. He proposes to do something in the way of agriculture, and also feels strongly inclined to do, or have something done, in the way of making a good road from Jaffa to Jerusalem. Sir M. is apparently about seventy years of age, tall, portly, of majestic and affable bearing, with a small black eye and benevolent expression. He makes one feel at home in his presence. He has now left here for Jaffa, via Hebron, and has already embarked for England. He told me that he expected to return to Palestine after a few months. A few of the Jews seem pleased with him; others, and many of them, find a great deal of fault. Their expectations were high, previous to his coming. They are now disappointed. Probably the Lord intends to teach them by this, that the help of man is vain—that they must look to Him whom they have pierced, and mourn for their sins. O, may the veil fall from their eyes, and their hearts be opened to receive the gospel! W. M. J.

☞ We are requested to say, that a watch was left at the house of Eld. W. B. Maxson, during the season of our late Anniversaries at Leonardsville, by some person unknown to him. The owner can have it by calling for it.

PASSMORE WILLIAMSON.

In our last we announced the release of Passmore Williamson. From the various accounts of the matter, it appears that the judge, finding that the inoffensive citizen whom he had tyranically imprisoned, could not be coërced into cowardice or perjury, and feeling himself hemmed in by the scorn and indignation of the friends of law and justice throughout the land, began to devise expedients for releasing himself by the discharge of his prisoner. The *Tribune* thus succinctly states the movements:—

"Private suggestions were given that any reasonable pretext would be adopted for the release of Mr. Williamson; and accordingly Jane Johnson's petition was presented, but true as all its statements palpably were, and just as were all its demands, it was rather too strong to be allowed. At the same time, however, the court took occasion to open the door for a different arrangement. Other proceedings were had, till finally Judge Kane proposed that Mr. Williamson himself should appear and take immediate steps for his liberation. Hereupon, willing to adopt every means that should not compromise the truth or surrender a principle, Mr. Williamson petitioned for leave to appear before the court and purge himself of that contempt because of which he was imprisoned.

When this petition was presented, the district attorney contended that the word "legally" should be inserted, so as to make Mr. Williamson admit that he was legally incarcerated, which, of course, he would never have done. But so desirous was Judge Kane of extricating himself from the detestable position in which he stood, that he overruled the proposal and allowed the petition to pass as it was. Then Mr. Williamson was to answer why he had not produced the bodies of Jane Johnson and her children as required by the original writ. To this interrogatory his reply now was simply 'Because it was impossible.' Here again the district attorney sought to go further and compel him to answer whether he would have produced them had it been possible, but this the judge also excluded, and upon this answer released the prisoner."

It will be remembered that Williamson was put in prison three months ago for contempt of court, because he declared that the bodies of Jane Johnson and her children were not and never had been in his custody, and therefore he could not produce them. Now he is released, without admitting the legality of his imprisonment, and reäffirming the same thing in these words, "Because it was impossible to do so." The subterfuge under which Judge Kane escapes is the strongest condemnation of his own sentence. Mr. Williamson has sued him for false imprisonment.

A Pastor setting an Example for his People.—Many a pastor sighs for more of this world's goods in order that he may be able to set an example of benevolence to his people. For the most part, however, they are compelled to content themselves with casting in *mites* only. One exception we see noticed in our exchanges, and that is John Angel James, of Birmingham, England. At the recent jubilee, his people made a contribution, a part of which was invested in presents, and the balance, $2,500, was given to him in a purse. In acknowledging their kindness he said:—

"There is another item of these costly presents on which I must remark—I refer to the sum of money placed at my disposal. Ten years ago, you, my generous and large-hearted flock, when I had spent forty years among you, marked that era by raising £500 to found a scholarship in Springhill College, to bear my name in perpetuity; and now you have raised nearly double that sum. Part of this will go, as you have stated, to defray the expense connected with this jubilee, and incurred by these presents, and the remainder you have now placed in my own hands, to do with as I may determine. Had Providence been less bountiful to me than it has, I should have felt justified in appropriating this sum to my own personal use; as it is, however, every farthing of it will be appropriated—with the addition of a thank offering of my own for the mercy of this season—to the use and benefit, in some permanent way, of my brethren in the ministry."

A Working Christian.—In noticing the death of Dr. James C. Bliss, of New York, one of our exchanges says that he was connected with the N. Y. Religious Tract Society from its commencment; in fact, he was its originator. In 1824 he was elected its Secretary. Chiefly by laboring at night he wrote at that time seventy-five tracts for children. A National Society was formed chiefly at his instigation—the first meeting being held at his own house. This was in 1825. For more than thirty years Dr. Bliss labored in connection with this Society as a member of the Distributing and Executive Committee. Out of 416 stated and special meetings of the Committee, the records show that he attended 275 of them, for twenty eight years acting as Secretary, and for twenty-two years as its chairman.

Interchange of Pulpits, &c.—The Boston *Courier* says that Rev. J. L. Bennett, A. F. Spaulding, and C. McCurdy, of the Baptist, Methodist, and Orthodox churches of East Cambridge, have addressed a letter to Rev. F. W. Holland, of the Unitarian Church, declining to make a union with him on Thanksgiving and Fast days, as "they are now convinced that such an interchange of pulpits is not warranted by the New Testament, so long as those with whom we thus outwardly fellowship take away the chief corner-stone of the church, and rob Jesus Christ of his glory as over all, God blessed forever." The letter was accompanied by a token of respect for Mr. Holland's character as a man, and their willingness to coöperate with him in all schemes of social and intellectual improvement.

The Christian Watchman and Reflector, published at Boston by Upham, Ford & Olmstead, comes to us in a new and beautiful dress, indicative of enterprise and prosperity. It is one of the neatest printed and best edited of our exchanges. A member of our family often asks for it as "the model religious and family newspaper."

RELIGIOUS INTELLIGENCE.

Rev. A. C. Thompson, of Roxbury, has returned from an extended tour among the missions under the charge of the American Board in the East. In company with the Rev. Dr. Anderson, the senior Secretary of the Board, he sailed from this country in August, 1854, and since that time has been abroad. Dr. Anderson is not expected until December.

One M. Erdam, of Paris, having written a work in which he strongly condemned the Roman Catholic religion, was arrested, tried before the Correctional Police, and sentenced to one year's imprisonment and a fine of three thousand francs. The copies of the work printed were ordered to be destroyed.

A correspondent of the N. Y. Observer calculates that each fall and winter adds 200,000 souls to the population of Texas, embracing now an aggregate of 600,000. Of these 50,000 are Germans. They will go for "free soil." Much is being done for education, both in founding colleges and common schools.

The catalogue of Dartmouth College, just published, shows an aggregate of 361 students connected with the Institution; of whom 258 belong to the four classes of Under-Graduates, 41 to the Scientific School, and 62 are Medical Students.

Dr. A. Monod, the French correspondent of the Presbyterian, writes under a late date and says, "In Tuscany, persecution pursues its course, and the little flock in Florence have had much to suffer."

The First Presbyterian Church corner of Washington and Clark streets, Chicago, Ill., together with the lot on which it stands, has been sold, and is to be converted into a theatre. The price is said to be $50,000.

The Methodists have in Kansas and Nebraska 10 mission stations, 91 preaching places, 16 Sunday Schools, and 826 members, of whom 699 are whites, and 127 Indians.

From a statement in the Windsor Chronicle it appears that the receipts of the Vermont Bible Society for the year past were $7,651.

Rev. Albert Barnes.—In declining to deliver an Anti-Slavery lecture in Boston the coming winter, Rev. Albert Barnes says:—

"Nothing could give me greater pleasure than to comply with your request, and it gives me great pain and regret that I am not able to do so. My heart is more and more opposed to slavery, and more and more desirous of resisting its aggressions and evils in the land. But the state of my eyes is such, having been so afflicted for nearly four years, as to forbid their use in reading and writing almost entirely, and especially to prevent my using them in the evening, that I could not hope to be able to prepare such a lecture as I could wish to, and as the occasion demands, and I am compelled most reluctantly to decline your invitation."

Bible Society of Essex Co., N. J.—The Essex County Bible Society recently held its ninth annual meeting in the Market-street M. E. Church, in Newark. R. T. Haines presided, assisted by Ex-Governor Pennington, John P. Jackson, and other Vice Presidents. The annual report of the managers was read by Rev. George Sheldon. Total receipts were about $3,400. The whole county was supplied five years since and Newark last year. Copies of the Scriptures have recently been put in the lodging-rooms of the hotels in the county, in the almshouses and public prison. A growing interest is evinced in the worthy object of the Association. Addresses were delivered by Rev. Dr. Brigham, Secretary of the American Bible Society, Rev. W. W. Holloway, of Brooklyn, Rev. R. K. Rodgers, of Boundbrook, and Prof. Mattison.

African Colonization.—Under the auspices of the New York State Colonization Society, a vessel is to sail from New York for Liberia about the 1st of December. The vessel to be employed is the bark Estelle. There have already engaged to embark fifty-seven colored men and their families. They are distributed as follows: New York, seventeen; New Jersey, twenty; Connecticut, thirteen; Pennsylvania, three; Alabama, four. Doubtless double this number will be in readiness to go by the 1st of December. These people are taken to Liberia and supported there for a period of six months at the charge of the Society. The entire expense of each adult is estimated at from $60 to $80. The Estelle is the same vessel which last year carried out Rev. Mr. Pinney, former Governor of Liberia, and is the second of a line established about a year ago and designed to form a regular connection between this port and the west coast of Africa.

American Orphan Girls.—Several ladies have associated themselves, with Mrs. I. A. Lincoln as President, to sustain an association for the purpose of directly assisting the American Orphan Girls of New York, by establishing a home for them to fly to in case of need. It will be the duty of this Society to aid those who are out of employment, in their afforts to obtain it; while it will be expected of those who are more fortunate, to pay a moderate amount of board—sufficient to cover actual cost. At eighteen years of age they can become members and own a share in the house. A temporary building has been obtained at No. 335 Broome-st, until sufficient can be had to erect a suitable building upon ground which some able philanthropist will have an opportunity of donating to the Society.

The Fair of the American Institute, just closed, was very successful. The number and variety of articles on exhibition was unusually large, and the attendance of visitors exceeded that of any previous year. In the machinery department a Polychromatic Printing Press, placed on exhibition by A. M. & G. H. Babcock, of Westerly, R. I., attracted much attention. There was also a press placed on exhibition by Charles Potter, Jr., formerly of Westerly, R. I., called Davis' Oscillating Printing Press, which bids fair to become a favorite among printers. It meets a want which has long been felt of a press between the old-fashioned hand press and the expensive cylinder press.

General Intelligence.

European News.

We have one week later news from Europe, the substance of which will be found below.

Kinburn has been captured, and its garrison, composed of fifteen hundred men, have laid down their arms, and surrendered themselves prisoners of war. The other fortress at the mouth of the Dnieper, on Oczakoff point, was subsequently blown up by the Russians, to prevent its falling into the hands of the victors. By this conquest, the Allies are now able to blockade Kherson and Nicolaieff, and intercept, in a great measure, the communication between those cities and the Crimea. There were taken at Kinburn 1,420 prisoners, including Gen. Kokonovitch and forty officers, with 174 pieces of cannon, and a quantity of ammunition and stores. Marshal Pelissier sent home the standard, with the arms of Russia, which floated over Kinburn.

Rumors are again current of the intention of the Russians to evacuate the Crimea without further delay—but, as usual, they lack confirmation. The bombardment of the Northern forts had been commenced, and their capabilities for resisting a heavy fire will now be fully tested. Reinforcements from France and England continued to arrive at Balaklava and Kamiesch in large numbers. The Allied force in the Crimea is estimated at 210,000 men.

When the Russians in Asia heard of the fall of Sevastopol, they on the 29th Sept. made their attack upon Kars. The Turkish details of the affair are received. The Russian loss is reported at 2,000. Two Turkish redoubts were lost and retaken four times.

The principal portion of the news from the two armies in the field appears to be, that the Allies are moving forward systematically in strong force, and that the Russians are retiring in good order back upon their fortified position.

The Moniteur publishes a list of the stores found in Sevastopol, comprising a million shot and cartridges, and half a million pounds of gunpowder.

A St. Petersburg letter of the 15th says the Allied successes had caused despondency, yet every thing indicates the intention of Russia to continue the war. Preparations were making for a fourteenth levy and enrollment of the local militia. Prayers were offered for the Emperor's safe return from the Crimea.

There is nothing more definite, as to the resignation or recall of Gen. Simpson. The London Post says that a new Commander is appointed, but does not give his name. Rumor mentions Sir DeLacy Evans, Codrington, Markham, Colin Campbell, and others.

Major Delafield, Major Murdoch, Jr., and Capt. McLellan, American officers, had arrived in camp. A British general order provides them with rations during their stay in the Crimea.

Sir Wm. Molesworth, Secretary of State for the Colonies, died on the 22d ult., of a low gastric fever. The Right Hon. Baronet had been ailing for some time, but it was only a week previous to his death that his health began to occasion any anxiety amongst his friends. His age is 45. Sir Wm. Molesworth, we believe, is the last of his race, and with his death the Baronetcy expires.

The London Times has a noticeable article (editorial) respecting American expansion, and says the English government is omitting no opportunity of reinforcing the West India Squadron, and thus interposing a powerful barrier between Britain and the North American Continent. At this moment, says the Times, North America is in profound peace with the whole world, yet it is not the less true, that in her ports are fitting out at this moment piratical fillibustering expeditions, destined to carry war and bloodshed into the dominions of an unoffending neighbor. We cannot believe that those who are now engaged in enrolling unhappy men for these desperate and criminal enterprises fully contemplate the success of a descent upon Ireland, for instance, as probable, or even possible. If we can prevent the expedition from sailing, or intercept them in mid-ocean, we shall have done much towards averting the dangers which must arise, should they be carried out to their natural developments.

Cholera continues to prevail badly at Madrid, and about 100 cases were reported daily. General Tacon, formerly Governor of Cuba, had died of cholera, at the age of 80.

Distress from Cholera, scarcity, and crime, was on the increase in Tuscany.

California News.

California dates to Oct. 20th, being two weeks later, were received in New York on the 10th inst.

From California the news is devoid of incident, if we except another tragic murder in Columbia, Tuolumne County, followed by swift retribution and Lynch law execution upon the person of the criminal.

From Oregon and Washington Territories, we learn that Indian depredations have reached such an alarming extent that a general war is considered most imminent. In Rogue River Valley the war had already commenced. A battle was fought on the 7th of October at the mouth of Butte Creek, in the vicinity of Fort Lane, between a volunteer force of one hundred men and a large party of Indians. The latter, who were most signally defeated, left forty of their number dead upon the field. This lesson, however, does not seem to have deterred the savages from renewing their outrages. An extra of the Portland Standard further informs us that Major Haller (who went out from the Dalles on the 3d of October with one hundred troops to punish the murderers of an Indian agent) was in a most critical situation. His men had been for forty-eight hours without water, and were completely surrounded by a very large body of Indians who kept constantly firing upon them. A messenger from Major Haller managed to escape through the ranks of the Indians, and reach the Dalles in safety, whence a party of a hundred and fifty men instantly started to relieve their beleaguered comrades. Major Haller, it is understood, calls for a thousand men to aid him. An Indian war is also so greatly apprehended in Washington Territory that Acting Governor Mason has made a requisition upon the garrisons for a sufficient number of troops to march against the hostile tribes.

The Pacific Railroad Calamity.

The accident to the excursion train on the Pacific Railroad from St. Louis westward, (noticed last week,) resulted in the death of about thirty persons, including some prominent men, and the maiming of three times s many more. The St. Louis *Republican* of Nov. 3d, in a notice of the calamity, says:—

When we take into consideration the fall of thirty feet in front to the bed of the river, and the high embankment on either side of the track, covered with stone—the ponderous cars themselves capable of grinding each other into fragments—the wonder is increased that so few were killed outright or fatally wounded. There is hardly a position in which a car could be precipitated from the track at the point named, that gives a reasonable hope of escape; and yet, with seven out of the ten, of which the train was composed, plunged headlong down the abutment and then others rolled over the grade, containing five to six hundred passengers, we have only the report of twenty-five killed and mortally injured.

As soon as the crash was over, a moment of painful silence ensued, and then issued from the wreck around us the groans of the wounded, the supplications of the imprisoned, the screams of the agonized, while here and there might be observed the upturned face of the dead, mangled and clotted with blood, or the half-buried forms of others whose spirits had passed away forever. To add to the horror of the scene, a storm of lightning, thunder, and rain arose, of the severest description. The lightning appeared to be of a blood red, and the peals of thunder, quick as the flash, resounded on the hills and through the valleys of the dreary forest with terrific grandeur.

The St. Louis *Democrat*, of Nov. 5th, says:

Fatality seems to attend this road. The terrible loss of life and the large number of wounded by the falling of the Gasconade Bridge had scarcely been reported to the city, before a train was dispatched to the relief of the sufferers. By the earnest, energetic efforts of a few brave men who remained at the scene of disaster, the sufferers were relieved, and the dead were taken out from the wreck of cars. Scarcely, however, had the mournful procession bearing the mutilated bodies proceeded half way in its return, when on reaching the bridge at Bœuff Creek, amidst the darkness of night and the horrors attending such a progress, that also was swept away by the flood, just as the uninjured had passed over, and while the cars containing the wounded were in the act of going upon the frail structure.

To-day we have to record another calamity and another disaster to this unfortunate railroad. The bridge at the Moreau, four miles this side of Jefferson, gave way on Friday evening, and that structure also is now a mass of broken fragments. This is said to have been the only completed bridge on the whole line, and the result that has happened only confirms what had been already said of those which had previously fallen. Not one has stood the test of a flood tide—not one but has endangered, to a great extent, human life—while a single span of a careless arch has hurried twenty-eight of our citizens into eternity.

A Glimpse of War.

An English officer writes as follows, under date of Kars, Monday, Oct. 1, 1855:—

Here I am on the Karadagh again, none the worse for my late illness. Last night the Russians attacked us in force, and (between you and me and the post) very nearly took Kars. The fight was a most bloody one, and lasted seven hours and a half, without one second's intermission. The Russians left upwards of 2,000 men dead on the field, and their loss in killed, wounded, and prisoners, must have exceeded 6,000 men. What do you think of us Kars chaps after that? I was not actively engaged, as they knew better than to attack my almost impregnable battery a second time; but I did great service with my heavy guns, and twice drove them out of a battery they had taken, and turned upon us. It was a nasty sight—the field—afterwards. It was completely covered with dead bodies, mostly Russians, as our men did not lose more than five or six hundred altogether. The defense was commanded by dear old Gen. Kmeti; and when our general thanked him in the name of Queen Victoria, for his gallant repulse of the enemy, I thought the brave old boy would have burst his heart open—he was so proud. The Turks fought—not like lions, but like fiends. I never saw such desperate recklessness of life. You can form some idea of what a desperate business it was, when I tell you that the Russians had their whole force concentrated upon Gen. Kmeti's division, which, with the reinforcements he afterwards received, did not amount to 8,000 men. The reports have just come in, and there are more than 3,000, killed on the side of the enemy.

New York State Election.—The election in New York resulted in the triumph of the Know Nothings. Up to Second-day morning, the complexion of the State Senate is undecided, though from 15 to 17 Senators, out of the 32, are claimed as Republicans or Fusionists by the *Evening Journal.* The Assembly will stand about

Democratic	50
Republican	43
American	35
Total members	128

The State Officers elect are:

Sec. of State	Joel T. Headley	K. N.
Comptroller	Lorenzo Burrows	K. N.
Treasurer	Stephen Clark	K. N.
Canal Com.	S. S. Whelan	K. N.
St. Pris. Inspect.	Wm. A. Russell	K. N.
Attorney-Gen'rl	Stephen B. Cushing	K. N.
State Engineer	Silas Seymour	K. N.

A Musical Prodigy.—There is in this vicinity, says the Columbus (Ga.) *Times and Sentinel*, a blind negro boy, only six years old, the property of James N. Bethune, of the Corner-Stone, who exhibits the most wonderful capacity for music, and is able to play almost any piece, even the most difficult, on the piano-forte, after hearing it once or twice. He has never been instructed in music; his knowledge of the science is, therefore, instinctive. He has the most intense passion for music, and exhibits the greatest emotion during his performances. We have never seen so wonderful a musical prodigy before.

The Fever at Norfolk.—Within a space of three months, out of an average population of six thousand, every man, woman and child, (almost without exception,) has been stricken with the fell fever, and about two thousand have been buried—being not less than two out of three of the whites, and one out of three of the whole abiding community of Norfolk, white and black. What a hideous summing up? Besides this, we learn that one half of the resident physicians perished, and not less than thirty-six in all, resident and visitant, fell martyrs. The glory of these men will be truly appreciated in a more civilized age, when Force and Wrong are not so widely worshiped, but Science and Mercy come in for a fuller share of public esteem.

Death of a Murderer.—John L. Chapman, who was convicted last May of the murder of Reuben Cozzens at Sherborn, N. H., Sept. 17, 1853, died in the jail at Concord on Saturday, aged 22. Chapman's disease was consumption, brought on by exposure to rain and cold on the night of the murder, and the weight of his guilt preying on his mind. His health, which was feeble at the time of his first trial when the jury disagreed, has been gradually failing ever since, and was so broken at the time he was convicted, that he was sentenced to the jail for the year before execution instead of the House of Correction. For some weeks past he has been confined to his bed, and has been tenderly watched and nursed by his sister, who has occupied his room with him, and devoted herself to him.

To prevent Bloomers.—The patent petticoat lifter is a great centre of attraction at the Crystal Palace. It is thus described:—

There are four small pulleys attached to the waist, underneath the dress, over which are rove small cords, one end of which is attached, with diaper pins, severally to the front, rear and sides of the skirt, at about the height of the knee. The other ends terminate in loops, which are led into the pockets on either side. If a lady wishes to go up stairs, she pulls loop No. 1 in the right pocket, and instantly the dress rises in front, so that the ascent is made with perfect grace. No. 2 in the left hand pocket elevates the rear in the same manner, and all pulled at once lift all the skirts knee high!

Surveys in New Mexico.—The Surveyor-General of New Mexico writes to the Commissioner of the General Land Office from Santa Fé, that he has closed a contract for the survey of six hundred miles of the correction or standard parallel lines east of the principal meridian, and also west of the said meridian, and south of the base line. The difficulties of carrying forward these surveys during the dry seasons are represented to be very great. The deputy surveyors have been paying seventy-five cents per gallon for water for themselves and mules while surveying a large portion of the work. [Union.

Thanksgiving.—Thanksgiving this year is not to be kept simultaneously in the several States. North Carolina had hers on Thursday, the 25th ult., Maryland and Virginia observe the 15th of November; Pennsylvania, Maine, Iowa, and Ohio, the 22d of November; and Massachusetts, New York, Connecticut and Indiana, the 29th.

☞ We have been furnished by Mr. J. H. Prince, some curious statistics of J. C. Ayer's *Cherry Pectoral* and *Cathartic Pills*, which we publish to show the benefit of Advertising. His business now extends completely round the world, and wherever abide civilized men. But a few years ago, it was confined to his own State and City, (of which, by the way, he was the Mayor,) and where his preparations were justly esteemed. He now occupies a building which embraces the whole of one square, in the centre of the city of Lowell, Mass., four stories of which is exclusively devoted to the manufacture of his Pectoral and Pills. He gives employment to eighty persons at home, and has five men constantly traveling in this country, for the purpose of advertising, &c. His advertising in 2300 papers of this and foreign countries, cost in 1853 $65,000. Besides this, he printed at his establishment, forty tons of Almanacs in English and German, which were distributed gratuitously wherever these two languages are read. Any one copy of his advertisements runs through an issue of 85 millions, counting its insertion in the daily and weekly papers.

The *Cathartic Pills* are manufactured by steam power, with great precision, and at the astonishing rapidity of 2,592,000 per diem; which is one dose for 518,500 persons. They are not, however, made at this rate steadily, all the time. The *Cherry Pectoral* has for several years been manufactured in such daily quantity as would require 340 men to dose it out, providing each man worked 10 hours per day, and gave a dose a minute. Thus 204,800 doses are taken daily.

It is further estimated, on a reliable basis, that the patients relieved (i. e. consider themselves cured,) by these two preparations, amount to 11 per minute, or 25,840 per diem, all the year round.

What an immense operation for the weal or woe of mankind, and what a responsibility that these medicines shall be properly made! Had they been even more useful than they are now, could their value have ever been made known to the people without the assistance of the Public Press? [Toledo Blade.

Mr. Appleton, *Chargé d'Affaires* of the United States at London, transmits dispatches to the Department of State, announcing that the following-named vessels of war have been ordered to the North American and West Indian states, viz: The *Pembroke*, sixty gun screw-ship, for Bermuda; the *Cornwallis*, sixty gun screw-ship, for Bermuda; the *Russell*, sixty gun screw-ship; the *Hawke*, sixty gun screw-ship; the *Hastings*, sixty gun screw-ship; the *Powerful*, eighty-four gun sailing-ship, for Jamaica; the *Rosamond*, six gun paddle-sloop, for the North American station. This movement, and the augmentation of the French fleet, have excited lively sensations.

Mrs. Dolly Brown, of Newburyport, who has seen eighty-seven summers, (and apparently many less winters,) appeared at the Lowell Bank for her dividend. She could read her name and trace her shares upon the books of the Bank without glasses, and signed her name with a fair and but slightly tremulous hand. The Cashier expressed his cordial satisfaction at her visit, and informed her that she was now the oldest stockholder.

SUMMARY.

At Candia, N. H., three young men, of unenviable notoriety, snatched thirty-two dollars from the wife of John Stevens, while she was making change for liquor she had sold them in violation of law. They were prosecuted, and the man who entered the complaint had his house burnt down the night afterwards. When the day of trial came, the counsel of the accused having threatened Mrs. Stevens with a prosecution for the sale of the liquor if she appeared against them, she cleared out on having the stolen money returned to her, and the delinquents were consequently discharged.

A dispatch dated Washington, Friday, Nov. 2, says: Various contradictory reports being in circulation regarding Lieutenant-General Scott's pay, I find on direct inquiry at the Paymaster-General's Office, that the figures in my dispatch of Wednesday are substantially correct. The official record shows that he is entitled to back pay to the amount of $10,405 to the 1st October last—no allowance being made for the eight months during which he commanded the Eastern Division of the army in Mexico. His pay, in addition to that of Major-General, is $1,320 per year. General Scott claims $32,000 arrearages.

Preparations are making in New Orleans for the erection of the Jackson Monument on the approaching anniversary of the Battle. At the surface of the ground the pedestal will cover a space of thirty-eight feet eight inches square. By steps to the height of ten feet it will decrease to sixteen feet eight inches square, the size of the base of the shaft. This itself will be one hundred and forty-two feet high. The height of the top of the monument above the general level of the ground will be one hundred and fifty-five feet. A spiral stair-case of two hundred and ten stairs will lead up the interior to a landing in the top, just below the apex of the obelisk.

Two years ago Wisconsin passed an act granting the northern part of its territory to the proposed State of Superior. The proposed northern boundary of Wisconsin, and southern line of Superior, extends from the Mississippi at the mouth of the Chippewa river, up this last named river until it strikes the United States Correction Line between towns 30 and 31, and then following that line east of Green Bay, which it intersects near the mouth of Brule river of Green Bay.

A census of Nebraska Territory has just been completed, showing a total population of 4565. The number of legal voters is 1465. There are eleven slaves in the Territory. The population would have been much larger if it had not been for the Indian difficulties the past summer. Only two persons, however, have been killed thus far, and all fears on the subject appear to have subsided.

The steamer John Potter, while coming up the New York Bay from Amboy, about 7 o'clock, on Wednesday evening, Nov. 7, and when off Governor's Island, came in contact with a boat filled with men, which was being rowed directly across her bows. The small boat was upset, and all its occupants—nine in number—thrown into the water. Six of them were rescued by those on board. The other three drifted off rapidly with the tide, and notwithstanding the life-boat was sent to their relief, they were not rescued.

The season for farmers is very backward in nearly all sections of New York State. In Washington County the heavy and constant rains have put work of all kinds back at least *twenty days*. Corn is not in, and a very few potatoes have been dug. There are loud complaints of the rot in that section, as well as in Western Vermont and Lower Canada. There is not much prospect of any great decrease in the price of potatoes, butter, or other agricultural products.

A dispatch dated Philadelphia, Saturday, Nov. 10, says: The locomotive of a freight train on the Pennsylvania Railroad exploded yesterday near Penningtonville, instantly killing the fireman, named Chandler, and severely injuring John Wilhelm, the engineer. The latter was blown up into the air and fell upon the telegraph wire, which broke with his weight.

The Mechanics' Institute, New York, propose putting up a new building in the Bowery, near the Cooper Institute. The President, Wm. Miles, Esq., has offered to erect it at his own expense. The probable expenditure is $75,000. A plan is now maturing to make the library free to mechanics.

The New York State Canal revenues from the opening of navigation, May 1, to the close of the month of October, reached $2,411,946, against $2,420,384 same period last year. The deficit at one time exceeded $150,000. To the close of navigation the aggregate promises to exceed last season's result by $100,000.

A dispatch dated Albany, Tuesday, Nov. 6, says: At the polls in the Second Ward of this city, this morning, Michael Brennan, a fighting man, met and attacked Wm. McCrossen, with whom he was at enmity. McCrossen drew a pistol and shot Brennan through the heart, causing death in less than two minutes.

The Duke of Northumberland has been expending the enormous sum of £50,000 a year in rebuilding cottages, farm-houses, and buildings, and in draining lands on his real estate in Northumberland, to say nothing of the splendid improvements going on in the stately castles of Alnwick and Warkworth.

Saturday, Charles Higgins, a youth of fourteen years, residing in Alton, Ohio, went out into the garden for the purpose of shooting a chicken not seeing any one, he fired, the ball striking his mother, (who was behind a bush) in the head, killing her instantly.

Mrs. Wilson, whose husband was killed on the Pennsylvania railroad by the breaking of a rail, has recovered $4,500 damages. Dr. Carrington, who was upset in a stage-coach, near Lynchburg, Va., in 1854, has obtained a verdict against the proprietors for $5,000 damages.

The friends of education in Troy have raised $100,000 towards endowing a university to be located in that city. They wish to make the endowment $200,000.

A fellow named Wm. Stevenson, who was convicted at Lockport for biting off the nose of John Lecy in a fight, has been sentenced to two years and five months' imprisonment.

The executors of Daniel Webster are about to pay a dividend to the creditors of 21¾ per cent.; assets $35,180 89; debts $155,000.

Recently, on the west side of Cleveland, Henry Ruder, a German, parted from his second wife, and closed his house, chaining inside a savage dog. Suspecting that all was not right, Officer Robinson forced an entrance to the house, and found two children of the first wife, who had been shut up three days without food.

Died, at her residence, near Peekskill, Oct 27, aged seventy-one years, Mrs. Serrine, daughter of the late Isaac Denike, and widow of Major John Paulding, of Revolutionary memory. Mrs. Serrine had been a member of the Methodist Church for many years, and died in the full enjoyment of the religion of Christ.

The fearful epidemic at Norfolk and Portsmouth is attributed to the fact that most of the wharves were made or filled up with green timber, logs, brush, and low marshy dirt, some years ago. These had begun to decay, and they render the whole atmosphere impure.

The census returns from eight counties of Illinois show an increase of 398,811 since the enumeration of 1850. There are yet twenty counties to be heard from, which, with the same ratio of increase, will swell the population of that State to about 1,300,000.

A student of Roanoke College has been expelled for refusing to perform what he deemed an overtask, and which one of the professors refused to lessen. On account of this expulsion some twenty-five or thirty of the students immediately withdrew.

A dispatch dated Buffalo, Wednesday, Nov. 7, says: The propellors Omer Pasha and Delaware were lost in a gale on Sunday night on Lake Michagan, off Sheboygan. All on board were lost.

Twenty dollar notes altered from three dollar notes, on the Cumberland County Bank, at Bridgeton, N. J., are in circulation. The bills are skillfully executed to deceive.

A party of hunters are engaged in the lower part of New Jersey in bear-hunting. There are many of these animals in swamps in that section of the country.

There has been another terrific storm on Lake Michigan, in which two propellers were wrecked, and several lives lost.

New York Markets—Nov. 12, 1855.

Ashes—Pots $6 37 a 6 50, Pearls 7 37.

Flour and Meal—Flour 8 75 a 8 87 for common to good State, 8 62 a 9 00 for Michigan, Upper Lake, and Indiana 9 75 a 10 75 for extra Genesee. Rye Flour 6 00 a 7 50. Corn Meal 4 62 for Jersey. Buckweat Flour 2 50 a 2 75 per 100 lbs.

Grain—Wheat 1 90 a 1 92 for red Western, 2 20 a 2 26 for good to choice white Canadian, 2 05 for mixed Ohio. Rye 1 22 a 1 23. Barley 1 30. Corn 95 a 96c. for mixed Western, 1 00 for white Southern.

Provisions—Pork 21 00 for prime, 22 50 for mess. Beef 8 50 a 9 50 for country prime, 11 00 a 12 50 for country mess. Lard 12 a 14¼c. Butter 16 a 21c. for Ohio, 21 a 24c. for State. Cheese 9½ a 11c.

Hay—70 a 75c. per 100 lbs.

Tallow—12½ a 12¾c.

DIED,

In Fulton, Rock Co., Wis., October 19, 1855, Orrin Buton, aged 42 years. Bro. Buton left this world with strong hopes of a joyful future. He came from Peterham, Mass., to this place, where he had secured to himself the friendship of all who knew him. V. H.

At the residence of William Stillman, in Westerly, R. I., on the 22d of October, 1855, Miss Lois Champlin, aged 91 years.

At Potter Hill, R. I., on the 9th inst., of hemorrhage of the lungs, Miss L. Angelina Maxson, aged 18 years. Thus early in life has another of our youthful friends passed away; but not without leaving to her surviving relatives the cheering hope that she died in Christ. She had professed religion some five years since, and from that time has evinced much love for religion, which brightened as death drew near. Her sickness, which was short, was borne with patience, and the hour of her departure was one of joyful release. Her hope in the Saviour was unshaken to the last. When she gave the parting "good bye" to her dear friends, she expressed a firm belief that she should soon be with Christ, and exhorted them to meet her there. C. M. L.

In Pomfret, Ct., Sept. 26th, 1855, Elizabeth Grinnell, wife of the late J. M. Grinnell, of Pomfret, and daughter of the late Doct. G. H. Perry, of Hopkinton, R. I. Faith in Christ enabled her to meet death with calm resignation.

In Brookfield, N. Y., Oct. 21st, of heart disease, Mrs. Polly Crandall, wife of Jary Crandall, aged 40 years. Sister Crandall was a consistent member of the First-day Baptist Church in Clarkeville. She gave evidence of the soundness of her piety, by patient suffering and resignation to the will of God, and doubtless sleeps in Jesus.

In Brookfield, Madison Co., N. Y., Nov. 6th, of pulmonary consumption, Mr. William Burdick, in the thirtieth year of his age.

LETTERS.

Charles M Lewis, Henry Sheldon, G W Stillman (sent with Minutes to Nile,) A B Burdick, J B Clarke, W B Sayles, C A Bacon, Joshua Clarke, W B Maxson, T P Merritt, Grove D Clarke, Geo P Burdick, Charles Potter, Eli Forsythe, Halsey Stillman, Rowse Babcock (received,) L T Rogers, A A Lewis.

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

Great Central Route.

THE Through Ticket and Freight Office of the GREAT WESTERN RAILWAY, MICHIGAN CENTRAL RAILROAD, and their Railroad and Steamboat connections to Chicago, Milwaukie, Galena, Burlington, St. Louis, Cairo, and all points West and South-west, via Suspension Bridge, Buffalo, or Oswego, is at No. 173 Broadway, New York, corner of Cortlandt-st.

DARIUS CLARK, Agent.

Carpet Warehouse.

YOUNG & JAYNE, No. 364 Broadway, corner of Franklin Street, (opposite Taylor's Saloon,) offer for sale a very choice and extensive assortment of

CARPETINGS, OIL-CLOTHS, CURTAIN MATERIALS, MATTRESSES, &c.,

at the lowest rates. Purchasers are respectfully solicited to examine the stock.

Misrepresentations, either expressed or implied, are strictly prohibited in this establishment.

YOUNG & JAYNE,
364 Broadway, corner of Franklin-st.

N. B.—Churches and clergymen furnished at wholesale prices. Sept 27—3m.

Farm for Sale,

CONTAINING about 100 acres, with a fair proportion of woodland, a small orchard of grafted fruit, and a comfortable dwelling and outhouses. It is situated about four miles north of Westerly, R. I., and within a mile of each of the flourishing manufacturing villages of Potter Hill and Ashaway. There are several other manufacturing establishments near, affording a ready market, in the immediate vicinity, for every species of produce. It is convenient to the first Hopkinton Church, as well as to the very excellent male district school.

It will be sold with or without the stock and farming implements, and possession given the ensuing winter or spring, if desired. To those wishing to secure a quiet home in an enterprising neighborhood, and surrounded by such comforts as can only be found in an old settled and thickly populated country, this affords an opportunity seldom offered. For terms and other particulars apply to the subscriber on the premises, or address John E. Potter, No. 15 Sansom-st., Philadelphia, Pa. Benjamin Potter, Ashaway, R. I.
11tf.

Good Crops, Good Prices, Good Books, and Good Times.

BELCHER'S HISTORY OF ALL THE RELIGIOUS DENOMINATIONS IN THE UNITED STATES.
Large Octavo 1,024 pp. and nearly 200 engravings.
FLEETWOOD'S LIFE OF CHRIST AND HIS APOSTLES. 704 pp. and 25 engravings.

Probably there has never been a more favorable opening for the sale of books than the present. Large crops have been produced throughout the country, and these are bringing good prices; every body is in high spirits.

The above volumes are printed on fair paper, in clear, large type, are handsomely illustrated, and bound in a neat and attractive style. More than all, their contents bear the ring of the true metal, enabling the agent to sell them to the highest in the land as well as the humblest, with the gratifying feeling on his part that he is conferring a favor rather than receiving one. They have gained and are gaining a world-wide fame; and being sold exclusively by subscription, the agent has the entire benefit of their popularity.

Canvassers, and those wishing to become such, will find it for their interest to secure an agency. We can offer them with other popular works on the most favorable terms. For further particulars apply to or address either of the

Publishers, { John E. Potter, Philadel., Pa.

Magnificent Floral Gift.

SUBSCRIBERS to the "CHRISTIAN DIADEM" for 1855, are entitled to a splendid steel engraving, the ☞ LILLY AND THE ROSE PERSONIFIED, being given *gratis* to all old and new subscribers who send us only ONE DOLLAR, by mail or otherwise.

Six Copies for Five Dollars.

The Diadem is a strictly moral and religious work—designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address Z. P. HATCH, Publisher, 9 Spruce street, New York. May 24—3m.

New Market Seminary.

This Seminary will re-open on the 12th of September, with Mrs. R. H. Whitford, as Preceptress.

This Institution is located in a pleasant section of country, and has a commodious and well arranged building, and is designed to furnish every facility and advantage to the student found in other institutions of this class.

Board for students may be had in families at one dollar and seventy-five cents per week, where all their wants will be kindly cared for. Tuition from $3 to $5 per term, according to the studies pursued. Music, with use of Piano, $10 00.

I. H. Dunn, Sec. of Board of Trustees.
New Market, N. J., August 26, 1855.

New York and Erie Railroad.

ON and after Wednesday, Sept. 19, and until further notice, Passenger Trains will leave the pier foot of Duane-st., New York, as follows:

Dunkirk Express at 6.30 A. M. for Dunkirk.

Buffalo Express at 6.30 A. M. for Buffalo.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations. Passengers by this Train will remain over night at Owego, and proceed the next morning.

Rockland Passenger at 3 P. M. (from foot of Chambers-st.) via Piermont, for Sufferns and intermediate stations.

Way Passenger at 4 P. M. for Newburgh and Otisville and intermediate stations.

Night Express at 5½ P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5½ P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c., and with first-class splendid steamers for all ports on Lake Erie.

D. C. McCALLUM, General Sup't.

DeRuyter Institute.

This Institution is located in a pleasant and healthy section of country, and in a community comparatively moral and intelligent. It is easy of access from Syracuse, Chettenango, and Homer. Our motto is, *Teach the young to govern themselves—to educate themselves.* Grateful for past liberal patronage, we assure the public we have ample accommodations for more.

Expenses:

Tuition,	from $4 00 to $6 00
Board in families,	from 1 25 to 2 00
" in clubs	from 0 60 to 1 00
Room rent, per term,	from 1 25 to 2 62

Books and Stationery furnished at very low prices.

All bills settled invariably in advance. No bills for less than half a term. No deductions made except in case of sickness.

Board of Instruction.

HENRY L. JONES, A. M., Principal.
AMOS R. CORNWALL, A. B., Prof. Mathematics.
Miss JOSEPHINE WILCOX, Preceptress.
Mrs. SARAH E. JONES, Mrs. BARBARA A. CORNWALL, Miss SARAH E. SHIPPEY, Miss JANE C. BURDICK, Assistants in Female Department.

For further particulars, address, Henry L. Jones, Principal; W. D. Wilcox, President; J. B. Wells, Secretary; or C. H. Maxson, Treasurer, DeRuyter, Madison Co., N. Y.

Miscellaneous.

The Jugglers of India.

From the first of a series of interesting articles entitled, "Sketches of India," now publishing in the *Crayon*, we extract the following:—

One morning after I had passed some days at Madras, I went to the "garden house" of one of my English friends, to see an exhibition by some jugglers, who had been seen for the night before to come up from the Black Town. The jugglers of Madras are famous as the best in India. They form a caste by themselves. Their skill is the result of the practice of successive generations, and their art is a hereditary one. It was about six o'clock in a clear September morning, and our party consisted of five or six spectators. Coffee having been served, we took our seats on the veranda on the shady side of the house, while the jugglers, of whom there were fifteen or twenty, men, women, and children, ranged themselves before us on the grass at the further side of the avenue, ten or twelve feet wide, that run between us and them. Behind them was a green field, on which at some distance grew a few trees and flowering shrubs. There was nothing near them that could afford hiding-place or shelter. The men wore nothing but the dhotee or tight cloth about their loins; two of them were very old, with white beards lying upon their dark skins. The women were clothed in the common bright, loose dress of the lower classes, and the little children were quite naked. The implements of the art, their musical instruments, and the flat, circular baskets in which were their snakes, for the jugglers are also snake charmers by profession, lay around about upon the grasss.

One of the young men began the exhibition with some common tricks of sleight of hand, remarkable only from the fact that his dress and the ground afforded him no aids. Then another came forward, and throwing four brass balls into the air, kept them in constant motion, now making them circle round his head, now throwing them in opposite directions under his arms and over his shoulders, now chasing one with another, never missing the instantaneous chance, with incredible quickness of eye and quickness of hand, with incomprehensible delicacy making them wheel about him as if they were the obedient servants of his will. Such exquisite skill makes one's own hands seem utterly clumsy and inefficient. All the while that this juggler was playing so beautifully with the glittering brass balls, one of his companions beat upon a dull drum, while the others looked on, and now and then, at some peculiarly successful or long sustained flight, broke out with a murmur of encouraging applause. Then followed in quick succession other not less remarkable feats of strength, agility, and skill—feats on poles, with swords, with stones, with ribbons—feats, indeed, of all sorts, and all done with an apparent ease that made them not less pleasant than wonderful to see. The jugglers seemed subtile and lithe as spirits,

> "Not tied or manacled with joint or limb,
> Nor founded on the brittle strength of bone,
> Like cumbrous flesh."

But the most wonderful performance that we saw this morning, was a feat of pure juggling, of which I have never been able to find any solution. One of the old men came forward upon the graveled and hard-trodden avenue, leading with him a woman. He made her kneel down, tied her arms behind her, and blind-folded her eyes. Then bringing a great bag net made with open meshes of rope, he put it over the woman, and laced up the mouth, fastening it with knotted intertwining cords in such a way that it seemed an impossibility for her to extricate herself from it. The man then took a closely-woven wicker basket that narrowed toward the top, lifted the woman in the net from the ground, and placed her in it, though it was not without the exertion of some force that he could crowd her through the narrow mouth. Having succeeded in getting her into the basket, in which, from its small size, she was necessarily in a most cramped position, he put the cover upon it, and threw over it a wide strip of cloth, hiding it completely. In a moment, placing his hand under the cloth, he drew out the net quite untied and disentangled. He then took a long, straight, sharp sword, muttered some words to himself while he sprinkled the dust upon the cloth, and put some upon his forehead, then pulled off and threw aside the covering, and plunged the sword suddenly into the basket. Prepared as in some degree we were for this, and knowing that it was only a deception, it was yet impossible to see it without a cold creeping of horror. The quiet and energy with which he repeated his strokes, driving the sword through and through the basket, while the other jugglers looked on, apparently as much interested as ourselves, were very dramatic and effective. Stopping after he had riddled the basket, he again scattered dust upon its top, lifted the lid, took up the basket from the ground, showed it to us empty, and threw it away. At the same moment we saw the woman approaching us from a clump of trees at a distance of at least fifty or sixty feet.

Throughout the whole of this inexplicable feat, the old man and the woman were quite removed from the rest of their party. The basket stood by itself on the hard earth, and so much beneath the verandah on which we were sitting, that we could easily see all around it. By what trick our watchful eyes were closed, or by what means the woman invisibly escaped, was an entire mystery, and remains unsolved. The feat is not a very uncommon one, but no one who had seen it ever gave me a clue to the manner in which it was performed.

Suit against Trinity Society.

A more formidable attack upon the monster corporation of Trinity church than has ever been made, is now in progress in the courts of this State. At the recommendation of the Commissioners of the Land Office, a suit has been commenced in behalf of the State, for the prosecution of which the Governor has engaged Judge Conklin, of Auburn; Nicholas Hill, Jr., Esq., of Albany; Charles Tracy, Esq., of New York, and Morris S. Miller, Esq., of Utica; to be associated with Ogden Hoffman, Attorney-General, the object of which is thoroughly to test the validity of the title of the Trinity church corporation to the immense estate in its possession, now amounting, it is estimated, to something like twenty millions, or some such incalculable sum. This title has always been questioned, whether from the doubtful character of its origin, or because its magnitude has provoked envy, and many suits have been instituted, but hitherto without success. The more deliberate and thorough attempt now made will probably be final, whatever be its result; and if the church is as successful in this as in all former trials of strength, she may rest quietly in her luxurious seat for all time to come. The property now in possession of the Trinity corporation was originally called King's Farm. It consisted of an immense tract of land which was held by the British Crown, then the sovereign power in the colony of New York, as one of its own franchises. In May, 1699, an act was passed by the Colonial Legislature, at the express command of the King, then William III., and sanctioned by him, which forbade the leasing of this King's Farm by the Governors of the Colony, for any longer period than their own respective terms of office. It had before this been in possession of Trinity church, having been leased by the then Governor Fletcher. On the termination of his office, his successor, Gov. Cornbury, leased the property to the church, expressly during his office, for an annual rent of sixty bushels of wheat. But a few years after, Gov. Cornbury was induced to revoke his limited lease, and to grant a conveyance forever of the property, for a small rent of three shillings a year. This grant was sanctioned by the Colonial Legislature, but never approved by the Crown. The same Legislature also repealed the former act, by which the Governors were restricted from leasing the property for any longer term than they held office, but this, too, was not approved by the Crown. This conveyance, thus sanctioned by the Colonial Legislature, is said to be the sole original title of the Trinity corporation to the property in question. Some subsequent additional acts are claimed, which go to confirm the title—as that a suit brought in Chancery against the church was discontinued by the express act of Queen Anne, by which a royal consent was impliedly given to the claim of the church. Now the question is, was the conveyance of Gov. Cornbury valid? And had the Colonial Legislature power to give him authority to convey the property forever, by repealing the act of the previous Legislature, passed by the express command of the King, and approved by him? There are various incidental circumstances on both sides, which are adduced to throw light upon the main question; but the solution of this will probably settle the question, unless the claim of long adverse possession, or the force of the Statute of Limitations shall deprive the State of its claims.

The possession of such an enormous property is unquestionably a great evil, both to the church and to the community. It never has been, and cannot be, used wisely, or for the public good, while in the hands of a close corporation; and no one can doubt that, if converted to the School Fund of the State —which will be its destination if the State is successful—it would do immeasurably more good than can be expected from it in its present hands. But all this has no bearing upon the case; it is one of pure legal right and wrong; and if Trinity church is fairly entitled to it, she ought to have it, without envy, reproach, or hindrance. [N. Y. Evan.

Economic Cultivation.

We have repeatedly seated ourselves with the intent of writing upon the best mode of cultivating the various crops, and almost as often have we actually had our attention turned to and written upon some other topic. The reason is this: No one, except the favored few who have all the means at command needful in carrying out their plans of farm operations, can do half as well as they know how to do. Their land is poor, and they have not the means of enriching it. Tell a man that a purse full of gold is only an inch beyond his utmost reach, and you do him no good but to excite feelings of discontent and envy, and even lead him to forego certain improvements which are within his reach, because they pay so little compared with what he is really anxious but unable to do. Poverty is a terrible burden, and nowhere is it felt more than among intelligent farmers.

Notwithstanding these difficulties, we would now urge this class of farmers, first, to expend their labor and their fertilizers upon a much smaller [illegible] usually done. Instead of planting five acres of corn, plant two, or even one; and plow and cultivate this small field to the entire neglect, if need be, of other acres. If those lie fallow it will be useful to the soil, and at least no money will be wasted upon them.

We say to such farmers, in the second place, you can do more than you have done in the preparation of various composts. There are very few farmers who cannot double and treble the quantity and value of these necessary means of restoring vigor to worn-out and barren soils. By diminishing the extent of surface under cultivation, and by proper industry in preparing composts, there is scarcely a farm in the country that cannot be made to produce its sixty, and seventy, and eighty bushels of corn to the acre. And even though one acre only is brought up to this desirable condition, a series of years will suffice to bring the whole farm to a high state of cultivation. If only small fields are made thus productive, the hopes and courage of the farmer will be thereby excited, and he will stand up manfully among men, and tell of this success as well as they.

We would not advise farmers of limited means to buy guano or phosphates at any thing like their present prices. Pay your poorer neighbor his six or eight shillings a day (if you cannot exchange work with him) to help you collect leaves from the forest, mud from the meadow, carting the latter only after it is tolerably dry, peat or marl from the bog; and if you can buy barn-yard manures, mix them with turf, sods, roots, weeds, dirty straw, spoilt hay, chips that are unfit to burn; and if you are conveniently situated for it, get sea-weeds from the sea-shore, oyster shells, old bones, horns, &c. Dead animals are of great value. The offal from a slaughter-house, worthless scraps of hides, bones, &c., should be used only with large quantities of common soil, or of some other solvent. Not one in a hundred turns to the best account the contents of privies, hog-pens, soap-suds, and other kinds of waste.

Pardon us for asking, why will you tax yourselves so severely by neglecting any of these modes of improving your lands? It may be only such neglect that keeps you in poverty; and though you enter upon the work with many painful doubts in relation to the result, we will assure you against loss from any such operations, if conducted with tolerable discretion.

Now is the time to commence this system of operation for the next year. On every leisure day, let the time be occupied in these preparatory labors. Every hour thus spent is worth something, and will tend to fill your purse at the time of harvest.

Almost all farmers sadly neglect their barn-yard manures. Were these properly cared for, their value, as a whole, would be more than double.

Having thus suggested the means by which manures may be provided, the next inquiry is, how and where shall they be used? Perhaps we are unable to give the information that many would desire, for reasons suggested in the last number. Perhaps you have an enclosure that for many years produced very large crops, and you just looked on and watched your opportunity to take from it the most you could get, returning nothing to it. It may be that it is so situated that it is almost able to take care of itself, like much of the intervals on the Connecticut, which is annually enriched by being overflowed.

[Plough, Loom, and Anvil.

Cultivation of the Cranberry.

Cape Cod, Wednesday, Oct. 24, 1855.

Now that the cranberry crop is harvested, those who have land adapted to the growth of this remunerative fruit, are preparing it for the reception of the young vine. And as there may be readers of the *Tribune* who contemplate making a trial in the cultivation of this excellent vine, but yet lack some items of information which may retard the speedy consummation of such an undertaking, I will state for their guidance that process of cultivation which has been pursued with marked success on Cape Cod.

1. In the management of the cranberry, respect must be had to a particular part of the year in which the vines ought to be removed from their beds, and planted in the yards. Some, whose experience is not extensive, are of opinion that the vine ought to be set out in the Spring. This has been tried by novices in the art of cranberry cultivation, but generally these plants have failed, because they have been unable to withstand the severity of the sun's heat, and the consequent dryness of the soil. Practical experiment has, therefore, decided that the Spring of the year is an unfavorable time for laying out and planting a yard. The fall is most suitable part of the year for transplanting, and the time on Cape Cod that is considered the best for this work is from the middle of October to the latter part of November. A gentleman who owns a four-acre yard informs me that this has been his method for the last twenty-five years, and that he has never had a vine fail or die, and what his experience in this respect is it is supported by that of others who do not cultivate on so large a scale as himself. The reason why the Fall is the most seasonable time for this work is, that the young plant is submerged during the Winter; the roots descend into the new soil, and before the following Spring is past, it is prepared to sustain itself by the moisture the leaves derive from the atmosphere, and the outspreading roots from the earth. Let those farmers who have contemplated turning their attention practically to the growth of cranberries do it at once, for this is the most favorable opportunity. If you neglect it now you will have to wait for the return of another Fall before any thing can be done to advantage. I will repeat the caution given by old producers:—"By no means plant in the Spring; if you do, your work will have to be done over again, or you may conclude that your soil is not adapted for the growth of cranberries, when the error does not lie there but in the time of setting out."

2. The most eligible parts of land for the cranberry claims our notice. It is probable that many farmers have desired to own a small patch of vines, but not knowing where and how they grow, have decided that it would be useless to attempt any thing in this direction, when, at the same time, nature has provided for them all they need, with the exception of making and planting a yard.

Are there no swamps or miniature valleys on your farms? Swamps which in the Summer are dried up by the heat and the absence of rain; little valleys which in the Winter are covered with water. These are the very places you require; the best possible positions for the planting of vines you can have. Why, then, are not these hitherto useless, spongy places, turned to profitable account? There is scarcely a farm to be found, of any importance and extent, but what has situated on some part of it places of the above description, which the actuate farmer will not overlook.

I assume, that the reader has all the natural facilities for the cultivation of cranberries, he ought reasonably to wish, and that he has decided upon making a trial. He may properly ask, "But how am I to go to work?" I will, in the plainest language at my command, endeavor to answer that question.

First, clear off the thick wood, and straggling bushes, if there are any; decide upon an elevation in your swamp which is high and dry from May to October, so that if there should be excessive rains your vines may not be under water too much. Take off the sod and throw it into the low and hollow places which are to be raised, and prepare for "filling in" and bringing the swamp as near to a level as you can. In "filling in" and it is of the first importance to carefully select that kind of soil which is best adapted to promote the growth of the vine. If this work is done in a careless or negligent manner, the plants will suffer, and perhaps die.

The cranberry growers in Dennis generally make use of coarse sand, but the preference is given to fine beach sand; and all who can, fill in with the latter, because experience has taught the most practical and successful producers that it is the best. They find that the young vines thrive better, and can withstand the drouth with much less danger of their being killed, than those which are set out in a clayey soil. The clay is apt to cake, and it is not an unfrequent thing to see young roots shriveled up and destroyed by the action of the Summer's heat upon such soil. The sand is light and porous, and is therefore adapted to take in the moisture of the atmosphere. I have seen some few vines which have been set out in beds of peat; they have flourished and done well; but still the preference is given to beach sand for the purpose of "filling in" for another reason—it more effectually destroys the long wiry grass which is indigenous to swamp, a consideration which by no means must be lost sight of by the farmer. If this enemy to the cranberry is not provided against, by covering over or pulling it up, it will greatly retard the process of "matting." Where the vine is planted upon fine beach sand which is free from the grass, the runners will spread more rapidly and new hills will spring up from them where they take root. Having nothing to contend against, a yard set off in this way will be "matted" in about one-fourth the time that it takes others where these precautions are neglected, and thus the farmer will have not only satisfaction but his pecuniary interests promoted by going the right way to work; for it is in this case as in all others, where expense and trouble are involved, "that the work well done once needs no mending," and it saves both anxiety and money in the future. [N. Y. Tribune.

The Thrifty Farmer.

The provident and thrifty farmer adopts three rules for regulating his business, which he observes himself, and enforces on those around him, viz: to do every thing in the right time, convert every thing to its proper use, and put every thing in its proper place.

He buys only the improved breeds of cattle, horses, sheep, and swine, and keeps no more than he can keep well, either in summer or winter.

He always drives on his work, and never lets his work drive him.

His animals are never under-fed or over-worked.

His out-houses, wood shed, poultry-house, pig-pen, wagon-house, spring-house, and corn-crib, are nicely whitewashed on the outside, and kept clean and neat within.

He has a tool-house, and a place for every tool in it, which may be wanted for any ordinary farm purposes, such as mending implements, making axe or hoe or fork handles, &c., and also for stowing carefully away such as will not be wanted for another season.

He has sheds around his barn-yard, to protect his cattle from the weather, and warm ventilated stables for his cows and young stock, and also a shed to protect his manure heap.

He has leaves or other refuse vegetable matter, together with soil from his headlands, convenient to his barn-yard, to compost with his manure heap through the winter.

He does not allow the liquid manure to escape into the nearest stream, a quarter or a half mile from his barn-yard.

His barn, and sheds, and dwellings, are all supplied with wood cut in August, always one year ahead.

His wife never scolds, because she never has occasion to.

Her cellar and pantry are always supplied with the needful *raw material*, which she works up in a palatable form to fill up vacuums at meal times.

Heavy bread, cold buckwheat cakes, and rancid butter, are novelties which her good man and the children have heard tell of by some of the neighbors, but have never seen.

He considers it a duty to promote the circulation of agricultural papers, and has saved himself some hundreds of dollars by following their advice.

His crops are always equal, and often better than any in the neighborhood, and are kept clear of weeds.

He watches the market, and sells his crops at the highest prices.

He makes it a rule always to spend a little less than he makes.

Himself and wife are both industrious, the children are brought up in the same way, and are not allowed to shoot the birds, smoke cigars, or chew tobacco.

He buys and sells on the cash principle, and thus saves himself from losses and bad debts.

He has a large fruit orchard, well supplied with every variety of fruit to ripen in succession.

He studies the *theory* as well as the practice of farming, has cleared off the last one hundred dollars of mortgage, and is seriously talking of making a bid for his neighbor Sloven's farm, which is up at Sheriff's sale.

He goes to church on the Sabbath, minds his religious duties, and brings up his children to do the same, lives respected, and dies regretted, as a useful man and good Christian.

[Farmers' Magazine.

Velocity of Railway Trains.

Few persons realize how great is the velocity attained by the trains on our first-class lines of railroad. Not that the speed is greater than is consistent with safety—this I do not believe; as upon all well-conducted roads the trains are run with care, and at a reduced rate of speed, at such points as safety requires. Upon straight portions of the track, however, remote from stations, the speed of express trains, at every trip, will reach fifty miles per hour.

It seems almost incredible that, as we glide smoothly along, that elegantly furnished car moves nearly twice its own length in a *second* of time; about 74 feet! At this velocity we find that the locomotive driving wheels, six feet in diameter, make four revolutions per second! It is no idle piston rod that traverses the cylinder thus, eight times per second.

If a man with a horse and carriage upon an unimportant public road in a country town should approach and cross the track at a speed of six miles per hour, (which would be crossing rapidly,) an express train, approaching at the moment, would move towards him 257 feet while he was in the act of crossing a distance barely sufficient to clear the horse and vehicle. If the horse was moving at a pace no faster than a walk, (as the track is usually crossed,) the train would move toward him, while in the act of crossing, more than 600 feet. This fact accounts for the many accidents at such points. The person driving thinks he may cross because the train is a few rods distant. Under no circumstances does a train cross any public road without timely warning from both bell and whistle when within 80 rods of the crossing. This the law rigidly compels.

How compares the highest speed of the train with the velocity of sound? When the whistle is opened at the 80 rod "whistling post," the train will advance nearly 100 feet before the sound of the whistle traverses the distance to and is heard at the crossing. The velocity exceeds the flight of many of our birds. Dr. J. L. Comstock, the well-known author of several philosophical works, informed the writer that he was recently passing through western New York when the train actually "ran down" and killed a common hawk. The train was stopped and the game, so rarely captured, was secured. Probably the greatest speed, for any considerable distance, ever made in this country was by an extra train for the European mail from Boston to New York, via Springfield and New Haven, in January, 1853. On certain portions of the route the speed exceeded one mile per minute. The whole distance, 236 miles was accomplished in an actual running time (excluding delay at water stations) of five hours and five minutes—an average speed of nearly 47 miles per hour.

A word in regard to the *weight* of railway trains. When crossing a high, open bridge, during a gale of wind, it seems as though its fury would hurl us into the valley or foaming waters below. The danger, however, disappears when we consider that the weight of a first class locomotive alone is 25 tons; and first class passenger cars, unoccupied, 10 to 14 tons each. A loaded train of five passenger cars, therefore, with baggage car, complete, would give an aggregate weight of about 150 tons.

Notwithstanding the rapid communication by railroads between distant points, it must be conceded that they are far *safer* than any other mode of general land conveyance. Frequently a million persons have been transported over our best roads without an accident. See legislative reports. It should be known that, for safety, every such road is divided into sections of perhaps six miles in length, over which a small body of men are incessantly passing and repassing, carefully examining every rail, spike and cross-tie.

The character of those who control the locomotive, has been frequently misunderstood. No good road accepts the services of any but intelligent, skilfull mechanics, familiar with every rod and bolt connected with the engine. They are careful men, and uniformly and very properly command handsome salaries. Did space allow, other facts might be stated in regard to the careful and constant inspection of car wheels, axles, &c., all tending to inspire the passenger with confidence in railway management. [Courant.

Hints to Housekeepers.

Dry Yeast.—The following kind of yeast is very convenient, and those who have tried it, say it answers an excellent purpose, and is not injured by keeping any length of time: Make a very strong hop tea; wet rye meal thoroughly with it, and spread it to dry in crumbs. Put it away in bags. When you want to use it, put a tea cup full in soak over night, in the chimney corner; in the morning, add about two gills of luke-warm water, and thicken it with flour, about as thick as pancakes. If kept moderately warm, it will be ready for use in a short time. This is enough for eight loaves.

Cleaning Wall Paper.—Wall paper is the order of the day now, and all persons who find their paper dirty would make a saving by cleaning it instead of putting on new. The process of doing this is to take about two quarts of wheat bran, tie it up in a bundle in coarse flannel, and rub it over the paper. It will cleanse the whole paper of all description of dirt and spots better than any other means that can be used. Some use bread, but dry bran is better.

Worth Knowing.—It is said that a small piece of rosin dipped in hot water, will add a peculiar property to the atmosphere of the room, which will give relief to persons troubled with a cough. The heat of the water is sufficient to throw off the aroma of the rosin, and give the same relief as if afforded by the combustion of the rosin. It is preferable to the combustion, because the evaporation is more durable. The same rosin may be used for weeks.

To Make Crackers.—Take ten teacups of flour, one of butter, a teaspoon-full of soda, two of cream tartar. Rub them together until they are thoroughly mixed, add enough water to make a stiff dough, which must be well kneaded; form the dough into crackers with your own hands, bake in a quick oven, and then dry.

To Improve the Wicks of Candles.—First steep the wicks in a solution of lime water, in which saltpetre has been dissolved. To 1 gallon of water add 2 ounces of saltpetre and ½ pound of lime. Dry well the wicks before using. It improves the light and prevents the tallow from running.

Good Yeast.—Boil one pound of brown sugar, and a little salt, in two gallons of water, for an hour; when milk-warm, bottle and cork it close. One pint of this will make eighteen pounds of bread.

Domestic Tea. The first green leaves of the common current bush, gathered as soon as full cut and dried on tin, can hardly be distinguished from green tea.

Importing Vegetables.

It is not a great many years since Connecticut used to supply the West India Islands with onions and other kinds of vegetables; but now the tide has turned, and a stream of vegetables is pouring in upon us from the West Indies and all other parts of the world. We are certainly getting to be great eaters. With the finest soil and the best kind of climate in the world for all kinds of vegetable productions, we are importing from foreign countries the article that ought to be produced in our own gardens. Bermuda supplies us with early potatoes and tomatoes; and it seems that the British provinces at the east of us are supplying us with eggs, which are now imported duty free under the Reciprocity treaty. Twelve hundred and sixty dozen of Nova Scotia eggs were entered at the Custom House in Boston on one day recently. We import enormous quantities of dried prunes from France, a kind of fruit that grows abundantly in all of our Eastern and Middle States; we import figs from Smyrna, which might as well be grown in North Carolina; grapes from Spain, which can be raised in Virginia; nuts from Madeira, which may be raised in New York; and olives, which might be produced in abundance in nearly all the Southern States. As for eggs, the value of which is so much greater when they can be warranted fresh, we should hardly think it could be profitable to import them from abroad. Peaches we are able to raise in as great quantities as we can consume; but we shall not be surprised next to hear of a cargo of this delicious fruit being imported from some neighboring country. Potatoes are brought to us from France, Germany and England, and a cargo of turnips was lately brought to us from Scotland. It is about time we had begun to develope our agricultural resources. [N. Y. Times.

Lieutenant-General Scott will receive upwards of $10,500 back pay, by virtue of his brevet appointment, dating from March 29, 1847, or about $1,300 a year additional to his pay and emoluments as Major General.

It is estimated that 12,000 persons were present at the Iowa State Fair, held at Fairfield in that State.

New Steamboat Line for Albany and Troy.
From Pier 15, foot of Liberty-st., at 6 P. M

STEAMER RIP VAN WINKLE, C. W. Farnham, Commander, Monday, Wednesday and Friday, at 6 o'clock, P. M.; steamer COMMODORE, L. Smith, Commander, Tuesday and Thursday, at 6 o'clock, P. M., and Sunday, at 5 P. M.

Fares: Saratoga, $1 50; Moreau, $2 15; Fort Edward, $2 15; Whitehall, $2 75; Castleton, $3 10; Rutland, $3; Burlington, $4; Rouses Point, $5 50; Montreal, $7 50.

These Boats will arrive in Albany or Troy in ample time to form connections with all the Railroads, North, East or West, enabling passengers to reach Montreal and tintermediate points the same day.

These Steamers are of the first class for strength and speed—well known favorities of the public—having been thoroughly overhauled during the past winter, and offer every accommodation that can be desired by either freighter or traveler.

Through tickets can be obtained on board the boat for Saratoga, Moreau, Fort Edward, Whitehall, Castleton, Rutland, Burlington, Rouse's Point and Montreal.

The Northern Freight Express will give Bills o Lading to all points as above named. Shippers who desire it, can have time receipts, by applying at the office on the Pier. A. A. DYKEMAN.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

THE EVANGELICAL CONFERENCE.

The French correspondent of the *Independent* furnishes the following details of the meetings of the "great Evangelical Conference," held in Paris, from the 22d of August to the 1st of September:—

The chief, and one of the most interesting features of this Conference, is the vast amount of reliable information which it has brought to light concerning the religious and moral condition of the world at the present day. Day after day, nations, so to speak, have appeared before the Conference, and, by the mouth of their representatives have spread before an attentive audience the lights and shadows of their present state; some of them, however, dwelling with marked preference upon the bright features, while others did not recoil from exhibiting, under its most painful aspects, the wretchedness to which they have been reduced under the influence of either infidelity or popery.

England first reported herself. It was not without some degree of surprise that many heard for the first time of the startling fact, that only *one-half* of the British nation belongs to the Established Church, whilst the other half are either connected with Independent Churches or profess Popery. While in that country, the papal aggression and the eastern war have, with other causes, contributed to produce an awakening, first of the Protestant feeling, then of a truly religious spirit, England has had to deplore the progress among her people, of the Mormon imposture, and the growing influences among the people and the clergy of those German systems which are most opposed to evangelical religion.

Next to old England, young America made her appearance—an appearance by no means unworthy of her reputation, though it is much to be regretted that so few, comparatively, of either her laborious, learned and deep thinkers and theologians, or eloquent speakers—and she has got plenty of them—were present. Some of the formal worn-out citizens of old Europe, thought their trans-atlantic brethren a little noisy, a little boasting, and a little fond of *big* speeches; but all were unanimous in their sympathy and admiration for the piety, the zeal, the energy of the churches of the New World; and all, on hearing an account of the wealth and stupendous resources of your country, were ready to acknowledge that these vast means of doing good could not be placed in better hands.

Holland was well represented, in more than one way, by her worthy and learned delegate, the Rev. Chantepie de la Saussage, and the meeting devoted to her and to Belgium contrasted singularly, by its calm, Dutch-like character with the animated meeting where America was heard. In Holland, as in the rest of the world, this age is an age of trouble, and change, and agitation. There are among the Dutch, diverse tendencies, theological and ecclesiastical, and Protestantism there after having given a resting place to the persecuted of all Europe, preserves in its bosom the various ideas and tenets which characterized them. Holland is a land of thinking, of erudition, and quiet seriousness. Religion has been, and is still, at a very low ebb there, but a very great progress has been made, and is spreading, both as regards Christian doctrine and activity.

As to Belgium, her condition is that of all Roman Catholic countries, where people forever oscillate between superstition and infidelity. Evangelical Christians in that kingdom are but an imperceptible minority, but the liberty they enjoy, their true missionary zeal, and the fair success they have obtained since they began their work, promise a steady progress in the work of spreading the Gospel.

Germany has had a whole day for herself, and she has nobly filled it. Unless I am much mistaken, it must be considered as the great day of the Conferences. The Drs. Tholuck and Dorner were among the German representatives, living witnesses of the learning and piety of the land of Luther. A general report upon the state of religion in Germany, by the *prelate* Kapff, of Stuttgard, read by Mr. Grand Pierre, gave a sketch of the religious awakening which begun in 1817, has been growing more and more important until the present day, and has caused a transformation in the theology, in the preaching, and in the activity of the Church, which is most cheering. But while Christianity was revived and raised up from its very ruins in Germany, that same country has been worked upon by all the excesses of an anti-christian philosophy. After the reading of the report, Professor Tholuck delivered a deeply interesting address upon the German Universities, showing how, little by little, under the blessed influence of public sufferings a godless rationalism yielded the ground, among the professors and the students, to a science friendly to faith. "Once," said Professor Tholuck, "there was perhaps only one University in Germany which could be called evangelical; to-day only one could be found which is not such." Doctor Dorner, in his turn, made an eloquent and deeply pious plea in favor of the German Universities. There was some call for it, for it seems a pretty well accredited opinion, that all the heresies of the nineteenth century come from Germany, and would never have been known in the world were it not for the German Universities. Because, while in other countries, like France for instance, men become unbelievers without taking the trouble of thinking laboriously, either to arrive to this infidelity or to justify it—because, I say, the Germans, when they deny the truth of Christianity, endeavor to show the world why they reject it, and because they try with all their might to substitute for it a system of philosophy—it is thought that their infidelity and their philosophy are the most dangerous al all. Now Dr. Dorner has shown this opinion to be an erroneous one. He who falls into error by adopting a system of philosophy, has more chance of arriving at the truth, than a man whose opposition to Christianity rests on mere prejudices and antipathies. A philosophical system rests necessarily upon a series of logical deductions. If it is a false system, it contains in itself some inconsistency which logic will sooner or later discover, and that inconsistency in a system which pretends to be a strictly logical whole, will necessarily cause it to fall to pieces and be given up. No such hope is left for those whose infidelity seeks for no scientific grounds—those light superficial infidels who neither seek to destroy Christianity scientifically nor attempt to substitute anything for it. While the systems of the former are self-destructive, the prejudices of the later are such that one can hardly conceive of anything that may overcome them.

The meeting devoted to France has not been quite as interesting as several others. The report upon the state of religion was upon the whole a very poor and superficial affair. The Rev. Mr. Farjat, who wrote and read it, had none of the qualifications required for such a task, and though he did his best, he was far from doing justice to the important and stirring theme he had to develop. After him Mr. Guillaume Monod delivered *the* speech of the meeting. That speech was no doubt eloquent and stirring, but were its statements well grounded? Is it true that France is, as Mr. G. Monod asserted, "the natural born supporter of evangelical Christianity?" Is it true that "her history, her government, her literature, and her moral and religious state are favorable to Protestantism?" Though for many years Mr. G. Monod has proved it, I am not convinced that it is true, and I believe that such assertions on the part of the speaker are the result of too lively an imagination, whilst the readiness and applause with which they were received, simply show once more how easily people are led to believe what they most desire.

Sweden and Denmark have been conspicuously before the Christian world of late years, on account of the shocking persecutions inflicted by Protestant churches upon evangelical Christians. The Lutheran clergy of Sweden especially shows the most bitter opposition to the spreading of vital religion. In the Dutchies of Holstein and Sleswig the compulsory use in the pulpits of a foreign tongue (the Dane instead of the German) and the utter subjection of the Church to the State renders most difficult the breaking out of the gospel light upon these Protestants, but alas! far from Christian countries.

I cannot pass over the statistics of the missionary work in the world, given in the meeting devoted to that most important branch of Christian activity. To mention only what regards the last four years, it was stated that in 1851 eight missionary societies had received 8,669,006 francs, in 1854 their receipts amounted to 8,893,700 francs, showing a decided increase. In 1851 there were only 774 missionary stations; in 1854 they had increased to 862. Missionaries: in 1851, 1362; in 1854, 1581. During the same period the number of native missionaries or helpers had increased from 10,451 to 11,965, the number of communicants from 153,000 to 166,000, the pupils in the schools from 117,000 to 133,000.

The meeting was remarkable, among other causes, on account of Dr. Duff's and Professor Sardinoux's speeches. The first named, by that inward fire which bursts now and then into torrents of wild and sublime eloquence, made a profound impression upon all his hearers. The contact with such men does really good; their earnest zeal, their exhorttations, backed by twenty-five years or more of arduous labors in their Master's cause, are well calculated to kindle or revive missionary zeal in the bosom of young Christians, and of ministers of Christ. Professor Sardinoux, of Montauban, pointed to the East as the grand field where now all evangelical Christians must turn their eyes, and where they must unite in a common effort to conquer for Christ the ground now occupied by decayed and decaying Mohammedanism.

The meeting for Italy has been particularly interesting. A report upon the condition of that country was read by a man whose untiring efforts, whose great success as well as great self denial and ability, in the work of evangelizing Italy, entitled most to the confidence of the assembly. I mean the Rev. Mr. Meille, of Turin. None better than him could speak with more accurateness of the state of Italy; of her degradation, her wants, her aspirations, and the best means of doing her good. The Rev. Mr. Desanctis, also, interested much the meeting by the details he gave upon Rome where he was once a priest, and the internal condition of the "Mother and Mistress of all the Churches." Would to God that Mr. Desanctis, who is also anxious to do good to the Italians, had not been instrumental in splitting in two one of the first Italian churches—that of Turin, for the most futile motives—and thus causing the work he loves the greatest injury!

In another meeting, a report upon Turkey, by Dr. Dwight, was read in French, by Mr. Gauthey. It stated both the decay of Mohammedanism, and the extreme difficulty the missionary finds in evangelizing the Turks. What can be done while the law pronounces capital punishment against any Turk who embraces the gospel? But if the Turks are next to inaccessible, the so-called Christian population scattered over the empire, can be evangelized, and the influence of truly Christian communities will do more to prepare the conversion of Turkey than would ever have done direct evangelization, as long as the Turks saw no Christianity but the corrupt forms it has assumed among the Armenians, the Greeks, and other ancient down fallen churches.

Alas for Hungary! Those who had read Kossuth's description of the Protestant Church of Hungary, in this paper, expected much more and better things of her than what was said in the meeting devoted to her. A fact at the outset, gave us the measure of the freedom enjoyed under Austria's rule: The Hungarian pastor who wrote the reports was obliged to conceal his name. Oppression on the part of the Austrian clergy, opposition to the spreading of the Bible, extreme poverty of the ministers, lamentable state of ignorance both in the church and in the schools, spiritual life hardly perceptible—such are the main features of the picture given of the state of the two millions of Protestants, either Lutherans or Reformed, who are to be found in Hungary. A few facts, however, show that lately the Spirit of God has been at work there, and that as regards religion, there is still hope for Hungary.

The report upon the Jews was written by a converted Jew, the Missionary Hausmeister. In a retrospective review of his nation's history, Mr. Hausmeister stated that the ancient Church of Jerusalem had for bishops fifteen converted Jews. Afterwards the corruptions of the church, and the persecutions inflicted upon Jews by the Christians, caused the Jews to look with horror upon Christianity. Yet, now and then, some of them, before and after the reformation, embraced the gospel. But no missionary effort was made in their favor until the beginning of the 17th century. Since then many societies have been founded to evangelize them; among which may be mentioned the following: 1st. London Society, with 33 chief stations, 98 missionaries, 50 of whom are converted Jews. In the Duchy of Posen, there are 8,000 Jewish children in the Society's schools; there are 2,000 converts in Berlin, and several thousands in England. 2d. Berlin Society; 3d. Scotch Missions; 4th. British Society; 5th. The Societies of Westphalia, Basle, and Strasbourg.

FRANC PARLEUR.

RELIGIOUS CHARACTER OF RANDOLPH.

The following letter, addressed by John Randolph to his half brother, the Hon. St. George Tucker, on the death of his eldest son, will be new to most of our readers. It was recently found by Judge Tucker, of Va., among the private papers of his father, and by the consent of the family, was published in the *Washington Union*:—

"Did you ever read Bishop Butler's Analogy? If not, I will send it to you. Have you read THE Book? What I say upon this subject I not only believe, but I know to be true—that the *Bible*, studied with an humble and contrite heart, never yet failed to do its work, even with those who from idiosyncracy or disordered minds have conceived that they were cut off from its promises of a life to come.

"'Ask, and ye shall receive; seek, and ye shall find; knock, and it shall be opened unto you.' This was my only support and stay during years of misery and darkness; and just as I had begun to despair, after more than ten years of penitence and prayer, it pleased God to enable me to see the truth, to which until then my eyes had been sealed. To this vouchsafement I have made the most ungrateful returns. But I would not give up my slender portion of the price paid for our redemption—yes, my brother, *our* redemption—the ransom of sinners—of all who do not hug their chains, and refuse to come out from the house of bondage;—I say that I would not exchange my little portion in the Son of David for the power and glory of the Parthian or Roman empires, ~~as described by Milton~~ in the temptation of our Lord and Saviour;—not for all with which the enemy tempted the Saviour of man.

"This is the secret of the change of my spirits, which all who know me must have observed within a few years past. After years spent in humble and contrite entreaty that the tremendous sacrifice on Mount Calvary might not have been in vain for me—the chiefest of sinners—it pleased God to speak His peace into my heart—that peace of God which passeth all understanding to them that know it not, and even to them that do. And although I have now, as then, to reproach myself with time misspent, and faculties misemployed; although my condition has on more than one occasion resembled that of him who, having one evil spirit cast out, was taken possession of by seven other spirits more wicked than the first, and the first also; yet I trust that they, too, by the power and mercy of God, may be, if they are not, vanquished.

"The existence of atheism has been denied; but I was an honest one. Hume began, Hobbes finished me. I read Spinoza and all the tribe. Surely I fell by no ignoble hand. And the very man (——) who gave me Hume's 'Essay upon Human Nature' to read, administered 'Beattie upon Truth' as the antidote! Venice treacle against arsenic and the essential oil of bitter almonds—a bread and milk poultice for the bite of the cobra Capello!

"Had I remained a successful political leader, I might never have been a Christian. But it pleased God that my pride should be mortified; that by death and desertion I should lose my friends; that * * *. The death of Tudor finished my humiliation. I had tried all things but the refuge to Christ; and to that, with parental stripes, I was driven.

"Throw Revelation aside, and I can drive any man by irresistible induction to atheism. John Marshall could not resist me. When I say any man, I mean a man capable of logical and consequential reasoning. Deism is the refuge of those that startle at atheism, and can't believe Revelation; and my ——, (may God have forgiven us both!) and myself used, with Diderot & Co., to laugh at the deistical bigots who must have milk, not being able to digest meat.

"But enough—and more than enough—I can scarcely guide my pen. I will, however, add, that no lukewarm seeker ever became a real Christian; for 'from the days of John the Baptist until now, the kingdom of heaven suffereth violence, and the violent take it by force;'—a text which I read five hundred times before I had the slightest conception of its true application."

THANKSGIVING.—This appointment has now been made in the following States:—

Virginia, Nov. 15; Maryland, Nov. 15; Florida, Nov. 22; Pennsylvania, Nov. 22; Ohio, Nov. 22; Illinois, Nov. 22; Iowa, Nov. 22; Maine, Nov. 22; Delaware, Nov. 22; New Hampshire, Nov. 29; Massachusetts, Nov. 29; Connecticut, Nov. 29; Rhode Island, Nov. 29; New York, Nov. 29; Missouri, Nov. 29; Wisconsin, Nov. 29; Michigan, Nov. 29; Texas, Nov. 29; Indiana, Nov. 29.

"MY ANGEL LOVE."

Mr. Willis thus introduces an unpublished poem of the late Mrs. Emily Judson, in the *Home Journal*:

There is a poem, written by one of our foster children of genius, of which I am reminded by this question of angelic aid to our mortal imperfectness of reach. I am not sure that it has ever been published. "Fanny Forrester" wrote it, and it has been among my manuscripts till I have learned its inspired harmonies by heart. Even if it be found elsewhere in print, however, it will not be unrefreshing to read, (for a change,) a bit of the old-fashioned poetry, that has in it both meaning and music. The widowed heart of the gifted one—with her apostle husband just gone before her to heaven—thus exquisitely tells the story of their earthly love and its still lingering "hold of hands:"

I gazed down life's labyrinth,
  A wildering maze to see,
Crossed o'er by many a tangled clew,
  As wild as wild could be;
And as I gazed in doubt and dread,
  An angel came to me.

I knew him for a heavenly guide—
  I knew him even then,
Though meekly as a child he stood,
  Among the sons of men—
By his deep spirit loveliness,
  I knew him even then.

And as I laid my weary head
  Upon his proffered breast,
And scanned the peril-haunted wild,
  From out my place of rest,
I wondered if the shining ones
  Of Eden, were more blessed.

For there was light within my soul,
  Light on my peaceful way,
And all around the blue above
  The clustering starlight lay;
And easterly I saw upreared
  The pearly gates of day.

So hand in hand we trod the wild,
  My angel love and I,
His lifted wing all quivering
  With tokens from the sky;
Strange my dull thought could not divine
  'Twas lifted to fly.

Again down life's dim labyrinth
  I grope my way alone,
While, wildly through the midnight sky,
  Black, hurrying clouds are blown;
And thickly in my tangled path,
  The sharp, bare thorns are sown.

Yet firm my foot, for well I know
  The goal cannot be far,
And ever through the rifted clouds,
  Shines but one steady star—
For, when my guide went up, he left
  The pearly gates ajar.

In those last two unsurpassed lines—lines in the golden cadence of which lay the lark-song of her own then dawning morning in heaven—Emily Judson has expressed the faith for which the imaginative world is now zealously contending—*spirit-vision across the grave*. I should be reluctant indeed to relinquish my hold, instinctive rather than philosophical though it be, of faith so precious.

DISCUSSION.

It seems, after having discussed much and long on very many questions, that it has become, at length, a fairly mooted question, whether it is right to discuss at all, in the style or range of a free, whole-souled debate. And, Messrs. Editors, we would crave the insertion of the following thoughts, which lately appeared in the *Independent*, from the pen of the Rev. H. W. Beecher, for the benefit of all such as are in trouble on this point. There is the ring of a true, manly, as well as Christian spirit about his suggestions, which we admire.

The Benefits and Dangers of Discussion.

There is no deception more natural to combative men, than to suppose that religious growth requires storms of agitation, and none more deceptive to timid and inert men, than to suppose that religious growth requires perfect quiet. What the first mean by aggitation is quarrelsomeness; what the second mean by quiet is a slumberous rest—not tranquility, but spiritual lassitude and dreamy indolence.

No agitation is wholesome which violates the moral sentiments, and no quiet is desirable which leaves the moral feelings asleep. How to steer between these extremes is the great art of right conduct in public discussions.

Some men love discussion for the relish of its excitement, for its pungent passages, for its intellectual zest. But there are others who have an indiscriminate horror of all controversy. A passage at arms upsets their nerves, and fills them with the most dismal forebodings. They deprecate excitement. They tremble over imaginary alienations among brethren, and untold spiritual disasters.

The truth of Christ is a fire. When it exists in life and power it will search out the hearts of men, and try men's ways. It will put every human device into the furnace, and burn up the dross and bring forth the gold purified. The soundest principles, the most undoubted facts, the most prudent measures, the wisest counsels, and the most beneficent institutions, require discussion. They need from time to time to be summoned to answer for their life. In the hands of men all things gather moisture and mold. The dust of life gathers upon them. A thousand motes of mischief steal imperceptibly into the crevices. The truths of a hundred years since become lies in the way we use them. The institutions which set men free in one age, or protected their liberty, become, by insensible change of circumstances, or administration, the enemies of liberty and the instruments of oppression.

Nothing could be more dangerous to the public welfare than the prevalence of a doctrine that discussion is inimical to religion and liberty. It is the safeguard of both. The doctrine of quietism, in this respect, is the first article of the priest's and tyrant's creed. While every step of advance, in religion, in morals, in liberty, secular or spiritual, in education and civilization, has been made by a violation of this false doctrine of peace, and by a sharp application of the laws of agitation.

The truer a thing is, the sounder an institution, the better will they appear under searching investigation.

When men are afraid to hear doctrine or dogma discussed, either they are dozing and do not wish to awake, or else they have no faith in their doctrine, and fear to have it explored.

Nothing more can be required to prove that an institution needs serious investigation, than that its managers are unwilling to have its affairs examined and discussed. Where its officers are close-mouthed and dignified; where its friends answer facts and arguments by lifting up their hands in horror of discussion, and go about deprecating agitation, praising peace, longing for peace, praying for peace, it is high time to bring them to a rigorous account. It ought to be enough to condemn any measure or institution, that it is unwilling to bear examination. There is nothing on earth so good that it does not need vigilant scrutiny.

Neither is it for the institution itself to say how often, or how closely, examination shall be made. It should be made just as often as there is any sensitiveness among its managers, and until the community from whence it draws its support are entirely satisfied. And if such a course tends to undermine the confidence of the community in an institution, then that effect is conclusive of the necessity which there was of fiery, trying, and rigorous searching.

There never will be peace while there is wrong. There never will be peace so long as liberty of speech is abbreviated or punished. And wherever discussion becomes odious, tyranny is not far off.

But, on the other hand, every Christian who is called to the work of discussion, or controversy, should feel himself specially required to put on the whole armor of God. The Apostle directs us to contend earnestly for the faith, but not quarrelsomely, not angrily. Nay, we are commanded in meekness to instruct those who oppose themselves, and to speak the truth *in love*. All irritating sharpness, all questions or imputations of motives, all anger and ungracious violence, is to be laid aside. Every good cause deserves not alone good arguments from its defenders, but the glory of a noble spirit. Nothing is more offensive to the spirit of Christianity, than the unfairness often witnessed among Christian writers, the disposition to take advantage of antagonist, the suppression of whatever might do him good, the exaggeration of whatever might damage him, the attempt to misrepresent, and, especially, that spirit which is willing to abridge the liberty of reply.

We are sorry to believe that Christian men have as yet formed less honorable canons upon these matters than men of the world, and the columns of religious newspapers have exhibited as flagrant breaches of truth, honor, and generosity, as can anywhere be found.

When controversies are in progress, good men become impatient, and even exasperated; because, it is said, they promote ill-will and not charitablenesss. The remedy is, not the suppression of controversy, but of its ill temper. If a man is writing in a bad spirit, let those who have love deep enough to float advice in, go to him and labor with him. If a pastor is violating the spirit of the gospel which he is set to preach, to his own brethren he should be held to account. The spirit of a man should be held to account, as much as the spirit of an institution.

In our own day there are many controversies and much excitement. We do not desire that there should be one discussion less. But there are peculiar reasons why it should not be divisive and embittered. * * *

It is in vain to seek a remedy for this danger by dissuasions from controversy. There is something stronger than controversy in the air. There is a Divine Providence. Controversy is an effect. It is only the *spirit* that we may control, and that ought to be controlled for Christ's sake, for our own, and for the sake os our whole land.

BAXTER AS PASTOR AND WRITER.

Every intelligent Christian is familiar with the name of Richard Baxter as the author of the "Call to the Unconverted," and of the "Saint's Everlasting Rest." Every intelligent Christian knows something also of the rare fidelity of Baxter in his pastoral labors at Kidderminster. Yet few have any adequate idea of the voluminous and diversified publications of Baxter while in the pastoral office, both at Kidderminster and in the parish of St. Martin. As a pastor, Baxtor abounded in labors for the spiritual good of the people of his charge. His "Reformed Pastor," drawn from his own experience in the pastoral office, is published by the American Tract Society as a *vade-mecum* for pastors in our time. No better manual of pastoral duty—not excepting Vinet's admirable treatise—is extant in any language, or could be furnished this day with the accumulated experience of two hundred years.

What were the labors of Baxter in the pulpit and from house to house, he himself has told us in his touching record of "fourteen years' liberty in sweet employment," at Kidderminster. We give the extract at length:—

"Before the wars, I preached twice each Lord's day; but after the war, but once, and once every Thursday, besides occasional sermons. Every Thursday evening, my neighbors who were most desirous, and had opportunity, met at my house, and there repeated the sermon; afterwards they proposed what doubts any of them had about the sermon, or any other case of conscience; and I resolved their doubts. Last of all, I caused sometimes one and sometimes another of them to pray, to exercise them; and sometimes I prayed with them myself; which, besides singing a psalm, was all they did. Once a week, also, some of the younger sort, who were not fit to pray in so great an assembly, met among a few more privately, where they spent three hours in prayer together. Every Saturday night, they met at some of their houses, to repeat the sermon of the former Lord's day, and to pray and prepare themselves for the following day. Once in a few weeks, we had a day of humiliation on some occasion or other. Two days every week, my assistant and myself took fourteen families between us, for private catechising and conference; he going through the parish, and the town coming to me. I first heard them recite the words of the catechism, and then examined them about the sense; and, lastly, urged them, with all possible engaging reason and vehemency, to answerable affection and practice. If any of them were stalled through ignorance or bashfulness, I forbore to press them any further to answers, but made them hearers, and either examined others, or turned all into instruction or exhortation. I spent about an hour with each family, and admitted no others to be present; lest bashfulness should make it burthensome, or any should talk of the weakness of others; so that all the afternoons on Mondays and Tuesdays I spent in this way, after I had begun it, (for it was many years before I did attempt it,) and my assistant spent the morning of the same day in the same employment. Before that, I only catechised them in the church, and conferred occasionally with an individual.

"Besides all this, I was forced, five or six years, by the people's necessity, to practice physic. A common pleurisy happening one year, and no physician being near, I was forced so advise them to save their lives; and I could not afterwards avoid the importunity of the town and country round about. Because I never once took a penny of any one, I was [illegible] patients; so that almost twenty would be at my door [illegible]; and though God, by more success than I expected, so long encouraged me, yet, at last, I could endure it no longer; partly because it hindered my other studies, and partly because the very fear of miscuring and doing any one harm, did make it an intolerable burden to me. So that, after some years' practice, I procured a godly diligent physician to come and live in the town, and bound myself by promise, to practice no more, unless in consultation with him, in case of any seeming necessity; and so with that answer I turned them all off, and never meddled with it again."

Thus systematically and laboriously was he employed as the physician both of soul and body. But besides these parish labors he enumerates others connected with the interests of the church.

"Every first Wednesday in the month was our monthly meeting for parish discipline; and every first Thursday in the month, was the ministers' meeting for discipline and disputation. In those disputations it fell to my lot to be almost constant moderator; and for every such day, I usually prepared a written determination; all which I mention as my mercies and delights, and not as my burdens. Every Thursday, besides, I had the company of divers godly ministers at my house, after the lecture, with whom I spent that afternoon in the truest recreation, till my neighbors came to meet for their exercise of repetition and prayer."

The results of his labors were wonderful. His congregation so increased, that though the church was very commodious, five galleries were built to accommodate the people. When he first went to Kidderminster, about one family in a street worshiped God and called upon his name; and when he came away there were some streets "where there was not one family that did not so." All must own that the diligence, the faithfulness, and the success of Baxter as a preacher and a pastor, fully met the highest requirements of the pastoral office.

And yet at the same time that he led such a life of devotion as a pastor, and lived in such near communion with God, he wrote and published so many works that his biographer tells us that he seems "to have lived only in *the atmosphere of a printing-office*." And Baxter himself says, "all these my labors (except my private conference with the families) even preaching and preparing for it, were but my recreation, and, as it were, the work of my spare hours, for my writings were my chief daily labor." During his fourteen years residence at Kidderminster he published fifty-seven distinct works, several of which were large quarto volumes. Among these were the "Call," the "Saint's Rest," the "Reformed Pastor," the "Holy Commonwealth," and many others entirely separate from his regular pulpit preparations.

Besides a great number of doctrinal and practical treatises, he published many controversial tracts. Baxter was foremost in the controversies of his time; controversies about conformity, popery, antinomianism, baptism, Quakerism, Millennarianism; on all which subjects he wrote with great learning and zeal.

He also wrote many and able political tracts, so that some who had occasion to feel the power of his pen, denounced this holy and devoted pastor, as secular, a political adventurer, traveling out of his own parish and meddling with things foreign to his calling. He was even accused of treason, though he declares that he "thought it not treason to say that God's law was above the king." At last he went to prison for conscience' sake and the Gospel's.

We find that if we should fill the editorial page of the *Independent* every week from the writings of Baxter, it would require fifteen years to publish all his works in our columns; i. e., the labor bestowed upon this journal by all concerned in writing its editorials, would only equal in fifteen years the labors of Baxter as an author. Should we give up one-half of our columns every week to the publication of his writings, it would take nearly four years to complete the work! The industry and zeal of such a man may well put to shame our feeble services. This faithful and devoted *pastor*, preached twice every week, visiting from house to house, yet wrote so voluminously upon the questions of his time, that these labors were but his recreation.

[Independent.

ETIQUETTE.—The National *Intelligencer* has a correspondent who produces a series of numbers on the subject:

1. Before you bow to a lady in the street permit her to decide whether you may or not, by at least a look of recognition.
2. "Excuse my gloves," is an unnecessary apology, for the glove should not be withdrawn to shake hands.
3. When your companion bows to a lady in your company, always bow to him in return.

Prof. Tyler enumerates the names of forty physicians who perished at Norfolk and Portsmouth since the 8th of July.

"FREE DISCUSSION."

"One of the Subscribers," in a communication which lately appeared in our columns, reprobates the idea of giving unrestricted license to correspondents to set forth "what they please, on whatever subject," and thinks that "a discreet censorship should be exercised by the editors," &c. We are happy to coincide in this view. And while we have no particular relish for the distinction of revealed truth into "essentials and non-essentials," we do regard some points of doctrine as so vital to godliness, that it pains us greatly when any of our brethren demur to their truth. We believe that the error which impugns these vital points ought either to find no place at all in our denominational organ, or to find admission only for the sake of being combated. Indeed, we are not sure that the latter alternative ought to be conceded, in all cases. An everlasting round of controversy is not profitable; nor will the most masterly refutation of error always suffice to cure the evil which it effectuates. If mankind were always eager for the truth, if they loved it, and esteemed it more precious than rubies, it would be otherwise. But it is too true, that "men love darkness rather than light." They reject the truth, not so much because it is not clearly presented, and successfully vindicated, as because it opposes their prejudices; and we very much doubt the expediency of presenting to the readers of a family newspaper, or to the members of a miscellaneous congregation, errors which they had otherwise never heard of, merely for the sake of confuting them.

In these days of free inquiry, the stern rigidness of our forefathers is not unfrequently reflected upon with much severity. That they erred somewhat, we do not doubt; but we are of opinion, that the tendency of the present age is to an extreme of latitudinarianism. The maintenance of sound doctrine has come to be considered a matter comparatively unimportant. In the affectation of exalting moral rectitude, "the faith once delivered to the saints," the foundation of all true morality, is guarded with loose care. A recusant public sets its face against the cardinal principles of Christianity; the literary and political journals abound with insinuations to the disparagement of old-fashioned Bible doctrine; talented speakers go about the country lecturing in behalf of what is called 'reform,' and covertly hinting that the Church of Jesus Christ is a worn-out, superannuated institution; the so-called "benevolent societies" are magnified as the agencies which are to redeem mankind, while a sort of Good-Samaritanism is glorified, as if it answered all the purposes for which the plan of salvation was instituted; and in the prestige with which the active spirit of the age invests these movements, the vital elements of Christianity seem to be forgotten.

Many well-intentioned Christians are carried away by these things. They allow themselves to be fascinated with the scintillations of infidel wit, and come back from hearing their declamations, so charmed with the striking expressions and imagery in which the seeds of infidelity are wrapped up, that they can scarcely talk, or think, of any thing else. From such men they take the first lessons of a system destructive of their communion with God; but, like Samson shorn of his locks, they go out as at other times to shake themselves, not knowing that the Lord has departed from them. They suppose themselves to be in possession of all the elements of true religion still, and are rather offended if the bald spots which the Philistines' shears have made upon their heads should be alluded to. And if they send communications to the religious paper smacking of the company they have been in, or stand up to preach teeming with quotations from Theodore Parker and the popular reformers, whose zeal for mere Natural Religion has conjured them into the belief that there is no substantial disagreement of their pantheistic philosophy with the Christianity of the New Testament, and should therefore be subjected to "a discreet censorship," they at once complain that free discussion is inhibited.

As a general thing, we do not calculate to allow important errors of our correspondents to pass unnoticed. When our residence was in the immediate vicinity of the press, we made it our aim to give "the bane and antidote," both together. Not many communications impugning our views were given to the readers of the *Recorder*, without being accompanied by editorial strictures, in the same paper. As we are now situated, we are obliged to wait. But while we are waiting for, and anxiously expecting, a suitable pause to the arguments of our correspondents, before we begin to review them, we confess that some of them have a peculiar faculty of keeping us in uncertainty whether they have finished their subject, or ever intend to.

T. B. B.

ENCOURAGING RETROSPECT.—It is now twenty years (says Dr. Baird) since I came the first time to the old world, for the purpose of promoting, in my humble, though imperfect way, the things of our Lord. During that period I have made seven visits to Europe, and many portions of it I have visited often, and every country in it at least once. I can say, with truth, that I believe that a great and good work has been going forward, not equally, but really, in every Protestant country, and in several Roman Catholic countries, such as France, Piedmont, Belgium, and Ireland. There is a good movement in Bohemia, Moravia, and other German parts of the Austrian empire, in favor of the evangelical faith among the dispersed and oppressed Protestants. In the central parts of Russia truth has been making some progress. Even in Spain, especially at Madrid and Barcelona, a good work is in progress, about which I may not speak more particularly.

THE RESURRECTION—NO. 2.

It is still a subject of inquiry as to how the dead are raised up, and with what body do they come? These are questions which will probably never be satisfactorily answered until the solemn and grand event takes place.

In regard to the first part of this inquiry, I think we should be satisfied in referring it altogether to Him who is fully competent to perform all He has engaged to do. It should not be thought a thing incredible, that God should raise the dead; and we should be satisfied with his doing it in his own way. We cannot tell what means he employed in creating man originally. He spake, and it was done. It is "through faith we understand the worlds were formed by the word of God; so that things which are seen were not made of things which do appear." Heb. 11: 3. In regard to the last clause of this passage, *Dr. Doddridge* says: "It is certain no visible cause could produce those things, which would in effect be to suppose them to have produced themselves; we therefore refer them by faith to a divine, invisible original." *Chrysostom* thus expresses it: "The things which exist were made of things not existing." So *Bishop Pearson*, and most other divines. In like manner, I see not but we must refer the resurrection to the same divine, invisible, original First Cause, who can as easily restore the dead to life, as he originally made the worlds of things which did not previously exist, and as he made man of the dust of the earth. All things are possible with God. It is by faith we understand there will be a resurrection of the dead by the word of God.

Nor shall we be more successful in the second part of this inquiry, namely, With what body do they come? It is certain that in the resurrection bodies of some kind will be raised. There is a natural body, and there is a spiritual body; but in what particulars, and to what extent, they differ, we are not informed. Our present bodies are natural and corruptible; but they will be raised spiritual and incurruptible. The Apostle Paul explains the nature of the resurrection by comparing it to the production of grain from a single seed which is sown. This comparison seems to have been borrowed from what Christ said in John 12: 24—"Except a corn of wheat fall into the ground and die, it abideth alone; but if it die, it bringeth forth much fruit." But it can scarcely be supposed, that either Christ or the Apostle designed to represent the resurrection of the dead as being produced upon the principle of vegetation; but as being in some respects analogous to it. The grain of wheat brings forth many grains of the same kind, but the body is sown mortal, earthly, and corruptible; in the resurrection it is raised immortal, spiritual, and incorruptible, and only its own body.

As to the identity of the body, it may ever be an insuperable difficulty for us to understand. In the living body, we find no difficulty in proving its identity; but we ascertain the fact mainly from its connection with the same mind. The change which is continually going on in the physical body, through a course of seventy or eighty years, in size and form, by the operations of nature, accidents, and disease, would render it impossible to prove the identity of an individual after the lapse of years, but from the residence of the same mind, and the consciousness of individuals. And as God gives to every body its proper flesh, so will he associate with every human mind its proper body, whether it be composed of many, few, or none of the particles of which the human body is composed at death. It will be a proper body, adapted to its new affinity to spiritual beings.

In regard to the philosophical objection against the resurrection of the body and its identity, on the ground that the substance of the human body is constanly changing during life, *Mr. Lock* disposes of it upon the principle that personal identity consists in self-consciousness—in the power of considering itself the same at different times and places. By this, every one is to himself what he calls self, without considering whether it be continued in the same or different substances, so that it is the same self now that it was then, and it was by the same self which now reflects on an action, that the action was performed. It is this personal identity that is the subject of reward or punishment, which we have observed to exist in different successions of matter; so that, to render the rewards and punishments just and pertinent, nothing is necessary but that we rise again with such a body as that we retain the consciousness of our past actions. It appears to me that the best method of disposing of the question "with what body do they come?" is to refer it to the risen body of the Lord Jesus. St. John says, (1 John 3: 2,) "It doth not yet appear what we shall be; but we know that when he shall appear, we shall be like him." St. Paul says, Phil. 3: 21, that Christ "shall change our vile body, that it may be fashioned like unto his glorious body." The raised body of Jesus, and the changed bodies of Enoch and Elijah, are, without doubt, specimens of what the raised bodies of the saints will be in the resurrection. These bodies had an organization in some respects similar to what they had while in this world, yet so changed as to suit their new relation to the spirit world. It is certain that the Saviour' had flesh and bones after his resurrection, as he testified to his disciples. Luke 24: 29. He said to them, "Behold my hands and my feet, that it is I myself; handle me and see, for a spirit hath not flesh and bones, as ye see me have." Although it is said, 1 Cor. 15: 50, that flesh and blood cannot inherit the kingdom of God—that is, in their present corrupt state—yet *Mr. Fuller* says, "Our bodies, after they are raised from the dead, may be flesh and blood, and yet not what they now are."

From the foregoing remarks, it seems a fair conclusion, that at the resurrection the spirits will be united to bodies which will have flesh and bones. It cannot be a matter of consequence, so far as we are concerned, whether any part of what is buried be raised again. God will see that all will be accomplished according to his promise. No person is warranted in saying that there will be nothing quickened that dies, or that nothing will be raised that is buried. The language used by the inspired writers seems to be intended to impress upon the mind the idea, that at a set time, "the Lord himself shall descend from heaven, with a shout, with the voice of the archangel, and with the trump of God, and the dead in Christ shall rise first." 1 Thess. 4: 16. "For the trumpet shall sound, and the dead shall be raised incorruptible, and we shall be changed." 1 Cor. 15: 52. Let no Christian stagger at the promise of God, as if it were a thing incredible, that God should raise the dead; for why should it be more difficult than that he should raise up children to Abraham from the stones of the street, or restore to organized life Abraham's son Isaac after he was burnt to ashes; or produce from nothing the universe of which our earth, when compared with the small part of it we can see, is such an insignificant item. The religion of Jesus teaches its adherents to walk by faith, and not by sight. Whatever God promises must be believed, though it be involved in mystery and seeming contradictions; for we see through a glass darkly, and we know only in part; but when that which is perfect is come, then that which is in part shall be done away.

I am aware that the literal accomplishment of this event is objected to upon the ground that the Scriptures do not say that *dead bodies shall be raised*. If it were really so, I see not that anything would be gained to strengthen the objection to the literal resurrection of the dead. The Scriptures do not teach us that any thing but the mortal body perishes by natural death, and nothing but the dead body is buried. Now, if the Scriptures teach us that the dead shall be raised, it is equivalent to saying that the dead bodies shall be raised. Nothing but the body is dead, and therefore nothing but the body can be made alive. Nothing but the body can be said to sleep in the grave. If, therefore, the promised resurrection is to have nothing to do with dead bodies, or the grave, why are we at all referred to them? Why are we told that the graves shall be opened, and that the dead shall arise? But I do not think that this objection is well laid. The prophet Isaiah says something very near to it. In 26: 19, he says, "Thy dead men shall live; together with my dead body shall they arise." And the prophet Daniel says, 12: 2, "Many of them that sleep in the dust shall awake, some to everlasting life, and some shame and everlasting contempt." This cannot be fairly construed to signify anything else than that dead bodies that sleep in the dust shall awake. Some remarks in the *Cottage Bible* on this place seem quite appropriate, on which account I here insert them:—

"We have been obliged to place the concluding verses of the preceding chapter among the mysteries which yet 'remain to be fulfilled' in the latter ages, and we are still hurried on in the vortex of Scripture prophesy to the second coming of our Lord, to the resurrection of the dead, and to the day of judgment. The first verse brings us to the eve of the general resurrection and final judgment, when the books are opened, and all found written in the book of life (many) shall be delivered. But hark! the trumpet sounds, and the graves are opened; and the *many*, the multitude of them who sleep in the dust of the earth, are awakened, some to everlasting life, and some to everlasting contempt and shame."

Our Lord seems to refer to these words of the prophet Daniel in John 28: 29. "Marvel not at this," he says, "for the hour is coming in the which all that are in their graves shall hear his voice, and shall come forth," &c. This is equivalent to saying, that all the *dead bodies* that are in their graves shall hear his voice and come forth. What is in the graves but dead bodies? No other construction can justly be put upon these words.

But omitting many other texts relating to this subject, which cannot be consistently explained in a different sense, I will come directly to the resurrection of our Lord. If the body of Jesus was literally raised from the dead, (and I should think that none but an infidel would deny it,) then the bodies of the saints will in like manner be raised; and if the bodies of the dead be not raised, then the body of Jesus is not raised, and according to St. Paul's reasoning, we are all false witnesses of God; our preaching is vain, and the faith of the believer is vain, and he is yet in his sins; and those who have fallen asleep in Christ, are perished.

A denial of the resurrection, literally, of the dead, notwithstanding the incomprehensible nature of it, is therefore equivalent to a denial of the gospel as the power of God unto the salvation of those who believe it. W. B. M.

"SABBATH BREAKING."

A recent number of the *American Messenger*, a paper published by the American Tract Society, contained the following:—

"A short time since, as the Sabbath train was standing at the depot of one of our Western New York villages, a young man came hastily up, and took his seat in the cars, remarking, as he did so, that he almost feared to go on that route, so many accidents had of late occurred on it. His destination was a distant city. Bright prospects were before him. He was there to marry a wealthy lady; and after a wedding tour, they were to return to a beautiful home made ready and waiting for them. The Sabbath train passed on, disturbing the peace and quiet of villages and communities, through which its course lay. Suddenly there was a shock, and in an instant several of the cars were thrown off the track, and dashed over a high embankment. Many were injured, but the young man who had taken his seat but a few minutes before, fearing more for his life than for the law of God, alone was killed. Instantly had death done its work, and one of that Sabbath-breaking company had gone to stand before God in judgment."

The *Boston Investigator*, an infidel paper, copies the above, and accompanies it with rather pointed remarks, from which we clip a paragraph:—

"So, because a young man took a ride on a Sunday, he broke 'the law of God,' and the inference we are to draw from it is, that God killed him! We were not before aware that God had established such a 'law;' but if the Rev. Editor refers to the Scripture command to keep the Sabbath, he has mistaken the day, for, according to the Scriptures, the Sabbath is *Saturday* and not Sunday. It is the seventh day, and no other, that is to be observed as a Sabbath, if we are to take the Bible as a guide upon that subject."

LETTERS FROM PALESTINE—NO. 18.

JERUSALEM, Aug. 31, 1855.

The fact that Sir Moses Montefiore, at the invitation of the Pasha, went into the Mosque of Omar, shows that some change is coming over the Jewish mind, even though it be no more than a change from superstitious notions. It being regarded as a holy place, the Jews were a little horrified that one, to whom they naturally look for support, should presume to set his foot within the Temple ground. The hospital ground has been broken, and the work commenced. Passing there the other day, I saw about fifty Jews at work quarrying stone and building a wall. I was pleased to see among them one for whom I wrote a letter to Sir M., asking employment for him. He has been a sufferer indeed, but now, though still feeble, he looks more cheerful.

A missing package of the *Recorder* has just come to hand. On the wrapper is written, "*Missent to Ceylon*," possibly to *Jaffna*, Ceylon. The address is legibly written, and ought not to have occasioned any mistake of the post-office; still, friends are requested to write the address of our letters and papers so plain that a Frenchman, and even a Dutchman, may not be liable to mistake its intended direction. These papers are dated May 3d and 10th, and make my file complete for several months past. News from home is quite rare with us, except through the *Recorder*. If the loved ones who read this would but write us occasionally, we should esteem it a great favor.

My labors press so constantly upon me, that I find it very difficult to get time to write for the brethren. Though obliged frequently to write in haste, I endeavor to write truthfully, and so to plead the merits of the cause as shall be acceptable to Him whose commission to His church is: "Go ye into all the world, and preach the Gospel to every creature." The work grows more and more interesting, and the hope is reasonably indulged, that ere long precious fruit will appear, to the glory of God. But mountains of prejudice and false doctrine stand in the way; to overcome, yea, to pull down the strong-holds of sin, requires time; but the weapons of our warfare are mighty; the word of God will not return unto Him void. It will in due season, by the life-giving power of the Spirit, convince of sin and lead to Christ. Do pray for us, dear brethren and sisters, that through our humble instrumentality the Word of the Lord may have free course and be glorified with us, even as it is with you.

Another opportunity presented itself, not long since, for the discussion of the Sabbath question. The conversation on both sides was conducted in a kind spirit, though each endeavored to do justice to the merits of his cause, and I hope was honestly seeking to know the truth as revealed in the Scriptures. The discussion lasted long enough to afford opportunity to say a good deal, and to go over much ground. The manner of it was as usual guided by the course pursued by my opponent—first, no Sabbath; then, a commemoration day; then, there is not much importance attached to the question, &c.; no matter where he goes, one must follow and prove all things, and show the truth of this position, and the folly of that, and secretly pray as he proceeds, that the Spirit of God may take effect and overturn this pillar of popery. God only knows what will come from these repeated discussions—a word here and there, and the scattering of Sabbath tracts, and such like labors, put forth in order to convict and convert men to love His holy day. We should hope that the seed sown in faithfulness and love will yet appear, to the honor and glory of the Lord of the Sabbath.

Twice, lately, I have had earnest conversations with a son of Abraham, in regard to the way of salvation. Taking a Hebrew Bible, and turning to Isaiah, we read the fifty-third chapter. "Of whom," said I, "does the prophet here speak—of himself, or of some other man!" "Ah, Signor, the Jews believe that Isaiah speaks of himself." "But how is this possible, when he says of this person, in verse ninth, 'He did no violence, neither was any deceit in his mouth?'" To this he made no reply. We then turned to the ninth chapter, and read the 6th and 7th verses; and then to the 7th chapter and 14th verse. This last seemed to trouble him. He had read with me much of the New Testament, and he saw at once the bearing of this verse. He frankly told me, that he seldom ever read any in this prophet. As he left me, I put up a secret prayer, that the veil might fall from his eyes, and he acknowledge Jesus as his only Saviour.

W. M. J.

THE PACIFIC RAILROAD CALAMITY.

We find in the *Independent* a letter from Rev. Dr. Post, of St. Louis, who was on the ill-fated excursion train on the Pacific Railroad. His description of the calamity is most graphic. We copy a few paragraphs:—

With words and thoughts more or less grave, but all jubilant, and through a region in sympathy of jubilation, we passed about one hundred miles to the Gasconade River, which this railroad crosses. As we approached the river, I was sitting in the car, the fourth I think from the engine; all around me men most eminent in professional and mercantile life, and in the political history of the region, variously engaged in gay or serious converse—trade, stocks, politics, morals, reminiscences amusing or sad, hopes and schemes for the future, the jest and pleasant laugh, or reflections grave, philosophic or religious, engaging us, as we looked around on each other's faces in an intense consciousness of life and a sense of perfect security, when lo! in a moment, that multitude, in horrid imbroglio, were struggling in the jaws of Death.

As we were thus in the fullness of life and enjoyment borne on, all at once there comes on the car an awful crash! instantly the car pitches forward! we feel the grasp of the Ruin-Demon tearing it with horrid clangor downward. One flash of thought. Here it is, the last moment! Eternity! Sweet home, wife, children—fading! the universe gone! God only left! If thy will it be, O God, I go! I go to Thee! One such flash of thought like lightning through the mind, and with it a sense of falling, and of things tumbling with us, and around us, and upon us; and then the stunning, hideous c-r-a-s-h, with blows innumerable, all over our persons, as we strike the earth! and the crash, crash, crash, till seven or eight cars, with their living freight, have taken the dreadful leap over and upon each other, crushing through that mass of ruin and of living flesh. It was all the work of a moment, and yet it seemed as if it would never end. I was so buried up and stunned that the sound came to me less distinctly through the superincumbent mass; others compared it to successive thunder claps. Oh, the relief when it stopped, and I felt I was yet alive! for the pressure on me was so great, I felt, a little more and I must die; and was momently expecting the plunge of another car upon us. The consciousness of a long time was gathered into that moment. Indeed, I can hardly tell how long I lay there crushed in darkness. I felt alone with God; that he was there and it was well. The prayer of Jonah flashed upon my mind. "Out of the bosom of hell I cry unto thee, O God. The depth has closed around me. The grave with its bars is about me forever. Yet I am *not* cast out of thy sight. I will look once more to thy holy temple." And He did bring my life up again from corruption. Blessed be His Holy Name.

God's hand warded from us the dreaded stroke. The hideous clangor was over, and it was for a moment still as the grave. I found myself under a mass of, I knew not what, crushed, prisoned, helpless, and almost stifled. I heard a voice near me cry out, "Thank God we are yet alive;" but there was no response save groans. Instantly it flashed upon me, we are in the river and I must drown; and momently I expected to feel the cold death-touch of the waters; but it came not. Then came a moving in the mass above me, mingled with the cries of the mutilated and the dying; I waited in awful anxiety until by the lightening of the pressure, I could gradually stir my limbs. With difficulty I extricated my person and rose to my feet. I had suffered a severe contusion on one limb, which nearly disabled me; my head was cut and bruised, my forehead gashed and scarred with hot iron—for the stove had fallen against me—and my face was begrimed with blood and ashes; but, oh, the glad thought that I was yet alive, and with no dangerous wound. As I looked around I found the wreck of a car in which I was, nearly empty of men. Behind me lay a man with bloody face, who called out to me by name as to one rising from the dead. Beyond was a poor youth with both legs broken, crying out for God's sake to help him; and below me toward the forward end of the car, was one still buried in the ruin and imploring to be extricated. I removed the rubbish as I could, and lifted him up. Beside him was one who had been killed instantly, and was already purple almost to blackness. All others I thought had gone or been removed. I got up to the rear end of the car, which was poised somewhat in the air, and looked forth. Familiar voices called to me as one from the grave. With the help of kind friends I descended, and we greeted each other as only those can do who are conscious of a common escape from an awful death. But what a scene there was around us! It was one frightful to remember. The bridge—a temporary tressel-work, not designed as a permanent structure—over the Gasconade River, had broken. The first span of it, fortunately not extending to the water's edge—had given way under the pressure of the engine and train. Had it been the next span, that over the water itself, the loss of life must have been fearfully increased. The engine had reached the first pier, some forty yards or more from the abutment—when it fell with the foremost cars, dragging those in the rear after them, till seven or eight cars had crashed one after another into the chasm between thirty and forty feet deep - while others farther back had tumbled sidewise down the embankment.

MISSIONARIES FOR CHINA.—A company of missionaries sailed from New York October 25th, on board the bark Maury, Capt. Fletcher, for Shanghai, China: Rev. John S. Joralmon and wife, to be connected with the mission at Amoy, of the Reformed Dutch Church, under the care of the American Board; Rev. J. R. Wight, of the mission of the General Assembly's Board at Shanghai, and Mrs. Sarah F. Blodgett and child, of the mission of the American Board in Shanghai.

BAPTISTS IN NEW JERSEY.—The anniversaries of the New Jersey Baptist Convention and Educational Society were held recently at Piscataway, continuing four days. The session was one of very great interest, representing all the Baptist churches in the State—about 110 in number. Sermons were preached by Rev. W. E. Cornwell, of Bridgeton; Rev. A. S. Patton, of Hoboken; and Rev. Dr. J. L. Hodge, pastor of the South Baptist Church, Newark. The Convention has expended some $3,500 the past year in aid of feeble churches; and it is an interesting fact, that since its organization—about twenty-five years ago—some 70 new churches have sprung into existence; and the additions to the churches have not been less than 18,600 by baptism alone. About $14,000 have been contributed by the churches the past year for the various objects of benevolence. D. M. Wilson, Esq., is President of the Convention, and Rev. J. M. Carpenter, Secretary.

The Educational Society, whose object is to aid young men in their studies for the ministry, has expended for this purpose the past year $1,500. It has now nineteen young men on its list of beneficiaries for this year, who are to receive $100 each. A very commendable interest is manifested in this object, and the churches are fast securing for themselves an able and soundly educated ministry. Rev. George Kempton, of New Brunswick, is the President, and Rev. Henry C. Fish, of Newark, Secretary. The young men are pursuing their studies at Rochester, Hamilton, and Lewisburg. Two of the beneficiaries have finished a complete course of study this year.

SUNDAY IN ENGLAND.—The gardens of Kensington palace are open as a public promenade on Sunday afternoons and evenings, and for some time past, military bands have played for several hours in the day. Large numbers of persons have been thus attracted. The number of visitors on Sunday, Sept. 16th, was 48,018, while on Sunday, Aug. 26th, an official statement shows that 61,458 persons entered the gardens by thirteen different gates. The music on Sunday is awakening considerable attention, and petitions to the Queen are in course of signature, praying that these public performances of music on Sunday may be discontinued. The prayer of the petition is urged on the ground, that these performances tempt many to forsake public worship—that it is opening the way to worse violations of the day—that they will encourage private musical parties—that by them the notion is strengthened that Sunday is intended for a day of idleness or pleasure—or, that the religious observance of the morning of the day is sufficient.

DR. FULLER AND THE BIBLE UNION.—The last New York *Chronicle* publishes the following letter from Rev. Dr. Fuller, bearing date "Baltimore, Oct. 19, 1855."

"Allow me, through your columns, to request the Board of the Bible Union to erase my name from the list of Vice Presidents of that Society. I thank my brethren for any regard for me indicated by this appointment; but it surprises me, as I am not, nor never have been, a member of the Bible Union.

"That our English Version of the Bible should be revised, and all errors corrected, I should suppose nobody would deny; and whatever may become of the Bible Union's Version, still the combined labors of learned men of different denominations will be a valuable acquisition. The work will be a rich accession to any theological library, even if it shall never be adopted as a standard version. I have, therefore, contributed to this enterprise, and am a member of a Revision Society here.

"But the Bible Union is engaged in other enterprises, as to which I express no opinion. And moreover, I have been so grieved and afflicted by the strifes and contentions which have sundered brethren who once loved each other, that I cannot allow it to appear—even for a moment—as if I am identified with either party to these deplorable, and, unless God interposes, interminable controversies.

"Your brother in Jesus, R. FULLER."

METHODISM.—The following paragraph from the *Presbyterian* contains matter for profitable reflection. Is the present state of Metodism attributable to its doctrines, or to its discipline, or to both?

"The decrease of Methodism, both in England and in the places of its earliest triumphs in this country, is a fact so remarkable as naturally to excite inquiry as to its causes. Its origin in the movements of Wesley, its rapid extension, its lively, animating spirit, the zeal of its ministry diffusing itself among the masses, are matters of history. Having arrived at its culminating point, the evidences of its decline are too obvious to admit of concealment. It does not appear that this retrogression is to be attributed to any force of opposition exerted from without. Methodism has enjoyed a fair field for its enterprise; it has never been the object of any peculiar persecution; it has enjoyed all the protection extended to other forms of religion, and yet without any visible abatement in the zeal of its promoters, it is losing its prestige and failing to make its vantage ground."

JEWISH ANNIVERSARY.—The Hebrew Benevolent Society of New York held its 34th anniversary on the 15th inst., at the Chinese Assembly Rooms. A company numbering from 250 to 300 partook of a sumptuous repast, which was followed by speeches, toasts, &c. About $4,500 was received by the Society last year, all of which was expended in the relief of 1600 applicants. Before the meeting broke up a call for subscriptions was made, and $4,000 was subscribed.

REVIVALS.—The N. Y. *Examiner* says that many churches in the Southern States are enjoying the reviving of the spirit. Nearly a hundred baptisms are reported the present week in seven churches of Georgia; eighty in four churches of Alabama; one hundred and four in four churches in North Carolina; five hundred in churches of the Tyger River Association, South Carolina; one hundred and eleven in four churches of Virginia.

RELIGIOUS INTELLIGENCE.

Rev. I. C. Barrett, rector of St. Mary's Episcopal church, Birmingham, has for some time past been holding week evening meetings in his parish, for the purpose of reading from the principal journals the war news of the day. In September, 700 working-men presented him with a *testimonial* of gratitude and esteem for having read to them on forty-two evenings. In acknowledging the testimonial, Mr. Barrett said, that having heard that working-men were in the habit of resorting to public houses for the purpose of hearing the news, he had commenced these meetings with the hope of withdrawing them from the expense and temptation of the public-house, and also with a view of improving their taste in reading. He further said, that he should watch the opportunity when peace arrived, which he hoped would be soon, to direct their attention to some of the higher subjects of literature.

Rev. Mr. and Mrs. Buel, of the Greek Baptist Mission, left Athens for the United States, *via Smyrna*, early in September. Their return is in consequence of measures taken by the Executive Committee for discontinuing the mission, in accordance with the views entertained by the Missionary Union, at its last meeting.

Rev. Mr. Rawson writes from Burns, N. Y., that the church in that place is now in the midst of one of the most blessed revivals he ever witnessed. "The work moves on with great stillness and solemnity, and several of our most prominent citizens—men of middle and advanced life—are rejoicing in hope."

The donations and legacies received by the American Missionary Union, in August and September, amounted to $18,222 39—making, for the first six months of the current year, $47,568 82, against $38,957 75 received in the corresponding period of 1854.

The Bishop of London acknowledges, through the *Times*, the receipt of the first half of a £1,000 bank-note from an anonymous donor, to be applied to the purposes of church extension in London.

The Patriarch of the Chippewa Indians was lately baptized, with his wife and three children, making more than forty of that tribe who have received the holy ordinance.

European News.

European news to Nov. 3d was received in New York, by the steamer Pacific, on the 15th.

The action of the British Government in sending a fleet to American waters, and thereby imperiling the friendly relations that exist between the two greatest commercial nations of the world, had created the most intense excitement throughout England, and the step was almost universally condemned as a rash and provocative act. It was alledged that the Mosquito question was the cause of the threatened rupture. The supposed misunderstanding between the two Governments had been exaggerated to such an extent that at the time the Pacific left Liverpool a statement was published in the Post of that city, and generally believed, that our Minister at London had demanded his passport. Happily, we are able to contradict such an absurd report on the direct authority of Mr. Buchanan himself.

The war news brought by the Pacific is unimportant. Nothing positive is given about the military operations in the Crimea, but the impression prevails that the campaign is closed for the season. It is imagined that the design of the Allied Commanders is rather to expose the Russian Army to the severities of Winter and cut off their retreat, than offer them battle.

Full details are published of the capture of Kinburn. The fire upon the devoted fortress is described as exceeding in intensity even that to which the Malakoff succumbed. Against a vastly superior force, the garrison of Kinburn contended bravely, but in vain, and, finally, conditions of surrender being offered by Admiral Lyons, and accepted by the Governor, the garrison, to the number of fourteen hundred men, marched out with the honors of war, and gave themselves up as prisoners. After the capture of Kinburn the Russians blew up the forts on Oczakow Point, anticipating an attack from the allied mortar vessels.

There is no later news from Kars. A rumor was current at Erzeroum, that the Russian General had demanded reinforcements to make another attack on the place. The Russians are said to have lost over nine thousand men in their late disastrous repulse before this fortress.

On the 24th September, a sqadron of the Allied fleet sailed, with 300 British infantry, under Major Hunter, and 600 French, on board, to destroy the Russian establishments at Fanagoria and Taman, with the purpose of depriving the enemy of his means of sheltering troops, during the coming Winter, and to procure materials for housing the Allied forces at Cape St. Pauls and Yenikalé. Simultaneously with this attack, a demonstration was made against Temriouk, by the Azoff squadron. Both operations were successful. The Allies destroyed and carried off quantities of building materials, and found, within the defences, about 70 disabled guns. No opposition was offered, and no loss was sustained.

According to Vienna letters, the Emperor of Russia was desirous of holding a personal interview at some place on the frontier with the Emperor of Austria, King of Prussia, and probably other potentates, with the view of coming to some understanding for the conclusion of peace.

Of the 1,910 British wounded in the assault on the Redan, 800 were shot or stabbed through the chest or upper part of the body.

A circular, published at Vienna, estimates the Turkish and Allied forces at 300,000 men, exclusive of the Turkish army of 24,000 men on the banks of the Daunbe.

Gen. Sir William John Codrington is appointed Commander-in-Chief of the British army in the Crimea in room of Gen. Simpson. His appointment is regarded favorably by the army and people.

Violent storms had been experienced along the Eastern coasts of Britain, causing considerable loss in shipping.

Among the passengers by the mail steamer La Plata, at Southampton, were Gen. Belzu, of Bolivia, on a tour, and the negro baron, Jean Baptiste Damier, appointed to represent the Empire of Hayti during the temporary absence of the Haytien Minister at London.

Sir Thomas Trowbridge, who had both limbs shot off in the Crimea, has just been united in marriage to Miss Gurney, of Norwich.

Among the items of general intelligence is the statement that Lord Stanley, son of the Earl of Derby, is to receive the appointment of Colonial Secretary, vacant by the death of Sir Wm. Molesworth.

Thirty-four political refugees have been ordered to leave the Island of Jersey by the British Government. Among the expelled are Victor Hugo and his sons.

The Fraudulent Legislature of Kansas—Duty of Congress.

It is very evident to all fair-minded people throughout the country, that the Legislature was elected by votes imported from Missouri, and that the actual settlers were overborne in the contest by that fraud; and although Gov. Reeder is estopped by his formal recognition of it, from taking this ground—a point he was called upon to decide by virtue of the Act of Congress—we yet feel persuaded that the fraud should induce the House of Representatives to reject the claims of Gen. Whitfield as a delegate. There is no question that the fraud of the election entered into the character of every act passed at Shawnee, and gave to them the peculiar and the bad complexion by which they are marked. By legalizing them, effect is given to the fraud, and its repetition is invited, there and elsewhere, in contests of the same character. The true principles of the Nebraska Act, which seeks to give to the people of the Territories the complete regulation of their domestic concerns, is overthrown by a Congressional recognition of an election for members of the Legislature, the result of which was due entirely to imported voters. The actual settlers of Kansas were not represented in that Legislature; they do not sympathize with its proceedings; they condemn its tone and its violence; and they repudiate its acts, as being in truth those of strangers, who came in, on the day of election, to shape the organization of the Territory so as to suit the institutions of an adjacent State. Governor Reeder, who had ordered that the Legislature should be held at Pawnee—the spot of his speculations in real estate—instead of taking firm ground against the legality of the election, recognized its validity, and sent in his Message, as Governor, to the Legislature thus elected. It is true that this recognition of them complicates the matter, inasmuch as he was the person named by the Act of Congress to make a decision; but, under the power to regulate the Territories conferred on Congress, that body may obviate the difficulty, by rejecting a fraudulent election, and remanding the whole question back for settlement by the people of the Territory. There are various reasons of an imposing character for this policy, some of which we proceed to present. 1. If the fraud shall be persisted in, it will keep alive a powerful organization having for its object to correct the difficulty, which will ultimately prevail, as indeed it ought to prevail, in overturning the fraud. 2. The public mind, which was excited in some quarters to a high pitch by applying the principle of the Compromise bill as respects Texas, to Kansas and Nebraska, (leading to unfriendly feeling between the North and South,) would return to its old and safe track, if this fraud were repudiated by those who appear to derive benefit from it, but who cannot, in the long run, owing to the inherent weakness and injustice of an attempt to maintain what is wrong. 3. The repudiation of the fraud would quiet agitation, now directed against the principle of popular sovereignty, which agitation derives its chief aliment from the circumstances attending the inauguration of the territorial Government in Kansas.

[Journal of Commerce.

How a Slave Tried to Escape and Couldn't.—The Louisville *Courier* tells this story with a relish :—

Ben, the slave property belonging to one of our citizens, made his escape from jail several weeks age. He was captured, and yesterday returned to the city. His account of his adventures in search of freedom, and that of his captors in search of the fugitive, partakes somewhat of romance. He says that he crossed the river at the saw mills, and immediately took the line of the Jefferson Railroad. In the neighborhood of Vienna some Hoosiers discovered him and immediately gave chase. They, after a long run, succeeded in taking him, but he escaped from them soon. At a subsequent period he was again seen and had to undergo another chase. Being mounted on a stolen horse, his pursuers soon found that he would distance them. Accordingly they fired, killing the horse. Undaunted he kept ahead, and dogs were set upon him; but he baffled all pursuit until wearied down. Being again taken, he escaped a second time, and for a long while perplexed the Hoosiers, until, entirely prostrated by hunger and exposure, he was finally taken.

Cost of the Eastern War.—A glance at the two years of the Eastern war—at the battles of the Crimea, the seige of Sebastopol, and the storming of that fortress—will show that this war is among the most sanguinary the world has ever seen. The loss of human life is greater than that which took place in the French and Russian campaign of 1812, and this was greater than any which (up to that time) had been recorded in history. The fleets of both the Powers on the Black Sea have been annihilated, and the number of those capable of bearing arms in Russia has been decimated. More than one hundred thousand of her soldiers moulder beneath the ruins of Sebastopol, or upon the battle-fields of Kalafat and Silistria, and the hills of the Alma and Tchernaya. The struggle of Sept. 8 was at the cost, on both sides, of more lives than were lost in Napoleon's greatest battles, with the exception of those of Leipsig and Waterloo. The Allies employed in the bombardment of Sebastopol more ammunition than was used during the seven-years' war by all the arms put together. The cholera alone has destroyed, in the East, a greater number of soldiers than were brought into the field by Frederick the Great in all his wars.

Trial of a Judge.—Sidney H. Stuart, Esq., is now on trial in New York for receiving a bribe in his official capacity as Judge. The indictment charges, that on the 15th of April, 1853, an indictment was found in the court of Sessions against Wm. Cosgrove for burglary, who was held to bail, and the case called for trial, but he not appearing the recognizances were forfeited, and a bench warrant issued for his arrest—that on the 17th of February, 1855, Judge S. "contriving and intending to prevert the due course of justice," accepted a gift of five hundred dollars in money from Margaret Connolly, as to said William, with the understanding that the judicial action of the said indictment against said Cosgrove should be ended by means of a *nolle prosequi*.

The Mercantile Commerce of the World.—From official tables it is ascertained that the shipping of the world amounts in number to 145,500, measuring 15,500,000, and worth in money $775,000,000.

The following table shows the number of vessels and tonnage of the leading commercial nations in the world :

	Vessels.	Tonnage.
United States,	40,000	5,661,416
Great Britain and Col.,	35,960	5,043,270
France,	14,354	716,130
Holland,	2,090	456,462

Not a great while ago we used to read in the geography, that the tonnage of the United States was larger than any nation except England, which had twice the tonnage of our own country. Both countries have gained largely upon France and other maritime nations. Either England or the United States has as much tonnage as all other nations together.

Fruit of Missions in New Zealand.—In 1854, Sir G. Grey, Governor of New Zealand, stated that he had visited nearly every one of the missionary stations, and that he believed that out of 100,000 natives there were not more than one thousand who did not profess Christianity. It is estimated that 50,000 of these native Christians are in connection with the Church Missionary Society. All the arts of civilized life are springing up in the path of Christianity, and the island is fast becoming the very garden of the Southern Ocean. Such wonders hath God wrought by the hands of a few feeble and unprotected missionaries.

SUMMARY.

Several of our largest ship owners have arranged to fix the minimum rates of passage to European ports from this city, as follows: In second cabin, eighteen dollars for adults, and ten dollars for children under twelve years; in steerage, sixteen dollars for adults, and nine dollars for children under twelve years—including provisions, which in all cases will be provided by the ship.

Mrs. Albert Rogers, residing in the Thirteenth Ward, Brooklyn, committed suicide on the 10th inst., by taking arsenic. She had been subject to temporary fits of insanity since childhood, and had recently been more than usually melancholy, owing to the loss of considerable property.

A dispatch dated St. Louis, Saturday, Nov. 17, says: The suit of Messrs. Page, Bacon & Co., against the City and County of St. Louis, for damages arising out of the injunction case, was submitted to Court to-day. The Court gave damages in the sum of $85,727. The defendants appealed.

A dispatch dated Washington, Friday, Nov. 16, says: I understand that dispatches have been received by the Pacific, embodying assurances from the English Government, that the dispatch of a British squadron to the West India Station has no reference to Central American matters, nor any object hostile to the United States.

Mr. J. A. Crander, of Caroline, Va., raised the past season eight hundred and thirty bushels of prime Wheat on eighteen and a half acres of accurately measured land, being nearly forty-six bushels per acre.

The Illinois Central Telegraph Line was extended to Cairo on Saturday last, and that office is now ready for business for Cairo and all points on the line of road from Chicago and Dubuque to the mouth of the Ohio River.

Further and authentic particulars of the curious accident on the Harlem Railroad, when a train of cars was blown off the track, show that but *one* person was killed. This was Mr. Francis W. Rathbone, a passenger residing at White Mills, Chatham Four Corners.

One of the largest crops of Potatoes we have heard of lately, is that raised by Mr. McMurty, on his farm near Lexington, Ky. He has 160 acres in Potatoes of the very finest qualities, and calculates on raising over nine thousand barrels.

A dispatch dated Boston, Thursday, Nov. 15, says: At South Danvers this morning, John Brown shot his sister dead, and then cut his own throat, dying immediately. He was out of health, and it is supposed, must have been suddenly seized with insanity.

Several vessels that went to Malaga for raisins came home without a box, on account of their very high price. Boxes are retailed for $4 50 now that sold a year ago for $2 50.

The total yield of Copper of the Lake Superior mines for the present year is set down at 4,790½ tons, or 9,581,000 pounds, the aggregate value of which is $1,600,000.

The Northern Home Journal learns that within the last four months nearly fifty persons have left Gardiner, Me., to locate themselves permanently in the West.

Wisconsin, by her new census, has a population of 552,100, against 305,391 in 1850. Gain in five years 246,718, or about eighty per cent. There are but 788 blacks in the State.

Henry Ward Beecher has commenced a lecturing tour "out West," for which he is to receive $125 a night and all expenses paid.

Rev. Dr. Baker states that twenty or twenty-five thousand dollars have been subscribed, in Brazoria county, to Austin College, Texas.

One-dollar bills, on the Genesee River Bank, altered to fives, are in extensive circulation.

Cranberries are very scarce and high this year, $10 to $15 per barrel at wholesale, which is double last year's prices.

There are 300,000 volumes in the private libraries of Boston. Ten of these libraries contain 92,000 volumes.

Switzerland sent goods to the value of 3,576,000 francs to this country, from July to October, this year.

There are one hundred and forty-one churches in the city of Brooklyn, and seventy-five school-houses.

A dispatch dated Boston, Friday, Nov. 16, says: The British ship Robert Parker, arrived at this port from Liverpool, was in contact, on the night of Nov. 8, in lat. 45° 30′, lon. 54° 30′ with the British ship David Brown, Vaughan, from Quebec for Bristol, England, and damaged her badly. The P. lay by her until day-light and took off the Captain and crew, twenty-one, all told, who stated that two men had been killed at the time of the collision.

A dispatch dated Easton, Pa., Friday, Nov. 16, says: The Monument in honor of Zachary Taylor is to be dedicated here on Tuesday next, and a great time is anticipated. Invitations have been extended to Generals Scott, Cadwallader, Patterson, and Foster, and Commodore Stockton, and it is hoped that most if not all of them will be present. Twenty different military companies are expected.

A suit has been commenced against the trustees of Trinity Church, New York City, by the State of New York, claiming as the property of the State a good portion of the Trinity estate. It is valued at $20,000,000, and was known as the King's Farm. The suit will employ some of the ablest lawyers in the country. In addition to Attorney-General Ogden Hoffman, Governor Clark has selected the following corps of assistants: Alfred Conklin of Auburn; Nicholas Hill of Albany; Charles Tracy of New York, and Morris S. Miller of Utica.

The population of Boston, according to the late census, is 162,629. In 1850 it was 138,727, showing an increase of 17.10 per cent. The number of foreigners and their children under 21 years of age now residents of the city is 86,336, or 10,043 more than all others. The increase of this class during five years has been 22,874, leaving only 997 for the increase of the native population. A large portion of the native increase has been absorbed in the suburban towns.

Elizabeth Harker, who had been confined in the jail at Huntingdon, Pa., since the Fall of 1853, under sentence of death for the murder of her husband and sister, by poison, died there a few days ago. She was 65 years of age when she committed these murders, and in consideration of her sex, and extreme age, Governor Bigler humanely withheld her death warrant, and she was allowed to drag out a life of remorse and wretchedness, until called by Providence to her final account.

A dispatch dated Washington, Wednesday, Nov. 14, says: You may rest assured that nothing has transpired in our diplomatic relations, that could give the President the slightest intimation of any unfriendly purpose in the ordering of a British fleet to American waters. There really is no excitement or uneasiness felt by the Administration, if positive assurances to that effect are to be believed.

George W. Wells, of Mason Co., Ky., has a twenty-acre field of corn which promises, from what has been gathered, a yield of *one hundred and eighty* bushels (ears) per acre. But the funny part of the story is that he did not intend to make such a crop. The first planting not coming up well or looking promising, he replanted between the rows, and afterward, not being able to decide which rows were best or which to plow up, as he intended to do with the first planting, he let both stand; the present great crop is the result.

A man by the name of Wm. Ewers, living at Gravesend, Canada, was recently engaged in a dispute with a woman with whom he cohabited, and being at high words, expressed a wish "that God would strike him dumb if he was not correct." At that moment his speech failed him, and up to this present time he has not been able to speak a word. Beyond the loss of his speech, he is in no way affected, either by paralysis or epilepsy, so that there appears to be no physical cause for the impediment.

A census just completed shows that the population of New York City has now reached 633,189. In 1845 the population was 371,223, and in 1850, 515,394. The census of the State of New York shows that the tendency of population is towards the cities, rather than towards the country. While all the cities have increased largely since the previous census, the returns show a falling off in population in many of the rural districts.

The National Intelligencer says that Brigadier General Shields has taken out a land warrant for 160 acres, and adds that the General has entered with great assiduity upon the pursuits of agricultural life, and intends locating the land granted him by this warrant in the region of his present home in Minnesota.

The late Thomas B. Cushing, of Boston, left the munificent sum of $150,000 to the town of Ashburnham, Worcester Co., to endow two seminaries of learning, to be located in Ashburnham, the one for males and the other for females over ten years of age.

The passengers in a recent balloon excursion state that at the height of 14,000 feet above the earth, every thing spoken distinctly by them was returned in about a minute in an echo as clear and distinct as the words spoken.

The subject of female lawyers has been revived again by some of our strong-minded friends, and Mrs. Oakes Smith, and others, have published letters, lately, recommending ladies to prepare themselves for forensic duties.

While a party of wreckers were taking out the cargo of a Spanish brig, on Bahama Bank, they were fired into by a Spanish launch, two of them killed, and five or six wounded. The remainder were imprisoned at Cienfuegos.

A dispatch dated Chatham Four Corners, Saturday, Nov. 17, says: A snow storm commenced here at 3 o'clock this afternoon and continued till 7 o'clock this evening, when a most violent rain set in. About ten inches of snow had fallen.

A dispatch dated Utica, N. Y., Friday, Nov. 16, says:—George F. Evans, an actor, was suddenly killed while walking down Genesee street, this morning, by the falling of a ladder upon him.

On Saturday week, a man named Jackson, living near Ottawa, Ill., was shot in his own house, while eating his dinner, by a neighbor to whose wife he had given shelter when she was driven away from home by disagreement with her husband.

Judge Stuart, of the Superior Court of Quebec, has decided that American coin are not a legal tender in the British Provinces.

A dispatch dated Baltimore, Sunday, Nov. 18, says: The fire at Alexandria caused the death of seven persons. Five of them were members of the Star Fire Company; one of the Relief Company, and one a colored man. The fire was deliberate incendiarism. Candles saturatad with camphene and trains of gun-powder leading to the crockery crates were found. Mr. Dowell and two of his clerks have been arrested, and are charged with being the incendiaries. Mr. Dowell had his stock insured for twenty thousand dollars, while its value is said to be but five thousand.

Dr. Kane's gray hairs and furrowed face plainly tell the story of his hardships and sufferings. His appearance indicates two score and ten; in reality, he has just entered his thirty-fifth year. His form and physique are not what is generally fancied to be in keeping with a dauntless spirit, daring exploits, and herculean undertakings. He is below the medium height, with a spare, delicate frame.

The Borsen Zeitung, of Berlin, mentions that the Russian government is endeavoring to effect a sale to the United States of America, of its possessions in the north of that continent, for the sum of 40,000,000 of silver roubles; should the bargain be brought to a satisfactory conclusion, various indulgences are to be extended to the commerce of the United States on the part of Russia.

In Mariposa county, Cal., is one of the most remarkable objects of natural scenery in the world. A considerable stream dashes down a precipice almost perpendicularly sixteen hundred feet, and afterwards the collected waters again fall in spray and foam to a depth of eight hundred feet. In Winter, when the stream is swollen into a torrent, and snows cover the lofty mountains surrounding, the scene beggars all description.

The new Governor of California, J. Neely Johnson, was born in a squatter's cabin in Indiana. In 1849 he went to California, where his first occupation was that of driving a mule team to the mines. He next took to the practice of law, and has since then been a rising man. At the age of thirty years and one month he is Governor of a large and thriving State.

A correspondent at Davenport, Iowa, says that all fears of an injunction against the contemplated railroad bridge across the Mississippi at that point (Rock Island) have vanished, and the work has been vigorously pressed forward through the past summer, favored by the exceeding low water in the river.

It is said that no fewer than 25,000 horses, belonging to the English army, are rationed daily in the Crimea. This number, of course, includes chargers, cavalry horses, bat horses, and the animals belonging to the transport establishments.

A writer in the Atlas states that the sales of boots and shoes by Boston wholesale and jobbing houses, amount to upwards of $20,000,000 per annum; and in our large manufacturing cities and towns, such as Lynn, Haverhill, Danvers, &c., the sales are also reckoned by millions.

It is reported of a Society for the relief of indigent clergymen, that they make all their contributions secret, lest the penurious parishioners of such ministers, having knowledge of the fact, should deduct the same from their salaries.

The claim of J. H. T. Newell, Esq., of Hillsboro', against the Boston and Maine Railroad, for injuries received by his little daughter, in 1852, when Gen. Pierce's boy was killed, has been settled by the payment of $3,000.

Berlin is the fifth in size of the European capitals, which thus follow each other in the order of population:—London, Paris, St. Petersburg, Constantinople, Berlin, and Vienna is the sixth.

New York Markets—Nov. 19, 1855.

Ashes—Pots $6 37 a 6 50; Pearls 7 37.

Flour and Meal—Flour 8 75 a 9 00 for State, 8 87 a 9 25 for Michigan and Ohio, 9 50 a 11 25 for extra Genesee. Rye Flour, 6 25 a 7 50. Corn Meal 4 25 for Brandywine.

Grain—Wheat 1 95 a 1 98 for Western red, 2 10 a 2 20 for Western white, 2 20 for Canadian white. Rye 1 20 a 1 23. Barley 1 18 a 1 29. Oats 47 a 52c. for State and Western. Corn 94 a 96c. for Western mixed.

Provisions—Pork 20 75 a 21 25 for prime, 22 50 for mess. Beef 8 50 a 9 50 for country prime, 11 00 a 12 50 for country mess. Lard 12 a 12½c. Butter 17 a 21c. for Ohio, 21 a 26c. for common to very good State, 26 a 28c. for choice. Cheese 9½ a 11c.

Apples—1 50 a 1 75 for Greenings and Spitzenbergs, 1 75 a 2 25 for Pippins, 2 00 a 3 00 for Newtown Pippins, 75c. a 1 12 for common.

Hay—70 a 75c. for shipment, 87c. a 1 00 for local use.

Onions—1 37 a 1 50 per bbl. reds, 1 75 for whites.

Potatoes—1 00 a 2 00 per barrel, according to quality.

Seeds—Clover 11½ a 12c. Timothy 2 87 a 3 12 per bushel. Flaxseed 2 00 a 2 10 for 56 lbs.

Tallow—12½ a 12¾c.

MARRIED,

In New Market, N. J., on the morning of the 10th inst., by the Rev. H. H. Baker, Mr. Henry V. Dunham to Miss Susan Mariah Smalley.

LETTERS.

W B Maxson, W B Gillette, Joseph Goodrich, Joshua B. Maxson, W L Saxby, G R Wheeler (will look for it,) Z Campbell, John Utter Jr (cr. Rec. Sept. 20,) C Tyler, E R Clarke, H P Burdick, J C Green, J E Potter.

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

Carpet Warehouse.

YOUNG & JAYNE, No. 364 Broadway, corner of Franklin Street, (opposite Taylor's Saloon,) offer for sale a very choice and extensive assortment of

CARPETINGS, OIL-CLOTHS, CURTAIN MATERIALS, MATTRESSES, &c.,

at the lowest rates. Purchasers are respectfully solicited to examine the stock.

Misrepresentations, either expressed or implied, are strictly prohibited in this establishment.

YOUNG & JAYNE,
364 Broadway, corner of Franklin-st.

N. B.—Churches and clergymen furnished at wholesale prices. Sept 27—3 m. *

Farm for Sale,

CONTAINING about 100 acres, with a fair proportion of woodland, a small orchard of grafted fruit, and a comfortable dwelling and outhouses. It is situated about four miles north of Westerly, R. I., and within a mile of each of the flourishing manufacturing villages of Potter Hill and Ashaway. There are several other manufacturing establishments near, affording a ready market, in the immediate vicinity, for every species of produce. It is convenient to the first Hopkinton Church, as well as to the very excellent male district school.

It will be sold with or without the stock and farming implements, and possession given the ensuing winter or spring, if desired. To those wishing to secure a quiet home in an enterprising neighborhood, and surrounded by such comforts as can only be found in an old settled and thickly populated country, this affords an opportunity seldom offered. For terms and other particulars apply to the subscriber on the premises, or address John E. Potter, No. 15 Sansom-st., Philadelphia, Pa. Benjamin Potter, Ashaway, R. I.

11tf.

Good Crops, Good Prices, Good Books, and Good Times.

BELCHER'S HISTORY OF ALL THE RELIGIOUS DENOMINATIONS IN THE UNITED STATES. Large Octavo 1,024 pp. and nearly 200 engravings.

FLEETWOOD'S LIFE OF CHRIST AND HIS APOSTLES. 704 pp. and 25 engravings.

Probably there has never been a more favorable opening for the sale of books than the present. Large crops have been produced throughout the country, and these are bringing good prices; every body is in high spirits.

The above volumes are printed on fair paper, in clear, large type, are handsomely illustrated, and bound in a neat and attractive style. More than all, their contents bear the ring of the true metal, enabling the agent to sell them to the highest in the land as well as the humblest, with the gratifying feeling on his part that he is conferring a favor rather than receiving one. They have gained and are gaining a world-wide fame; and being sold exclusively by subscription, the agent has the entire benefit of their popularity.

Canvassers, and those wishing to become such, will find it for their interest to secure an agency. We can offer them with other popular works on the most favorable terms. For further particulars apply to or address either of the

Magnificent Floral Gift.

SUBSCRIBERS to the "CHRISTIAN DIADEM" for 1855, are entitled to a splendid steel engraving, the ☞ LILLY AND THE ROSE PERSONIFIED, being given *gratis* to all old and new subscribers who send us only ONE DOLLAR, by mail or otherwise.

Six Copies for Five Dollars.

The Diadem is a strictly moral and religious work—designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address Z. P. HATCH, Publisher, 9 Spruce street, New York. May 24—3m.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 per Annum, in Advance.

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance :

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 a Year, 25 Cents a Number.

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol :

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, George B. Utter, No. 9 Spruce-st., New York.

Postage.

The postage on the Sabbath Recorder is 13 cents a year in the State of New York, and 26 cents in any other part of the United States, payable quarterly or yearly in advance.

The postage on the Sabbath-School Visitor is 3 cents a year in the State of New York, and 6 cents in any other part of the United States, payable in advance.

The postage on the Seventh-day Baptist Memorial is 2 cents a year in any part of the United States when paid in advance, or 4 cents a year when not paid in advance.

Miscellaneous.

The Philosophy of Chimneys.

A recent number of the London *Quarterly Review* contains a readable and instructive article upon chimneys and their belongings. The writer is apparently a decided admirer of the open fire-place, as a genial enhancer of home joys, and while he admits its defects, and its annual chapter of accidents or annoyances, still thinks the enjoyment of the open fire to be too deeply seated (among Englishlishmen especially,) to be disturbed greatly by these causes. But leaving this social aspect of the open fire-place, which the weather just now would rob of all its charms, the writer gives much that is new in relation to chimneys, and the philosophy of their action, some portions of which we condense for our columns.

The chimney has been in use five centuries. Existing remains prove that perpendicular flues were constructed in England as far back as in the twelfth century. In drawings of the time of Henry III., chimneys of a cylindrical form, are represented as rising considerably higher than the roof, and orders to raise the chimneys of the king's houses were frequent in that reign. Nevertheless it was still the general custom, even in the fourteenth century, to retain the hearth in the middle of the room. When the wood was fairly ignited, the smoke would not be great, and the central position of the fire was favorable to the radiation of heat. This method of warming the hall was continued long after fire-places with chimneys had been erected in the smaller apartments. By the reign of Elizabeth the advantages of the new system were so well appreciated, that ladies in their visits to their friends, if they could not be accommodated with rooms with chimneys, were frequently sent out to other houses, where they could enjoy the luxury.

But notwithstanding the chimney is so venerable an institution, it has been employed with a very imperfect appreciation of the physical laws upon which it depends. Probably, says the writer, from whom we quote, even at the present day, few of those who erect chimneys would be able to explain the conditions of their successful action; while the learned chimney-doctor often fails in his diagnosis, and rashly prescribes for a malady from which the patient may be free, while neglecting that which would be evident to the eye of the man of science.

It is often supposed either that smoke ascends the chimney because it is lighter than the surrounding air, or that some mysterious power exists in the chimney by which the smoke is drawn up and discharged. That smoke is not lighter than air, the following experiment, devised by Dr. Franklin, will show. If a pipe of tobacco be lighted, the stem plunged to the bottom of a decanter half full of cold water, and the bowl covered with a piece of linen so that it may be blown through without burning the lips, the smoke will descend the stem of the pipe and bubble up through the liquid, and thus becoming cooled, it will not rise out of the decanter, but will spread over the surface of the water. This shows that smoke is in reality heavier than air. But the murky cloud, which consists of carbon, hydrogen, carbonic acid, carbonic oxide, vapor of water, and other products, is mixed with a large proportion of the air which enters the fire. It is this invisible column of heated air, that by its expensive force carries with it the visible and less heated smoke, until it emerges from the top of the chimney, where it encounters the cold of the external atmosphere, loses its ascensive power, and unless some kindly breeze convey it speedily away, hangs like a cloud over the crowded city, or falls in minute particles of carbon, begrimming everything below.

Air, then, being essential to the draught of chimneys, the quantity needed and the best mode of supplying it is an important inquiry in connection with the subject. Dr. Franklin's method of ascertaining in a rough way how much air is required to be admitted per minute, was to set the door ajar until the fire burnt properly; and gradually close it again until smoke began to appear; he then opened it a little wider, and if the width of the crevice was half an inch in a door eight feet high, the room would need an aperture equal to 48 square inches, or a hole 6 inches by 8. Six inches square would probably be sufficient for the wants of most chimneys. But where to form this aperture is a difficult question. If made in the door, it admits a cold current to the back and feet of persons sitting near the fire, and also interferes with the privacy of the room; if made in the windows, it brings down a cataract of untempered air upon the head. The plan invented by Gauzer, a Frenchman, who a century and a half ago, described it in a work, entitled "La Mecanique de Feu," appears to have great merit, and is now very generally used in this country for the purpose of supplying hot air furnaces. He opened a hole in the hearth, communicating with a channel which passed under the floor, and finally through an aperture in the wall of the house, reached the outside atmosphere. The principal remedy for smoky chimneys being to keep up an ample supply of air, and no special provison being made by the house-builder for the purpose, the air finds its way through the cracks of windows and doors, or by the more easy passage of another chimney-shaft. In this way chimneys may overpower each other. A fire in a front or back drawing room my burn very well by itself, but if an attempt be made to light both fires, the rooms are filled with smoke. The stronger burning fire draws upon the shaft of the weaker for a supply of air, and of course brings the smoke down with it. If the two rooms be separated by a wall, the same effect may be produced, for they still communicate atmospherically by the joints of the doors. It is even possible, when the windows fit tightly, for a large kitchen fire to overpower all the other chimneys of the house. It was an old notion that chimneys ought not to be crooked, whereas a slight bend at the top is beneficial, for this prevents the sudden descent of wind or rain. Nor is the form of the chimney material; it may be tapering, or of equal bore; pyramidal or square; it is only necessary that it be constructed so as to offer no considerable resistance to the ascending current, for otherwise the hot air will be delayed in its ascent, and have time to cool. A high chimney always makes the best draught, and hence well built factories invariably have such chimneys. Dwelling houses do not require such enormously high chimneys, but they must be high enough not to be over-topped by contiguous buildings, else the wind, striking against the superincumbent ll, will be precipitated down the chimney, filling the room below with smoke and gas.

Much of what is here said about smoky chimneys applies also to ventilation. The combustion of a fire, or of gas lights, as well as our own breathing, vitiates the air, so that every apartment ought to have an outlet for carrying off the carbonized and deleterious atmosphere. A hole, opening into the chimney, just below the ceiling, is the best method of meeting this difficulty. Rooms, heated by properly constructed furnaces, which admit fresh air raised to a temperature of sixty-five degrees, and supplied with such an opening, are the healthiest that can be had, unless it is apartments warmed by grates, and fitted with such a ventilator, the grates and room being fed with cold air in such a way as to prevent draughts on the person.

[Baltimore American.

An Incident.

It was late. The lamps of the car burned dimly. In one seat were a "happy couple" rejoicing in a carpet-bag, two band-boxes, a basket, a brown paper parcel, and a "sleeping cherub." Suddenly cherub—a girl of some three years' experience in this strange world—awoke from one of those long undisturbed slumbers that are among the prerogatives of childhood, and climbed up so as to stand and look over the back of the seat. Two care-worn, travel-weary, and half-awake men sat directly in front of the little creature. They looked as if they had been on board of railroad cars for a month, and had journeyed from the regions about sunset. The great, curious eyes of the child fell upon them. She scanned carefully the face of each, and one would have deemed her to have been an infantile physiognomist. Presently one of them looked at her. It was evident that she liked him, of the two, and had about made up her mind to speak to him; for instantly her little voice was heard, as she piped out the query:

"Does you love little girls?"

The man looked at her a moment rather gruffly, and then replied:

"No—I don't."

A shade of disappointment and surprise was instantly daguerreotyped upon the child, but passed away, when she replied:

"Yes, you do."

The man roused himself, and took another look. He was evidently both puzzled and interested, and he said, "How do you know?"

And she replied, "'Cause you looked as if you did."

This thawed him out some, and he said: "I have got a little girl at home."

The little questioner now evidently felt that she was on the right "track," and after a look that showed that this intelligence presented a new and unexpected view of the affair, renewed the conversation earnestly, and the following colloquy ensued:

"Does you love your little girl?"

"Yes."

"Is she a real good little girl?"

"Sometimes she is."

"Is she naughty sometimes?"

"Yes."

"Does she go down in the kitchen when she hadn't ought to?"

"Yes, sometimes."

"Do you whip your little girl when she is naughty?"

"Sometimes."

"Does she cry when you talk to her, and tell her she is naughty?"

"Yes."

"*Then* do you whip her?"

"Sometimes."

"When she says she is sorry, do you whip her *then*?"

"No, never."

The little creature's eyes danced and sparkled at this, and drawing conclusions no doubt from her own experience, she exclaimed:

"I's real glad, I is."

Then looking at the other man who had refused to answer the question she had put to him, she said to her newly-made friend with a look of wonder:

"That man won't speak to me! Does he love little girls?"

The man had a heart somewhere, and he thawed out. Rousing himself, he extended his brawny hand, and said:

"How do you do, sissy?"

And the little creature, not altogether at her ease, replied:

"I's pretty well, how is you?"

By this time all within hearing of the colloquy were moved to tears; the eyes of the parents of the little prattler were full to overflowing, and those who were nearest heard one of the men she had questioned say to the other:

"She's a little witch."

And so she was. Her blooming beauty and her infantile artlessness were powerful enough to break through the roughness, the weariness, the reserve, and the indifference of the travel-worn men of the world, and to melt them to tears.

[Auburn American.

The Thriftless Farmer.

The thriftless farmer provides no shelter for his cattle during the inclemency of the winter, but permits them to stand shivering by the side of a fence, or lie in the snow, as best suits them.

He throws their fodder on the ground, or in the mud, and not unfrequently in the highway, by which a large portion of it, and all the manure, is wasted.

He grazes his meadows in fall and spring, by which they are gradually exhausted and finally ruined.

His fences are old and poor, just such as to let his neighbor's cattle break into his field, and teach his own to be unruly and spoil his crops.

He neglects to keep the manure from around the sills of his barn—if he has one—by which they are prematurely rotted, and his barn destroyed.

He tills or skims over the surface of his land, until it is exhausted; but never thinks it worth while to manure or clover it. For the first, he has no time, and for the last he 'is not able.'

He has a place for nothing, and nothing in its place. He consequently wants a hoe, or a rake, or a hammer, or an augur, but knows not where to find them, and thus loses much time.

He loiters away stormy days and evenings, when he should be repairing his utensils, or improving his mind by reading useful books or newspapers.

He spends much time in town, at the corner of the street, or in the "rum holes," complaining of hard times, and goes home in the evening 'pretty well *tore.*'

He has no shed for his fire-wood; consequently his wife is out of humor, and his meals out of season.

He plants a few fruit trees, and his cattle forthwith destroy them. He has "no luck in raising fruit."

One half the little he raises is destroyed by his own or his neighbors' cattle.

His plow, harrow, and other implements, lie all winter in the field where last used; and just as he is getting in a hurry, the next season, his plow breaks because it was not housed and properly cared for.

Somebody's hogs break in, and destroy his garden, because he had not stopped a hole in the fence, that he had been intending to stop for a week.

He is often in a great hurry, but will stop and talk as long as he can find any one to talk with.

He has, of course, little money; and when he must raise some to pay his taxes, &c., he raises it at a great sacrifice, in some way or other, by paying an enormous shave, or by selling his scanty crop when prices are low.

He is a year behind, instead of being a year ahead of his business—and always will be.

When he pays a debt, it is at the end of an execution; consequently his credit is at a low ebb.

He buys entirely on credit, and merchants and all others with whom he deals charge him twice or thrice the profit they charge prompt paymasters, and are unwilling to sell him goods at any cost. He has to beg and promise and promise and beg, to get them on any terms. The merchants dread to see his wife come into their stores, and the poor woman feels depressed and degraded.

The smoke begins to come out of his chimney late of a winter's morning, while his cattle are suffering for their morning's feed.

Manure lies in heaps in his stable; his horses are rough and uncurried, and his harness trod under their feet.

His bars and gates are broken, his buildings unpainted, and the boards and shingles falling off—he has no time to replace them—the glass is out of the windows, and the holes stopped with rags and old hats.

He is a great borrower of his thrifty neighbor's implements, but never returns the borrowed article, and when it is sent for, it can't be found.

He is, in person, a great sloven, and never attends public worship; or if he does occasionally do so, he comes sneaking in when the service is half out.

He neglects his accounts, and when his neighbor calls to settle with him, has something else to attend to.

Take him all in all, he is a poor farmer, a poor husband, a poor father, a poor neighbor, and a poor Christian. [Farmer's Magazine.

A Tunnel to Connect England and France.

When Mr. Isambert Brunel projected the Thames Tunnel, people first scoffed at the feasibility of the undertaking, and then, when the great engineer demonstrated its practicability by achieving his plan, they took to wondering of what earthly use this great expensive underground gallery could possibly be.

For a long time, we confess, we were rather skeptical of the practical benefit to be derived from Mr. Brunel's splendid whim. We knew that certain people sold cakes and candy by gaslight in the Thames Tunnel to wondering country people, who paid their sixpences to walk through that great damp, mouldy gallery; but there it seemed as if the commercial uses of the Tunnel ended. Now we know better. The successful accomplishment of the Thames Tunnel has directed the scientific mind in that line, and the result has been that we are in five years from this time to have a tunnel beneath the English Channel, running from Boulogne to Dover.

M. Favre, a distinguished French engineer, accompanied by several hydrographers and engineers, has lately been employed in surveying the neighboring coasts, and taking soundings with the view of immediate carrying out this magnificent project. M. Favre's report is bold and self-assured.

The tunnel will be about eighteen and a half miles in length, to which must be added about a mile and a half that will run under the shore on each side in order to give the necessary gradually ascent from the tunnel to the surface of the earth.

The distance between the top of the arch of the tunnel will never be less than $27\frac{1}{3}$ yards, so that all danger of the ocean breaking through will be avoided by this enormous thickness of what may be called the wall of the tunnel. This tunnel will be lined with a double arch, the first of granite and of impermeable cement, the second of thin iron plates pierced like a colander with small holes, so that the slightest leakage will be instantly discovered.

Through this tunnel it is intended that an atmospheric railroad shall be established, thereby avoiding the smoke consequent on the use of the ordinary locomotive, by which the transit from end to end will be performed in twenty-five minutes, and all the terrible sea-sickness, so awful to the continent-seeking cockney, entirely avoided.

The natural objection that arises to the practicability of this stupendous work is the difficulty of getting rid of the earth of stone, quarried out of the bowels of the subterranean chamber. In the ordinary course of engineering, every barrow-load of earth would have to be brought to one of the mouths of the tunnel, which operations would consume so much time and labor, as to add enormously to the expenses. The difficulty M. Favre proposes to surmount by sinking along the course of the tunnel, what he calls "Maritime Wells," which will divide this subterranean gallery into sections of about eleven thousand yards each in length. By these wells all the encumbering earth will be thrown into the sea, forming islands about the wells themselves, and so strengthening them. These wells will serve the purpose of ventilating the tunnel. The cost of the whole is estimated in round numbers at 100,000,000f., or $20,000,000, and the cost of each yard will be 2,695f., or $539.

The soundings that have been made in the English Channel, show that the soil is very favorable to such an undertaking. At a certain depth free-stone has been found, so that the vault of the tunnel will be formed of a stone impermeable to water, and capable of sustaining, in a thickness of 27 yards, an enormous weight.

The estimates of the produce of this Submarine Railway are based on the supposition that 200,000 passengers now travel backwards and forwards between France and England at the present day. Of course this number would be increased by the facilities offered by the Submarine Railway. France now consumes 80,000,000 of metrical quintals of pit coal, 8,000,000 of which is furnished by England. the remainder by Belgium and Prussia. As the superior facility for transport would enable England to supply much of this coal now brought from those countries, the Company calculate that their transport of coal will amount at least to 10,000,000 of tons, which will yield a profit for transport of 10,000 of francs yearly for this branch of commerce alone. Besides, the 3,000 ships that now annually enter the harbors of Calais, Boulogne and Dunkirk, with a tonnage of 40,000 tons, will, of course, yield a great portion of their traffic to this railway, which will be safe, expeditious, and comparatively inexpensive.

These are the principal details of a scheme which, if carried out, will certainly connect the reign of Napoleon III. with one of the most stupendous scientific enterprise the world has ever seen. With a tunnel across the British Channel, and a telegraph across the Atlantic, what man will be found to say to the tide of human progress, "That far, but no further, shalt thou go!"

History of Steam.

In a late number of Hunt's *Merchants' Magazine*, we find the following condensed history of Steam, and its application to steamboats:—

"About two hundred and eighty years B. C. Hiero, of Alexandria, formed a toy, which exhibited some of the powers of steam, and was moved by its power. A. D. 450, Anthemius, an architect, arranged several cauldrons of water, each covered with the wide bottom of a leathern tube, which rose to a narrow top, with pipes extending to the rafters of the adjoining building. A fire was kindled beneath the cauldrons, and the house was shaken by the efforts of the steam ascending the tubes. This is the first notice of the power of steam recorded. In 1743, June 17, Blasco D. Garoy tried a steamboat two hundred and ninety tons with tolerable success, at Barcelona, Spain. It consisted of a cauldron of boiling water, and a moveable wheel on each side of the ship. It was laid aside as impossible. A present, however, was made to Garoy. The first idea of a steam engine in England was in the Marquis of Worcester's History of Inventions, A. D. 1663. In 1710, Newcomen made his first steam engine in England. In 1618, the patents were granted to Savary for the first application of the steam engine. In 1764, James Watt made the first perfect steam engine in England. In 1776, Jonathan Hulls set forth the idea of steam navigation. In 1778, Thos. Paine first proposed this application in America. In 1781, two Americans published a work upon it. In 1789, Wm. Symington made a voyage in one on the Forth Clyde canal. In 1802, Ramsey propelled a boat by steam at New York. In 1789, John Fitch, of Philadelphia, navigated a boat by a steam engine on the Delaware. In 1793, Robert Fulton first began to apply his attention to steam. In 1793 Oliver Evans, a native of Philadelphia, constructed a locomotive steam engine, to travel on a turnpike road. The first steam vessel that crossed the Atlantic was the Savannah, in the month of June, 1818, from Charleston to Liverpool."

In addition, we find the following, which we extract from the miscellaneous papers at the close of the third volume of the Documentary History of New York, and in connection with the extract given above, will be of some interest to you. The paper is entitled, Model of Fitch's Steamboat. It then goes on to say:—

"The model of the first steamboat (built by John Fitch) was discovered a few days ago, in the garret of Col. Kilbourne, a brother-in-law of John Fitch, near the town of Columbus, in Ohio. It has been in the possession of Col. Kilbourne for more than 30 years. The model is about two feet long, and set upon wheels; the boiler is a foot long, and eight inches in diameter, with a flue through it not quite in the centre, in which the fire seems to have been placed. The cylinder stands perpendicular, and the framework that supports it is not unlike that now used by some of the low-pressure boat on Lake Erie. There is a paddle wheel on each side, and, in fact, every thing appears to be complete, with the exception of a condenser and force pump. The boiler is even supplied with a safety-valve, though part of it has been broken off."

Variety of Food Necessary.

It is in vegetable as in animal life; a mother crams her child exclusively on arrowroot—it becomes fat, it is true, but alas! it is rickety, and gets its teeth very slowly, and with difficulty. Mamma is ignorant, or never thinks that her offspring cannot make bone—or, what is the same thing, phosphate of lime, the principal bulk of bone—out of starch. It does its best; and were it not for a little milk and bread, perhaps now and then a little meal and soup—it would have no bones and teeth at all. Farmers keep poultry; and what is true of fowls is true of cabbage, a turnip, or an ear of wheat. If we mix with the food of fowls a sufficient quantity of egg shells or chalk, which they eat greedily, they will lay many more eggs than before. A well-bred fowl is disposed to lay a vast number of eggs, but cannot do without the materials for the shells, however nourishing in other respects her food may be. A fowl, with the best will in the world, not finding any lime in the soil nor mortar from walls, nor calcarious matter in her food, is incapacitated from laying any eggs at all. Let farmers lay such facts as these, which are matters of common observation, to heart, and transfer the analogy, as they may do, to the habits of plants, which are as truly alive, and answer as closely to every injudicious treatment, as their own horse. [Maine Farmer.

Feeding out Roots.

There is probably a greater crop of roots—such as turnips, ruta bagas, carrots, &c., raised in Maine during the present year, than for any one year previous, for some time. These roots will be fed to cattle during the winter, and it may not be amiss to think the best mode of doing this. The easy man chops up a pint or two every day with his jack-knife or barn shovel, and throws them over to the cattle "hit or miss," and lets them eat them so. In the spring he looks at his cattle and says, "I don't think roots are any 'great snakes' to feed cattle with." The careful man purchases a root-cutter, passes them through it in sufficient quantities to give his bullock a full meal—sometimes, if he be extra careful, he cooks them and feeds out in that way. In the spring, he looks at his cattle and says, roots are excellent for cattle in the winter, but it requires a good many of them and a good deal of care in feeding them out. So does any thing else. The question with him will next be, how can I economize this business so as to make the roots do the most good?

On this point many good farmers have often queried, and many experiments have been tried. Mr. Lawrence, of Cirencester, Eng., has made some experiments in feeding turnips to cattle in Winter, from which it appears that to give a bullock a full feed of roots alone, is not so good as to give a less quantity with cut hay, or straw, (chaff, as they call it in England.) [Maine Farmer.

COAL.—The greatest coal field in the world, says the *N. E. Farmer*, is that of the Ohio valley, which embraces that space of country penetrated and watered by the Ohio river and its tributaries, such as Western Pennsylvania, Western Virginia, all of Ohio, Indiana, and Illinois, up to the narrow rim of the Lakes, and the States of Kentucky and Tennessee. More than one-third of this valley is underlined with coal, the extent of the coal surface being 99,000 square miles. In the State of Illinois alone there is a total coal area of 44,000 square miles. This State has the largest coal area on our continent, and greater by 26,696 miles than the whole coal area of Europe, which amounts only to 17,504 miles.

FOREIGN MISCELLANY.

The introductory part of the French treaty with Persia reads thus:—In the name of God, the clement and merciful—his high Majesty the Emperor Napoleon, whose elevation is as that of the planet Saturn, whom the sun serves as a standard, who is the brilliant star of the firmament of crowned heads, the sun in the heaven of royalty, the ornament of the diadem, the splendor of standards and imperial ensigns, the illustrious and liberal monarch; and his Majesty, elevated as the planet Saturn, whom the sun serves as a standard, whose splendor and magnificence are like those of the skies, the sublime sovereign, the monarch whose armies are in number as the stars, whose grandeur recalls that of Djemschid, whose magnificence equals that of Darius, the heir of the crown and throne of the Keyanians, the sublime and absolute Emperor of all Persia.

In consequence of the increasing submarine telegraph communication with the Continent from England, the Electric and International Telegraph Companies have laid down another wire between the English and Dutch coasts in addition to three already in operation. The new cable is 119 miles in length, and weighs 238 tons. It was coiled on board the steamer Monarch (Capt. Henley,) belonging to the companies, and the process of paying out commenced at Orfordness, at 3 P. M., on the 29th of September, and was successfully completed at Schevening at 1.20 P. M., on the 30th, having occupied about twenty-one hours.

A gentleman named Dellac, residing in Paris, has presented to the church of Chalinargues (Cantal,) a piece of the True Cross, of the size of a man's finger, which, in the great revolution, was broken from a large piece kept in the chapel of St. Denis. This piece was originally presented to the chapel by Philip Augustus, who obtained it from Baldwin, Emperor of Constantinople, and the French monarch caused it to be deposited in a gold box, enriched with precious stones.

A letter from Rome says: The fall of Sebastopol has reëchoed dolorously in the hearts of our ecclesiastical rulers here, who foresee woes upon woes arising from the success of the allied arms, and apprehend that the defeat of one autocrat will be fatal to the repose of all the others throughout Europe. When reproached with their sympathy for the schismatic Czar, the priests reply, "What would you have us to do? Do you not see what Palmerston said of us?"

Signor Bonelli, of Turin, has submitted a proposal to the British government to carry the submarine telegraph from Cagliari, in the island of Sardinia, (where a line already starts from Algeria,) to the Island of Malta. He offers to do it in two months, at a cost of £10,000. He also offers to carry the line from Malta to the Dardanelles in one direction, and to Alexandria in Egypt, in the other, in six months' time, and at a cost of £60,000.

The Russian government, in order to excite the religious zeal of the people, has caused to be constructed near Moscow an exact imitation of the Holy Places at Jerusalem. The convent of Voskreseenskoe is made to resemble exactly the church of the Holy Sepulchre; and the sanctuaries, chapels and tombs have precisely the same dimensions, color and ornaments as those at Jerusalem.

On the 1st of September there were 120,000 visiters in Paris, which is 25,000 more than at the corresponding period of last year. There were in the public hotels alone, at the 29th ult., 4,480 Germans, 1,190 Americans, 9,210 English, 2,390 Belgians, 59 Egyptians, 1,075 Spaniards, 780 Dutchmen, 1,512 Italians, 330 Sweedes, 1,020 Swiss, and 78 from the Danubian Principalities.

The solemn proclamation, and promenade of the "King of Pumpkins"—that is the largest pumpkin offered for sale—took place the 19th ult., in accordance with ancient custom, in the Marche des Innocens, Paris. The royal vegetable of the present year, which was produced at St. Mande, weighed 370 pounds, and was nearly nine feet ten inches in circumference.

General Pelissier is an enormously fat man, with very white hair, which is cut very close; he is so fat that he is unable to ride any distance. He is not very tall, and his face has rather a good-humored expression, and quite different from what imagination would portray from his history, either in the Crimea or in Africa.

An employe of the French Administration des Lits Militaires of Constantina (Algeria) committed suicide in a strange way a few weeks ago; he placed three ball cartridges in his mouth and set fire to them. When the explosion took place the upper part of his head was blown off.

The 24th of September was the heaviest day ever known in the London Post Office. A mail from Australia, in addition to the usual amount of continental and provincial correspondence, was brought in, which mail, besides letters contained 720,000 newspapers.

A cave of considerable size has been discovered and explored, somewhere near the head of Cheat River, in Virginia.

New York and Erie Railroad.

ON and after Wednesday, Sept. 19, and until further notice, Passenger Trains will leave the pier foot of Duane-st., New York, as follows:

Dunkirk Express at 6.30 A. M. for Dunkirk.

Buffalo Express at 6.30 A. M. for Buffalo.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations. Passengers by this Train will remain over night at Owego, and proceed the next morning.

Rockland Passenger at 3 P. M. (from foot of Chambers-st.) via Piermont, for Suffern and intermediate stations.

Way Passenger at 4 P. M. for Newburgh and Otisville and intermediate stations.

Night Express at 5½ P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5½ P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls; at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c., and with first-class splendid steamers for all ports on Lake Erie.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical Pill, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. *It has been* unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing *obstruction* or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the box. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Languor and Loss of Appetite, Listlessness, Irritability, Bilious Headache, Bilious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known, the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary disease, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

SELF-DECEPTION.

This subject has occupied my attention more or less for more than twenty years. It certainly is a very grave one. To see one indulging a hope of endless felicity, while yet a stranger to God, and "foreigner from the commonwealth of Israel," is exceedingly painful, and calculated to move the sympathy of every interested believer in man's future existence. When my attention was called to this subject by M. E. S., and the question asked, "Have you been true to your trust?—have you made the way of life so plain that it cannot be mistaken?" &c., I felt disposed to seriously entertain the question. Such is the importance attached to religious teachings, and such my incompetency to this most of all responsible labor, that, after returning home, reviewing my efforts in the desk, the effect they have on the congregation, &c., I have felt a great many times as though I could not repeat the effort. But, prompted by a sense of duty, in the midnight watches, I have laid my Bible in the chair, and with the sacred page open before me, on my knees before my Creator, I have sought instruction at the mouth of God. Stimulated by hope, I have again and again called the thoughtless to consider the solemn messages I brought, but failed to get the attention of the sinner, and while I was expressing the burden of my heart, he would appear as indifferent as the walls of the temple in which we offered our devotion. I have been compelled to return again, with the painful inquiry, "Lord, who hath believed our report?" Stimulated with now and then a hopeful convert to God, I have labored on, until now, very evidently, my work is nearly closed for this world. While much imperfection has attended, and does attend, my labor, I feel springing up within me a hope of God's final approbation.

As to the question, "Have you made the way of life so plain that it could not be mistaken?" I answer, No; I have not. This I never expect to do. The prophets and apostles failed in this, and the blessed Jesus, the "teacher sent from God," failed. I must of *necessity* fail. In this respect the servant may not exceed his Lord. Thousands listened to him while "he spake as one having authority," and uttered the words of infinite wisdom; and yet thousands went away unmoved. Others, moved only by the worst of passions, sought to traduce him, and finally to take his life. Others still, represented in the Scriptures as "stony ground hearers," were moved by the solemn appeals or stirring eloquence of the speaker—possibly induced to profess discipleship by considerations that are altogether personal and sensual. At a given time it seemed as though the Saviour would carry the whole country of Judea before him. They confessed that "he spake as never man spake." "The multitude thronged him." His congregations run up to thousands. But on hearing certain truths, they took exceptions, and left, almost to a man, leaving only "the twelve." And that "good revival preacher" received the reproaches of those who had been far too little interested in his teaching; so much so, that they evidently did not "try to live religion." It is often the case, that sinners are in attendance when truths the most appropriate to their condition are uttered, and that too in the clearest language that wisdom can devise, and yet, from a criminal thoughtlessness and indifference, they return home and cannot so much as repeat the text, or tell the subject. Perhaps these very ones will be amongst the first bitterly to complain, that things had not been expressed so that they could understand them; the teaching was not sufficiently "tangible;" the instructions were not presented in such a way that they "could receive them." Such carelessness may well be styled "*self*-deception."

It does, however, happen, that persons, by mistaken views, improper motives, or over-persuasion, are induced to take upon them a public profession of religion, and afterward, like M. E. S., come to be convinced that they had been deceived, and seek anew the pardoning mercy of God. There was such a case at the same time and place that M. E. S. first professed Christ. He received such new light, and merciful tokens of Christ's "nearness," that he was led to believe that he had hitherto been deceived. He professed Christ anew, and was again "buried with Christ by baptism." I *think* this was at the above-named time. I was not present on the occasion, but was there soon after, and heard the circumstance spoken of. This brother ever after gave good evidence of devotion to God; rejoiced in his Saviour while he lived, I am told, and has already gone to the world of spirits. What is a little remarkable is, that these extra cases should have occurred under the same administration of the word. It teaches us, however, the propriety of not blaming others, always, when we are not benefited by their lobors of love. But our earlier moments are not always our only moments of deception. Thousands have been deceived in their riper years. In fact, there is not a point in all our lives where we are not exposed. New influences, new circumstances, are constantly occurring; and how far we are affected by them, we are not always aware. Satan, with his beguiling arts, is constantly on the alert, and has sent out his heralds, clad with the garments of the sheep, who compass "sea and land" to proselyte. He is untiring in his efforts; he holds the millions in his deadly grasp, and occasionally, when he can no longer render them quiet in his fold, then comes along a train of beguiling arts. First, perhaps, he makes you believe that mercy's door was closed against you, for he is a preacher of "the shut-door doctrine." Then he tells you all will be well after death. Then he "confuses" you. Then he gives you "something tangible"—*materializes God*, and makes *Him* "tangible." Then he presents the promises of God to Abraham and his seed, telling you that "they were exclusive land grants," making them "tangible." Then the judgments of God are all brought within our comprehension, and we are taught that they are not "past finding out." Then God and all his doings and government, are brought down to the narrow confines of human conception; with a thousand other devices. They are laid before the seeker after truth; he pauses for a moment, voluntarily accepts the temptation, and comes to be responsible for his own "deception." When once he comes to believe that he is an accepted child of God, he feels that all is a reality. If he is a Musselman, he urges on his dashing steed and bathes his sword in the blood of his fellow, and gives glory to God, feeling that he is "doing him service." If he is a Pagan, he shouts at the dying groans of the victim of Juggernaut, and feels that his god approves the act. So with the professed but deceived Christian; when once he comes fully to imbibe the thought that he is accepted of God, he rejoices in that deception; if the truth has been taught him hitherto, he spurns it and rejects it as heresy, now pitying and warning all who have escaped *his* delusion, as though *they* themselves were the deluded, especially if they are engaged in new sect making, manifesting the zeal peculiar to "new converts."

But there is one thing quite remarkable in the case of M. E. S.; for he, or she, remained in a state of self-deception "until last fall," at which time he, or she, "had an opportunity, in listening to those who are looking for the soon coming of our Lord, of learning the true way. It was so explained that I could see it *all*, and it was after all so simple, so real, something I could lay hold upon." It is then explained by M. E. S. to be, "action on our part, instead of feeling—it was works and faith united—it was first faith, repentence, and baptism." What is really strange is, that M. E. S., born and reared by Sabbath-keeping parents, and perhaps religious, and enjoying the teaching of Seventh-day Baptist ministers, and that too after a profession of religion from the "fall of 1845" until "last fall," should have failed to learn before that Christianity did not consist in "*feeling*"—never until then learned that "faith, repentance, and baptism," were the order of Christian experience and duty. I am very much mistaken, if the church and administrator both did not understand, from the confession of M. E. S., that he or she *had* believed, and *had* repented, before they could in any way become responsible for the baptism. I *know* that church; it is orthodox on this question of Christian experience. No minister or church is *Baptist* in sentiment unless it is correct on this point. None could be held in fellowship with us for an hour, who were not sound here; and to represent them otherwise, even in an implied form, is to do them injustice, and betrays a want of attention on the part of those thus holding up their sentiments and efforts.

A TEACHER TAUGHT.

SPIRITUAL RICHES OF THE BIBLE.

It would be interesting to collect in a single volume records of Christian experience, specifying the chapter or verse which brought light to the darkened mind, and balm to the sorrowing heart. Dr. James Hamilton, in one of his facinating works, has given a few illustrations, from which we make the following extract:—

"Suppose that each were to mark in golden letters the text which has been to him the gate of heaven; the text through whose open lattice a reconciled God has looked forth on him, or through whose telescine he first has glimpsed the cross. The Ethiopian chamberlain would mark the fifty-third chapter of Isaiah; for it was when reading about the lamb led to the slaughter that his eye was directed to the Lamb of God, who taketh away the sin of the world, and he went on his way rejoicing. The English martyr, Binney, would indicate the faithful saying, 'Christ Jesus came into the world to save sinners, of whom I am the chief;' for it was in sight of these words that the burden fell from his back which fasts and penances had only rendered more weighty. There was 'a stricken deer' who had long been panting for the water-brooks, but he had yet found no comfort; when one day, listlessly taking up a Testament, it opened at the words, 'Whom God hath set forth to be a propitiation, through faith in his blood, to declare his righteousness for the remission of sins that are past;' and instantly he realized the sufficiency of the atonement, and embraced the gospel; and, doubtless, the bard of Olney would signalize, by the most brilliant memorial, the spot where the Sun of Righteousness first shone into his soul. 'Now unto the King eternal, immortal, invisible, the only wise God, be honor and glory for ever and ever. Amen.' These were the words which instantly converted into a living temple the calm and stately mind of Jonathan Edwards; and we may be sure that—like Jacob, who at Luz, would always see the light of the ladder lingering—every time he returned to the passage, even in his most cursory perusal, the devout theologian would perceive a surviving trace of that manifestation, which into his vacant wistful soul brought 'the only wise God,' and in glorifying that God gave him an object worthy of the vastest powers and the longest existence."

THE SLAVE'S DREAM.

BY H. W. LONGFELLOW.

Beside the ungathered rice he lay,
His sickle in his hand;
His breast was bare, his matted hair
Was buried in the sand.
Again, in the mist and shadow of sleep,
He saw his native land.

While, through the landscape of his dream,
The lordly Niger flowed;
Beneath the palm trees on the plain
Once more a king, he strode;
And heard the tinkling caravans
Descend the mountain road.

He saw once more his dark-eyed queen
Among her children stand;
They clasped his neck, they kissed his cheeks,
They held him by the hand—
A tear burst from the sleeper's lids,
And fell upon the sand.

And then with furious speed he rode
Along the Niger's bank;
His bridle-reins were golden chains,
And with a martial clank,
At each leap he could feel his scabbard of steel
Smiting his horse's flank.

Before him, like a blood-red flag,
The bright flamingoes flew,
From morn to night he followed their flight,
O'er the plains where the tamarind grew,
Till he saw the roofs of the Caffre huts,
And the ocean rose to view.

At night he heard the lion roar,
And the hyena scream;
And the river-horse, as he crushed the reeds,
Beside some hidden stream.
And it passed, like a glorious roll of dreams,
Through the triumphs of his dream.

The forests, with their myriad tongues,
Shouted of liberty,
And the blast of the desert cried aloud,
With a voice so loud and free,
Till he started in his sleep, and smiled
At their tempestuous glee.

He did not feel the driver's whip,
Nor the burning heat of the day—
Death had illumed the land of sleep,
And his lifeless body lay
A worn-out fetter, that the soul
Had broken and thrown away.

WESTERN COLLEGE SOCIETY.

The Western College Society held its 12th anniversary at Providence, R. I., Oct. 30th and 31st. A full report of the meeting is given in the *Independent*, from which we copy the most interesting portions.

It appeared from the Treasurer's Report, that the balance in the treasury at the close of the previous year (including $1.672 subject to outstanding drafts,) was $2,501.34—the total receipts $19,301.14, and the entire resources of the year, $21,892.48. More money had passed through the treasury for the benefit of colleges than in any previous year, but present resources were entirely inadequate to meet the growing demands.

An abstract of the Annual Report was read by the Corresponding Secretary. The memorable words of the founders of Harvard College were quoted as applicable to the work in which the Society is engaged. The main points considereed in the report are the difficulty of so constructing the great argument of the Society, that it could be fully apprehended by the popular mind, and the still greater difficulty of securing its adequate diffusion; the case of Western Reserve College; the publication of Tyler's Essay on Prayer for Colleges, as marking a new era in the history of the Society; revivals of religion in the institutions aided; the death of the Rev. J. M. Ellis; the necessity of accurate information in regard to the West, and the best means of securing it; the importance of a full development of Western resources, and a prevention of the needless multiplication of Colleges in order that no unnecessary burdens may be imposed upon the Eastern churches. The growing feeling at the East, that the West ought to sustain its own institutions, was alluded to, and erroneous views in respect to the *available* resources of that country guarded against.

The progress of the Society was shown to be real and highly encouraging, but yet sadly slow when compared with the rapid and wondrous development of the West. Ten colleges had been aided during the year, viz. Marietta, Wittenberg, and Heidelberg Colleges, Ohio; Wabash College, Indiana; Illinois and Knox Colleges, Illinois; Beloit College, Wisconsin; Iowa College, Iowa; German Evangelical Missouri College, Missouri; and Pacific University, Oregon. Knox College would no longer apply for aid, making the third institution which had come off from the Society's list as not needing further assistance. Another, Wittenberg, would follow at the close of the next year, and two or three others were making rapid advances toward a state of independence in respect to foreign aid. The importance of doing up the whole work of the Society *east of the Mississippi*, was especially set forth.

THE ANNUAL DISCOURSE.

The Annual Discourse was preached by Rev. R. S. Storrs, D.D., of Brooklyn, N. Y. It was founded on the Song of Solomon, chap. 4, verse 4: "Thy neck is like the tower of David, builded for an armory, wherein there hang a thousand bucklers, all shields of mighty men." The familiar reference which the poet here makes to this citadel of David was taken as suggesting the general principle that God had always availed himself of fit powers in the extension of his kingdom over the earth; that he has himself designated and established such centres of power, has gradually enlarged and consolidated them, and has taught his people to make effective use of them, for the spread or the defense of his Truth. The object of the Discourse was then defined to be, to show that a College is in our times such a center of power; of that moral power which really controls and wields all others; and that it is one which is harmonious with Christianity, and which it is therefore the duty and the privilege of Christians to use, vigorously and persistently, for the upbuilding of God's kingdom.

In the course of the discussion of this theme, the College was considered first in its simplest form, as an institution in which younger and receptive minds are brought into personal and continous contact with others older and more disciplined, who commucicate to them of their knowledge and thought:—secondly, as an institution that tends continually to grow larger and more powerful, as the years and centuries advance; a point which was illustrated by the history of European universities, and by the necessary interdependence of each department of knowledge upon all others:—thirdly, as an institution the influence of which affects certainly, though not with equal force or immediateness, all classes in the community; especially in a country like ours, where these classes intermix freely, and are continually changing places:—fourthly, as an institution essentially friendly to Christianity, by its very aim and constitution, and pre-eminently needed by a Protestant Christianity, both for its illustration and defence, and for the propagation of its principles among men.

It was affirmed, as the result of the discussion, that if this enterprise of founding and building up colleges in our country was now for the first time proposed and advocated, the very proposition of it would mark a great advance in Christian wisdom. But at the same time it was shown that the views and efforts of the Christian fathers of the country were in harmony with these, and that their early and noble efforts in the same work gave to it a special consecration. The permanence of the influence thus exerted was briefly glanced at, and the time was anticipated when such colleges, standing all over the country, each in its place like 'the Tower of David, builded for an armory,' should at once bless the land most richly and permanently, and shed their influence over the world; forming the most noble trophy and memorial of the Society, which had so largely assisted to rear them.

ANNIVERSARY EXERCISES.

These were held on Wednesday evening in the Central church. In the absence of the President, the Rev. Prof. Goodrich, of Yale College, presided, and the meeting was opened with prayer by the Rev. E. V. Gerhart, President of Franklin Marshall College, Lancaster, Pa.

ADDRESSES.

The Rev. R. W. Clark, of East Boston, moved the adoption of the report. Dr. C., in sustaining this motion, remarked that colleges, like all great forces in nature, were quiet, yet controlling. Their influence was greatly increased by being founded early, as their creating and molding power is then brought to bear upon society in its infancy. This organization was comprehensive in its character. It stood related to and embraced all others, Foreign and Home Missions, Tract Society, etc., inasmuch as it had especially to do with educating living minds, which must constitute the moving power in all these organizations. This Society should interest all classes. Gratitude is due for the past benefits conferred on our nation through the influence of colleges. We inherited the past and should live for the future.

Dr. C. considered the influence of colleges on our political institutions, and stated that a foreign ambassador once came to our shores to examine into our condition and to learn where lay our great strength as a nation. He was taken to our navy-yards, armories, forts, etc., whereas Dr. C. would have taken him to our colleges and schools. A despotism needs forts and armies; we, schools and colleges. They need flatterers; we, orators. Discussion was the life of our institutions. Our political parties needed educated leaders. They are changing their bases as new and great questions arise, involving most precious interests. Truth and error, freedom and slavery, were in conflict, and men educated in our colleges were adapted to meet the crisis.

Dr. C. also traced the bearing of colleges on general education. Colleges and common schools went together. They acted and reacted upon each other. Massachusetts had 1,149 students in her colleges, and 199,447 in her common schools. Virginia, with one-third more population, had in her colleges 744, and 109,775 in her common schools, or 400 less in the higher institutions, and 90,000 less in schools. Colleges were for the poor, and therefore needed to be endowed. It was the glory of New England, and especially of Boston, that the wealthiest citizen could not purchase for his child as good an education as was provided for the poorest.

The influence of colleges in respect to revivals of religion was also considered. No places had been so abundantly blessed of God. This was shown by statistics derived from the history of revivals in Yale, Dartmouth, Williams, &c. All the colleges aided by the society had been abundantly blesssed. The work in institutions was likely to be thorough and genuine, and free from extravagances. Minds there were disciplined and prepared for the reception of the Word. In respect to the dangers of college life it might be said, that while there are temptations everywhere, here they were guarded by the frequency of revivals, by the watch of college officers, and the fact that the mind was continually and fully occupied.

Colleges cultivated *individual power*. This was needed to meet the skepticism of the day and conduct reforms. Associated effort was a peculiarity of our day. The history of the church showed the power of individual minds, and the primitive disciples, Paul and Luther, were cited as illustrations. Influences descended from the more cultivated to the less, from the teacher to the scholar. Christ recognized the value and power of individuals. His teaching was often directed to individual minds. He instructed Nicodemus, the Samaritan woman, and others, in the great doctrines of religion. Leaders of society were now needed. The allied armies in the Crimea had every resource, but a leader was wanted. All great enterprises, to be successful, must have some originating and guiding mind to direct them.

Such minds were needed to contend with Romanism. The power of that system resided in the educational schemes of the Jesuits. Education as conducted by them stopped the Reformation. Their schools were established for Protestants rather than Romanists. In this country we had a fair field, and if we were beaten we deserved it. If we could not save our nation from Popery, what hope was there of converting the Papal nations of Europe? God did not allow us our great privileges without our laboring to retain them. If we were faithful we should act upon Romanists rather than they upon us. Modern improvements had already reached Rome itself.

Dr. C. urged the importance of liberal contributions to this object. But little comparatively was contributed to the cause of benevolence; in Great Britain some $2,000,000 annually, $800,000 in the United States. In the city of New York alone $1,500,000 were annually expended for theaters and opera-houses—about twice the amount of all our charities. Great Britain expended $250,000,000 yearly for alcohol and tobacco. The contributions to a single heathen temple in Calcutta were nearly as much as the united contributions of Britain and America. When the annual income of John Wesley amounted to £30, he gave away £2 and lived on £28. When it amounted to £60 he gave away £32, and when it rose to £120 he still gave away all but the £28. His charities amounted in all to £30,000. When the tax gatherers, who supposed him possessed of great wealth, called on him for an inventory of his plate, he informed them that he had two spoons in London and two in Bristol. By benefiting others we benefit ourselves. Great sacrifices were made to plant the early colleges of this country. Each family among the Pilgrims of New England gave twelve-pence or a peck of corn to sustain Harvard.

Dr. Clark was followed by the Rev. A. D. Smith, D. D., of New York:

If, in regard to any important matter, he said, where there is a lack of due practical interest, the main difficulty, commonly, is one of theory. Men fail to grasp the great generic truths which underlie it. If we would magnify any good object, we must magnify its ground idea. Mere details and specific views will not suffice. So as to the enterprise which now engages our attention. The public mind needs to apprehend more adequately:

I. *The importance of Education.* Of education broadly considered, and in the high Christian view, the view taken by this Society. Even the intelligent see but imperfectly what an interest and what a work it is. There is no other such interest in the universe. It is high as heaven, and broad as Jehovah's empire. It is the greatest of all works; as appears, 1. From the nature of the subject or material on which the educator operates—immortal mind, made in God's image. 2. From the results of his labor, so glorious and permanent. 3. From the divine example. God's agency may be referred to three great departments—creation, preservation, education; and of these the last is the greatest. He is the Educator of the world, nay, of all worlds. Even in the sphere of the materiel, there is a sort of educational process, much magnified by recent science—the educing from old chaos, if not from primordial "fire-mist," multitudinous forms of beauty and grandeur. The whole probationary state of man is educational. The chief function of Providence is didactic. Christianity is mainly, both as to the individual and the race, a process of training. To create and to preserve a soul is, in some sense, less than to educate it. Sanctification is greater than regeneration. The one is instantaneous—it comes of but a single fiat. The other stretches, often, over half a century, and has in it numerous and marvelous manifestations and harmonies of the divine attributes. As education is thus God's greatest work, so it is ours. From all this, we readily infer,

II. *The importance of educating the educators.* Such, indeed, are we all, and always. Every thought, feeling, word, act, has a formative power. But some have peculiarly and preëminently a didactic function; and chief among these are the graduates of such institutions as are aided by this Society. Various classes of graduates were briefly presented, in their educational function—ministers, lawyers, physicians, teachers by profession, legislators, authors. By them mainly is the community moulded. What they are, it will be. Of what transcendant consequence, then, is *their* education. With this general view, was connected,

III. *The importance of educating the educators of the West.* There is to culminate the glory of our republic. There, for it and for the world, is to be the seat of power. It was about a century ago that Berkeley wrote,

> "Westward the star of empire takes its way,"

and in the famous utterance was embraced both history and prophecy. Dr. S. gave a rapid sketch of the westward course of power and of light—in the old Assyrian empire, the Persian, the Macedonian, the Roman, the British; each extending farther West than its predecessor, until, on these shores, sprang up the great American power. And the course of this has been ever towards the setting sun, until hastened by that providence which out of evil educes good, it has established itself hopefully and even magnificently on the shores of the Pacific. For all this, meanwhile—in the Christianization of the Sandwich Islands, the opium war in China, the recent insurrection there, and the partial opening of Japan—Asia has been in preparation. Long assailed by Gospel forces on its western borders, it is now invaded on the east. Christianity, having made the circuit of the globe, is coming back to its birth-place with the spoils of the globe. From our own shores the light of salvation is to flash over the Pacific. Not for our own sake, a one, but for the world's and for Christ's, let us look well to the education of the educators of the West. Dr. S. spoke,

IV. *Of our agency in this matter.* The elder States of our uuion have a responsibility in reference to the younger, analagous to that of the elder sisters of a family. 1. We must hold up to the newer regions, *model institutions*. The colleges of the East have various advantages, resulting from their age, position, and patronage over those of the West; and they should be well sustained, not for our own advantage merely, but that they may serve as ensamples. They benefit the whole land, and especially the younger communities, by maintaining a high standard of education. 2. We must send to the West *model men*. This, to some extent, in all departments, we have always been doing—with some failures it must be admitted. 3. We must sustain institutions at the West, for *the development of native mind*. No Eastern supply can supersede this. Without it neither the ministry nor other important educational forces can be adequately supplied. The native mind, besides, has peculiar facilities for influence. Dr. S. dwelt on the developing powers of a college in relation to the surrounding community. It is a sort of divining-rod pointing to hidden wealth—a magnet drawing to itself congenial natures. He concluded by urging that while the movement of the world in general is so impetuous, we make haste in our work. The powers of darkness are making haste. In some way the West will be educated for evil if not for good. Be it ours to educate it for God and his Christ.

THE JEWS WITNESSING FOR CHRIST.

It is cheering to note how Jewish prejudices are gradually abating, and candid and honorable Jews are admitting the moral sublimity of the Saviour's life. The late Dr. Noah, of New York, gave the following testimony:—

"Jesus preached at all times, and in all places, in and out of the temple, with an eloquence such as no mortal has since possessed. It has been said, and with some commendation on what has been called my liberality, that I did not in a former discourse term Jesus of Nazareth an impostor; I have never considered him as such; the impostor generally aims at temporal power, attempts to subsidise the sick and weak believer, and draws around him persons of influence whom he can control. Jesus was free from fanaticism; his was a quiet, subduing, retiring faith. He mingled with the poor, communed with the wretched, avoided the rich, and rebuked the vain-glorious. In the calm of the evening, he sought shelter in the secluded groves of Olivet, or wandered pensively on the shores of Galilee. He sincerely believed his mission, courted no one, flattered no one; pointed and severe in his denunciations, he was calm and subdued in his religion. These are not the characteristics of an imposter; but, admitting that we give a different interpretation to his mission, when one hundred and fifty millions believe in his divinity, and we see around us abundant evidence of the happiness, good faith, mild government, and liberal feelings which spring from his religion, what right has any one to call him an imposter?—that religion which is calculated to make mankind happy, cannot be a false one."

Dr. Raphael, the elegant scholar and eloquent rabbi, speaks in a similar strain:—

"If you are desirous of knowing the opinion of a Jew, aye, of a teacher in Israel, respecting the proceedings against and the condemnation of the Master from Nazareth, I do not hesitate to tell you that I do not by any means feel bound to identify myself, or my brethren in faith, with these proceedings, or to uphold that condemnation; I, as a Jew, do say, that it appears to me, Jesus became the victim of fanaticism combined with jealousy and lust of power in Jewish hierarchs, even, as in later ages, Huss and Jerome of Prague, Latimer and Ridley, became the victims of fanaticism combined with jealousy and lust of power in Christian hierarchs; and while I and the Jews of the present day protest against being identified with the zealots who were concerned in the proceedings against Jesus of Nazareth, we are far from reviling his character or deriding his precepts, which are for the most part those of Moses and the prophets."

* * *

SALVATION BY GRACE.—Let it be considered that no other doctrine save that of distinguishing grace, secures the eternal benefit of a single individual of our race; for such is the deep depravity of the human heart, that all the outward means of grace are of themselves totally ineffectual to man's everlasting salvation—in so much, that after Christ himself had employed the best of external means with the Jews, he complains, "Ye will not come unto me that ye might have life;"—and upon this ground He asserts, No man can come to me, except the Father who hath sent me draw him;—whence it follows, that had not God sovereignly chosen *some*, and resolved on their salvation, the death of Christ, and the ministration of the Gospel, with all its appendages, would have been in vain; so that the sovereign purpose and effectual operations of Jehovah, so far from diminishing his grace, tend highly to exalt it; since it is abundantly evident, that there is more grace, goodness, and compassion manifested in *securing* the salvation o *some*, than in making *ineffectual provision* for the salvation of *all*. [Samuel Pearce, 1795.

* * *

The people of Milwaukee have been considerably excited by an attempt of a Russian named Pfeil to burn the dead body of his wife, (a Brahmin in belief,) according to her dying request. The authorities interfered and buried the body.

Thanksgiving.

A Proclamation by Myron H. Clark, Governor of the State of New York.

The Lord has been pleased to preserve our lives and to deal graciously with us during another year. While sanguinary war has desolated the soil and saddened the homes of Europe, peace has sat by our firesides and plenty has walked in our fields. The earth, parched by no drouth, and chilled by no unwonted frosts, has yielded her increase bounteously. Pestilence, that has ravaged a neighboring coast, has been staid at our threshold, and we have been enabled to minister to the wants and necessities of the suffering and afflicted. The commercial, mechanical, and various pursuits of our citizens, have been crowned with unusual success. Science and art have made liberal progress among us; and religion, unawed by power and unchecked by bigotry, has imparted her divine teachings and ministered her consolations. Our Republican institutions, with good and wholesome laws, have helped to lighten the burdens of our people, and to advance the moral and intellectual improvement of society.

In grateful remembrance of our manifold blessings it becomes us to lift up our hearts to God, the giver of all good, who carefully considereth all the dwellers upon the earth. I do, therefore, and in pursuance of established custom, set apart and appoint THURSDAY, THE TWENTY-NINTH DAY OF NOVEMBER NEXT, to be observed throughout the State as a day of Praise, Thanksgiving and Prayer; and I respectfully recommend to my fellow-citizens to abstain from all secular occupation on that day, to gather themselves in their assemblies, and render to our Heavenly Father the homage of grateful hearts, remembering before him the poor, the neglected, and the oppressed. Let us, as patriots and Christians, implore Him to bless our Civil and Religious Institutions; and let us supplicate Him to continue His favor to this people throughout all generations, and withal to dispense to us individually that heavenly grace which, with faith in the Lord Jesus Christ, and virtuous action here, will prepare us for His heavenly kingdom.

In witness whereof, I have hereunto set my name and affixed the Privy Seal of the State at { L. S. } the City of Albany this twenty-seventh day of October, one thousand eight hundred and fifty-five.

By the Governor, MYRON H. CLARK.
GEO. F. BAKER, Private Secretary.

COLONIZATION AS A REMEDY FOR DIFFICULTIES.

In view of the difficulties which beset Seventh-day Baptists, on account of their Sabbath, it is quite natural to wish that the whole world were converted to their views. We do not mean to intimate, that the conformity of the public to the Bible Sabbath is not to be desired on another and infinitely more important ground—the glory of God. Still, it is a fact that this conformity does not exist; and because it does not, our people are subjected to many inconveniences, which it would seem not wrong to wish might be removed. And as every Christian is disposed to smooth the way for himself, as far as he can do so consistently with duty to his Lord, we suppose it to be a question which engages the attention of no small number among us, whether any plan can be adopted, which will afford a reasonable probability of the cessation, or at all events of a considerable diminution, of these inconveniences. If our denomination generally, or any considerable portion of it, can be placed in a situation where there will be an exemption from the disadvantages growing out of our interspersion among those of a different faith, it would seem to be expedient to put in operation the plan which promises such a result, as soon as possible. For why should we continue to bear a burden, if laying it down involves no sacrifice of principle?

The idea of congregating our people together in a community by themselves, is not unfrequently entertained; and though no one thinks it could be realized in behalf of the entire denomination, we may as well, in view of what we have said, *suppose* it to be practicable, as to suppose any thing else. Suppose, then, that the entire community of Seventh-day Baptists could be gathered together, and without much trouble set down in Oregon, Nebraska, California, or any other given territory. Such an arrangement would give them great facilities for carrying on business among themselves. Relieved from the necessity of regulating their movements by the convenience of those who observe a different Sabbath, and enabled to combine their capital, for business purposes, to an extent to which they could not under any other circumstances; enabled also to shut out, in a great degree, those temptations which, because of our interspersion among First-day people, bear strongly upon the weaker and more selfish portion of our community; it would seem, at first blush, as if the desired remedy for our inconveniences were obtained.

It must not be forgotten, however, that under the diversified organizations of society, human nature is still selfish. Whatever an arrangement like the foregoing might promise, therefore, or however advantageously it might operate, in a business point of view, for the community as a whole, individuals would be found, (and not a few of them either, we apprehend,) who would think that they were not realizing all the prosperity that they ought to, or that they might elsewhere. Would these individuals be retained in the community? Or, would they take their leave, to seek their fortune among First-day people?

Those who imagine that any such colonization scheme as that we have supposed would cure the discontented and migratory spirit which is now so often exhibited, have not studied human nature to very good purpose. For why do our brethren leave the smaller communities of Seventh-day Baptists already established, and go off to seek their support among those who do not keep the Sabbath? Is it because they cannot live? Is it because the business of a small Sabbatarian community is not sufficient for them? This is not the reason. It is because they cannot *increase*, as well as live. The amount of employment which they can secure from their brethren, joined with what they can obtain from First-day people in proximity to them, would enable them to live, if living were all, without any compromise of their integrity.

But the idea of obtaining nothing more than a sustenance for themselves and their families is so intolerable, that they prefer foregoing their religious opportunities to submitting to it. It is, in their opinion, so important to lay up for the future, that the purely religious character of the question is ignored completely. Lay up they must, and lay up they will; and in the hope of being able to do so, they forsake their brethren, and the church, endeavoring to persuade themselves that the accumulation of something ahead is even a more sacred duty than to dwell in the house of the Lord. This, in nine cases out of ten, is the true reason why our brethren exile themselves to regions where the Sabbath is not observed.

Now it is clear, that no plan of colonization will ever remedy *this* difficulty. Were it even practicable to gather together in one colony the entire community of Sabbath-keepers, it would not remedy it. It would be impossible to interclude those inequalities of wealth and station, which obtain in every thriving community; and we do not know that it would be advisable, if it were possible. Some would accumulate rapidly, others in a moderate degree, and a third class would but just live. Those who could not compete with their neighbors, would soon begin to find fault with the society—with its customs—with the men who employed them—with the nature of the soil—or something of a like nature, and would soon find their way to other localities.

In our opinion, therefore, colonization would only be taking a new start, to encounter the same difficulties, sooner or later, which have always attended us. T. B. B.

THE RESURRECTION—NO. 3.

From a reperusal of Brother Griswold's article on *the Resurrection*, published in the *Sabbath Recorder* of August 30th, I propose some further remarks upon the subject.

1. I understand Brother G. to assume, that it will not be necessary for the soul and body to be reunited in order to receive a full reward of pleasure or suffering in the spirit-world; and therefore he thinks that the body will not be raised in the resurrection. Now, this is what no uninspired person should pretend to know. It may be that as the soul could not perform those virtuous acts, nor commit many of the sins, which will be brought into the account at the day of judgment, without the agency of the body, so it may be that the rewards and punishments of the future state must be administered in like manner through the agency of the body. And as all pleasure and pain, whether corporeal or mental, are enjoyed or suffered through the medium of these faculties which appertain to the soul, so it may be, for aught we can know, God's chosen, and perhaps his only consistent method of carrying out the final decisions of the day of judgment.

2. Brother G. thinks that the resurrection of the body is not very definitely taught in the Scriptures. But admitting it to be taught *indefinitely* therein, it should be admitted to be a truth; for the Scriptures do not indefinitely teach an untruth. But I have thought otherwise on this subject. There is certainly no lack of testimony in the Bible to prove the resurrection of the dead. But what can we understand by *the dead* but *dead bodies?* The body only dies, and this is what is buried. As the word *dead* is an adjective, it must qualify some other word, expressed or understood; so that when Abraham stood up from before his dead, (Gen. 23: 3,) we know that the language signifies that he stood up from before the dead body of Sarah, his deceased wife. And the word is more generally used in the Scriptures without its adjunct *body*, or *bodies*, than with it. The criticism of Mr. Locke, quoted by Brother G., to show that *necroi*, masculine of *dead*, does not agree with *somata, bodies*, which is of the neuter gender, proves nothing in his favor; for there is no necessity for making *somata* the adjunct of *necroi;* some other word, in the masculine gender, might with more propriety be supplied. *Anthropoi, man*, being the generic word for the whole race of mankind, being supplied, obviates the difficulty, as it agrees both in gender and number with *necroi.* The noun is generally omitted in the Greek of both the Old and New Testaments; but not always. In Jeremiah we have *ton necron ton anthropon*, genitive plural; literally, *of the dead of men.* In Isaiah 26: 19, we read, "Thy dead men shall live, (*anasterontai*, literally, shall arise,) together with my dead body shall they arise." This evidently looks forward to the resurrection of the dead. When it is said, in Luke 20: 38, "For he is not the God of the dead, but of the living," does it not signify, that he is not the God of *dead men*, but of *living men?* This will not be denied.

3. Brother G. quotes Dr. Dwight as saying that the Greek word *anastasis*, which is rendered in the Scriptures *resurrection*, denotes our existence beyond the grave, and should not be rendered *resurrection;* and refers to the reply of Christ to the Sadducees, as evidence of his correctness. But the opinion of Dr. Dwight is by no means conclusive upon this point. A man who can find a first-day Sabbath in Matt. 9: 15, as Dr. Dwight has, can make the Scriptures signify anything to suit his turn. That *life beyond the grave* is the result of the *anastasis*, or resurrection, I admit; but I think Dr. D. could have adduced no good authority for his opinion. I have, in a previous article, shown that his Scripture reference does not settle the meaning of this word beyond dispute. Although the existence of an angel or spirit is what the Sadducees denied, and, as a consequence, they said, in accordance with their infidel theory, that there is not to be a resurrection to life after death; but Christ told them that they erred, "not knowing the Scriptures, nor the power of God." But the apostles did not so preach the resurrection; nor were they so understood to preach it. When Paul preached at Athens, (Acts 17: 18,) "Jesus and the resurrection," had the people understood him to mean by the resurrection, only *a life beyond the grave*, or a life separate from the body, they would have scarcely charged him with being a setter forth of strange gods on this account; for the pagans generally believed that the spirit lived after the death of the body. Nor will this word (*anastasis*) admit of such a rendering, in many places, as it stands connected with other words. See Luke 2: 34, which, according to Dr. Dwight's improved version, would read thus: "And Simeon blessed them, and said unto Mary his mother, Behold, this child is set for the fall and life beyond the grave of many in Israel." Again, by substituting Dr. D.'s interpretation we should read, "They that have done good unto the life beyond the grave of life." Also, 2 Tim. 2: 18, "Who concerning the truth have erred, saying the future life is past already, and overthrow the faith of some." The sense of *anastasis* will not admit of such a rendering, for it signifies a rising again of that which is fallen, or buried, as it is used in Luke 2: 34, quoted above. Its theme is *anistemi*, "to stand up, to rise; as a noun, it signifies, a standing up, a rising up; in a political sense, an insurrection, tumult, uprising"—*Grove.* The sense given by Parkhurst is, "A standing on the feet again, or rising, as opposed to falling; a rising of the body from the grave, applied both to Christ and men in general, whether good or bad." *Greenfield* defines the word to mean, "A rising up, resurrection." It has this sense in Zeph. 3: 8—"Until the day that I rise up," (*anastaseos.*) The word occurs in 2 Mac. 7: 14 and 12: 43. In both places it signifies the resurrection of the body from the dead. *Webster* defines *resurrection*, "A rising agein, a revival from the grave." *Walker* defines it, "A return from the grave." *Chambers* says it signifies, "The act of returning to a new or second life, after having been dead." Thus much for the signification of *anastasis* and resurrection.

4. If I rightly understand Brother G., he thinks the resurrection occurs to every individual when he dies. If so, then to all who have died the resurrection is past already. I do not wish to consider him in a class with *Hymenius* and *Philetus*, who erred, saying that the resurrection is past already; but I am unable to discover wherein they differ on this point; and the consequences resulting from those ancient errorists saying thus, are very likely to follow the same thing being said now.

5. The resurrection of the dead is, in the Scriptures, associated with the second coming of Christ, the day of judgment, and perdition of ungodly men; the conflagration of the earth, and the destruction of the things that are in it. Christ is called the *first-fruits* of the resurrection; "afterwards they that are Christ's at his coming." 1 Cor. 15: 23. "And then cometh the end." According to St. Paul's teaching, the resurrection of the saints will take place immediately preceding the end, when Christ shall deliver up the kingdom to God, even the Father. These things are yet in the future.

6. The scenes described in the Apocalypse, (20: 4, 5, and 21: 11, 15,) seem to me adverse to the opinion expressed by Brother G. on the subject of the resurrection. Here it is proclaimed by an angel, that time shall be no longer. The souls of the saints are said to live and reign with Christ, while the rest of the dead lived not until the accomplishment of an appointed period. The great white throne was seen, with the Judge of the living and the dead seated thereon; the dead small and great stood before God; the books were opened, and they were judged according to their works. The sea also gave up the dead which were in it. Now, whatever of metaphor may be supposed to be here employed, it is in close keeping with the instruction of Christ and the apostles, and of the prophets who were before them. According to Matt. 13: 30, the righteous and the wicked are represented as living together until the harvest. The harvest is the end of the world, the reapers are the angels, the Son of Man is the Lord of the harvest. So in Rev. 14: 15, it is said, "The time is come for thee to reap, for the harvest of the earth is ripe; and the earth was reaped."

The Apostle Paul speaks of the resurrection of the dead and the eternal judgment as being closely connected, and of equal importance for the Christian to embrace in his faith. In Heb. 6: 2, the doctrine of the resurrection is mentioned as being a part of the foundation upon which is reared the whole superstructure of the Christian religion.

The rising from the dead will be something definite, and not any thing that our fancy may suggest. It is so also with the word *anastasis*, or resurrection. It cannot signify any kind of occurrence, but must be defined according to the rule of analogy, and the established laws of interpretation. It has invariably been used in the Scriptures, by lexicographers ancient and modern, by theological writers and commentators, with very few exceptions, (and these of a modern date,) to signify a rising, a standing up again, and, generally, a rising from the grave, or restoration from death. I can see no analogy between rising from the grave, or restoration to life, and merely a conscious existence after the spirit is separated from the body by death. They are two very distinct things. To subscribe to the doctrine of the resurrection, and deny the thing intended by it, is really to deny the fact of the resurrection. To be consistent with this denial, we should deny the fact of the Saviour's resurrection, and consequently the most important evidence of the divinity of our Saviour's mission.

I have thus candidly expressed my dissent from what I understand Brother G.'s sentiment to be on the foregoing subject. I sincerely regret that he has allowed himself to speculate upon the subject so far as to come to his present opinion. My regard for him as a Christian brother, gives me confidence that he will reconsider the subject, and ultimately be settled upon conclusions in stricter harmony with the expressions of the Scriptures, and the sentiments of his covenant brethren, on this subject. W. B. M.

LETTERS FROM PALESTINE—NO. 19.

JERUSALEM, Sept. 3, 1855.

During the past two days we have enjoyed interesting visits at the houses of several Christian friends. Two nights were spent upon Mount Olivet, in the house of a missionary who knows how to excel in making his guests feel at home. These have been rare treats, off here in this wilderness land, and an agreeable contrast with our pent-up quarters and company among those who care so little for the Son of God. Hence (from Mount Olivet) we had for two mornings in succession a sunrise view of Jerusalem. It was beautiful; indeed, to every Christian eye, it must be glorious. Looking upon the city in those fresh, golden moments, the whole Bible seemed spread out as a single page before me. I looked, yea, gazed, and thought and prayed, and wept, till business brought me into the city. Here it is dusty and filthy as ever. Ah, poor Jerusalem! How like a widow doth she sit solitary, and but few care for her mourning.

Some two months since, while at supper in the house of a missionary, I was led to relate the story of the journey of William Box Brown, from the sunny South to Philadelphia. Of course, friends, it was an abolition story; nevertheless, a true one. Arrived at that point where his journey ends, we were at that moment interrupted. Yesterday, we were invited to dine with the same family, accompanied with the request that I must come and finish my story. As it was then the close of my temporary stay here, I concluded to enjoy as much as possible of the religious services of the day. (It was first-day.) In the morning at six, I attended Arabic service, expecting to hear Mr. Nicolayson preach, but Mr. Clyne, from Nazareth, preached in his stead. After sermon, the communion was administered to eleven natives. At 10 o'clock we attended English service. We then repaired to the house of Rev. Mr. N. After a sumptuous cold meal, we were invited into the garden. A nargilia was brought and placed beside the Danish minister, who took its amber mouth-piece and began to "drink" smoke—yes, *tobacco* smoke—through a cord or serpent-like stem several feet long. "Now for the rest of your story." It was given, though prefaced with an outline of what some present had not heard before. When that was finished, I related the case of our dear suffering brother Pardon Davis. When I finished *this* story, I perceived that a tender cold had been touched. There were tears shed, and I hope prayers offered, for the universal overthrow of slavery; and as the company separated, each felt that English and American Christians should better understand the iniquity of this business, and labor unitedly to extinguish the sin and curse of such oppression from under heaven.

In the morning I had attended to my usual studies. The extreme heat of the past few days, and the labors of the day, made me feel at night that I had performed a hard day's service. To-day closes for the present my studies and labors in Jerusalem. We are now busy packing up and getting ready to leave this afternoon for Jaffa. The three months we have passed in this city have been months of toil, in quite unpleasant quarters, for the reason, as the brethren may well guess, that we are short of funds. But, cramped as we are in this respect, we would, if duty called again, try the same or similar circumstances over again, for the sake of a more thorough preparation for the great work. No cross, no trial, should be considered too heavy to be borne for the sake of Christ and his gospel. Oh! to feel that one is laboring for Christ; to realize that the Word and Spirit say, Go work in the vineyard; and to be able to perform that labor in the *love* and *truth* of the gospel; that is a point gained—a victory obtained, worth more than all the glory of battles, or even of the world. "He that winneth souls is wise." Oh! for such wisdom who would not live, and suffer, and rejoice in the midst of sufferings, that toil and pain were his below, while hope, like an anchor to his soul, revealed that through divine grace, heaven will be his above!

After our brief sojourn here, I feel somewhat the force of the remark of Brother K. when I first came here: "Jerusalem must be studied." Perverted as the sacred spot is to the sway of the Moslems, and dirty and dingy as are its streets and general appearance, still, there *is* something about this place that makes me feel that Divinity has been here. Here the Saviour of men walked and taught; He trod this ground; here He wept, agonized, sweat, bled, and died, and rose again. "O Jerusalem, Jerusalem, how often would He have gathered you together, ... but *ye* would not." W. M. J.

JAPANESE RELIGION.

Every day brings something new in regard to the religious belief and practice of the Japanese—a people who have long been shut out from the rest of the world, but who are likely soon to become familiar with it. A gentleman named W. C. Reed, who has recently made an unsuccessful attempt to establish a mercantile house in the empire, communicates to the *Journal of Commerce* the following interesting facts concerning the religion of Japan:—

"The religion of this country is as strange as the people themselves. Our short stay here has not afforded us much opportunity to become conversant with all their vocations and religious opinions. So far as I know of them, I will write you. First, they have no Sabbath or weeks, but divide the time by moons and half moons. Hence the first and middle of each month is observed as a day of rest or recreation. On these days no appearance of activity is to be seen. All the houses are closed, and the inmates spend their time in eating and licentious enjoyments, to such an extent, the Russians say, as to become perfectly abhorrent to an enlightened mind. What takes place in their houses on those days I am unable to say, but I have noticed their excluding themselves from the streets on these days. Temples are built all over the country, where there is a spot sufficiently picturesque to meet their idea of a temple site. In the temple a priest lives, with as many wives as he wishes, and to all appearances leads a life of licentious debauchery. In front of each temple is a large bell, which is sounded at certain hours of the day, or, according to my observation, at any hour it may suit the pleasure of the buns or priests, and that is a signal that he goes to prayer. None come at the sound of the bell, nor does it appear that the object is to call the people in. The priest sits down in front of the altar, with a small taper burning, and with a small mallet in one hand and a string of beads in the other, he begins to hum or half sing a certain number of words—'Am Jam Am,' at the same time rapidly striking a wooden bell or tub, and then a copper one, and so alternately for an hour or so, except sometimes he ceases to strike with the mallet, and rubs the beads together with both hands, and renders his voice finer or more slow and plaintive. This appears to be all the worship they have, and their belief is, that the priest can and must do all the praying. There appears to be no solemnity attached to this service by the people or the priest; for, go into a temple during prayer, and the priest gets up and begins to laugh and ask questions, &c., the same as though we entered a shop. In short, I am informed that the people in general have no respect for their priests, but treat them as we would some outcast from society."

CALVINISTIC AND GENERAL BAPTISTS.

The causes of the stationary condition, or gradual decline, of the General Baptists of this country, have been much discussed of late. A writer in the *Free Will Baptist Quarterly* gives what appears to him to be the true explanation, in which will be found suggestions worthy of thought. He claims that most of the earlier Baptist Christians of New England and the United States belonged to the General rather than the Particular Baptists, and gives the following reasons for the stationary condition of the former body and the rapid growth of the latter:—

"Without attempting to inquire at length into the causes of this difference, it may be briefly accounted for as follows: The Calvinistic Baptists, or New Lights, as the General Baptists at the South call them, began at a comparatively early date to educate their ministers and give them a competent support, which was a means of raising up many able and useful preachers among them. They also engaged heartily in the cause of education, which opened the way for the learned and influential to unite with their congregations and churches. In building meeting-houses, they consulted taste as well as convenience, and adapted their manner of worship to the views and feelings of the intelligent and refined portions of the religious community. On the other hand, the General or Six Principle Baptists seem to have almost wholly discarded such measures, considering them as indications of pride and worldly policy, which would offend God rather than secure his favor. To what has been said on the causes of the difference under consideration, it may be added, that the Particular Baptists have long taken unwearied pains, and made great sacrifices of time and money, to promote and extend their denominational interests and influence, while the General Baptists have done but little in this way. It is easy to perceive that under the circumstances indicated above, one of the denominations must necessarily increase, and the other make little if any advancement. Able, pious, and faithful ministers, well-supported—permanent churches, good meeting-houses, denominational zeal, benevolence, regular meetings, and acceptable forms of worship, are means without which no sect, however humble and religous, can enjoy prosperity."

ROMISH PRIESTS FOR AMERICA.—The Pope of Rome has written a letter to "the Archbishop and Bishops of the Province of New York," recommending the establishment at Rome of a College to educate priests for this country. It is said to be the design of the Pope to have a College in Rome for the education of priests for each of the principal nations of the earth. The letter says:—

"But that you may provide more easily for the wants of your dioceses, and may be able to have skillful and industrious laborers who can help you in cultivating the vineyard of the Lord, *we most earnestly wish*, as we already have intimated to some of your order, *that*, comparing your advice, and uniting your resources, *you would please to erect in this our fair City of Rome a College appropriated to the clergy of your nation.* For your wisdom will instruct you how great advantages may redound to your dioceses from an institution of that kind. Because, by this arrangement, youth chosen by you, and sent hither as the hope of religion, will grow up as in a nursery, and imbued here with piety and with an excellent education, and drawing from its very fountain a doctrine incorrupt, and learning the institutes, and the rights and holy ceremonies in the method of the Church which is the mother and mistress of all others—when they return to their country, will be able properly to discharge the office of a parish priest, or of a teacher, or of a professor, and to shine as an example of life to the people, to instruct the ignorant, and to bring back the erring to paths of truth and justice, as well as, by the armor of sound doctrine, to confound the madness and refute the fallacies of men of guile. If you will ratify this our desire, which looks only to the spiritual good of those regions, we certainly, as much as lies in us, will not omit to assist you with all diligence, that you may establish the said College."

RELIEF OF AMERICAN WIDOWS.—There is an Association in New York for the Relief of American Widows, the first anniversary of which was held at the Tabernacle one evening last week, when the Annual Report was read, and addresses were delivered by Horace Greeley and Rev. Drs. Smith and Parker. From the Annual Report it appears that this Association aims to relieve those persons who are struggling to get along without help, rather than those who are always ready to apply for help. In carrying out this design, it was early discovered, that many such persons were suffering for the want of clothing which they had pawned for small sums with which to buy food. It was therefore decided, that the best thing the Association could do would be to take their clothing from the pawnbrokers, and soon 140 pawn tickets had been returned, and the clothing given to its owners. The money obtained on clothing was about as follows:—for a feather bed, $2 50; for a quilt or blanket, 37 cents; for a pillow, 25 cents; for a common shawl, 37 cents; for a gown or skirt, 37 cents; for a velvet or other fine cloak, $5. The entire receipts of the Association last year were $8,250, nearly all of which has been expended in redeeming articles from the pawnbroker's. Seventeen hundred tickets have been returned by the Association, for which three thousand articles have been obtained, and many of them returned to their owners, at a cost of $8,000.

MISSIONS IN SHANGHAE.—We find in the *Christian Watchman and Reflector* the following statistical account of the missions located in Shanghae, China:—

The city of Shanghae contains a population of about 350,000. On May 30th, 1855, ten missionary societies had agents there, viz., 3 English, 6 American, and 1 Dutch. There were 13 European, 20 American, and 9 Native missionaries; 2 printing establishments, 29 schools, with 735 scholars, about 70 being girls. There were also 13 chapels, in which 82 services were held weekly, the attendance varying from 30 to 150.

It appears that there are six Christian churches in that city, viz., two in connection with English societies, the London Missionary formed in 1844, and the Church Missionary formed in 1850; and four in connection with American societies, the Southern Baptist, formed in 1847; the Sabbatarian Baptist, formed in 1849; and the Episcopal Methodist, formed in 1851. To the inquiry, 'Church, when formed,' the American Episcopal Missionary Society returns the characteristic answer, 'A. D. 33.' Their mission to Shanghae was commenced in 1844. The present number of members in the six churches is 63. Total from their formation, 109. The number of applicants for membership is 25.

The missionaries practice itineracy with great vigor, some of them making journeys of one or two hundred miles into the interior. The aspect of missionary affairs is very encouraging. There is a great demand for books, and nearly 10,000 of 'The Sinner's Friend' have been distributed.

MODERN ENTERPRISE.—The N. Y. *Tribune* closes an elaborate article on the scientific activity of our generation, with the following summary of its achievements in the line of new discoveries alone:—

Within the last twenty-five years, all the principal features of the geography of our own vast interior regions have been accurately determined; the great fields of Central Asia have been traversed in various directions, from Bokhara and the Oxus to the Chinese Wall; the half-known river systems of South America have been explored and surveyed; the icy continent around the Southern Pole has been discovered; the North-western Passage, the ignis-fatuus of nearly two centuries, is at last found; the Dead Sea is stripped of its fabulous terrors; the course of the Niger is no longer a myth, and the sublime secret of the Nile is almost wrested from his keeping. The Mountains of the Moon, sought for through two thousand years, have been beheld by a Caucasian eye; an English steamer has ascended the Chadda to the frontier of the great kingdom of Bornou; Leichardt and Stuart have penetrated the wilderness of Australia; the Russians have descended from Irkoutsk to the mouth of the Amour; the antiquated walls of Chinese prejudice have been cracked, and are fast tumbling down, and the canvas screens which surround Japan have been cut by the sharp edge of American enterprise. Such are the principal results of modern exploration. What quarter of a century, since the form of the earth and the boundaries of its land and water were known, can exhibit such a list of achievements?"

AGED INDIGENT WOMEN.—The New York Asylum for the Relief of Aged Indigent Women is one of the most useful institutions of the kind in existence. Its 42d anniversary was held last week, when it was stated that 87 inmates are supported in the asylum building, and about 75 persons outside are aided for six or eight months of the year, as the funds of the institution hold out. "The 87 inmates all require the aid that is bestowed on infancy—poor, feeble, old persons, needing much tenderness and care, and this they receive from the nurse of the infirmary, the kind and faithful Mary."

RELIGIOUS INTELLIGENCE.

The N. Y. *Independent*, which has gained seven thousand since the first of Jan., publishes a letter from a score of laymen, sixteen of whom have never supported the paper, censuring the freedom of its controversy; in its remarks the editor says, "We admire the conscientious sensibility of these sixteen, which has led to the desire of purging themselves from responsibility for the supposed errors of a journal, which has neither quoted nor referred to them, nor undertakes to represent them, and which they have neither paid for nor recommended, sustained, nor read!"

The St. Louis *Presbyterian* notices a revival in Fulton, Mo., following the meeting of the Synod at that place. The pastor says: "I have been in many revivals, but do not recollect ever to have witnessed one where the feeling was so solemn and awful. Last Sunday thirty-six made a public profession of their faith before a large and interested congregation. Many of these were young men and young ladies in the College and Female Seminary."

One of the graduates of the Methodist Biblical Institute in Concord, N. H., at the commencement recently, was a converted Jew. The subject of his oration on that occasion was the "Life of St. Paul." It was interesting to hear the incidents of the life of the great Apostle to the Gentiles, so eloquently recited by one whose nation is that peculiar people who believe not that the Messiah has come.

The American Bible Society has resolved to publish the Gospel by John, and Acts of the Apostles, in the Spanish language, that they may be used as a school-book in St. Domingo. An appropriation has been made also for the purchase of blocks to print the Chinese New Testament at Amoy; and a Swedish Bible will be published as soon as funds can be spared for the purpose.

Columbian College, the Baptist institution at Washington, has just received a donation from Reuben Wittiers, of Alexandria, in real estate, in Washington, to the amount of $20,000. This college, under the auspices of President Binney, and the new corps of professors, is already beginning to revive.

Rev. L. C. Matlack, editor of the *Wesleyan*, Syracuse, N. Y., has been elected to and accepted the Presidency of the Illinois Institute, located in Wheaton, Du Page county, Ill., under the care of the Wesleyan Methodist connection in America. Mr. Matlack does not, at present, however, leave for his new post.

The Pope having determined to found an English college at Rome, to supply the wants of clergymen of the Romish faith in England, a general collection has been taken up in all the Roman Catholic churches and chapels of that country in aid of the project.

At a recent meeting of the Synod of Maryland, at Washington, the *Lutheran Observer*, with its assets and liabilities, was sold to Dr. B. Kurtz, its present editor, for $2,000, one-half cash, and one-half in six months, with interest.

The Rochester *Democrat* states that an American Protestant lady of that city, a few weeks since, entered the pale of Judaism, and last Sunday she was married according to the Jewish ritual, to a descendant of Abraham.

The Protestant Bible Society of Paris has declared its intention to present hereafter every newly-married couple of the Protestant church of France, with a Bible.

Rev. Dr. Duff has left England for India, where he will renew missionary labors, in which he has so long been prominent and blessed. His health has considerably improved.

The Hebrews, lately in session in Cleveland, have resolved to found a University for the education of their people. It is to be located at Cincinnati.

European News.

News from Europe to Nov. 10th was received in New York on the 22d, by telegraph from Halifax.

In England, the excitement respecting a war with the United States has quite subsided and the leading journals, ashamed of the panic they created, attempt to excuse it, and let themselves down quietly by attributing what they call the hostile attitude of the American government to an election ruse on the part of the President and his Cabinet, although it is notorious that the excitement was begun, fostered and kept alive by the London Times.

In Paris, it was rumored that another attempt had been made to assassinate the Emperor, which, however, was totally untrue. The report arose in consequence of a pistol belonging to one of the dragoons by accident falling from his holster and exploding.

From the seat of war there were various reports, the most important of which, received by way of Turkish embassy at Vienna, was to the effect that the bombardment of Nicolaieff commenced on the 29th of October, and continued during the whole of the following day. The result of course, was not known. It was said that the Grand Duke Constantine was in the town. There were rumors afloat of other battles, but no reliance was placed upon them. At Sevastopol affairs remained without change. The Russian force in the Crimea is stated to number two hundred thousand men, amply provisioned for six months.

Accounts from Naples to the 30th ult., say that there was no doubt of the commencement of a revolutionary movement in Sicily. Several of the insurgents had been shot. The particulars, however, had not transpired.

Reports were current of unfriendly relations between England and Spain, growing out of an alledged outrage upon a British subject in Cuba, and the appointment of a notorious slavedealer as Governor of Fernando Po.

Kansas News.

Letters from Kansas contain intelligence of considerable interest. The Free-State Convention, which has been in session for some weeks at Topeka, adjourned on the 11th, after having adopted a Constitution which is to be submitted to the popular vote on the 15th of December. A resolution indorsing the principle of the Nebraska bill, after a long and spirited debate, was rejected; or rather, a vote adopting it was reconsidered, and no further action taken on the subject. The Constitution, as it has been adopted, submits the question of Slavery in Kansas to the vote of the people.

We have also a report of the organization of a Law and Order Convention, as it styles itself, at Leavenworth, together with the speech of Governor Shannon on taking his seat as President. Gov. S. denounces, in the most vehement terms, the Free-State movement, and declares that all who resist the execution of the laws enacted by the late Legislature will be guilty of treason to the State. He asserts also that the National Administration is determined to support the late Legislature, and predicts that, in the coming Presidential contest, there will be but two parties—the "Black Republicans" and the Unionists. Resolutions embodying similar sentiments were adopted by the Convention.

The letters also contain the intelligence that a bill has at last been found by the Grand Jury against McCrea, for murder. The incidents of the affray in which McCrea killed his assailant, acting himself most clearly in self-defence, will be remembered by our readers. The Grand Jury once refused to find a bill; but it seems that the presiding Judge added seven men to the Jury, who were known to be enemies of McCrea, and that by this manœuvre a bill has been returned. [N. Y. Times.

Affairs in China.

The Hong Kong correspondent of the London *Times* gives the news to Sept. 15th.

A large and heavily armed piratical fleet had been destroyed, or dispersed, by her Majesty's brig Bittern, to the northward of Shanghae, and the well-planned and executed measures of Commander Vansittart had been most beneficial to the large native trade, which had been seriously interrupted. Nineteen piratical vessels have been destroyed.

The Taoutae of Shanghae has issued a proclamation ordaining that from and after the Chinese new year (February, 1856) all dollars or foreign coins of the kind assayed at the Custom-house in the presence of the Consuls, shall be taken at par with the old Carolus dollar, with reference to their intrinsic purity and weight in silver. This is an important step towards doing away with the fictitious value of the Carolus dollar, but the authority of the Taoutae is limited to his district, and the reformation of the currency must be a matter of time.

We hear nothing of rebels in the north.

Canton remains quiet, and the Province is apparently more tranquil than before, if we may judge from the safe transit of goods and produce to and from Canton, and the regular movements of the large passage-boats, which had long been disused, on the river. Food is plentiful, and the growing crops look well, the weather being favorable.

Affairs in India.

Intelligence had reached the Bombay Government from Madras, that Mr. H. V. Conolly, Collector of Malabar, had been murdered on the 11th of October, by a party of Moplahs. On the evening of the day in question, Mr. Conolly was seated with his wife in the verandah of his house, near Calcutta, when five men armed with the long and heavy Moplah knife rushed in and commenced a violent attack upon him. Mrs. Conolly ran into the house, calling upon the servants to come to the assistance of their master. Two of them, who were near the spot, immediately came forward, but were kept at bay by the assassins, who cut off the hand or several of the fingers of one, and inflicted a severe wound on the other. Then, their work accomplished, the murderers disappeared in the darkness. Mr. Conolly was carried into the house, and medical assistance sent for from Calcutta, but before it could reach him he had expired. His injuries are described as being of the most frightful character. No fewer than twenty-seven wounds were found upon his body, which was almost literally hacked to pieces. His poor wife sat by his side covered with the blood of her husband who had seen murdered before her eyes, stunned and tearless under the weight of a blow so sudden and so terrible.

A party of the 74th Highlanders were dispatched in search of the murderers, and on the 17th of October they fell in with them at Munjerry, when, as on previous occasions of a similar nature, it was found impossible to take these desperate fanatics alive, and they fell to a man before the bayonets of the soldiers.

The insurrection of the Santhals has n t been completely put down. The latest intelligence from the disturbed districts is the following telegraphic dispatch, dated Calcutta, Oct. 1:

"Seventeen of the family of Zemindar of Natlampore are murdered by the Santhals. The Santhals, 1,000 strong, were about to attack Jantarrah, when Lieutenant Phillips came upon them, and killed about 25, wounding 50 or 60."

The religious quarrel in Oude appears to be far from settled. A Mahometan pamphlet, entitled *The Sword is the Key of Heaven and Hell*, has been widely disseminated over Northern India, some three hundred copies having been seized at Cawnpore alone. The English translation that has been published is said to give but a poor idea of the spirited exhortations of this able and fanatical tract. It commences by asserting the sinfulness of war waged merely for conquest or dominion, but the lawfulness of taking up arms in defence of the religion of the Prophet.

PREPAYMENT OF POSTAGE TO BE MADE BY STAMPS ONLY.—The Washington Union, Nov. 21, says:—It will be recollected that by the Act of March 3, 1855, requiring the postage on all letters not free, sent by mail within the United States, and not from or to a foreign country, to be prepaid, it was also enacted from and after January 1, 1856, the Postmaster General may require postmasters to place postage stamps upon all prepaid letters upon which such stamps may not have been placed by the writers." We learn that the Postmaster General has decided to require postmasters to comply with, and carry into effect, this provision of the law; and, if not already done, to supply themselves with postage stamps accordingly by sending their order for them to the Third Assistant Postmaster General. Of course, it is not intended nor expected that this regulation shall throw upon postmasters the labors of affixing postage stamps to letters where the writers might, without inconvenience, have done it for themselves. The main thing is for postmasters to keep themselves supplied with stamps, that all persons having occasion to use may readily obtain them.

THE BARK MAURY.—This neat clipper bark sailed for Shanghae, China, some three weeks ago, taking out several missionaries, with parcels and remittances for other missionaries on that field. As the name of this vessel has became quite familiar to readers of newspaper articles about the difficulty with England, the following paragraph may be interesting:—

The bark Maury was seized on the 17th of October, by authority of the United States District Attorney, upon evidence furnished by the British Consul, and creating the suspicion that she had been fitted out for the Russian service as a Privateer. The fact that several cannon and cutlasses, with powder, shot, &c., were found stored under her cargo of cannon, gave rise to the suspicion. An investigation showed that she belonged to the firm of Low, Brothers, and was fitted out for a voyage to China;—that she had two deck guns to defend herself against Chinese pirates, and that the other guns, &c., had been shipped to the order of an American merchant in Canton. The counsel of the British Consul, upon proof of these facts, withdrew his complaint—and thus ended the whole affair.

STRUGGLES FOR LIBERTY.—The Trenton, N. Y., Gazette records the passage through that town of a party of fugitive slaves, under the following remarkable circumstances:—Two years ago a slave woman, advanced in years, the mother of six children, who had all been sold from her when old enough to be useful, overheard her master bargaining for the sale of her grandson, a boy fifteen years old, to a trader. This being the last of her family, she resolved not to permit it, and the same night fled with the boy. They traveled by night northward, guided by the north star, and after long wanderings reached Canada. There she hired herself out for wages, and two months ago, with the results of her own and her boy's labors, returned to the South, where, concealing herself in the woods, she revealed her presence only to her friends, and thus collected seven of her children and grandchildren. They started northward, traveling only by night, and concealing themselves during the day. Before reaching Philadelphia they were so worn out with hunger and hardship as to be obliged to seek the aid of friends. These were found, and the whole party were then fed, clothed, and forwarded safely to Canada. This woman is nearly sixty years of age, yet alone she has done all this.

SUMMARY.

Wm. B. Patterson, convicted at the September term, 1852, of the Court of Common Pleas, in Montgomery County, Ohio, of the crime of arson, and sentenced to four years' imprisonment in the Penitentiary, has been pardoned by the Governor. The convict was a youth of twenty years. He and several boys were detected in setting fire to old shops and vacant buildings in Dayton. The evidence left the impression that the only object the lads had in view was the annoyance of the Police, and the mere sport of tormenting.

The New Jersey State Prison Inspectors are constructing a number of cells at the prison for the purpose of more securely confining desperate malefactors. The cells are on the ground floor. An excavation of about five feet is made, at the bottom of which heavy stones, weighing about 500 pounds each, are laid; on these is placed a foot of cement; on this, a layer of hard flag stones six inches thick, two stones covering the entire excavation, and above these the floor planks are laid. No one will be able, they judge, to burrow down through such a foundation.

The Defenders of the Country in the War of 1812, who met last January in the city of Washington, are requested by J. B. Southerland, President of the Convention, elected 1855, to assemble there again on the approaching Anniversary of the Battle of New Orleans, pursuant to the resolution adopted at their last session, to which time and place the Convention adjourned. Many important propositions will be presented to the consideration of the Convention.

There are in the Paris Exhibition several samples of ladies' boots, manufactured with sheets of cork cut out to the one hundred and twentieth of an inch in thickness, inserted between the leather or cloth and the liniage of the upper portions. In Paris, where the ladies' boot trade has arrived at great perfection, the novelty and the success which has attended upon this mode of gaining extra warmth, without additional thickness or weight being perceptible, has excited a good deal of attention.

Judge Kane is to be tried upon the charge of false imprisonment, not in the city, but in the country, where there is a chance for an honorable and incorruptible jury. Judge Haines, of West Chester, whose office it will be to preside on the occasion, is a man who cannot be overawed by the minions of the Slave Power. If Kane is convicted the case will probably go to the State Supreme Court on appeal, and finally, perhaps, to the Supreme Court of the United States.

Mr. Wheeler, the Minister to Nicaragua, is a somewhat unfortunate man. After his difficulty here with Passmore Williamson, he went to Grenada. When Walker arrived at Grenada, Wheeler undertook a mission of peace between Walker and Corral, the latter the leader of the anti-revolutionary or government party. For this act of good nature he got into trouble, and was detained in custody, on suspicion of aiding the revolutionists.

Dr. T. Romelyn Beck, of Albany, died in that city on Sunday, Nov. 18. He was a man of eminent ability and usefulness—having been for many years actively connected with several of the most important educational and benevolent institutions of the State. He was Secretary of the Board of Regents of the University at the time of his death.

A quantity of musket balls, some nine hundred in number, were dug up a few days ago on a plantation in St. Thomas' parish, near Quimby's bridge, South Carolina. They are believed to have been secreted during the Revolutionary War by Marion's men, who, it is well known, made that region famous with their valorous exploits.

Corn raised this season in Minnesota, about forty miles above St. Paul, is exhibited in Cincinnati. It perfected its growth in three months, having been planted in the sod, after breaking, on the 20th of June, and harvested Sept. 20, without having been in the least cultivated after planting.

A dispatch dated Easton, Pa., Tuesday, Nov. 20, says: The monument in honor of George Taylor, one of the signers of the Declaration of Independence, was dedicated, to-day, in the Easton Cemetery, with imposing ceremonies. A considerable military force was present, from the surrounding country, as well as an immense concourse of the yeomanry of his original District. Dr. Schaffered opened the ceremonies with prayer, after which an oration, patriotic and eulogistic of the man whose memory the monument honors, was delivered by Hon. Alex. E. Brown.

A dispatch dated Springfield, Mass., Monday, Nov. 19, says: At 9 o'clock last evening, as the Clerk of the Pynchon Bank was going into the Bank for the night, he was seized by two men, who had been waiting for him in the dark passage. They demanded of him where the Cashier lived, which he refused to tell, when one of them plunged a knife at his breast, which penetrated his coat, but struck a thick wallet with coin in it, which saved a wound. The Clerk then shouted murder, and the burglars fled.

Henry Grinnell, the "celebrated philanthropist," has actually paid towards the expenses of the several Arctic expeditions fitted out from New York, about ten thousand dollars, the government having assumed the rest. The house of Grinnell, Minturn & Co., of which he is a partner, will have cleared at the close of the present season, on grain, and other transactions upon orders from the British Government—all of which orders came to this house in consequence of Mr. Henry Grinnell's "philanthropy," about three-quarters of a million of dollars.

The Frontier News states that Dr. Somers of Virginia, was on his way to Kansas with several other gentlemen to make arrangements for the location of one thousand persons who purpose emigrating from Eastern Virginia this fall, sixty families being from Richmond, thirty from Staunton, fifty from Rappahannock, and the remainder from the same neighborhood. It is also announced that a large emigration is expected from the western portion of Virginia next spring.

Within the last three months there have been eight railroad disasters, by which sixty persons have lost their lives, and one hundred and forty-four have been wounded. Referring back for a period of about two years and a half, the list is further extended by the addition of seven accidents (excluding those of a less destructive character,) by which 208 lives were lost, and 395 persons wounded; making an aggregate of 268 killed, and 539 wounded.

A dispatch dated Boston, Wednesday, Nov. 21, says: The Bank Commissioners and the several representatives of other city Banks, to-day examined into the condition of the Grocers' Bank of this city, a report having been started that it had suspended payment of its bills. It was found that the difficulty was but temporary, caused by a rather injudicious extension of loans, and other Banks having loaned it $100,000 it is again placed in a paying and safe condition.

A Chattel Loan Company is about to go into operation in Philadelphia. Its object is to make advances of money on personal property upon terms and conditions which may be just to the necessitous borrower, and at the same time fitted to facilitate and encourage him to redeem the pledge. It is also intended as a protection against the extortion and abuse of the ordinary pawn-broker system.

The whole number of cars and locomotives on the Erie Railroad is 3168, which, if coupled together in one train, would reach a distance of twenty-one miles, and be able to carry 150,000 persons in one day from New York to Lake Erie. The company has in its employ not less than 5000 persons, whose pay per month is $125,000, or $1,500,000 per year.

Lecompton, the capital of Kansas Territory, appears to be a great field of speculation. At the first public sale of town lots there, on the 23th ult., the average price paid for lots was $300 each, and a large number were sold. The Legislature granted a charter for a railway from Leavenworth to Lecompton, and a company is said to have been formed to build it.

A Montgomery paper learns than an application will be made to the legislature of Alabama for an appropriation of $100,000, to be used under sufficient auspices and securities for the promotion of an emigration of the proper sort of men to aid the Southern pioneers of Kansas and Western Missouri.

The Gardiner Transcript says Maine took the lead in the exhibition of stock, at the recent National Exhibition in Boston. Kennebec county alone take nearly two hundred dollars of the premiums awarded.

A building at the mouth of the Genesee River, in New York, containing 80,000 bushels of wheat, gave way, and about 10,000 bushels of the wheat went into the river. Loss in building and wheat about $30,000.

Two lots of fugitiues passed through Alliance, Ohio, by the underground railroad, on their way to Canada, last week. The first comprised four smart, hearty young men from Maryland, and the second three men and two women from the Old Dominion.

A botanist in one of the interior towns of France, is said to have discovered a native weed, which grown in abundance, and furnishes an infusion closely resembling in color, aroma and taste the black tea of China.

The Jury in the case of Judge Stuart, of New York, indicted for accepting a bribe, found him not guilty, but recommended that he should resign the office of Judge.

The tow-boat Cayuga left New York for Albany the other day, with forty-eight barges and canal-boats in tow. This is the heaviest tow that has ever appeared on the North River.

A room in the Mayor's Office at Philadelphia, is being prepared for the fire alarm and police telegraph. Both are expected to be in operation by the middle of December.

It will require one million five hundred and ninety-nine thousand five hundred acres of land to satisfy the land warrants issued last month, under the act of 3d March, 1855.

The St. Louis Democrat publishes a complete list of the victims and sufferers by the disaster on the Pacific Railroad. The dead are 30 and the wounded 70—in all 100.

The U. S. Mail steamship Alabama, Capt. Schenck, from Savannah brought to New York last week, on freight a quantity of green peas.

In Newark, 15th inst., Bishop Doane married M. Gevers, Envoy Extraordinary and Minister Plenipotentiary of his Majesty the King of the Netherlands to the Court of St. Petersburg, and Miss Catherine Maria Wright, only daughter of Hon. William Wright, United States Senator.

Dr. E. P. Fearing, of Nantucket, has taken from the stomach, abdomen and left side of a patient named Jane James, sixty-two needles, and it is probable that quite a number remain to be removed. They were swallowed twelve years ago, when the patient was deranged.

Notices is given in the Rahway, N. J., papers, that application will be made to the next Legislature for an act to annex the village of Upper Rahway to the county of Middlesex, and also for an act to annex the village of Lower Rahway to the county of Essex.

In Philadelphia, Nov. 19th, E. Debust, an eminent mineralogist, of North Carolina, committed suicide by cutting his throat at his hotel, on account of pecuniary embarrassments. He was the discoverer of gold in North Carolina.

The ship Mary Ward of New York, from Boston for New Orleans, and the bark Thos. E. Baxter of Philadelphia, from Savannah for Havana, were totally lost on the 29th ult., on Abaco Reef, Bahamas. All hands were saved.

Somebody recommends cooking frozen potatoes by dropping them, one at a time, into briskly boiling water; doing this at such intervals that the ebullition shall not be stopped; the potatoes will thus come out none the worse for being frozen.

New York Markets—Nov. 26, 1855.

Ashes—Pots $6 50, Pearls 7 37.

Flour and Meal—Flour 9 25 a 9 43 for various grades of State, 9 25 a 9 31 for mixed Western, 9 37 a 10 37 for Ohio, 9 75 a 11 50 for extra Genesee. Rye Flour 6 25 a 7 62. Corn Meal 4 37 a 4 50 for Jersey.

Grain—Wheat 2 02 a 2 17 for Southern red, 2 20 for Western white, 2 25 for Genesee white. Rye 1 25. Barley 1 22 a 1 31. Oats 40 a 52c. Corn 99c. a 1 01 for Western mixed.

Provisions—Pork 20 50 for prime, 22 50 for mess. Beef 8 50 a 10 00 for country prime, 11 00 a 12 50 for country mess. Butter 17 a 22c. for Ohio, 23 a 27c. for common to very good State, 28 a 30c. for choice. Cheese 9½ a 11¼c.

Apples—1 50 a 1 75 per bbl. for Greenings, 2 00 a 2 25 for Spitzenbergs, 2 00 a 2 50 for Fall Pippins.

Potatoes—1 25 a 1 50 per bbl. for Pinkeyes, 1 50 a 1 75 for Jersey Mercers, 1 00 a 1 25 for Western reds.

Seeds—Clover 12½c. per lb. Rough Flaxseed 2 00 a 2 10.

MARRIED,

In Westerly, R. I., on the 6th of October, by Rev. A. B. Burdick, WM. H. STILLMAN, of Westerly, to Mrs. MARY C. GREENE, of Stonington, Ct.

In Plainfield, N. Y., Nov. 21st, by David Whitford, Esq., Mr. JOHN R. SEARLS to Miss MARY D. CLARKE, both of Plainfield.

By Eld. C. M. Lewis, at his residence in Hopkinton, R. I., on the evening after the 17th inst., Mr. GEORGE E. CRANDALL to Miss MARTHA J. LANGWORTHY, all of Hopkinton.

In Alfred, Nov. 22, by Eld. N. V. Hull, Mr. SHEFFIELD B. MAIN, of Portville, Cattaraugus Co., N. Y., to Miss FRANCES EDWARDS, of Alfred, N. Y.

In Milton, Wis., on the 3d Oct., by H. G. Greenman, Esq., Mr. J. B. PATTERSON, of Jefferson, to Miss MARY WASHBURN, of Beloit.

Also, by the same, on the 18th Nov., GEORGE BURNETT to Miss HARRIETT LEWIS, both of Lima, Wis.

DIED,

In Albion, Dane Co., Wis., Oct. 20th, 1855, of typhoid fever, Mr. SAMUEL A. WOOLLEY, aged 41 years.

At Ashaway, R. I., on the 22d inst., H. EDGAR CRANDALL, son of Horace L. and Phebe L. Crandall, aged 9 months and 17 days.

"So fades the lovely, blooming flower,
Frail, smiling solace of an hour;
So soon our transient comforts fly,
And pleasure only blooms to die."

In Milton, Wis., Nov. 9th, 1855, CHARLIE AUGUSTUS, only son of J. M. and E. A. Saunders, aged 1 year, 4 months, and 15 days,

In Wautoma, Waushara Co., Wisconsin, on the 26th of October, 1855, of typhoid fever, Mrs. MARY M. WEBB, aged 23 years and 2 months, wife of Wm. C. Webb, Esq., of Wautoma, and daughter of Josiah Witter, of Dakota.

"He died!—She died!—has been pronounced of
All the by-past human race; and soon these
Words will be our sad memorial. *We must die!*"
"She died!—the young, the loved, the beautiful;
Ah, she had been the happy, careless girl,
The caressed sister, the idolized daughter,
The worshiped bride, with her wealth
Of treasured hopes, and pictures of high joys
Along a sunny future."

Yes, *she died*. And in her death, society has lost one of its brightest members, a parent's household is filled with grief, and the husband's home made desolate. But she has gone the way of all our race, from Adam downward to the present day—cut down in the very prime of life, and at a time when she might well have looked forward to many years of usefulness and happiness.

Scarce seven months ago Mrs. Webb left her parents' home, a happy bride, to assume the duties and responsibilities, not of a wife merely, but of a mother to three young children, who are now again bereft of a mother's kindness and a mother's love. So soon perish all human hopes—so soon are blasted our fondest expectations!

The deceased was formerly of Brookfield, Madison Co., New York, where she left a large circle of friends and relations, and whence she came with her father's family to this State several years since. During her residence in Wisconsin, she won the confidence and esteem of all who knew her, and her decease is deeply lamented by her entire acquaintances. She never made a profession of religion, but her whole life bore testimony that she possessed, in an eminent degree, all those qualities which distinguish the true Christian. Mild, gentle, firm, benevolent, humane and just, she never made an enemy, and never lost a friend.

"But Mary died. I saw her in her shroud,
With death's seal set upon her. The fixed eyes
Gleamed darkly from beneath the heavy fringe
Of the half-open and discolored lids.
The lips were livid, and the placid smile,
Left by the happy spirit as it passed,
Like radiance left by the departing sun
Upon the Western clouds, was fading out
From the unseemly company of death."

N. B.—Churches and clergymen furnished at wholesale prices. Sept 27—3 m. *

Farm for Sale,

CONTAINING about 100 acres, with a fair proportion of woodland, a small orchard of grafted fruit, and a comfortable dwelling and outhouses. It is situated about four miles north of Westerly, R. I., and within a mile of each of the flourishing manufacturing villages of Potter Hill and Ashaway. There are several other manufacturing establishments near, affording a ready market, in the immediate vicinity, for every species of produce. It is convenient to the first Hopkinton Church, as well as to the very excellent male district school.

It will be sold with or without the stock and farming implements, and possession given the ensuing winter or spring, if desired. To those wishing to secure a quiet home in an enterprising neighborhood, and surrounded by such comforts as can only be found in an old settled and thickly populated country, this affords an opportunity seldom offered. For terms and other particulars apply to the subscriber on the premises, or address JOHN E POTTER, No. 15 Sansom-st., Philadelphia, Pa. BENJAMIN POTTER, Ashaway, R. I.
11tf.

Good Crops, Good Prices, Good Books, and Good Times.

BELCHER'S HISTORY OF ALL THE RELIGIOUS DENOMINATIONS IN THE UNITED STATES.
Large Octavo 1,024 pp. and nearly 200 engravings.
FLEETWOOD'S LIFE OF CHRIST AND HIS APOSTLES. 704 pp. and 25 engravings.

Probably there has never been a more favorable opening for the sale of books than the present. Large crops have been produced throughout the country, and these are bringing good prices; every body is in high spirits.

The above volumes are printed on fair paper, in clear, large type, are handsomely illustrated, and bound in a neat and attractive style. More than all, their contents bear the ring of the true metal, enabling the agent to sell them to the highest in the land as well as the humblest, with the gratifying feeling on his part that he is conferring a favor rather than receiving one. They have gained and are gaining a world-wide fame; and being sold exclusively by subscription, the agent has the entire benefit of their popularity.

Canvassers, and those wishing to become such, will find it for their interest to secure an agency. We can offer them with other popular works on the most favorable terms. For further particulars apply to or address either of the

Publishers, { JOHN E. POTTER, Philadel., Pa.

Magnificent Floral Gift.

SUBSCRIBERS to the "CHRISTIAN DIADEM" for 1855, are entitled to a splendid steel engraving, the ☞ LILLY AND THE ROSE PERSONIFIED, being given *gratis* to all old and new subscribers who send us only ONE DOLLAR, by mail or otherwise.

Six Copies for Five Dollars.

The Diadem is a strictly moral and religious work—designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address Z. P. HATCH, Publisher, 9 Spruce street, New York. May 24—3m.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 per Annum, in Advance.

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 a Year, 25 Cents a Number.

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, GEORGE B. UTTER, No. 9 Spruce-st., New York.

Postage.

The postage on the Sabbath Recorder is 13 cents a year in the State of New York, and 26 cents in any other part of the United States, payable quarterly or yearly in advance.

The postage on the Sabbath-School Visitor is 3 cents a year in the State of New York, and 6 cents in any other part of the United States, payable in advance.

The postage on the Seventh-day Baptist Memorial is 2 cents a year in any part of the United States when paid in advance, or 4 cents a year when not paid in advance.

Miscellaneous.

The Little Shoe.

I found it here—a worn-out shoe,
All mildewed with time and wet with dew,
'Tis a little thing; ye would pass it by
With never a thought, or word, or sigh;
Yet it stirs in my spirit a hidden well,
And in eloquence one of the past doth tell.

It tells of a form that is cold and still—
Of a little mound upon yonder hill,
That is dearer far to a mother's heart
Than the classic "statues of Grecian art;"
Ah! strangers may pass with a careless air,
Nor dream of the hopes that are buried there.

Oh! ye, who have never over a loved one wept—
Whose brightest hopes have ne'er been swept
Like the pure white cloud from the summer sky—
Like the wreath of mist from the mountain high—
Like the rainbow, beaming a moment here,
Then melting away to its native sphere;—

Like rose-leaves, loosed by the zephyr's sigh—
Like that zephyr wafting its perfume by—
Like the wave that kisses some graceful spot,
Then passes away—yet is ne'er forgot;
If like these your life-hopes have never fled,
Ye cannot know of the tears I shed.

Ye cannot know what a little thing
From Memory's silent fount can bring
The voice and form that were once so dear;
Yet there *are* hearts, were they only here,
That could feel with me, when all wet with dew,
I found it this morning—this little shoe.

The Difficulty with Great Britain.

As the papers have of late said a good deal about a difficulty with Great Britain—the fear of which is now pretty much past—perhaps our readers would like to know precisely what were the circumstances which roused the indignation of John Bull. The following article, from the N. Y. Times gives the most complete account we have seen of the matter:—

The whole controversy has grown out of the trial of Henry Hertz and E. C. Perkins, before Judge Kane, in Philadelphia, on charge of having hired one William Budd to go beyond the limits of the United States, with intent to be there enlisted in the British service, contrary to the laws of the United States. The trial commenced on the 21st of September last, and was continued for several days. The prosecuting attorney, in opening the case, alledged that Hertz was employed as an agent to enlist men for the British service, at the instigation and under the direction of the British Minister, the Governor and Secretary of Nova Scotia, the British Consuls at New York and Philadelphia, and other British functionaries. Although, therefore, Hertz was the party on trial, evidence was taken relative to the action of these gentlemen also, in connection with the offence charged. One Max Strobal testified that in February Mr. Crampton told him he was willing to raise men here for the British service, having been authorized to do so by letters from the English Government; that Mr. Crampton gave him letters to Mr. Barclay, the British Consul in New York, in reference to this matter; and that he heard Mr. Hertz had received similar letters. He saw the names of some 60 men who had enlisted with Mr. Hertz. He testified also that at Halifax, in May, Mr. Crampton told him there had been some difficulty about the recruits, and he wished him to prepare a new plan which should avoid all objections; that he did so, and arranged for having recruiting stations along the borders of the United States, with receiving stations in Canada:—that this plan was approved and adopted by Mr. Crampton: that Mr. Crampton then furnished him detailed instructions "for the guidance of those who are to be made known to persons in the United States the terms and conditions upon which recruits will be received into the British army." These instructions were, that they "must carefully refrain from any thing that would constitute a violation of the law of the United States;" that they must "avoid any act which might bear the appearance of recruiting within the jurisdiction of the United States for a foreign service, or of hiring or retaining any body to leave that jurisdiction with the intent to enlist in the service of a foreign power;" that "no promises or contracts, written or verbal, on the subject of enlistment, must be entered into with any person within that jurisdiction;" and that they were simply to "tell those desiring to enlist that facilities for doing so would be afforded on crossing the line into British territory," and the terms offered "were to be stated as matter of information only, and not as implying any promise or engagement on the part of those supplying such information, so long at least as they remain within American jurisdiction." Strobel said he left Mr. Crampton at Quebec, and proceeded on the recruiting service, but was afterwards recalled, complaints having been made against him. Several other witnesses were examined, and among them Dr. Reuss, who testified that he saw Mr. Crampton in Halifax in May, and heard him advice Strobel to enlist men in the United States very quietly, so as not to excite suspicion, and send them to Canada. Evidence was given that Mr. Crampton was active in Canada, in promoting the enlistments;—but the above is all the proof that was offered to connect him with proceedings in the United States. As our object in this résumé is merely to state what concerns him, we pass over all the evidence implicating the men on trial—one of whom, Hertz, was convicted, the other being acquitted. In summing up the case, Mr. Van Dyke, the District Attorney, dwelt upon the evidence which connected the British Minister with this violation of our laws, and said:

"By forcing this indictment thus against this defendant, the President of the United States has struck as near the throne of Her Majesty as he is enabled to do in the shape of a criminal prosecution. The extended privileges given to a foreign Minister prevent, so far as he is concerned, the application of the criminal code of the country, although such foreign Minister may be proved guilty of acts which, if committed by a private individual, would make him a felon. Were it not so, I think I am justified in saying, I would this day, by direction of the President, be trying Mr. Crampton, Sir Joseph Howe and Sir Gaspard le Marchant, instead of their humble instrument, whose conviction is now asked at your hands. The Jury, however, will leave these gentlemen to the only power legally authorized to take care of our public safety, by demanding reparation from their Government; and you, gentlemen, may rest assured that in due time they will be called upon by our able and faithful officers at Washington, to make proper atonement for the gross insult which they have offered to our laws and our people."

After the conviction of Hertz his counsel moved for a new trial, which after argument was refused on the 12th of October. Mr. Van Dyke then asked leave to present the confession of Hertz. The prosecution, he said, had not been merely local in its tendencies. Its disclosures might be "the ground of an important step on the part of the Federal Government in relation to those who have been instrumental in producing that system of interference with an affair which has formed the basis of this prosecution." He added, that he was permitted to say that the trial just closed had been authorized by the National Executive; and he then read the letters of instruction from Attorney-General Cushing, in which the ground was taken that the instructions of the British Minister to avoid violating our laws, "in themselves violated the sovereign rights of the United States."

The confession of Hertz states that he had repeated interviews with Mr. Crampton, and that on the 5th of February he received a letter asking him to come to Washington. His narrative proceeds thus:—

"I went some days afterwards, say three or four days, to Washington, and saw Mr. Crampton at his private residence; he was indisposed. I told him I had received his letter and desired to know what I had to do. Mr. Crampton replied—"I have received a letter from Lord Clarendon, which contains the statement that the British Government has made arrangements to establish depots at some place in Canada, on the frontier of the United States, in order to receive the men who may be procured in the United States. In pursuance of this information, I have sent my special messenger to the Governor General of Canada and to the Commanding General of the troops in Canada, (whose name I believe is Roy,) requesting them to designate the places where depots may be established for the reception of persons who may be procured in the United States. I informed Mr. Crampton that I had incurred expense already by coming twice to Washington, and that I would have to waste more time until the messenger returned, and that I would have to neglect my business; I, therefore, requested him to refund to me the expenses already incuared by me. Mr. Crampton replied, 'I have at present no money at my disposal, and have no authority to give you any, but I am certain you will be paid, not only for your services, but that your expenses will be repaid to you.'

I asked Mr. Crampton what was to be done. How is the matter to be conducted? He said: 'As far as I know, there is a law in United States forbidding the enlisting of soldiers within the territory of the United States—it is, however, not difficult to evade this law, because who can prevent you from sending laborers to Canada, but we must take care to do this in such a way that it shall not appear in defiance of the Government. My idea is, further, that if you have twenty-five or thirty men together, either yourself or some other confidential person should take them direct by railroad to Montreal, where, I think, a depot may be erected.'

I then asked him, 'When do you think this matter will commence?' Mr. Crampton said, 'I cannot say precisely yet, because my messenger will perhaps be prevented from returning to Washington very soon, as the roads are obstructed by ice and snow. It is possible that he will call on you at Philadelphia on his return from Canada, and will give you the necessary information. In the meantime you may call on our Consul, Mr. Matthew, in Philadelphia, and he, Mr. M., will probably be able to give you the necessary instruction.' The conversation with regard to the procuring men was finished, but I reverted again to the law bearing upon the subject. I asked him, 'How am I backed in case a charge is made against me? I have a wife and children.' Mr. Crampton replied, 'First, that the law was exceeding lax; and secondly, that if any thing should happen, the British Government would not allow any one to suffer who had been engaged in assisting them in furnishing the men.' I replied that 'The popular voice is against this matter;' but Mr. Crampton said, 'Never mind about this popular voice; if a house in Liverpool fails, the whole United States trembles.' After Mr. Crampton had given me such assurances, and had used the expression, 'I give you my word as a gentleman, that nothing unpleasant shall happen to you,' I then made up my mind to act for the British Government. Before I left, Mr. Crampton assured me that he would send a man to my house in Philadelphia, who would make such arrangements with me as would enable me to procure men, and send them to their destination."

We have thus given all the evidence which has been adduced to convict Mr. Crampton of having violated our neutrality laws. It will be observed, by our Washington Correspondence, that the British Government complains of our thus trying their Minister, under pretext of trying another person: and that, too, under circumstances which give him no chance of introducing rebutting evidence, of explaining facts alledged, or of convicting witnesses of falsehood and perjury. Instead of foreign Ministers being protected in the countries to which they are accredited—if such a practice as this obtains—they are worse off by far than citizens: for they are tried and convicted without being allowed a hearing.

Dyspepsia.

The nervous energy is the motive power of the whole man, spiritual, mental, and physical. When that power is equally distributed, the body is well, the brain is clear, and the heart is buoyant. If the brain has more than its share, it burns itself up, and makes the "lean Cassius,"—the restless body and the anxious countenance.

As there is a given quantity of nervous influence for the whole body, if the brain has more than its natural portion, the stomach has less, consequently the food is not thoroughly assimilated, or, as we call it *digested*. This being the case, the requisite amount of nutriment is not derived from the food, and the whole body suffers, doubly suffers; for not only is the supply of nutriment deficient, but the quality is imperfect. These things go on, aggravating each other, until there is not a sound spot in the whole body; the whole machinery of the man is by turns the seat of some ache or pain, or symptom. This is a common form of aggravated dyspepsia.

Such being the facts, some useful practical lessons may be learned.

1. Never sit down to the table with an anxious or disturbed mind; better a hundred-fold intermit that meal, for there will then be that much more food in the world for hungrier stomachs than yours; and besides, eating under such circumstances can only, and will always, prolong and aggravate the condition of things.

2. Never sit down to a meal, after any intense mental effort, for physical and mental injury is inevitable, and no man has a right deliberately to injure body, mind, or estate.

3. Never go to a full table during bodily exhaustion; designated by some as *being worn out, tired to death, used up, done over*, and the like. The wisest thing you can do under such circumstances, is to take a cracker and a cup of warm tea, either black or green, and no more. In ten minutes you will feel a degree of refreshment and liveliness, which will be pleasantly surprising to you; not of the transient kind which a glass of liquor affords, but permanent, for the tea gives present stimulus and a little strength, and before it subsides, nutriment begins to be drawn from the sugar and cream, and bread, thus allowing the body, gradually and by safe degrees, to regain its usual vigor. Then, in a couple of hours you may take a full meal, provided it does not bring it later than two hours before sundown; if later, then take nothing for that day, in addition to the cracker and tea, and the next day, you will feel a freshness and vigor not recently known. No reader will require to be advised a second time, who will make a trial as above, while it is a fact of no unusual observation among intelligent physicians, that eating heartily, under bodily exhaustion, is not an infrequent cause of alarming and painful illness, and sometimes of sudden death. These things being so, let every family make it a point to assemble around the family board with kindly feelings, with a cheerful humor and a courteous spirit, and let that member of it be sent from the table in disgrace, who presumes to mar the, ought to be, blest re-union by sullen silence, or impatient look, or angry tone, or complaining tongue. Eat in thankful gladness, or away with you to the kitchen, you graceless churl, you ungrateful, pestilential lout that you are. There was grand and good philosophy in the old time custom of having a buffoon, or music, at the dinner-table.

[Hall's Journal of Health.

Lost Baggage on the N. Y. Central Railroad.

Suppose that a young—say a very young—gentleman, a little behind time at his breakfast at a hotel in Buffalo, is in a flurry when he pays his bill, and in more of a flurry when he gives his trunk in charge of the porter, with instructions to have it checked for Piermont on the New York and Erie road. Time presses—other gentlemen, and women not a few, are also in a flurry—the porter, overworked and distracted with a cross firing of inquiries and orders, assigns in his own mind Pembroke as a stopping place for that trunk instead of Piermont. Its hurried owner, without a check for his baggage, and with a vague sense of error oppressing him, steps into the last car of the New York and Erie train, just as it moves off on time—and is parted from his raiment. To call that youth wretched as he tosses sleepless and in short linen in his bed in Piermont, is to use mild language.

The morning will probably see him retracing his steps, with a view to a season of anxious inquiry with the porter of that Buffalo hotel. If he happens to know the custom of the New York Central Railroad with respect to lost baggage, he will stay where he is, and simply write a letter to the superintendent of the road, describing his baggage and asking him if he has got it. Within six days of its loss that official will be sure to have it, if it went to Pembroke. It will come from that station after waiting five days for its owner, to Albany, bearing a large card upon it, inscribed:—"N. Y. Central R. R. Unclaimed baggage. Left at Pembroke, July 4, 1855. For stray baggage room, Albany."

This room is under the care of a clerk and porter specially assigned to the duty. That Pembroke estray is taken to it, aud immediately numbered. A register is then opened, and the number is entered in it, with a date and the name of the station from which it was received, and then the trunk is opened. Its contents are carefully examined, and full entries are made of all the facts it discloses pointing to its ownership. Its color and general external character were noted at the time the number was entered. If russet, the trunk is then placed on top of a pile of russet baggage, solemnly waiting ownership in a large state-room. If black, it is added to a pile of dusky baggage, over which hands have been wrung and tears shed—say rather over the images and remembrances of which—for those trunks were not when linen, silk and dimity were wanted from within their recesses. Along side of the black baggage is a sad pile of hair trunks, each numbered conspicuously. Next to these is a suggestive row of emigrants' chests. Among the blue and yellow shipping pasters, put on in Sweden, Holland, Germany, France, Norway and England, shines the big white card of the Central road, with the registered number painted on it. These chests have all been entered, defiant of locksmiths as they look, and their strange and fanciful, their valuable and their worthless contents, noted, and subjected to inquiry to reveal their owners' names. Gold and silver coin are in some—heirlooms, keepsakes, love-letters, kitchen utensils—every thing that an emigrant from the old world to the new can possibly take and possibly keep in a chest, is there. The record of it all is also there—on the register. Way off in Iowa, Minnesota and Wisconsin, men and women of Scandinavian extraction, speak feelingly now of the losses of those chests. Their blue eyes doubtless have moistened at the recollection of their inclosed household wealth, such time as the circumstances of their poor homes in the wilderness straightened them for the want of that baggage, "lost and unclaimed" upon the great Central railroad. Carpet bags and satchels, all numbered and hung in orderly succession upon hooks depend from above and await reclamation. In a room apart from these, is the unclaimed bedding of emigrants, and "movers." Policy and humanity indicate, that this should be distributed to the poor on the very first snow-storm.

The discipline of the road is severe with respect to lost and unclaimed baggage. Printed circulars have been sent to all the station agents on the line, requiring them to report to the office at Albany all parcels unclaimed for the period of twenty-four hours; also to forward to Albany all luggage unclaimed for the period of five days. Violations of these instructions are followed by a discharge from the road. Every day brings into the baggage department of the central office reports from station agents all over the line, containing a statement of baggage "unclaimed or not called for;" also, "lost or wanted at this station." These reports contain the number of the check on the parcel, a description of the parcel, the place it came from, and the name of the baggage man who delivered it. A register of these reports is kept at the central office, which also shows the final disposition made of the baggage—whether it was sent here or there on the road to its owner, or was put in store in the lost baggage room. From there the clerk having charge of the register can order it out at any moment, to the proper claimant. The station agents are also required to report daily all cases of delivery by them of claimed baggage at the stations, if any shall take place between the interval of their first report and the sixth day after the baggage was left with them. Printed blanks for these reports are in the hands of the agents, and these officials are inexorably required to live up to this strict discipline of the road in its care of the lost property of travelers.

The lost baggage room and the register kept in it are both sealed to the public, and for obvious reasons. Every article in them if subjected to examination, and so to identification upon false claims, would be lied out of the company's custody in a short time. As it is, there is a great deal of fraud attempted upon the road. Baggage is paid for that never was lost, or never came into the company's possession, and claims for indemnification are frequently excessive where the loss has actually happened, and often are urged upon fraudulent pretenses.

So perfect is the system on the Central road, that within thirty-six hours after a trunk is lost, or erroneously left at any one of its seventy-one stations between the Hudson river and lake Erie, full knowledge of it is had at the central office in Albany, and the superintendent is in a condition to direct it to its owner if he can be found. Under the rules of the road regulating the lost and unclaimed baggage branch of its business, mismatching checks is an offense. So is the putting of a trunk into a car before it is marked with its place of destination. So is the neglect to enter in a book all checked baggage, and a description of the unchecked, with its destination, the trains by which it goes, and the names of the baggage men receiving it. For the comfort of the nervous and careful, we will add, that a law of the road makes the handling of trunks "in a rough and careless manner," a misdemeanor so grave as to be prohibited under the penalty of discharge from service.

A statute of the State authorizes a sale of the property thus accumulated by the Central road at stated times, but requires the proceeds to be given to the overseers of the poor. The injustice of this is so apparent in those cases where the baggage has been paid for by the Central company, or some other with which it connects, as to make a modification of the requirement not only proper but necessary. [Albany Evening Jour., Nov. 10.

Exhaustion of the Soil.

"There is, on an average, about one-fourth of a pound of potash to every one hundred pounds of soil, and about one-eighth of a pound of phosphoric acid, and one-sixteenth of a pound of sulphuric acid. If the potatoes and the tops are continually removed from the soil, it will soon exhaust the potash; if the wheat and straw are removed, it will soon exhaust the phosphate of lime; if corn and the stalks, it will soon exhaust the sulphuric acid. Unless there is a rotation, or the material that the plant requires, supplied from abroad, your crops will soon run out, though the soil may continue rich for other plants."

An acre of soil twelve inches deep would weigh, say 1,600 tons. According to the above figures, it would weigh 8000 lbs. of potash, 4000 lbs. of phosphoric acid, and 2000 lbs. of sulphuric acid. Estimating that potatoes contain 20 per cent. of dry matter, and that 4 per cent. of this is ash, and that half of the ash is potash, we only remove in a crop of 250 bushels, 60 lbs. of potash. Say that the tops contain 20 lbs. more, and we have potash enough in an acre of soil to produce a crop of 250 bushels of potatoes, each year for a century!

A crop of wheat of 30 bushels per acre, contains about 26 lbs. of ash, and half of this, say, is phosphoric acid. Allowing that the straw, chaff, &c., contain 7 lbs. more, we remove from the soil in a crop of wheat of 30 bushels per acre, 20 lbs. of phosphoric acid. According to the above estimate, then, an acre of soil contains sufficient phosphoric acid to produce annually a crop of wheat and straw of 30 bushels per acre, *for two hundred years!*

We will pursue the calculation no farther. The writer of the paragraph quoted above, selected out the crops and elements best suited for his purpose; but it will be seen, that even according to his own estimate, there is sufficient potash and phosphoric acid in the soil to give the present wicked generation all the potatoes and wheat they may need.

But let us take another view of the subject. No intelligent farmer removes all the potatoes *and tops*, all the wheat, straw, and chaff, and all the corn stalks, &c., from his farm. According to Dr. Salisbury, a crop of corn of 75 bushels per acre removes from the soil 600 lbs. of mineral matter; but the grain contains only 46 lbs. The remaining 554 lbs. is contained in the stalks, leaves, sheaths, husk tassels, &c., all of which are generally retained on the farm. It follows from this, that, when only the grain is sold off the farm, it takes more than 13 crops to remove as much mineral matter from the soil as is contained in the whole of one crop. Again the ash of the grain contains less than 3 per cent. of sulphuric acid, so that the 46 lbs. of ash in 75 bushels of corn contains less than a pound and a half of sulphuric acid, and, thus, if as is estimated, an acre of soil contains 2000 lbs. of sulphuric acid, we have sufficient for an annual crop of 75 bushels per acre for fifteen hundred years!

Intelligent wheat-growers seldom sell their straw, chaff, and frequently consume on the farm nearly as much bran, shorts, &c., as is sent to market with the grain. In the Natural History of New York, part 5, it is stated that a crop of wheat in Western New York of thirty bushels per acre, including straw, chaff, &c., removes from the soil 144 lbs. of mineral matter. Genesee wheat usually yields about 80 per cent. of flour. This flour contains only 0.7 per cent. of mineral matter, while fine middlings contain 4 per cent. Coarse middling, 5 1-2; shorts, 8; and bran, 8 1-2 per cent. It follows this, that, out of the 144 lbs. of mineral matter in the crop of wheat, less than 10 lbs. is contained in the flour. The remaining 134 lbs. is found in the straw, chaff, bran, shorts, &c. Even, however, if none of the shorts is returned to the farm, the 30 bushels of grain remove from the soil only 26 lbs. of mineral matter; and it would take more than five crops to remove as much mineral matter as one crop contains. Allowing that half the ash of wheat is phosphoric acid, 30 bushels remove only 13 lbs. from the soil, and if the soil contains 4000 lbs., it will take 207 crops of 30 bushels each to exhaust it.

We commend these facts to the consideration of the writer of the paragraph we have quoted. If his estimates are correct; if the soil contains as much potash, phosphoric acid and sulphur as he states, we need have few fears of waking up some morning to find all the precious elements of crops departed from our soils forever.

We should just observe that the idea, embodied in the latter part of the paragraph, has no foundation in fact. If a soil is *exhausted* of potash, or of phosphoric acid, it will not "continue rich for other crops." Not a plant that we commonly cultivate, can grow upon soil destitute of *any* of the mineral elements of plants. [Country Gentleman.

Curing Bacon Without Smoke.

"O, the trouble folks have taken,
To smoke and spoil their bacon."

To smoke the best bacon, fat your hogs early and fat them well. By fattening early you make a great saving in food, and get well fattened pork. Then kill as early as the weather will allow, and salt as soon as the animal heat is gone, with a plenty of the purest salt, and about half an ounce of saltpetre to one hundred pounds of pork.

As soon as the meat is salted to your taste, which will generally be in about five weeks, take it out, and if any of it has been covered with brine, let it drain a little. Then take black pepper, finely ground, and dust on the hock end as much as will stick, then hang it up in a good, clean, dry, airy place. If all this is done as it should be, (it ought to be done now,) you will have no further trouble with it, for by fly time in spring, your bacon is so well cured on the outside, that flies or bugs will not disturb it.

Curing bacon is like the Irishman's mode of making punch. He said:—"Put in the sugar, then fill it up with whiskey, and every drop of water you put in after that spoils the punch." Just so with curing bacon, after following the directions given above, every "drop" of smoke you put about it spoils the bacon. [Portage Democrat.

Putting Down Butter.

When butter is designed for keeping, it is of the highest degree of importance that it should be worked free from all remains of buttermilk. Pure butter is an oil which will keep equally as well as lard or tallow. Buttermilk, on the contrary, contains casein, a nitrogenous compound, which decays very soon when in contact with air. Were it possible to remove every particle of the buttermilk, and all traces of impurities or foreign substances, no salt would be required, nor would it be necessary to pack butter away from the air.

In salting butter, the salt itself should be of the purest kind, and it should be so thoroughly worked in, that every particle of the remaining buttermilk be left in direct contact with a particle of salt. A very simple method of purifying salt for butter or cheese is, to add a pint of boiling water to four or five pounds of salt; stir them well, now and then, for an hour or more; drain off the wrter, and hang the undissolved salt in a bag to drain and dry. (The drainings may be used for salting animals, or putting upon hay.) In this process the water dissolves out the bitter, disagreeable portions of the salt—the chlorides of magnesium and calcium—which are more soluble than pure salt. A little care of this kind is a thousand times remunerated in the sweeter taste and better quality, both of butter and cheese.

Boys' Fun on Election Day.

A humorous scene took place in one of the cross streets in an upper Ward of New York on election day.

A number of boys, 30 or 40, all about the age of 12 or 13 years, undertook to hold an election on their own hook, appointed Inspectors and Policemen and held the poll in the body of an old carriage that stood in the street. A Havana segar box stood on end, served for a shanty for the distribution of the tickets. The coach and shanty were plastered over with election bills of all parties. Proclamation was made on the opening of the poll, and the voting commenced briskly. Several challenges were made, and one boy was refused permission to put in his vote because he wanted to vote for Fred Douglass. He made a great fuss, and declared he would inform *Horrible Greasy*, of the *Tribune*, how badly he was treated. Another voter was asked how long he had been in the United States? He replied that he arrived *next* Christmas. He was dispatched for his Naturalization Certificate, and soon returned with a large Anti-Maine Law handbill, which was accepted for his certificate and his vote taken. Another boy gave in his name as "Rugged Tough. The owner of the coach, after two hours' fun, made his appearance, and, surly fellow that he was, drove off the boys. They gave him a dozen groans as they ran, and three cheers for the memory of old Hays.

How the Process of Coloring Glass was Discovered.—At a meeting of the Farmers' Club of the American Institute, Professor Mapes stated that a few years ago the art of staining glass was unknown, when at a club, something like this—only composed of mechanics—a member stated he had stained glass blue with cobalt; and another, that he could color it red with ease, but not blue; until finally others came forward with their facts applied to other colors, and when all were combined, the result was a mass of facts that has produced the beautiful combinations of colored glass, equaling the art when it was applied to the old cathedral windows, centuries ago, in Europe.

Blackberry Wine.—The following is said to be an excellent recipe for the manufacture of a superior wine from blackberries:—Measure your berries and bruise them; of boiling water. Let the mixture stand twenty-four hours, stirring occasionally; then strain off the liquor into a cask; to every gallon adding two pounds of sugar; cork tight, and let stand till the following October.

In the Pennsylvania coal districts there is much trouble because the miners will throw coal-dirt in the streams. The Little Schuylkill Company has lately had to pay $10,000 damages for such performances.

New York and Erie Railroad.

On and after Wednesday, Sept. 19, and until further notice, Passenger Trains will leave the pier foot of Duane st., New York, as follows:

Dunkirk Express at 6.30 A. M. for Dunkirk.

Buffalo Express at 6.30 A. M. for Buffalo.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations. Passengers by this Train will remain over night at Owego, and proceed the next morning.

Rockland Passenger at 3 P. M. (from foot of Chambers-st.) via Piermont, for Sufferns and intermediate stations.

Way Passenger at 4 P. M. for Newburgh and Otisville and intermediate stations.

Night Express at 5½ P. M. for Dunkirk and Buffal.

Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5½ P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c., and with first-class splendid steamers for all ports on Lake Erie.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

For all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and *irritating* to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restore the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

For the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

GEOLOGY AND THE BIBLE.

Had brother Maxson done me justice, or rather no injustice, I probably should not have troubled the readers of the *Recorder* with any further remarks on his views of Geology and the Bible. *Indeed*, after reading the remarks of "*A Rhode Islander*," and "*One of the Subscribers*," I concluded to pocket the injustice, and remain silent. But upon more mature reflection, I have concluded that justice demands that I should review some of his arguments, and correct his misrepresentations of my own.

He contends that the general sense of the Scriptures, as he understands them, is not opposed to his theory. But as he has taken the affirmative of the question, he is bound, not only to prove that the Scriptures may admit of a rendering that will not contradict his theory, but that the Holy Spirit intended they should be used in that sense, or that they do sustain his theory, which he has never done. Can any person read the account of the six days' work, as recorded in the first chapter of Genesis and the twentieth chapter of Exodus, without prejudice, and say that neither God nor Moses meant to say that in six days the Lord made heaven and earth, the sea, and all that in them is? It is utterly impossible! God spake these words with an audible voice to the thousands assembled at the foot of Sinai, and engraved them with his own hand on a table of stone.

But to do away the force of this passage, we are informed that the Scriptures tell us that the sun rises and sets, and of course the earth is stationary; whereas astronomy teaches that the sun is stationary, and that the earth revolves daily upon its own axis and annually around the sun. I can discover no analogy in the two cases. Astronomers continue to use the same language, notwithstanding all the light science has shed on the subject. Even our almanacs have tables showing the rising and setting of the sun and moon. Are we therefore to suppose that they adopt the notion that the earth is stationary? I answer, No. They speak of things as they appear, and nobody is misled by it. When God says that in six days he made heaven and earth, the sea, and all that in them is, it cannot be shown that he means something entirely different.

Brother Maxson says, "Much as I esteem his (my) belief, it is more than overbalanced by the belief of such men as Harris, Pye Smith, Hitchcock, and also of numerous learned divines, who commented on the text long before Geology had developed any truth on the subject. I give preference to the belief of these men the more readily, since they have confirmed that belief by good and substantial reasons, founded in the philological character of the text itself, unbiased by any theory whatever." He has made quotations from a number of the writers referred to. If I understand what philology means, not one of them has presented a philological argument. They have stated their opinion, but the philological reasons for that opinion they have not given, or at least he has not quoted them. I have examined Hitchcock and Harris (that is, his Preadamite Earth.) If there are any philological reasons or criticisms on the text in the works I have read, they have either escaped my observation or recollection. This is the very thing I have always wanted, and now want. It is not simply that the Scriptures *may be* thus rendered, but that they *should be* so rendered. Till this is done, it is in vain that he appeals to rocks, coral reefs, telescopic stars, deltas, &c., while such manifest contradiction exists among geologists, and even with brother Maxson's own facts.

Brother Maxson has done me great injustice in representing me as holding that rocks were made as they now are, and that human feet had made tracts in solid rock; whereas I have exhibited no theory whatever. I stated as a fact, that in a certain granite rock in Rhode Island there were indentations resembling tracks, &c. But I gave no theory of their formation. In answer to his reply, I stated that Professor Hitchcock describes tracks found in stratified rocks made by various animals, &c., which he unhesitatingly acknowledges were made by the animals whose tracks they resemble. But when tracks of men, &c., are found in granite rocks, they are declared to be "simply the result of accident." There is nothing but his theory to oppose the latter being made by men and quadrupeds, more than that, in the former case, they were made by quadrupeds and birds. When Bro. Maxson informs me that the appearance of tracks in granite was simply the result of accident—that granite was composed of mica, quartz, and hornblend, and that the rains and winds had washed and blown out the mica from the quartz and hornblend, &c., I was forcibly reminded of his caution to all persons not to charge infidelity or atheism upon persons who happen to know more than themselves. His caution saved me. I will now give a more full description of the appearance of those indentations. They looked as if some person had walked barefoot in soft clay or mud. It was not a solitary track, but a succession of tracks. How came accident to place the mica in the quartz and hornblend in just the form of a human foot, so that when washed or blown out it should exactly resemble the footprints of a man walking? I have lately received information from a reliable source, that a petrifaction of a human being has recently been found, which is composed principally of granite. If this is true, I suppose that, according to Bro. M.'s theory, the mica in this case *happened* to form the mould outside of the quartz and hornblend, so that it was washed off and left the quartz and hornblend in the shape of a man.

Brother M. has made a number of statements, as facts to be believed, among which is the distance of telescopic stars, whose light occupied two millions of years, (traveling at the speed of 192,000 miles a second,) to reach the earth. When called upon for proof, he replied, they are facts to be believed, and if you do not believe them, go and measure them yourself. In this answer there is a seeming want of candor, as though to measure the distance of a telescopic star was as easy as to measure the distance from one village to another. Brother M. knows, or ought to know, that to ascertain the distance of the sun from the earth more accurately, the governments of Great Britain, France, and Russia, sent vessels and astronomers to the South Sea, to witness the last transit of Venus, to take observations, &c.

I quoted from Bradford's Wonders of the Heavens, in which he declares that the amount of parallax of the nearest fixed star which has hitherto been examined with the requisite attention, remains still mixed up among the errors incidental to all astronomical demonstrations. Brother Maxson treats Bradford as he treats most of those who question his theory He states that by recent improvements in instruments for the measurement of angles, &c., aided by telescopic apparatus, the annual parallax of no less than thirty-five of the fixed stars has been determined with great accuracy. Bradford states in a note (the truth of which announcement he seems to doubt) that it had been announced within a few years, that N. D. Assas had satisfactorily established the annual parallax of Kuil to be two seconds, of Rigel one and forty-three one hundredeths seconds, and Sirius one and twenty-four one hundredths. Of the last one he says, If the Almighty were now to blot it out of the heavens, its brilliancy would continue undiminished in our hemisphere for the space of three years. Vast as this distance must be, brother Maxson's telescopic star is more than 666,666 times as far off as Sirius, whose annual parallax is only one and twenty-four one hundredths second; how large must be the parallax of one 666,666 times that distance? It would be something less than the twenty millionth of a second, if my calculations are correct. Brother Maxson states that "by William Herschell's telescope stars can be seen whose light would not reach the earth in less than 2,000,000 of years. But vast as is the distance traversed by Herschell's telescope, the fifty-two feet reflector of Sir John Ross reveals stars at ten times the distance." Brother M. ought to know, that a larger reflector is not what is wanted, but a larger base. If brother Maxson's declaration, that the annual parallax of no less than thirty-five fixed stars has been determined with accuracy, is true, it does not follow that the annual parallax of his telescopic star, which is something like a million times the distance of the nearest fixed star, has been determined.

Brother Maxson seems to make himself merry over my remarks on Niagara Falls. Had I stated what I did on that subject, as a fact to be believed, or as a truth demonstrated, he might have had occasion for merriment; but I made no such statement. I stated it simply as a probability. But before discussing the subject, let us review brother Maxson's views. He states that it has taken forty thousand years to wear away the rock from Queenstown to its present location. Now, let us compare his views of the Falls with his views of the deltas of the Mississippi. It is known to every one acquainted with the geography of the country, that the Mississippi and St. Lawrence or Niagara have their source in nearly the same region; many of their tributary streams arising within a few rods of each other; and according to brother M.'s theory, they must have been raised from the bed of the ocean, and commenced flowing at the same time. He says, "It must have taken about 67,000 years to form the whole delta. It is evident that the mouth of the river has changed its place, and that the whole basin of the river was once delta-formed, before the present delta was begun, and its formation must have occupied nearly an equal length of time." So that something more than 130,000 years must have been occupied in the formation of the two deltas. So, according to Bro. Maxson's theory, the delta of the Mississippi must have begun to be formed at least 90,000 years before the Niagara began to wear away the rock at Queenstown. "For all the years which elapsed since the river was created, previous to that time, its mighty waters had been tumbling down the dreadful abyss; but no rock was worn away; there it stood, resisting the mighty force of the falling waters, but no particle of the soft rock crumbled off! All at once, however, when" the 90,000 years had expired, "it began to wear away, and since that time has worn away" seven miles. "It would be interesting to know by what force the falling torrent was restrained from wearing back the rock previous to that time, and what made it begin to wear away just at that time!" Men who live in glass houses should not throw stones. But if stratified rocks, when first raised from the bed of the ocean, were so soft that the feet of birds made indelible impressions upon them, or rather in them, and that even rain-drops made impressions so deep that it is easily discoverable which way the wind was when it rained—(see Hitchcock's Elementary Geology)—it seems to me the water might have worn away the rock up to the Island by the year 1690. Indeed, if rocks were so soft when first raised from the ocean, it seems to me that six thousand years would have been amply sufficient to have formed all the gorges in the world.

Again, coral reefs are brought forward to prove the great antiquity of the earth. "The peninsula of Florida is made of coral reef, and the reef is still growing under the water at the south end of the peninsula. Professor Agassiz, in a recent lecture on the Florida reefs, has stated he had ascertained by observation and comparison, that the reef grows one foot in a hundred years, and by estimating the extent of reefs now formed, he finds that a hundred thousand years have been employed in building that little reef." Such proof as this brother Maxson brings forward to invalidate the commonly received Mosaic record. In my estimation it does not amount to a demonstrated probability.

Before closing my remarks on the subject, I wish to state, that in my opinion the geological theory is founded on hypothesis instead of scientific facts. After stating (what no one denies) that the earth was created in a chaotic stete, (if I understand them correctly,) they lay it down as the basis of their theory, that the modifications or changes which the earth has undergone in order to fit it for the abode of man proceeded in the same manner, or as slowly, as similar changes do now, and that God worked by secondary agencies. Overthrow this hypothesis, and their theory is destroyed. Establish it, and the Bible is overthrown. The Psalmist says, "He spake and it was done; He commanded and it stood fast." God said, Let there be light, and there was light. The whole Mosaic record speaks of creation and its modifications as the immediate work of Omnipotence, and not as the result of secondary causes.

I assure brother Maxson, that he is entirely mistaken in his insinuation that I have had recourse to a ruse "to escape from the force of his conclusion, even though he be compelled to admit the *fact* on which I base it." I do not admit his fact, nor do I ever expect to, unless better testimony is presented than any that I have yet read. Convince me that the commonly received version of the Mosaic record be incorrect, and I shall believe that worlds are continually being created, and others being destroyed.

I have Harris in possession, that is, his Preadamite Earth and his Primeval Man.

In conclusion, I fully concur with the remarks of "*One of the Subscribers*," on free discussion, with one exception. He recommends to any one who wishes to discuss certain subjects, to write a book, &c. I propose, as an amendment, that we who have a thirst for disputation should start a literary omnibus, which should be open to the discussion of all the ologies and isms of the day. Then those who have no taste for such reading will not be compelled to pay for what they do not wish to read. We of the quill are liable to form erroneous opinions concerning the merits of our productions, and the importance of the subjects in which we feel an interest. Let such a paper be started, and our brethren who have no relish for the discussion of such subjects as are now discussed, or are not pleased with the spirit of our remarks, will be relieved, and we shall be at liberty to pursue the discussion to our heart's content. I go for a Literary Omnibus.

ELI S. BAILEY.

HOW TO LIVE WITH ONE'S FRIENDS.

If you would be loved as a companion, do not let familiarity swallow up all courtesy. Many of us have a habit of saying to those with whom we live, such things as we say about strangers behind their backs. There is no place, however, where real politeness is of more value than where we mostly think it would be superfluous. You may say more truth, or rather speak out more plainly, to your associates, but not less courteously, than you do to strangers.

Again: we must not expect more from the society of our friends and companions, than it can give; and especially must not expect contrary things. It is hardly in man to estimate justly what is familiar to him.

Intimate friends and relations should be careful when they go out into the world together, or admit others to their own circle, that they do not make a bad use of the knowledge which they have gained of each other by their intimacy. Nothing is more common than this, and did it not mostly proceed from mere carelessness, it would be superlatively ungenerous. You seldom need wait for the written life of a man to hear about his weaknesses, or what are supposed to be such, if you know his intimate friends, or meet him in company with them.

Lastly, in conciliating those we live with, it is most surely done, not by consulting their interests, nor by giving way to their opinions, so much as by not offending their tastes. The most refined part of us lies in the region of taste, that is perhaps a result of whole nature, and at any rate is the region of our most subtile sympathies and antipathies.

It has been said that, if the great principles of Christianity were attended to, all such rules, suggestions and observations as the above would be needless. True enough! Great principles are at the bottom of all things; but to apply them to daily life, many little rules, precautions, and insights, are needed.

THOU WEEPEST NOT ALONE.

Joy and pain to all are given;—
In the cup of human life,
E'en as in the April heaven,
Smiles and tears are still in strife.
Think not that alone thou weepest,
By some present grief oppress;
When in happy dreams thou sleepest,
Other sad hearts long for rest.
If to thee thy brother seemeth
Naught to know of pain or care;
If the sunlight ever streameth
O'er his pathway bright and fair—
Envy not his joy and gladness,
He hath his own sorrows, too;
Oft he weepeth tears of sadness,
As the summer skies the dew.
Happiness is all around thee,
If thou seek for it aright;
Darkness doth not so confound thee,
That thou canst not find the light.
If the humblest floweret springeth
In the pathway thou dost tread,
Unto thee some joy it bringeth—
Catch its fragrance ere 'tis fled.
Sadly when thy spirit sigheth,
'Neath its weight of anguish bowed,
And upon thy heart there lieth
The dark shadow of a cloud,
Look thou up in faith to heaven,
God will give thee strength to bear
All that unto thee is given
Of distress, and grief, and care.
When thy cup o'erflows with gladness,
Lift thy thankful heart above;
If oppress with fear and sadness,
Trust thy Heavenly Father's love.
Thou shalt know each hidden reason
When thine earthly work is done;
Praise Him, then, in every season,
For the shadow and the sun! [Home Jour.

HOW ROMAN CATHOLIC PRIESTS ARE EDUCATED.

A Royal Commission has been inquiring into the great Catholic College at Maynooth, in Ireland, where more than half of the Irish priests are educated. The report of the commissioners makes the world acquainted with the modes of instruction, the discipline, the manners and customs, of that important institution.

The number of students is about five hundred, and they are all supported by the funds of the college and the Parliamentary grant. The average age of the students on entering is between eighteen and nineteen, and they remain at college eight years. They are selected by the bishops from the most promising pupils of the diocesan seminaries. The qualification for admittance is a slender school-boy knowledge of Latin and Greek. The commissioners say that "the students are generally very deficient in primary education—that is, in correct reading and writing of the English language." The famine, it appears, nearly annihilated the Irish preparatory schools, and consequently a large number of the students sent to Maynooth are raw, ignorant youths, just able to translate a few books of Virgil and a few of the dialogues of Lucian.

Over the portals of Maynooth might be written:—"Who enters here leaves liberty behind." The students are absolutely prohibited from visiting each other's rooms, on any pretext, or for any purpose! No conversation is allowed at meals. No student dare go one step beyond the college walls without leave. Every Wednesday, if the weather is fine, the whole body is marched out into the country, under strict surveillance; and during the walk it is a very serious offence for the students to leave the ranks. The teachers live quite apart from the students; there is no intercourse between them of a social or friendly character. Students from the same diocese associate exclusively with one another; and this rule is so strictly enforced, that a willful violation of it might be visited with expulsion. The dean is at liberty to open all letters and papers addressed to the students, and he exercises a strict censorship over their private reading. Newspapers are absolutely prohibited. The utmost vigilance of the faculty is directed to their complete exclusion; but, we are happy to know, that their efforts are not always successful. No freedom of action is allowed to the students; in all respects, they are treated as children; and children they remain, in all respects but one—innocence.

In winter all rise at six; in summer, at five. Two hours of every day are devoted to religious exercises, nine hours to study, and four hours and a half to meals and recreation. During the hours of study, one of the deans walks up and down the hall, overlooking the students—students, remember, who are from eighteen to thirty years of age. On rising in the morning, they are required to spend half an hour in prayer and meditation; before going to bed, an equal period in prayer and examination of conscience. There is a mass daily in the chapel, which all must attend; and once in two weeks, all are required to confess and receive communion. During meals, a student reads the Bible aloud; but after finishing a chapter he is sometimes allowed to read a literary work. Twice a year there is what the Catholics call a "retreat" at the college, which lasts four days, and during which all intercourse between students is forbidden. Silence reigns within the college walls. Every student is supposed to be praying and meditating continually, and he is expected to fast to within an inch of his life.

The knowledge acquired by the inmates of Maynooth is, as might be supposed, very limited. For the first four years they are chiefly confined to mathematics and the classical languages; the last four years are devoted to theology and Hebrew. The student has no tutor to whom he can apply for assistance in his difficulties, and the classes are so large that he is not called up to recite more than once in two weeks. One essay in Latin, Greek, or English, is required weekly from each, but it is seldom corrected. The annual examinations, say the commissioners, are so loosely and hastily conducted, that they afford no means of judging of the proficiency of the students. There is scarcely any instruction given in physical science none in history; and no modern language is attempted except French. Once or twice during the last year of the course, each student is called upon to preach a sermon before the superiors of the college, who make a few remarks on the performance.

In this way the spiritual guides of the Irish people are trained for their important duties. They issue from the college, in which they have been *incarcerated* for eight years, ignorant of the world and unacquainted with its history, with no experience of the trials, sorrows, and temptations of human life, habituated to mental servitude, and drilled to uniformity of feeling, opinion, and habit. The Maynooth system is the clerical idea of education fully carried out. When we consider for how many ages it was the only system on which higher education was conducted, and that in a large proportion of Protestant colleges the plan of Maynooth has been merely modified, not essentially changed, we cannot but wonder at the past progress of the human mind, and still more at the strides it is now making towards complete emancipation. Man learns in spite of his appointed teachers, rather than by their assistance. [Life Illustrated.

STUDY NECESSARY FOR THE PREACHER

At the recent ordination of Rev. Mr. Slater as pastor of a Baptist Church in Rome, a very appropriate discourse was preached by Rev. C. G. Baldwin, D.D., from which the following is an extract:—

One part of the minister's work consists in the cultivation of the intellect, and acquisition of knowledge. Thus Paul charged Timothy: "Neglect not the gift that is in thee; till I come give attendance to reading, to doctrine; meditate on these things; give thyself wholly to them; that thy profiting may appear unto all." "Study to show thyself approved unto God, a workman that needeth not to be ashamed, rightly dividing the word of truth." And so the promise: "I will give you pastors according to my own heart, who shall feed you with knowledge and understanding." And again: "The priest's lips should keep knowledge;" and all, as an Apostle has said, "for the *edifying of the body Christ*." But how and where shall a minister of Christ obtain this intellectual enlargement and acquire this knowledge; will they come to him as come the soft showers of heaven or the fragrant breezes of the South. May he idle away his time, fritter away his energies, and then hope that God in some miraculous way will supply his need? Nay; God frowns on such presumption, and says to him as to all: "Incline thine ear unto wisdom, apply thine heart unto understanding; yea, if thou cry after knowledge, and lift up thy voice for understanding, if thou seek for her as for silver, and search for her as for hid treasures, then shalt thou understand the fear of the Lord, and find the knowledge of God."

Well has it been said, "A minister has no right to cease to be a learner, when he has become a teacher." The pulpit should never become the grave of the student. A fine person—a good voice—a fervent imagination—a smattering of information—a readiness of utterance—may interest, and, perhaps, dazzle an audience for a while; but if there be no real intellectual growth, no fresh-thought development, they will soon begin to suspect the character of the soil whose fruits at first so much gratified them, and the painful truth will force itself upon them, that their preacher is merely revamping old sermons, repeating old ideas, going over old illustrations, and the result is, he is soon compelled

"To fold his tent like the Arabs,
And silently steal away."

In this age, no department of knowledge is useless to the preacher of the gospel. There is no fact in philosophy, no event in history, no discovery in science, no product of art—there is nothing beautiful, grand, or magnificent in nature, animate or inanimate, which he may not subordinate to his work, and from which he may not gather material for proofs and illustrations of the doctrines of the Bible. Education is now brought within the reach of all. Everywhere are found men and women who think and study; men of liberalized minds, who will not listen to an ignorant or vulgar preacher. If the ministry maintain its dignity, and keep its hold on the respect of community, it must take the lead in intellectual, as well as moral culture. And no man can do this for any length of time, whatever may be his original powers, or may have been his early opportunities, who does not continue to explore new regions of thought, and dig in fresh mines of knowledge. He may be a very good man, but if he is not a very good student, he fails to exert the influence he might.

Ask a church member, "What kind of a minister have you?" If the only response is, "He is a good man," you understand it as his modest way of saying "he is not a very able man." But if he says, "My pastor is not only a good man, but a hard-studying man; go to him now and you will find him in his study, laboring as hard to meet his people next Sabbath, as any of his people are laboring in their occupations;" you feel that, although he may not be a genius, that pastor is a prize. He has an influence over his society, which any man may envy, but which no man can secure without patient industry and untiring application. Ah! my brethren, *these secret studies and secret prayers are the sunken piers upon which the bridge of a desirable reputation rests, while it spans the troubled waters of life.*

The Bible, however, should be the chief study of the servant of Christ. This is the light by which he sees eternal realities; the history which acquaints him with the past; the teacher that instructs him in the great spiritualities of the kingdom of God. But how can he explain the Bible, if he does not understand it himself? And how can he understand it unless, in private, he pores over its sacred pages, with the prayer evermore upon his lips, "Open Thou mine eyes, that I may behold wondrous things out of Thy law?" How can he lead saints into green pastures of promises, and still waters of consolation, unless he has been there himself? How can he take them to its Pisgah tops, and show them the goodly land beyond Jordan, unless his own feet have trodden those sacred summits? How can he bring beaten oil into the sanctuary who depends upon mere impulses, or flows of feeling, or passing events, for pulpit material? Inasmuch, therefore, as he cannot be a scribe well instructed, nor make full proof of his ministry, without such intellectual growth and acquisition, may his church say to him, "This matter belongeth unto thee."

GARDENING AND FLOWERS.

The Newburyport *Herald* gives the following excellent advice on a much neglected subject. If our countrywomen could be induced to reflect upon the subject of horticulture with half the sagacity they employ in topics of household concerns, they would require no persuasion to cultivate this most refining and beautiful of occupations, which, akin to poetry, is its own sweet reward:

"Gardening was the first employment of man, and now it is the most agreeable and healthy. Anciently it was esteemed the second of the fine arts, ranking next to architecture. Now, it should be the second thought of every family; the home that shelters, first, the garden for pleasure and profit next. It is a favorite occupation for a leisure hour to every man, giving to those who have a taste for the beautiful and the valuable delight with gain; and it should be a favorite occupation for every woman, who should have her plants and flowers, and shrubs, giving her employment in the open air for an hour or two every day. Our American women grow old and die before their time, for want of out-door exercise, which can be better afforded in the garden than elsewhere. It is a pity they could not learn something of their English cousins in this matter. The increasing interest taken in horticultural matters, as witnessed in the exhibitions, is a hopeful sign in the community. The gardens of the wealthy, filled with choice fruits and beautiful flowers, and the nurseries and vegetables of those who make gardening a business, have greatly improved the last ten years; but where land is so plenty and attached to nearly every dwelling, there are advantages and profits and pleasures in a garden that the poorest may enjoy with the wealthy, and the laborer with the man of leisure. Train the vines upon the sunny side of your houses, dig up the little patches by your doors, rear the trees, and grow the vegetables, and nurse the flowers. Their fragrance will be at your windows, the birds will come and sing for you, the melon the plum, the pear, and the apple will be in their season; and how delightful, morning and evening, with wife and children, and friends, to mark the growth of vegetation, which may be gathered in the fall for support in winter!"

Appropos of the above, the Philadelphia *Ledger* gives the following simple directions for extracting the perfume of flowers; an additional interest is thus given to their cultivation:

"Gather the flowers with as little stocks as possible, and place them in a jar three parts full of almond or olive oil. After being in the oil twenty-four hours, put them into a coarse cloth, and squeeze the oil from them. This process, with fresh flowers, is to be repeated according to the strength of the perfume desired. The oil being thus thoroughly perfumed with the volatile principle of the flowers, it is to be mixed with an equal quantity of pure rectified spirit, and shaken every day for a fortnight, when it may be poured off, ready for use. As the season for sweet-scented blossoms is just approaching, this method may be practically tested, and without any great trouble or expense.

"I HAVE NOTHING TO GIVE."

So said a church member when called upon for a contribution to missions.

"*Nothing to give.*" And yet he talked of the preciousness of the gospel to his own soul—of the hopes he entertained of salvation through the blood-purchased provisions of the gospel—but he has nothing to give to extend these joys and hopes to those whom he professes to love as himself.

Nothing to give! Yet God is constant and munificent in his benefactions. Every day his treasure is opened, and fresh blessings freely dispensed. God never answers to the asking of his creatures, "I have nothing to give."

Nothing to give! And he wears decent apparel, lives in a comfortable house, sets a plentiful table, and seems to want for nothing necessary to the comfort of his family.

Nothing to give! And he sometimes attends the monthly concert, and prays that God will send the gospel to the ends of the earth. He said many times during the year, "Thy kingdom come," and pretended that it was prayer. If dollars were as cheap as words, the treasury of benevolence would be full. If Christians were as liberal with their purses as they are with their prayers, there would no lack of means for sustaining the missionaries of the cross in every land.

I have nothing to give! And the heathen are stretching out their hands in imploring petitions for the Bread of Life, and warm-hearted Christian ministers, and even Christian women, are standing upon the shores of our own land, looking across into the darkness and weeping for the means to carry them there that they may minister to the spiritual necessities of those perishing millions.

Nothing to give! That means, "The missionaries may stay at home, or starve if they go, and the heathen may go to hell, rather than I will part with any of my money for their relief."

COLONIZATION AS A REMEDY FOR DIFFICULTIES—NO. 2.

It is not intended by what we have remarked under this head, to offer any discouragements to the plan of collecting together our Sabbath-keeping brethren, in small communities. But we never hear the project of colonizing our people agitated, without a suspicion that more of the worldly than of the religious element is at the bottom of it. Admitting that, as a mere speculating scheme, it might result in all that the most ardent could desire, it is our conviction, nevertheless, that the Lord has a higher and holier work for the members of our churches to engage in than money making. Ought not the impediments to their increase—their inability to accumulate largely without compromising their integrity—to be regarded as God's call to a mission of infinitely greater importance than that of laying up for themselves and their families? We verily believe they ought, and that the Sabbath is a hedge, which God has placed in the way to obstruct our brethren from the too eager pursuit of wealth. Alas! that so many of them break over it.

Yes, our people have an important mission to fulfill, and in view of it, we predict that God will withhold his blessing from all attempts to colonize them to any considerable extent. We need not stop to define what this mission is. All we need say about it is, that we are called to let our light shine. Agreeable as it might be to live in a community by ourselves, would this answer the great purpose which God would accomplish by us? It seems to be *His* plan to scatter his people abroad; and where they have undertaken to concentrate and consolidate themselves, under the impression that such an arrangement would be best, something has generally been sent upon them which tended to break up the policy, and disperse them again. The church at Jerusalem was a large and consolidated body, and it was doubtless thought by the members, that it would promote their religious enjoyment and prosperity to stick together. But God judged otherwise, and therefore brought about, through the wickedness of men, a persecution which scattered them into different provinces. It was a wise providence, and was the means of bringing them to the discharge of their duty. But for such a providence, they had not gone out to proclaim the gospel to distant lands.

Human wisdom seems always to be running counter to the Divine plan. That kind of missionary work which contemplates widely separated points of action, all over the world, was never in accordance with man's policy. Man's policy is to evangelize one nation first, as thoroughly as possible; then the surrounding borders, and so on; never venturing abroad, till everybody is made perfect at home. Thus he would keep together in one body all the good, and leave all the bad in another body. But the policy is a most mistaken one, as might easily be shown.

Now what would the plan of one general colonization of our own people be, but the adoption of this very policy, which God in his providence seems to have repudiated? Inefficient as we are already, we believe that the consummation of such a plan would but increase our inefficiency. Our small churches, scattered over eight or ten different States of the Union, and so widely separated from one another as to render concentrated action difficult, are better disposed for the accomplishment of the work to which God has called them, than if they were located compactly together. If all the light-houses in the world were builded together, in some given locality, the spectacle would unquestionably be a most magnificent one, and ships approaching the harbor they were intended to light would enjoy rare advantage. But would the seafaring community be benefitted by such an arrangement?

The compact location of our whole Sabbath-keeping fraternity would, it is true, enable us to do up our denominational business with a great deal more of *eclat* than we now do. We could build large houses of worship, bring together teeming congregations, and have all the formalities of public service performed in an imposing manner. We could have schools on a large scale, a denominational college, perhaps, and a denominational publishing house. We could throw around our anniversary exercises all the prestige of excitement. And then, if a traveling stranger should come among us, though he should not go so far as to "fall down on his face, worship God, and report that God is in us of a truth," he might be expected to at least carry away "*a very favorable impression.*" Perhaps he would give us an ephemeral notoriety by writing a letter about us to some popular newspaper.

Still, we do not believe that this would be for our prosperity. No doubt, it would do away many of the annoyances to which we are now subject; but, if we mistake not, God has called us to endure these annoyances for the sake of the truth of which we are the representatives. Ours is a mission which is accomplished, "not by might, nor by power." Some look upon their poverty as a hindrance to their usefulness, and very piously tell what great things they would do for the cause of religion, if they only had the money. Our patience is tried with such Christians. Who, of our whole Sabbath-keeping community, is as poor as Jesus Christ was? Did his poverty mbarrass his usefulness? And who has less of worldly influence than he had? Did his making himself "of no reputation" hinder the effect of his mission?

We are well persuaded, that we need none of those peculiar advantages which colonization on a large scale, or even on a small scale, would give, in order to our usefulness. All we need is to be made faithful in the situations which we now occupy. And if our people would but forego their strong desire to accumulate, and make up their minds to be comparatively poor—the *pinchings* of poverty none of them know anything about—for the truth's sake, the day of our enlargement would soon dawn upon us. Till then, we expect a continuance of night. Are there not some among us who "wait for the Lord more than they that watch for the morning?" T. B. B.

GLIMPSES OF DOMESTIC LIFE IN CHINA—NO. 15.

A Chapter on Kidnapping.

There remains yet one other view of the sufferings of these poor Chinese—one which, it seemed, would be better given in another form; but as I cannot learn that it has yet been sent to you, I hasten to do it now. Indeed, a full account of the affair would embody so much of our own domestic experience for a term of months, that it seemed almost out of place to write it in this connection, and has caused a long delay to that which had been better told at the time. But, forgetting all extraneous matter, which is only required as a husk for the kernel, herewith are the details.

You already know that our mission families were driven from their houses soon after the outbreak of troubles here, and that after being constant dependents upon the kindness of others, with the as constant expectation of speedily returning to our deserted homes, wearied at last with hoping against hope, the resolution was formed, and carried into effect, of providing a temporary retreat for ourselves. The spot selected was within the circle known as "The New Race Course," about one mile in circumference, for the perfect security of which, among other rights, had been fought the well-remembered battle of April 4th, 1854, and on the outer line of which a guard had been constantly kept, and no armed soldier allowed to enter within the prescribed limits. We took up our residence on the 7th of the August ensuing, with all that feeling of security which our well-guarded position seemed fully to warrant, although the only foreign family there. True, we were very near the Imperial camps, but not quite in the line of their fire, although stray balls did often come across the boundary line. We had known them to strike almost at our very feet, but considered the probabilities, on the whole, to be more favorable even than in the retreat we had left, which, being much nearer the city wall, was also fearfully near to and in full view of all the naval engagements, and exposed us to the uncertain firing from the war-junks, which in their wind-and-tide-bound movements often sent their ill-aimed balls quite above or beyond us, into the very heart of the foreign settlement. So we sat down in our unfinished house, thankful at least that it was *ours, our home.* As such we prized and enjoyed it for four whole months, and then a sad change came over the spirit of our happy dreams. The French, in consequence of collision with the Rebels, had commenced hostilities against them, thereby rendering most efficient aid to the Imperialists, in the blockade of the city. English and Americans, although bent upon remaining neutral, could not fail to be in a degree auxiliary, for the "Three Treaty Powers" could not violate their obligations to each other with impunity; so the result was, in order to complete the blockade, the Race Course, without reference to its native population or ourselves must be given up to the Imperial Powers, and the British guards withdrawn. Protection was thenceforth guaranteed only to those within the inner line of defense, which marked the limits of neutral ground.

From this time, the suffering within the city greatly increased, and the straitness of the siege became exciting in the extreme. Still, we saw no immediate necessity for leaving our new home, although the Imperial troops had full liberty to carry on their work on all sides of us, which they occasionally did, even at our very gates. Just at this juncture commenced those frightful scenes around our dwelling, a description of which has been deferred to the present time.

Late in December we first saw the kidnappers dragging away their victims to head-quarters for punishment, but we tried to reconcile ourselves to these outrages by regarding them as the "chances of war," and inseparable from the existing state of affairs. Now we noticed that *foreigners* were busy leading the people away. Still, as we had often seen the policemen take charge of native culprits in this manner, we allowed ourselves to feel no further interest in the matter, supposing these cases were of that kind. But very soon their constant recurrence, and their being always taken towards the city gates, excited our suspicion, especially as we knew there were many foreigners in the employ of the Rebels, and certainly none so suitable as themselves to carry on this most inhuman work. Very soon were our suspicions confirmed, and on this wise: Two kidnappers had grasped each his victim, but the contest seemed so nearly equal, and the struggle so violent, that Mr. Carpenter ran out to inquire the cause, when the hindermost one, a short, stout man, finding himself on a losing game, dropped his prey, and ran to the assistance of his comrade, who was thus successful, while one poor creature alone escaped, being severely wounded, sanguinary traces of which distinctly marked the path for a considerable distance. His gratitude was unbounded, as was also our indignation at seeing what British and American cupidity could effect in the person of these graceless renegades. We knew not, then, how *very* contemptible were the wages for which they could thus wantonly sacrifice the lives of so many innocent and helpless natives. We sat down to dinner, and a counter case was paraded past our open door. The Imperialists had also caught a man, and were dragging him away to their camps. Just at that moment our neighbors came running in, and beseeching Mr. C. and Mr. W. to run to the rescue, as the victim was a very near neighbor of ours. They went, but the cowardly soldiers dropped him at sight, leaving him to act his thanks, as best he could, for his so cheaply purchased freedom.

This, I think, was the last instance of kidnapping by the Imperialists, which we witnessed, until after the blockade of the city was completed. Courage and deeds of evil daring, seemed at this juncture vested in those restless and reckless fortune seekers, who gathered boldness in proportion to the helplessness of their cause, and seemed concentrating their efforts for more efficient work, now that it seemed so evident to al that their time was short. They would enter the hamlets near us, or grasp their victim in the broad sunshine, but a few steps from our door, and drag him away before our very faces towards the city wall. They would stop the sedans that went quietly along, examine the contents, and if the occupant seemed a hopeful subject, release his bearers, and lead him away a helpless victim to a horrid fate. Report had already reached us of the cruelly tragic termination of some of these cases, and we had spared no pains to call public attention to these facts. But we were assured that no interference could avail. It was an incident of war, and the parties embroiled must fight it out—that with respect to the *foreign* kidnappers, they were deserters from British and American ships, had entered the Rebel service against the express command of their respective governments, were therefore outlaws, and must be left to the consequences of their own evil course.

It was fearful to contemplate this state of suffering, and find ourselves unable to mitigate it. Still, no fear of personal injury (and that we knew might come upon us in the form of revenge) could deter us from keeping an eye upon their proceedings, and they seemed equally intent upon looking defiance at us. They stalked fearlessly along our footpaths, and at one time a company of six or seven walked deliberately past our open door, seeming as intent upon spying out our securities, as we were in noticing their individualities. That day their work was prosecuted with uncommon vigor. The cries of their struggling victims were heart-rending, but we were powerless to rescue, and our authorities had admonished us not to attempt it.

On the morning of the second of January, the work was commenced unusually early, by the carrying off of one or more in the rear of our dwelling; and soon after a man was dragged from the little hamlet in front of us, struggling violently, and throwing himself upon the ground, as others had often done, so that he was only moved by main force, accompanied, of course, with most brutal violence. At length a pistol was fired, probably to intimidate him, and soon after his clothes were discovered to be burning, and they succeeded in getting him forward. After a while his burning garments were cut loose, and he was dragged out of sight. About noon of the same day, to our unspeakable relief, the Captain of the Municipal Police, (Clifton,) accompanied by an assistant officer, came to reconnoitre, and if possible to put a stop to these scenes; for although foreign functionaries, both civil and military, felt they could not properly interfere, the position of the police was somewhat different, and we welcomed them with a feeling of certainty that good would follow. As we anticipated, however, the kidnappers were awake to these movements, and not one showed his head while the officers remained at our house. Captain Clifton informed us that the leader of the gang, whose name was Eldredge, was well known to him, having been once, for months, in his employ at Hong Kong, a character well fitted for the cowardly work in which he was engaged, of dragging poor innocent people into the city, where he received twenty or twenty-five dollars a head, leaving the chiefs to demand and get whatever they could as ransom money, or destroy with tortures in case of failure. After remaining some hours to no purpose, they left, and were hardly gone, when the gang were out again. But Captain Clifton and his assistant Boyle were not to be baffled. The latter, taking another companion, came out towards evening, as if for a quiet walk, and oh, how our hearts throbbed, as we saw them nearing the place where Eldredge was at the moment standing, with his constant associate Roberts. Neither party seemed to see the other, until a sudden turn brought them face to face. Boyle and his friend were both unarmed, but they boldly demanded of the others to surrender, when Eldredge drew his revolver, and darted away, with lightning speed, towards the city, stopping, however, at a safe distance, where he stood peeping out from behind a house, to see how it fared with his companion. Roberts at once gave up his weapons, consisting of two revolvers, two knives, a sword, and club-stick, and then was marched quietly away towards the police station. Presently we saw them wheel about and retrace their steps, bringing him up to our door to be identified, as he stoutly denied his guilt. We did not detain him long, and he was soon safely lodged in the consular jail. The next day he was on trial, and Mr. C. and Mr. W. were summoned as witnesses. And now, for the first time, did we really indulge in personal fears; for the general opinion was, that Eldredge and his accomplices would seek to revenge themselves on us. A guard was given us, until we could arrange to leave our home, which we soon after did, not returning until the siege was finally raised, and peace restored. It seems our danger was even greater than we suspected, for we have since been informed, that a few days after that, as two American sea captains were walking on the banks of the Yang-king pang, near Tailor's Bridge, they saw Eldredge, who was personally known to one of them, standing on the opposite bank, draw his revolver, and taking deliberate aim, fire at his head. The ball passed just behind his neck. After the capture of the city, Capt. D. again met Eldredge, and asked him, among other things, why he had fired at him. He replied, "I thought it was the d—d missionary that informed against me, and I was determined to kill him if I could."

Roberts was sentenced to a term of imprisonment at the south, but while lying in jail Eldredge succeeded in rescuing him, by some underground process, and they continued their career of crime in the city until its re-capture. Then they fled, in company with a few others, to Ningpo, leaving many of their poor comrades in guilt to be beheaded, in the general work of extirpation. But justice was not slow in finding them also. Eldredge and another were taken, after most desperate fighting, and placed in cages, to be brought, overland, to Shanghae. The former died of his wounds on the way; the other was alive, and was visited by different persons after his arrival here; but what finally became of him is uncertain—whether he died in his cage, was taken out and beheaded, or sent away, as reported, into the country to await a further sentence. Roberts returned after a few weeks to Shanghae, where he was recognized as he sat singing in a boat by the Bund, informed against, taken prisoner, and tried on three several indictments—"joining the rebels," "kidnapping," and "breaking jail." On the first he was acquitted; on the other two, sentenced to one year's imprisonment for each, at Hongkong, whither he has already been sent pursuant to the sentence. L. M. C.

June, 1855.

LETTERS FROM PALESTINE—NO. 20.

JERUSALEM, Sept. 3d, 1855.

As I wrote in my last, we were this afternoon to start on our return to Jaffa. In coming here, one large camel brought our luggage with ease, for which we paid forty piastres Now two are necessary, but cost only thirty-five piastres. The owner furnishes us with donkies for fifteen piastres each; but they are small, and cannot travel fast; at least so they appear. The agreement is to go by the way of Lydda, which is said to be three hours further than by Ramlah, the usual route for travelers. According to the representations of our Arab, we expect to be out two nights. To night we are to lodge at his house, three hours distant. For *that* he, according to Eastern flattery, will feel himself highly honored. The camels are loaded. I have fixed stirrups to the ragged pad on my donkey, and provided Miriam's pad with rope stirrups and a bed quilt, so that she may ride as easy as possible. The pads and halters for both donkies may be worth fifty cents, but they are as good as nine-tenths of the people ride upon. In this primitive, cheap style, (I should say *dear*, for so it proves in the end,) we are off. Arrived at the gate, we meet there, by previous arrangement, the Consul's Cavasse, who speaks to the publicans not to examine our baggage, as we are not merchants, and for this we give him ten piasters. This goes for tariff, or, more properly, as it ought to be universally named, *tear-off.* I presume the poor peasants think so, as every thing they carry into or bring out of the city must be seen by these officers of government. Loaded camels, mules, donkies, men, women, and children, with burdens however small, must undergo the publicans' search, he appropriating frequently an unlawful portion to himself. What right he has to any of it, the owner is at a loss to perceive, except it be the robber-right, which with the world is as good as justice. I no longer wonder that the tax gatherers of old were so unpopular with the Pharisees and people. Though our Saviour went among them to do them good, and that contrary to the wishes of the Pharisees, he seems to have fully understood their character. See Matt. 18 : 17. "Let him be unto thee as a heathen man and a publican." Two brethren accompany us on foot for a mile and a half, and then bid us an affectionate farewell. Our road lay in the direction of Nebby Samuel, but after an hour's travel we turned to the right around the mountain. The villages of Rama, Hauina, and Shaft, we passed on our right. We were agreeably disappointed to find our and road skirted with olive orchards, and here there fig, apricot, and quince trees. Half an hour before sunset we arrived at Beit Nabala, where our Arab said we must stop for the night. On the road he appeared anxious to cook us a supper at his house, but we heard nothing more about it after stopping. Instead of conducting us to his house, we dismounted on the top of some low rooms, well covered with earth, and at one side of which was a stone building, the wall of which afforded a good protection against the wind. Here where the camels and donkies had often made their bed, a mat was brought and spread. We were told to make ourselves at home! At a little distance a fire was made and coffee served to those about us. We ate a cold lunch, and lay down to sleep. If ever we needed rest it was then. The old man whom I have called our Arab, kept watch, with his gun and sword by his side, though he *slept* quite soundly. On arriving here, he showed us about the top of the mountain on which the village stands, a mere huddle of a dozen houses, whence we had a view westward, about fifteen minutes, of Gibeon, and southward, of Nebby Samuel, three-quarters of an hour distant. Rama was north, and still further in that direction was Bethel, though the latter was not to be seen. Returning to our *lodgings*, we were attacked by a dog which seemed not to relish our Frank dress. We in turn could not excuse his *ad*dress; a stone brought him to the ground, and when he rose again he retreated, satisfied that he wanted no more of us. Our bed was a hard one. True, our pillow was softer than Jacob's, but we doubt whether he had as many flees and other domestics to keep him company. We did not dream any; we were too uneasy for that, for the reason that our bedfellows—(their name was legion)—would not lie still. We used umbrellas to keep the dew from our heads. We might have lodged under the olives, twenty rods off, but our men positively refused, saying they were afraid of thieves. To have gone into the hovel of the owner of the camels, which we had now learned was beneath us, would have been still more unpleasant. How human nature can abide so much filth, confined air, vermin, &c., as do the Arabs, is a wonder. Poor fallen creatures! Their exterior is but an index to a more corrupt interior—a nature that can be cleansed only by the washing of regeneration.

At one o'clock A. M. of the 4th, we were called to prepare for the journey. We were on our way at a quarter to two. The moon had just risen, and now lighted our path, and even gave us quite a clear view of objects around us. Our course lay just north of Gibeon, called by the natives El Jib, and through a part of the valley where Israel fought the five kings of the Amorites, and upon which the sun and moon stood still. See Joshua 10 : 5, 12, 13. Gibeon appeared to be quite a town, and may contain from 700 to 1,000 inhabitants. It has a beautiful situation, on the top of a dome-like hill, surrounded by a valley, and quite overlooked by the high mountain of Nebby Samuel, or Mizpah.

In three-quarters of an hour we entered a narrow ravine between high hills, or rocky mountains, in which we traveled till we reached the plain of Sharon an hour after sunrise. At the first appearance of day, we came to a spring which sent out a little rivulet that was soon after lost in the ground. The water was sweet. Here our men, three Moslems, washed their feet, hands, and faces, and then prayed. Half an hour after, the chief robbed an acquaintance of his, whom we met, of a loaf of bread! The poor fellow murmured, but it was of no use; our party had a gun, and that made it right! It was useless for us to expostulate; the universal *mal-aish,* i. e., never mind, of this country covers a multitude of sins. We were reminded of the language of the angel of the Lord to Hagar: "And he will be a wild man; his hand will be against every man, and every man's hand against him; and he shall dwell in the presence of his brethren." Gen. 16 : 12.

When within half an hour of Lydda, or Lyd, as the natives call it, we stopped under some olives for rest and refreshment. We remained here from 9 1-2 A. M. to 12 1-2 P. M., and slept and dined. Water was brought by a woman in a pitcher or cruise containing three gallons or more. This she carried on her head, after the manner of all the women in carrying water, bundles, &c. Gave her a piastre, four cents, with which she seemed satisfied. The road thus far from Jerusalem, over, or rather by, this route, *down* the mountains, is much traveled, and is more level than I expected to find it; far more so than the usual route. At a rough guess, a railroad might be made from the plain to the summit; but in due time science and enterprise will determine that. We met, on the mountains and in the plain, along this road, long lines of camels, loaded with timber, boards, boxes, and bales of goods, trunks, and not the least conspicuous were some barrels of "*pure cognac.*" The Maine Law is not in operation in Palestine. Though only three and a half hours from Jaffa, we were five hours on the road from the aforementioned olives. We arrived home just before the sun was lost (apparently) in the blue sea westward, and were kindly greeted by the dear family who had occupied our house during our absence. Our Arab received his money, and besides receiving bread and coffee from us on the way, and stealing some besides, demanded liberal backsheesh. True, he was kind and obliging to us, and had come through a day sooner than he promised, which was as much for his advantage as ours, but he claimed a present for our *lodgings!* In this he had deceived us; but rather than clamor, we gave him sixteen piastres and saluted him with *mah salaamie,* which is equivalent to good bye, or simply *with peace.* He left us, as he said, contented and happy. We were weary, and glad to find rest in clean and comfortable quarters. We were prayerfully thankful, too, for His protection on the way whose angel keepeth watch over those who fear Him. W. M. J.

* * *

Rev. Harvey R. Hitchcock, for twenty-five years a missionary at Kaluaaha, Molokai, Sandwich Islands, died there on the 29th of August. He was originally from Great Barrington, Massachusetts.

ANOTHER VICTIM OF SLAVERY.

A late number of the *Independent* contains a lengthy statement by Miss Delia A. Webster, endorsed by Mrs. H. B. Stowe, which strikingly illustrates the partiality of Southern *chivalry.* The story is thus epitomized by the New York *Times*:—

Miss Webster taught school, ten years ago, at Lexington, Ky.; enjoyed an extensive and satisfactory patronage, yielding a net revenue of $800; and also a reputation for strong and emphatic Anti-Slavery sentiments. This snug and pleasant little business was interrupted by suspicions that Miss Webster united to her other professions that of negro emancipation; in other words, that she was privy to the escape of some ten or a dozen slaves, who fled at that period from the influences of the patriarchal institution, and found a home in the Provinces of Her Britannic Majesty. She was arrested; the indictments against her (numbering ten in all) were tried before one of the State Courts, where Henry Clay and Gen. Leslie Combs acted as her counsel. By a violent disregard of the rules of evidence, she was found guilty upon one of the counts, but was unanimously recommended by judges and jury to the Governor as a fair object for unconditional pardon. After a brief imprisonment, the pardon was conceded—Governor Ousely taking the ground that no offense had been established against her. Disgusted with this sort of experience, Miss Webster withdrew from Kentucky; but a nobler and better portion of the community, ashamed of the persecution to which a woman had been exposed, solicited her to return; added the most liberal offers of assistance, pecuniary and influential, and to prove their entire confidence in her and her kindred, succeeded in inducing brothers and relatives of hers to settle numerously in Central Kentucky. Overcome at length by importunity, Miss Webster ventured so far into the bounds of the commonwealth, as to purchase and stock a farm on the south bank of the Ohio, over against Madison, Indiana. Here she designed to pass the remainder of her days in peace. Her property was large; her means for managing it sufficient; her labor, being white, of course infinitely better for all practical uses than that of the colored generation about her. The hope was short-lived; the whole population of Trimble County combined against her; charges of aiding the escape of fugitives were invented or imagined; under threats equivalent to a Papal interdict, she was invited by the head of a highly chivalrous mob to forsake all and leave the State; which she firmly declined to do. Then came an illegal arrest; solitary confinement, and treatment which a Carib might have blushed to perpetrate; the destruction of the improvements on her property; a revival of the old and canceled indictments to give the color of justice to a tedious tissue of unlawful malignity; her flight from another and more reckless mob; the pursuit through Indiana under a requisition from the Kentucky Executive; and her final escape to the more wholesome climate of New England. Miss Webster sums up her sorrows as amounting to confinement in loathsome apartments for more than six months; a direct pecuniary loss exceeding $11,000; the utter desolation of her fine estate, and inability to return to it in order to recover or sell it. She also asservates her entire innocence of the offences so gratuitously and unlawfully urged against her; an asservation which gathers strength from the fact that the Executive of Kentucky, in 1845, sustained by all the public opinion of the State entitled to the least respect, pronounced the charges false and frivolous; and that when seven years later the persecution was renewed against her, nothing more recent or more authentic could be mustered than those old and discredited landers.

* * *

BOSTON SOUTH BAPTIST ASSOCIATION.—We have received a copy of the Minutes of the Seventh Anniversary of the Boston South Baptist Association, held with the Baptist Church in Hingham, Sept. 12 and 13, 1855. The Association is composed of 31 churches, connected with which there are 25 pastors. The number of church members is 4,609, of whom there were added last year, by baptism, 230, and by letter 205. The Minutes include a Circular Letter on the urgent need of the Holy Spirit's presence in the churches; historical sketches of two Baptist churches, one at West Medway, and one at Dorchester; and a list of the ordained ministers who have been or are connected with the Association. For completeness, general arrangement, and style of printing, these are model Minutes. The Clerk was Rev. A. H. Burlingham, pastor of the Harvard-st. Baptist Church, Boston, to whom Minutes of Corresponding Associations, and other documents relating to the Boston South Association, should be directed.

* * *

THE JEWS AND THANKSGIVING.—The Thanksgiving Proclamations of the Governors of New York, for two years past, have been offensive to the Jews. It is said that Governor Seymour, in 1854, apologized to the Jews for the use of an expression to which they objected. The Proclamation of Gov. Clarke, this year, addressed the inhabitants of the State as "Christians." Dr. Raphall, in his thanksgiving discourse, commented rather severely on the language of the Governor, and expressed a hope that he would not long fill the office.

* * *

THE YEARLY MEETING of the Seventh-day Baptist Churches in New Jersey was held this year with the Church at New Market, commencing on Sixth-day, Nov. 23d, and closing on the following First-day. It was tolerably well attended, and was upon the whole an interesting meeting. Some account of the business transacted will probably be furnished us soon by the Secretary.

* * *

☞ We are requested to say, that the Minutes of the Western Association for the churches in Hayfield, Cussewago, and Persia, are waiting to be called for at Nile, N.Y. The Minutes of the Conference, and the Annual Reports of the Missionary and Tract Societies, for the churches in the vicinity of Nile, have been sent to that place, care of E. R. Clarke.

RELIGIOUS INTELLIGENCE.

A paper on the private libraries of Boston and its vicinity was read at the last meeting of the New England Historic-Genealogical Society, by the Reverend Luther Farnham. According to Mr. Farnham, there are, within ten miles of the State House, 300,000 volumes in private libraries, said libraries being of 1,000 volumes and upward. Ten of these libraries contain 92,000, giving an average of 9,200 each; and twelve contain 100,000, being an average of 8,334 each. The paper was full of interesting facts, and will be published, a vote of the society to that effect having passed.

The *Home Journal* mentions that, of the whole number of poets whose biographies are given in the new edition of "The Poets and Poetry of America," 41 were born in Massachusetts; New York contributes 32, Connecticut 16, Delaware, Georgia, and the District of Columbia, 2 each, and thirteen States are not represented. James K. Paulding, aged 75, is the oldest, and Bayard Taylor and R. H. Stoddart, each aged 30, are the youngest on the list.

At the late anniversary of the Theological Department of Madison University, at Hamilton, N. Y., one of the five speakers was H. L. Simpson, of Schenectady, N. Y. His theme was, "Africa—Its Destiny." We understand that this colored brother possesses talents of high order, and contemplates Africa as his future field of labor.

Rev. Dr. Allen, who has been many years a missionary in India, has prepared for the press a new history of that country, including, it is said, an interesting account ot the condition and prospects of Christianity among the Hindoos.

Rev. Mr. Grover, of the Methodist Episcopal Church, has resigned his position as a member of the Ohio Conference, and joined the Protestant Episcopal Church. It is understood that a change in his views of church government has led to this result.

How much unprofitable discussion would be prevented if persons were to heed the advice of Locke, who said—"One should not dispute with a man who, either through stupidity or shamelessness, denies plain and visible truths."

The Indiana University, which lost its whole library by fire some time ago, has recently received the liberal donation of books to the value of $1,500 from Mr. H. W. Derby, of Cincinnati.

THE 34TH CONGRESS opened at Washington on Second day, Dec. 3d. In the Senate, probably nothing will prevent an immediate organization; but in the House a long and severe struggle is expected. In view of the probability that several days may be occupied in organizing, the President has declined to send out copies of his Message in advance of its presentation to Congress. It is doubtful whether any previous Congress has had in it so many elements of political discord. No party will be allowed to have everything its own way, and good may come of the diversity in party predilections.

THE METHODIST BOOK CONCERN.—The *North-Western Christian Advocate* says of the Methodist Book Concern:

"It commenced in 1789, in Philadelphia, under the supervision of Rev. John Dickens, the first book steward, agent and editor of the Methodist Episcopal Church, with a borrowed capital of $600; and though losing in 1832, by fire, nearly $300,000, the institution now possesses a capital of over three quarters of a million, and the grand total of its sales for the past fiscal year reached the sum of $631,169. It has now been in existence sixty-six years. The tract and periodical departments are but branches of the great trunk concern. No church in America has ever published and sold half as many books, and no one has a publishing establishment half as old."

IRISH EPISCOPAL ESTABLISHMENT.—From an editorial in the British Banner, we learn that in 155 parishes in Ireland, in which tithes are paid to this establishment, there is not a single Protestant inhabitant. There are 10 livings, with an income of from $9,600 to $12,500 a year cash; 20 of from $7,260 to $9,600 each; 24 of from $5,800 to $7,260; 48 of from $4,800 to $5,800; and 74 of from $3,870 to $4,800. Ascending a step higher, we find that the deans and chapters have among them an income of $109,500 a year; and the bishops and archbishops, $731,400.

JOHN B. GOUGH.—This distinguished apostle of temperance has been making a very successful tour through New York State, lecturing upon his favorite subject of Temperance. We regret to learn that he was compelled to lie by for a time as an invalid, but rest and recuperation were absolutely necessary. No one who has not heard him, should miss an opportunity of doing so—if for no other reason, as a natural orator, and the most effective speaker of the English language now living.

PAY FOR SUNDAY LABOR.—A question of some interest, in a religious as well as a pecuniary point of view, is now before the Board of Supervisors of New York. The various Police Clerks of the city have set up a claim for $4 extra pay for each Sunday's service they have performed, making the entire amount claimed over $5,000. There is considerable objection made to the principle of paying salaried officers extra for Sunday labor.

SUNDAY IN ENGLAND.—An English paper says that there "seems to exist a settled purpose in certain quarters to break down the sanctity of the Lord's day. The fate of Lord Robert Grosvenor's Bill last season has encouraged the enemies of the Sabbath to renew their attacks; and even one of the most prominent supporters of that measure—Sir John Shelley, the member for Westminster—is now to be found at the head of an association for opening the British Museum, the National Gallery, and the Crystal Palace, on Sundays."

European News.

One week later news from Europe was received by the steamer Atlantic, which sailed from Liverpool Nov. 17th.

A brief telegraphic dispatch, published in the London journals, announces that the Turks have gained another decisive victory over the Russians in Asia Minor. It seems that on the 5th of November, Omar Pacha, at the head of 20,000 men, succeeded in fording the river Ingour, the passage of which was disputed for five hours by the Russians. The latter lost in the engagement, four hundred men killed and forty taken prisoners.

Latest advices from Trebizond state that the Russians contemplate raising the siege of Kars, and had actually commenced a retreat.

In the Crimea, both armies, Russian and Allied, are wholly occupied in hutting and preparing for Winter. A desultory fire is kept up between the north and south side of Sevastopol, while the fortifications on both sides are being augmented. The bulk of the fleets in the Black Sea are withdrawing towards Constantinople, and but a few ships remain in the liman of the Dnieper. The Emperor Alexander has returned from the Crimea to St. Petersburg. Peace rumors are again very prevalent, and great diplomatic activity prevails, especially at Vienna, Berlin, Stockholm and Brussels.

A private dispatch to Paris states that Russia has absolutely prohibited the export of Breadstuffs from any of her ports. Sweden is expected shortly to follow the example.

Exportations of Breadstuffs is prohibited from all Turkish ports. Importations are allowed duty free.

The health of the Pope is very indifferent, and his intellect much enfeebled.

Florence papers publish a table showing the frightful ravages of cholera during the past two months. In the Duchy of Parma there have been 13,372 cases, including 8,020 deaths; in Modena and Reggio, 11,396 cases, and 6,566 deaths; in the Grand Duchy of Tuscany 49,618 cases, and 25,941 deaths; total 40,527 dead. If to these be added the mortality in Lombardy, exceeding 50,000, and a similar number in the Roman States, and the total will show no fewer than 150,000 victims. Pestilence is more destructive than the sword.

The Paris Industrial Exhibition was closed on the 15th of November, by the Emperor Napoleon, who made a speech on the occasion, which was received with great enthusiasm.

News from the Pacific.

San Francisco dates to Nov. 5th, and nearly two million dollars in gold from California, has been received in New York since our last.

The financial condition of San Francisco was represented as being somewhat gloomy, and the authorities were liquidating some claims by giving two dollars of scrip with ten per cent. interest, for one dollar indebtedness.

Accounts of marvelous discoveries of gold in Table mountain had been received. Deposits, it was said, had been laid bare which exceeded in richness all the former discoveries in the State. The mountain is twenty miles long and three hundred yards wide.

The total valuation of real and personal property in the city of San Francisco is $32,076,672; in Sacramento city it is $7,617,785.

Mr. Julius Levy, of the firm of St. Losky, Levy & Co., had been convicted in the U. S. Circuit Court of smuggling sixty-seven cases Havana segars, valued at about $30,000.

Two men whose names are given as Blake and Butler were murdered at Vellecito, Calaveras county, on the 24th ult. They had been pursuing some horse thieves, and coming up with them a fight ensued, which resulted as above stated.

Two men were executed at Coloma on the 26th of October. One of them was Crane, the spiritualist, who was convicted of the murder of Miss Newham, and the other was a desperate character known by the name of Mickey Free, who was concerned in the murder of Mr. Howe. The executions were witnessed by about six thousand persons, male and female, including children of all ages.

Two whaleships had arrived at San Francisco from the Ochotsk Sea, and had discharged about 2,000 bbls. of oil and upwards of 30,000 lbs. of whalebone. This latter article would be shipped to the East, as well as some of the oil. Far-seeing men are looking forward to a day not very distant, when the entire whaling fleet of the Pacific will rendezvous at San Francisco. The arrangements are now in progress which will go far to produce this result.

The most important news by this arrival relates to the Indian War in Oregon and Washington Territories. The San Francisco *Herald* gives the following summary of the Indian troubles:—

From Puget Sound to Shasta Battle the savages, divided though they be into many distinct tribes, have made a simultaneous attack upon the whites, a large number of whom were massacred at the first outbreak, before the hostile designs of the Indians were known. In Rogue River Valley, the Shasta, Klamath and Applegate Indians have combined. They fell upon small parties of two or more traveling in the mountains, and upon isolated farm houses and settlements, and massacred all they could lay their hands on. Volunteers turned out in every direction—the United States troops from Fort Lane, under Major Fitzgerald, took the field and pursued the savages, chastising them severely in several skirmishes. They are said not to exceed two hundred fighting men, but are all a reckless set, who go to war as they would upon a wild frolic, regardless of the consequences. In their mountain fastnesses it would be difficult to find them, and still more difficult to exterminate them. Farther north, nearly all the tribes north of Columbia river and east of the Cascade range, have confederated, and sworn to root out "the Bostons," as they style the Americans. The first to commence hostilities, and the most active in securing the co-operation of the other tribes, were the Yakimas and Clickatats. With these there is every probability the Walla Wallas, Nez Perces, Umatillas, Cayuses and Palonses have united, and together they can bring five or six thousand warriors into the field. A band of fifteen hundred took the initiative by attacking Major Hallar, in command of a small force of United States troops, who had penetrated into their country. The Indians were well armed, bold and defiant, and are said to fight well. The troops were compelled to retreat with loss to the Dalles, where they were subsequently joined by eight or nine hundred volunteers, and one or two companies of regulars. With this force, operations would at once be commenced against the savages, who, with their superior numbers, would probably not decline a battle. Our Indian affairs are assuming a serious aspect.

CHRISTIAN TEACHERS DEVOURED BY CANNIBALS.—The New York *Observer* says that the missionary ship John Williams, named after the heroic martyr of Eromanga, has recently completed a voyage among the New Hebrides and other westerly groups. Among the news she brings are some items of encouragement, and others of great sorrow. The journal of the voyage says:—

"After a run of ten days from Samoa, we reached the island of Aneiteum. The missionaries, Messrs. Giddie and Inglis, had nearly completed a census of the population. It contains about 4,000 inhabitants; of these, 2,600 profess Christianity; the remaining 1,400 heathen are so scattered that they possess little influence. A considerable band of natives and four Samoans assist the missionaries. Thirty schools are now in operation, and about 1,500 persons under instruction.

"At Tana, where the work had been broken up by the ravages of small-pox, we again landed teachers, who were received by a loud shout of joy.

"We were delighted with the improved appearance of things at Eromange. The teachers had all been ill, nevertheless the work went forward. Since last voyage, the number attending religious services had been more than doubled.

"On reaching the island of Fate, the distressing news was brought on board that some of the teachers, with their wives, left there on the last voyage, had been barbarously murdered. Only nineteen days after they were landed, under the most cheering circumstances, the two Raratongan teachers and their wives were murdered, to furnish materials for a horrid cannibal banquet. The real reason of this sudden act of cruelty could not be learned."

RELICS OF THE PAST.—A correspondent of the Kentucky *Statesman* gives the following sketch of an old veteran, named Elijah Denny, living in Pulaski Co., Ky.:—

"He was 118 years of age on the 10th of September, and is as active as many men at forty. He works daily upon a farm, and throughout his whole life he has been an early riser. He informed the writer that he had never drank but one cup of coffee, and that was in the year 1848. He served seven years in the war of the Revolution, and was wounded at the seige of Charleston; he was also at the seige of Savannah, and at the battle of Eutaw Springs. He was also present at the battles of Camden, King's Mountain, and Monk's Corner. He served under Col. Horry and Col. Marion, and was an eye-witness of the sufferings and death of Col. Isaac Hayne of South Carolina, an early victim of the revolution. He is sprightly and active, and would be taken at any time to be a man of middle age. He is a strict member of the Baptist church, and rides six miles to every meeting of his church. He has four sons and five daughters, all living, the eldest being now in his seventy-eighth, and the youngest in his fifty-first year. Such is a brief sketch of this aged soldier and republican, who is perhaps the only surviving soldier of Francis Marion, Sumpter and Horry."

SLAVES IN JACKSONVILLE, ILLINOIS.—Mr. William Kirk, a citizen and slaveholder of Louisiana, not long since came up to Jacksonville, Illinois, bringing with him eighteen slaves, for the purpose, he says, of allowing them to visit their relatives there, and of receiving an education. They are to be free at his death. The citizens of Jacksonville, though of Anti-Slavery proclivities, don't like the idea of having negroes in their midst, it would seem, for they expressed considerable dissatisfaction at the conduct of Mr. Kirk, who, they thought, had brought his slaves to their town for the purpose of turning them loose on society, without any means of support, to shift for themselves, and eventually to become a burden and nuisance to the community. The owner of the slaves seems, however, to be actuated by better motives. He has provided his negroes with wagons, teams and outfits necessary to enable them to secure a competent livelihood, and pledges himself to remove them whenever they become troublesome. He has not set them free yet, nor do they desire their freedom; for if they did, they could easily obtain it.

PRAIRIE FIRES.—Every night for three weeks past, says the Bloomington (Iowa) *Pantograph*, except immediately after rain, the horizon in every direction has been all a glow from burning grass on the prairies. So brilliant have been these displays of fireworks as not unfrequently to reflect quite a strong light upon our streets, enabling the pedestrian to make his way safely and pleasantly without other light, even in a very cloudy night, a distance of twenty and thirty miles across the prairies, lighting up the heavens half way to the zenith, with the most gorgeous colors, and as changeable almost as those of the kaleidoscope. The smoky weather which we call Indian summer is doubtless the result of these fires, and if there is any truth in the Espy theory, the rains which have followed each spell of very smoky weather may also be attributable to the extensive prairie burning.

MEETING OF INDIANS.—The *Christian Messenger*, of Brantford, C. W., states that "a general meeting of the Indians of New York was lately held at the Cataraugus Reservation. The assembly was composed of persons belonging to various Christian denominations, who all joined harmoniously together in the different services. Rev. Peter Jones, and Elder W. N. Cusick, were the only preachers from Canada, and they took a large part in the meeting. The result was that 66 Indians were converted to God, and left to join the churches they preferred. Amongst the Six Nations Indians, there are 300 regular communicants. The Indian Baptist church in Tuscarora is prospering. They are intending soon to hold a general meeting along with brethren from the States, to seek God's saving and reviving grace."

SUMMARY.

Louis Baker was on trial in New York last week for the murder of Wm. Poole, in Stanwix Hall, last February. The testimony develops a savage recklessness in the use of firearms by all the parties concerned in that memorable encounter; even some of the witnesses for the prosecution, who were in the affray, are not free from having indulged in the pastime of snapping pistols at the opposing party. The uninitiated in barroom life and groggery luxuries will be statled to learn how the class of men engaged in that bloody encounter "live and breathe and have their being."

On the 20th of October the French ship-of-the-line Le Tege encountered off Cadiz a water-spout, which in a few moments swept away her three masts. Two men were killed and 17 slightly wounded by this catastrophe. The officer on guard had his arm severely bruised. The crew spent the night in clearing the deck and erecting temporary masts. On the 21st the ship was towed into the port of Cadiz by a vessel which she hailed.

Judge Grier, of the United States Supreme Court, has decided, on a suit instituted in Pennsylvania, that the legal weight of a ton of coal is 2,240 pounds, and that no State law can be enacted altering the quantity. According to this decision every coal-dealer who gives but 2,000 pounds to the ton can be arrested and convicted on a charge of swindling. The law of Pennsylvania makes the ton only 2,000 pounds.

Barnum proposes to build in this city an immense equestrian and dramatic establishment, similar to Astley's in London, and to connect with it a zoological garden. He has recently purchased a large piece of land in Broadway above Bleecker-st. for that purpose, and now, we learn, has all his plans matured and perfected to go on and erect the establishment in question.

Private William J. Dunn, of Company G, Mounted Riflemen of the United States Army, was recently tried by court-martial at Fort McIntosh, Texas, and sentenced to be hung for mutiny and the murder of the Sergeant John Williams, of the same regiment and company, by shooting him with a revolver, at Limpa Creek, El Paso Road, Texas, on or about the 30th of June last.

P. T. Barnum has sold the American Museum to John Greenwood, Jr., and Henry D. Butler, who will carry it on with all their vigor, but without Mr. Barnum's aid. Mr. Greenwood has been for many years the popular manager of the Museum, and Mr. Butler has for several years partially superintended the details of this establishment.

The Grocer's Bank of Boston is in trouble, An over-issue of bills to the amount of $106,000, has been discovered by the Bank Commissioners. There is some panic about the matter, but the general impression seems to be that the Bank will pay all its liabilities and wind up.

The Board of Councilmen in New York have adopted a report in favor of a "passenger and baggage line," to run omnibuses and wagons from all the city traveling depots, at a low and fixed rate of fare. This will cut off the hackmen, and doubtless prove very convenient to the public.

Daniel Bacon, a soldier of the late war, residing near Bridgeton, N. J., was recently killed by being thrown out of a wagon. In 1812 he served under Colonel (now General) Scott, and he was one of the first of the soldiers who received bounty lands under the late acts of Congress.

The fishermen of Marblehead are reaping but a poor harvest the present season. But one or two have returned with really good fares, the best varying from 1,500 to 7,000. A few returned in damaged condition, and all report weather hard and fish scarce.

Late English papers advice us of a misunderstanding between the Governments of Spain and Great Britain, growing out of the summary style in which Spanish officials in Cuba are in the habit of administering what they call "justice," to foreign residents who happen to incur the resentment.

A dispatch dated Rochester, Tuesday, Nov. 27, says: The tower of the new Suspension Bridge now in process of construction, about two miles below this city, over the Genesee River, fell this afternoon with a tremendous crash. The towers lie on the bank a total wreck. No persons were injured.

We have papers from Belize (Honduras) with a letter dated Nov. 2. A full report of the losses suffered by the inhabitants of Truxillo, in consequence of the late earthquake, is given. The people had to camp out, as many houses were thrown down.

Some of the papers, of late, say considerable about the designs of England on China, expressing the belief that India and China will be swallowed up by England or Russia, and that the present war in the East is intimately connected with the question.

A "grocery" was broken into, the other day, at Danville, Miss., by a party of ladies, and all the liquor in it "smashed up"—utterly spilt. This was in revenge for the damage done to their husbands by said grocery.

A dispatch dated Boston, Tuesday, Nov. 27, says: The locomotive "Clinton" exploded last evening on the Worcester and Nashua Railroad, killing Mr. Gillson, the engineer, and badly injuring the fireman.

Mr. Caldwell, a Conductor on the Chicago and Burlington Railroad, has been convicted of embezzlement, and sentenced to a year's imprisonment in the Penitentiary.

In the Tennessee House of Representatives, on the 19th, Mr. Travis, of Henry, introduced a bill for the purchase, by the State, of the Hermitage, the residence of the late President Jackson.

The Crystal Palace is likely to become a permanent fixture of New York. It is for sale at $125,000, and the American Institute is trying to raise the money to buy it, with a view of keeping it for exhibitions.

The Montreal *Pilot* of Nov. 19 says:—The sleigh-bells are jingling merrily through the streets, and we suppose that winter may be considered as fairly inaugurated in his ice-mantled dominions.

Board Meetings.

The next Quarterly Meetings of the Executive Boards of the Seventh-day Baptist Missionary, Tract, and Publishing Societies, will be held at No. 80 Seventh-st., New York, on the second Fourth-day in January, 1856, commencing at 10 o'clock, A. M.

GEO. B. UTTER, Sec.

New York Markets—Dec. 3, 1855.

Ashes—Pots $7 50; Pearls 8 25 a 8 50.

Flour and Meal—Flour 9 37 a 9 46 for State, 9 37 a 9 50 for mixed Western, 10 00 a 11 50 for extra Genesee. Rye Flour 6 25 a 7 62. Corn Meal 4 31 and 4 37 for Jersey.

Grain—Wheat 2 10 a 2 15 for Southern red, 2 20 for Southern white, 2 25 for Canadian white. Rye 1 30 a 1 33. Barley 1 27 a 1 32. Oats 55 a 60c. Corn 1 05 a 1 06 for western mixed.

Hay—75 a 80c for shipment, 87c a 1 00 for local use.

Tallow—12¾ a 13c.

MARRIED,

November 22d, by Eld. S. D. Davis, Mr. REUBEN HEAVENOR to Miss ABIGAIL H. DAVIS, both of Lewis Co., Va.

DIED,

In Alfred, Nov. 11, from the kick of a horse, HORACE G., son of David and Ann Place, in the 8th year of his age.

In Almond, Nov. 25th, AURELIA, wife of Orrin B. Crandall, in the 23d year of her age. The death of sister Crandall was very sudden, supposed to come from the enlargement or rupturing of a blood vessel in the lungs or in the region of the heart. As from the first development of the difficulty, it was only a few minutes before she ceased to breathe, and as those few minutes were minutes of great distress, she had only opportunity to say a few words, and they were in respect to her future state and her children, showing that next to care for herself was that of her offspring.
N. V. H.

Of heart disease, at Vernon, Mich., on the 12th of Nov., Mr. JONATHAN STILLMAN BENTLEY, age forty-five years.

In Plainfield N. J., on the 25th ult., of diabates, DAVID R. DRAKE, son of Nathaniel Drake, in the fourteenth year of his age.

LETTERS.

N V Hull, Henry Sheldon, Ephraim Maxson, C S Benson, Joseph Lawton. Jr, T F West, C W Langworthy, E R Clarke, A V Bentley, Charles Potter, J C Maxson, G W Knapp, S D Davis.

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

WILLIAM M. ROGERS, Treasurer.

"Always Ahead of all Competitors!"
OPENING OF A NEW CAMPAIGN!
WOODWORTH'S YOUTH'S CABINET,
EDITED BY FRANCIS C. WOODWORTH,
Assisted by the best Writers in America,

A magazine which has earned for itself the reputation of being the "best periodical for the young in the Union," and which has long had the habit of being "always ahead of all competitors," begins a new volume with the January number, *now ready for delivery*. This number contains

AN ACCURATE PORTRAIT OF THE EDITOR, elegantly engraved on steel, and is filled with the richest and rarest gems from the editor and his assistants, illustrated by upwards of twenty-five handsome engravings. The CABINET has been enlarged, so as to contain

THIRTY-SIX OCTAVO PAGES IN EACH NUMBER and is otherwise materially improved in its costume, as well as in its literary contents. It is the intention, both of the editor and the publisher, to make WOODWORTH'S YOUTH'S CABINET excel, as it has heretofore had the reputation of excelling, any publication for the young ever issued in this country or elsewhere, to say nothing of any still below the horizon, whose advent is announced with the sound of a trumpet. To maintain this superiority, we shall employ all the resources which an experience of ten years in catering for the amusement of the little folks, as well as our correspondence with nearly all the acceptable writers for the young in the Union, put at our command.

NOW IS THE TIME TO SUBSCRIBE!

Yearly subscription $1 in advance; 4 copies, $3 50; 5 copies, $4 00; 8 copies, $6 00.

For a club of five or more, an extra copy will be sent to the one who forms the club. Those who are unacquainted with WOODWORTH'S YOUTH'S CABINET, will please send for a specimen number. Single numbers, containing the portrait, 12½ cents. Proof impressions of the Portrait, extra size, 25 cents.

CLUBBING WITH OTHER MAGAZINES.

☞ *Look at these liberal offers!*—The publisher of WOODWORTH'S YOUTH'S CABINET will, until further notice, furnish any one of the following three-dollar magazines and the YOUTH'S CABINET, each one year, for *three dollars*:

Harper's Magazine, | Putnam's Magazine,
Knickerbocker Mag. | Godey's Lady's Book,
Graham's Magazine, | Household Words.

☞ By this mode, families can obtain the CABINET free of expense. D. A. W. will also furnish either of the following two-dollar magazines, and the CABINET, each one year, for *two dollars and twenty-five cents*:

Peterson's Magazine, | Arthur's Home Magazine,
National Magazine.

Please forward your orders, by mail, with the amount (in money or post-office stamps) to

D. A. WOODWORTH,
Publisher of WOODWORTH'S YOUTH'S CABINET,
118 Nassau-st., New York.

D. A. Woodworth,
Publisher of Woodworth's Youth's Cabinet, 118 Nassau Street, New York,

WILL SEND PRINCE'S PROTEAN FOUNTAIN PEN by mail, *without expense of postage*, on the receipt of the manufacturer's price—$4 50 for the large size, $3 50 for the smaller size. This pen is one of the most important mechanical wonders of the age. It enables one to write twenty or thirty pages from the reservoir of ink in the holder. For 10 subscribers to the "Cabinet," and $10, a pen of the large size will be sent as a premium.

Send for a Specimen Number

OF WOODWORTH'S YOUTH'S CABINET. The January number, beginning a new volume, is *now ready for delivery*. It contains an accurate PORTRAIT OF THE EDITOR, engraved on steel, and is filled with the choicest dainties. Yearly subscription, $1. Single specimen numbers, 12½ cents.

D. A. WOODWORTH, Publisher,
118 Nassau Street, New York.

Person's Wanting Employment,

CAN learn of an excellent field of labor, with liberal compensation, by addressing the subscriber, who will furnish them with a circular, giving full particulars of the agency. None except active, industrious, capable men, who are willing to canvass for subscribers, and who furnish the best of testimonials, need apply.

D. A. WOODWORTH,
Publisher of Woodworth's Youth's Cabinet,
118 Nassau Street, New York.

Carpet Warehouse.

YOUNG & JAYNE, No. 364 Broadway, corner of Franklin Street, (opposite Taylor's Saloon,) offer for sale a very choice and extensive assortment of

CARPETINGS, OIL-CLOTHS, CURTAIN MATERIALS, MATTRESSES, &c.,

at the lowest rates. Purchasers are respectfully solicited to examine the stock.

Misrepresentations, either expressed or implied, are strictly prohibited in this establishment.

YOUNG & JAYNE,
364 Broadway, corner of Franklin-st.

N. B.—Churches and clergymen furnished at wholesale prices. Sept 27—3 m.

Farm for Sale,

CONTAINING about 100 acres, with a fair proportion of woodland, a small orchard of grafted fruit, and a comfortable dwelling and outhouses. It is situated about four miles north of Westerly, R. I., and within a mile of each of the flourishing manufacturing villages of Potter Hill and Ashaway. There are several other manufacturing establishments near, affording a ready market, in the immediate vicinity, for every species of produce. It is convenient to the first Hopkinton Church, as well as to the very excellent male district school.

It will be sold with or without the stock and farming implements, and possession given the ensuing winter or spring, if desired. To those wishing to secure a quiet home in an enterprising neighborhood, and surrounded by such comforts as can only be found in an old settled and thickly populated country, this affords an opportunity seldom offered. For terms and other particulars apply to the subscriber on the premises, or address JOHN E. POTTER, No. 15 Sansom-st., Philadelphia, Pa. BENJAMIN POTTER, Ashaway, R. I.
11tf.

Good Crops, Good Prices, Good Books, and Good Times.

BELCHER'S HISTORY OF ALL THE RELIGIOUS DENOMINATIONS IN THE UNITED STATES. Large Octavo 1,024 pp. and nearly 200 engravings.

FLEETWOOD'S LIFE OF CHRIST AND HIS APOSTLES. 704 pp. and 25 engravings.

Probably there has never been a more favorable opening for the sale of books than the present. Large crops have been produced throughout the country, and these are bringing good prices; every body is in high spirits.

The above volumes are printed on fair paper, in clear, large type, are handsomely illustrated, and bound in a neat and attractive style. More than all, their contents bear the ring of the true metal, enabling the agent to sell them to the highest in the land as well as the humblest, with the gratifying feeling on his part that he is conferring a favor rather than receiving one. They have gained and are gaining a world-wide fame; and being sold exclusively by subscription, the agent has the entire benefit of their popularity.

Canvassers, and those wishing to become such, will find it for their interest to secure an agency. We can offer them with other popular works on the most favorable terms. For further particulars apply to or address either of the

Publishers, { JOHN E. POTTER, Philadel., Pa.

Magnificent Floral Gift.

SUBSCRIBERS to the "CHRISTIAN DIADEM" for 1855, are entitled to a splendid steel engraving, the ☞ LILLY AND THE ROSE PERSONIFIED, being given *gratis* to all old and new subscribers who send us only ONE DOLLAR, by mail or otherwise.

Six Copies for Five Dollars.

The Diadem is a strictly moral and religious work—designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address Z. P. HATCH, Publisher, 9 Spruce street, New York. May 24—3m.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 per Annum, in Advance.

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 a Year, 25 Cents a Number.

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, GEORGE B. UTTER, No. 9 Spruce-st., New York.

Postage.

The postage on the Sabbath Recorder is 13 cents a year in the State of New York, and 26 cents in any other part of the United States, payable quarterly or yearly in advance.

The postage on the Sabbath-School Visitor is 3 cents a year in the State of New York, and 6 cents in any other part of the United States, payable in advance.

The postage on the Seventh-day Baptist Memorial is 2 cents a year in any part of the United States when paid in advance, or 4 cents a year when not paid in advance.

Miscellaneous.

Scene in real Life.

We do not often indulge in the sentimental, but occasionally in our walks our attention is called to the events happening before us, which leave an impression upon our minds, and lead us to thoughts and reflections which it is well we, as all other men, should indulge in at times.

We had been on the north side to see an acquaintance at his hotel, and returning by Clark Street, found, as is generally the case when a man is in a hurry, one of those little busy inventions, a steam tug, had passed up the river with a small fleet of vessels in tow, one of which had been cast off, and had hauled in just west of the bridge. Seeing no hopes of getting to our office for some time, and knowing that our compositors could not be in any worse temper an hour later than then, we resolved to bear it meekly, and find mental occupation by observing what was going on about us. We little expected what did occur.

The vessel we have mentioned had been moored, or made fast outside of several canal boats, and as we stood looking at the men upon her, one of them approached a female, who had been crouched upon deck, and addressing her, pointed to the shore, then to the bridge, and then down towards the thronged and busy streets of living, moving, headlong Chicago. She rose, picked up a small bundle, from which she drew forth a coin, which she tendered to the hardy sailor. He refused it, whatever it was, and lending her a hand, helped her from the vessel to the dock, and from the dock up to the bridge. By this time a large crowd of persons thronged the north end of where the bridge would be, if it was always a bridge, and in contemplating the new faces, and the representatives of the various classes there assembled, we had almost forgotten the incident we have related. Our attention was called from a vain endeavor to discover some hope of a cessation of tugs going up and down, and schooners and brigs pulling in and out, by hearing a most audible sob from some one near us. It was not the sob of childhood, caused by some sudden change from gaiety to grief; it was the sob of some maturer breast, filled with a sense of loneliness and despair. It reached other ears than ours. A lady, dressed in a manner which bespoke a wealth that could gratify taste and elegance, and who like ourselves, was detained at that place, stood near, accompanied by three children, whose desire to get at the extreme edge of the platform, she with difficulty repressed.

With a woman's tenderness her heart recognized the stifled ebulition of sorrow, and approaching the person from whom it came, who was none other than the woman we have just seen land from the vessel, she quietly, and in that soft sweet voice of woman which none can resist, inquired if she stood in need, or was she ill, or was her sorrow such that it could be relieved? A portion of the railing near us was vacant, and toward that, and almost at our side, these two women came to converse. The stranger was a fair, handsome girl, about seventeen years, neatly but coarsely dressed, with shoes not only worn, but heavy and unsuited as much for her sex as for the season. The poor girl in honest simplicity, and with an earnestness which despair alone could impart, related her history, uninterrupted by a single observation from her companion, but often accompanied by the tears of both. We have not space for it at length, and we will give it, changing its order just enough to enable us to state it briefly.

She said she was born in Boston, she had no brother or sister now; she remembered that she had a sister, the eldest, whose name was Lizzie; that sister, years ago, against her father's will, had married, and with her husband, having been banished the father's sight, had gone off, and had not been heard of since—no doubt was dead. At the time of her sister's marriage, her parents were wealthy; the pride which drove away Lizzie had brought silent regrets, and after awhile came melancholy complainings by the mother sighing for the embrace of her first born. These soon led to anger and criminations at home, and dissipation by the father abroad. Losses came upon them, and at last, gathering the few worldly goods they possessed, they left the proud city of their birth, and settled five years ago, upon land purchased of the Government in Wisconsin. Her brothers, some older and some younger than herself, one by one drooped and died; and soon the mother, calling in agony upon her long exiled daughter, joined her boys in a happier clime.

None were now left but the father and this poor girl. He too was humbled and stricken by that slow and certain disease which lights up the cheek, and fires the eyes with the brilliancy of health, even when its victim is on the confines of eternity; he would sit and tell to his surviving child the acts of winning love and sacrificing devotion, which had made his Lizzie the very object of life. He would talk of her sweet smiles and her happy disposition, until memory would lead him to the hour when he had bid her depart, and not let him see her face again. His decline was rapid, and this one child saw the first flowers which the warmth of spring had called from the soil of her mother's grave, disturbed, uprooted, and thrown aside, that his ashes might mingle with those of the mother of his children.

At his death, he charged her to pay off, as far as she might be able, the debts incurred to procure the necessaries of life; the land, which for want of culture, had not increased in value, was sold, and left her but a few dollars. These she expended in rearing a few boards to mark the spot where she had seen buried, one after another, her beloved kindred. She had heard of Chicago. She had heard that in this city there were offices where strangers wishing employment, could find work. She had on foot traveled many miles, until she reached Milwaukee, and thence by the kindness of a poor sailor, who had seen her day by day on the dock, watching the steamers depart, and inquired and ascertained that she wished to come thither, but had not the money. He brought her to Chicago on his own vessel, and had told her that by crossing the bridge she could find one of those places where situations were given to worthy applicants.

Such was her story. She had mentioned no name except that of father, mother, and the endearing appellations of brother George, Willie, &c. Both of the women were crying bitterly.

The fashionably dressed lady turned her face toward the river, that her tears, at such a crowded and unusual place, might not be observed. She requested us to take her two boys, George and Willie, she called them, by the hand, to keep them from danger, and then putting her arm around the neck of the poor, friendless, wandering orphan stranger, said, "You are my own sister. I am Lizzie!"

These two beings, children of the same parents, how different have been their paths, and how deep their sufferings! We have seen them together in "Lizzie's" carriage, driving along Lake Street. They are doubtless as happy as their bereavements, relieved only by the conciousness of duty faithfully performed, can permit. But while the suffering of that father and mother may be faintly known from the story of the daughter, what must have been the mental agony of that other daughter, unkindly banished from her mother's side, and driven out into the world without a father's blessing? What must have been her grief, when her letters written from a prosperous city, from the house of her wealthy and kind husband, telling them of her success, and the birth of her children, were unnoticed and unanswered? She must have felt indeed, that the hearts of that father and mother, her sisters and brothers must have been hardened against her. We will say no more. That scene will live in our memory while we can remember the holy love of father, mother, and kindred. [Chi. Times.

Tree Planting.

We notice among the munificent bequests of Elliott Cressen, a legacy of $5,000 to be employed in planting trees in Philadelphia. There is something touching in this gift. It is fragrant of good taste and friendly feeling. It seems to express gratitude for the comforting shade of some old tree under which the weary philanthropist had meditated his schemes of usefulness; and of considerate interest for the health and pleasure of future generations, who are to people the city of his birth. And when monuments of marble and of bronze shall crumble, the broad arms of the elm and the oak shall stand out against the sky as the benefitting memento of the liberality and the last of the tree-loving Philadelphian.

Every one should plant trees. No object is more beautiful than a spreading elm, or a lively evergreen; none more productive than the apple or the luscious pear. Half the labor bestowed on a single crop of potatoes, would originate an orchard, the product of which in a few years would be equal in value annually, to the potato crop, yet with but little labor beyond the harvesting. A fortnight's toil in the spring or autumn, in transplanting choice fruit trees to the road side, or tastefully grouping them on the lawn, will ultimately add more to the value of the place than twice the time employed in building or fencing. For their own comfort, for the sake of their descendants, for the taste and improvement of the country, plant trees—let every body plant trees.

That bald, naked church, tasteless, treeless! Who will have compassion on the worshipers, and surround it with trees? That district school-house, bare and unsightly; who will interest the boys in planting and protecting shrubs and trees that will make it an attractive and beautiful spot? Those verdureless villages, with their houses thrust upon the street—who will distribute honey-suckles, and Virginia creepers and prairie roses, that they may be turned into civilized habitations?

There is a softening, humanizing influence in horticulture and tree-planting, that we could wish were more general. There is too much danger of the gross and sensual and selfish in our national character; and while our reliance must be on religious and educational influence to correct this tendency, we believe that good and only good would come of the love for trees and flowers, and the cultivation of both. It may be blessed in leading the heart up to the love of the Rose of Sharon and the garden of God. [Am. Messenger.

Railroad Economy.

The United States will soon be overspread with one vast net-work of railroads. Already the maps of some of the States are threaded with these iron highways as closely as is the map of England, which presents the appearance of a grand window of lattice-work with rosettes of towns and villages in every angle. The States of Ohio and Illinois, for example, will soon be traversed in all directions by continuous lines of railroads, measuring thousands of miles within the boundaries of each. Everybody travels by railroad. The great lines of Western communication convey weekly many thousand travelers and emigrants. At the East the intercourse of neighboring villages, and the exchanges of commerce, are kept up almost entirely by railroad.

Everybody, therefore, has a personal interest in the safe and efficient management of railroad travel, and any suggestions that may contribute to this end will prove an important benefit to the public. It has been our fortune to travel over nearly every important line of railroad in this country and in Europe, and to journey perhaps a hundred thousand miles by this conveyance without at any time suffering a serious accident or detention. Yet it has not escaped our notice that the liabilities to accident upon American railroads are much greater than upon those in Europe, and that there is room for much improvement in the general management of this complicated and seemingly hazardous system of conveyance.

At the outset of these remarks, however, we would impress it upon the mind of the reader, that traveling by railroad is not ordinarily dangerous. The frightful accidents which sometimes occur, and which are spread before the public with all their details of horror, have caused an impression that railroad traveling is necessarily dangerous; and in consequence of this, many nervous persons are in a fever of anxiety and consternation from the moment of starting in a train till they reach their destination. This nervous apprehension, though quite natural in view of the appalling calamities that have occurred in railway traveling, is not warranted by the statistics of accidents when daily averaged upon the whole number of passengers for a given distance or in a given time. Railroad traveling is ordinarily safe; accidents to passengers are the exception; the causes of danger are in a good degree manageble, so that accidents may be almost entirely avoided by due vigilance on the part of the conductors, engineers and passengers.

A careful analysis of railroad accidents in Great Britain shows that the chances of an accident fatal to life to a passenger travelling ten miles by railroad, are only one in six and a half millions, and in traveling a hundred miles one in six hundred thousand. This certainly is a very low ratio of danger. The reader will find in Dr. Lardner's Railway Economy, at pp. 267 and 274, a tabular view of the risks of accident to railway passengers, compiled with much care, which will tend to quiet the nerves of travelers on the score of personal danger. It is most comforting to notice how small a proportion of fatal accidents happen to passengers, from causes beyond their own control, and how large a proportion are the result of inexcusable carelessness or recklessness in the parties themselves. For example, the whole number of persons killed upon the railways of Great Britain, in a period of two years, was 413; the total travel of passengers for the same period being 1,830,184,617 miles. Of the 413 persons killed only 28 were passengers, killed from causes beyond their own control; while 23 passengers, and 232 employees of the companies—in all 255 of the 413—were killed through causes which they might have prevented; and 96 of the remainder were killed by carelessly crossing or standing upon the railroads. Thus 351 of the 413 were killed solely through their own fault.

The report of the number of accidents on the railroads in the State of New York during the year 1854, strikingly confirms the statistical analysis made by Dr. Lardner from the returns of casualties upon the railways of Great Britain. We give this table entire:—

	Passengers.	*Employees.*	*Others.*	*Total.*
Killed	12	67	80	159
Injured	18	43	47	110

Cause.	*Killed.*	*Injured.*
Jumping from a train while in motion	12	16
Fell or were thrown from the cars,	6	7
Collision of trains,	8	7
Trains thrown from the track,	11	12
Run over while standing on track,	81	37
Run over at road crossings,	6	5
At work on or standing by trains,	5	6
Standing on platform,	3	
Other accidents,	27	26
ON THE FOLLOWING ROADS.		
Albany and West Stockbridge,	1	6
Buffalo, Corning and New York,	2	
Buffalo and New York City,	3	2
Buffalo and State Line,	2	
Canandaigua and Elmira,	2	2
Hudson River,	28	6
Long Island,	6	3
New York Central,	44	23
New York and Erie,	40	34
New York and Harlem,	7	10
New York and New Haven,	10	16
Northern,	6	1
Oswego and Syracuse,	1	1
Rensselaer and Saratoga,		1
Saratoga and Washington,	2	
Troy and Greenbush,	2	
Watertown and Rome,	4	3
Total,	159	110

Here of 159 persons killed on the railroads of this State last year, only 12 were passengers; and it is further stated in the report, that "not one passenger has lost his life during the last year from causes beyond his own control, although ten millions of passengers have been carried in the cars an aggregate distance of five hundred millions of miles. There were but two deaths from such causes during the preceeding year." These statistics show that railroad traveling is not extra hazardous; that it is ordinarily safe; and that the causes of danger are so far under the control of passengers and conductors that the number of accidents might be very greatly reduced. Only 10 persons were killed last year in the State of New York with its 2000 miles of railroad, by accidents to the trains, and of these not one was a passenger. The twelve passengers killed during the year met their death either by jumping from a train while in motion, or by standing on the platform of the car, or by some other act of personal carelessness. Eighty-one persons, more than one-half of the whole number killed on the railroads of the State, were run over while standing on the track. In the last two years, one hundred and twelve persons have been killed in this way upon the railroads of this State alone.

From these statistics it is obvious that with respect to the most frequent causes of accidents, railroads are perfectly manageable, and that the greatest danger in connection with these roads arises from the voluntary imprudence of individuals, and not from any imperfection in the management. [Independent.

Salt for Animals.

Prof. Simonds, Veterinary Inspector to the Royal Agricultural Society, observes, in relation to the action of salt on the animal economy, that "it is exceedingly beneficial in moderate quantities, but prejudicial in large ones." He thought horses might take with advantage from an ounce and a half to two ounces of salt daily; but that an excess of it would render animals weak, deliberated and unfit for exertion. Similar facts were applicable also to oxen, which accumulate flesh faster by the judicious use of salt, than without it. He cited Arthur Young, and Sir John Sinclair, to show that salt had a tendency to prevent the rot in sheep. Prof. S. added as his own opinion, that salt, by its action on the liver, and the supply of soda it yielded to the bile, led to a greater amount of nutriment being derived from the food. The substance, he said, was also well known as a vermifuge, destroying many kinds of worms in the intestines of animals, and conferring a healthy tone of action which prevented their re-occurrence. Several members of the R. A. Society, as Col. Challoner, and Mr. Fisher Hobbs, stated that their experience led them to agree with Prof. Simonds in regard to the value of salt for animals. In reference to the mode of giving it, the practice of placing large lumps of rock salt in fields or yards, where it was accessible to the stock, was mentioned with approbation. This practice is now adopted by many farmers in this country, and after several years' trial, is preferred to the former mode of giving salt periodically. When animals are only allowed to have salt once or twice a week, it is sometimes the case that they eat too much at once, but by having it constantly in their reach, they eat such quantities as their systems require, and it assists the digestion, and promotes health and thrift.

Rain from the Roofs.

In our climate, when rain water is most needed, for washing, for cattle, and for watering plants, it is not to be hed. There is sufficient quantity falls, however, unless in seasons of extreme drought, to give every farmer a full supply, if he had the proper reservoirs for holding it. These may be made much more readily and cheaply, than most people believe they can be. On any soil but a very sandy one, the earth may be removed, and the sides and bottom cemented without brick or stone, and the top covered with chestnut plank, and any amount of rain water preserved. If slanted outward half an inch to one inch to each foot in height, and well cemented, a cistern will last for many years. Such cisterns would be a matter of economy to many of our farmers.

We find a paragraph in the papers which has suggested these remarks, stating that "every inch of rain that falls on a roof yields two barrels to every space ten feet square; and seventy-two barrels are yielded by the annual rain in this climate on a similar surface. A barn thirty by forty feet yields annually eight hundred and sixty-four barrels; this is enough for more than two barrels a day for every day in the year. Many of our landlords have, however, at least five times that amount of roofing on their dwellings and other buildings, yielding annualy more than four thousand barrels of rain water; or about twelve barrels, or about one hundred and fifty ordinary pailsfull daily. [N. E. Farmer.

Machine for Folding Papers.

We have in our lower press-room a machine for folding papers, which is not the least curious piece of mechanism in a printing establishment. We will try to give some faint idea of its construction. This machine is driven by a pulley and belt, and the gearing and motion are principally rotary. Fed the same as a cylinder press, the sheet is carried from the board by passing between two cylinders, the lower one stationary, the upper drawn close to the stationary one, by a rod worked by a cam, and remaining in such contact long enough to carry the sheet down a proper distance for its center fold between the two pages, when a knife striking rapidly, horizontally, throws the sheet at its center between the second pair of cylinders, and the sheet thus folded once is drawn in running along on tapes, which tapes are moved by the lower one of said second pair of cylinders.

This movement carries the sheet once folded on tapes horizontally until it strikes two set guides, where it stops and another knife strikes the sheet in the middle of the page crosswise, forcing it between a third pair of cylinders running at right angles with the second pair. The third pair of cylinders then giving the sheet its second fold, carry it upward some six or eight inches, when a third knife strikes it and forces it between a fourth pair of cylinders. Passing this fourth pair, it is folded to one-eighth of its original size, when carried again along on tapes at right angles with its first movement over the fifth pair of cylinders, giving it its last fold, when landed on tapes it is carried out of the machine.

The cylinders are all inside of an iron frame compact, occupying not over three feet square. A main shaft, connected by cog-wheels to other shafts, at right angles with tapes passing from one cylinder to another, gives them all the same speed. The motion of the knives is governed by cams, and when the sheet is in its proper place to be folded, they move suddenly to their work, and return again as soon as it is done.

The machine will fold at the rate of twenty-five hundred per hour, and if well fed will do its work more perfectly than it can be done with human hands. Folding boys average about two hundred an hour; thus, allowing one boy as feeder, this machine saves the labor of at least eleven boys, and does not make the noise of one of them. For a daily issue, where time is worth more than money, this machine is a very important appendage.

It is a Buckeye invention, hailing, we believe, from Columbus. [Cleveland Herald.

An Honest Man.

Years ago, when the now proud city of Boston was but a brisk sea-port town, with its houses struggling to cover the hill-side and barren pasture, and not very successful in the attempt, there lived a man somewhat celebrated in his way, rejoicing in the name of Seth Thornton. His way of celebrity was and still is a peculiar one, honesty. Folks used to say that Seth was so intensely honest, that he was accustomed to set aside a percentage of his profits in trade, for the benefit of the poor, as an offset to any moneys he might by any possibility have become unlawfully possessed of, without his becoming aware of it.

Whether this was so or not, he was celebrated for his sterling, undeviating honesty, and without the reward that would have seemed to have been his due. Seth was poor, although he was indebted for his comfort rather to his economy in life than to his success. He was thirty years of age when then the story commences, and was regular, methodical to a nicety in his transactions, and from that had obtained the soubriquet of Old Seth.

So much for premises, now for our story.

A dull, gloomy day it was without, cold within, and cheerless everywhere. The trade was dull as the weather, and Seth was grubbing up old accounts with severe determination, when he was disturbed by the creaking of the low door of his shop, and the entrance of an old, bowed-down figure, who barely placed one foot before the other, shuffled across the floor through piles of West India, and dry goods, hardware, groceries, and notions, (for Yankee-land was even then full of them,) and depositing a well-filled bag upon the counter, with the ejaculation, "use for Ben Foula & Sons," suddenly shuffled away. Not comprehending the nature of so unbusiness-like a transaction, Seth was sometime in a muse, before the idea of examining the bag left, occurred to his bewildered brain.

The first touch told him it was gold, and upon examination, it contained the enormous sum of five hundred guineas in gold of Spain. Having satisfied himself as to the amount, he turned to his day-book, and made entry,—"Received this day 500g, to be used for Ben Foula & Sons," and opened account accordingly.

Years passed on, and year to year the property invested in the name of Ben Foula & Sons seemed cherished by fortune's self. Their ventures were successful by sea and land, when all others were ruinous; their ships rode safely through the storms that sunk the stoutest merchantmen, and their cargoes arrived in safety, when privateers had taken or driven away others. So immense was this increase, that soon Old Seth was known only as an agent for the Foulas', and his own property increase was of little account, compared with the immense commission on their investment. His warehouse became one of the largest in the colony, and his ships passed in and out from every port of usual trade on the line, laden with the property of the unknown. Still was the same account on his ledger preserved, and receipt and expenditures always kept, waiting the coming of his principal or his sons, and their examination.

So time went on, prosperity to the mysterious person and misfortune to the agent. A new market was then sought for on the coast of the Mediterranean, and a vessel was despatched for Algiers with rich consignments. The captain, upon his arrival, waited upon the principal merchants of the place, and all of Foula's manifest was in demand, while Old Seth produced but a nominal profit.

A sale was finally effected of the whole cargo, and the merchant and the captain discussed the subject of the new trade together. The merchant expressed the desire to see the new country, and by invitation of the other took passage in his ship for America.

The day succeeding his arrival, Seth was seated in his counting-room, engaged in his usual examination of ledgers and papers, when a movement attracted his attention, when he saw before him the same bowed-down figure, and the same shuffling step approaching.

"Where is the money for Ben Foula?" Without hesitation, and almost without surprise, the account of the investment was read over, and deeds of estate and evidences of property in the name of Benjamin Foula were produced. Houses, ships, and cargoes were palced over to the rightful owner, and a rigid account of expenses and commission was rendered, and with no comment or inquirg, the poor man was left alone.

The day passed on, and Old Seth again was toiling in business, when a captain arrived from the Mediterranean, entered and placed in his hands a package. It was a will, bestowing upon him all the property of the mysterious old man, accumulased by himself as agent.

The true story of the mysterious visitor was never told, but long afterwards it was recalled to mind that a Mohammedan merchant, named Hamet Ben Foula, had been in America when the first incident occurred, and the passenger who came and returned in the Yankee ships was called by the same name. This merchant continued his business with Old Seth long afterward, and the latter never surmised that the tall Arab was the old, decrepit man who was his benefactor, nor that he held his property by will of one who still lived.

The Last of a Noble Family.

A correspondent of the *Home Journal* furnishes the following sketch of the last representative of the famous Randolph family in Virginia:—

"During the summer of 1854, I had some business transactions which called me to the county of Charlotte, in Lower Virginia. A mild and lovely Sunday morning found me seated in one of the comfortably cushioned pews of the village church, at the Court House. As it wanted a few minutes to the hour of service, my eye wandered over the large and respectful-looking audience assembled, and was finally attracted by a very eccentric individual, who has just entering—a rather aged man, tall, of dark complexion, long white hair waving plentifully over his shoulders, and an equally venerable beard flowing on his breast. His step was active and graceful, his form erect and manly. But his peculiar actions were in striking contrast to his dignified appearance. At first, I thought him only eccentric, but a few moments of farther observation proved to me that he was insane. Immediately on entering his pew he knelt towards the wall, crossed himself, and apparently repeated a prayer. He then sat down, drew out a white cambric, delicately perfumed, wiped his brow, removed his gloves, stroked his hair and beard, took up his Bible, kissed and read it, examined his cane, used his handkerchief again—and all the time keeping himself in constant motion. I say all the time, but occasionally he was passive for a few minutes—his attention, apparently, aroused by some truths from the minister; but these times were rare. His countenance assumed all kinds of expressions. Contempt, alarm, pleasure, earnestness, sorrow, and anger, flitted across it in rapid succession. It reminded me more of what children call 'making faces,' than anything else.

"After the services were over, I ascertained that this gentleman was no other than the nephew of John Randolph, of Roanoke. He calls himself, Sir John St. George Randolph, and is sole heir to his celebrated uncle. Randolph himself remarked with bitterness, during his last days, that their blood flowed in the veins of but one single scion, and he was *deaf, dumb,* and *insane.* So much for human greatness. The subject of this sketch—although physically, and now, mentally, defective—had a mind cultivated in the highest degree. In his youth he was sent to Paris, where, under the protection of a celebrated abbe, he received a thorough education. Having the capacity to receive, and the wealth to command, no pains were spared in the improvement of his intellectual faculties. But it was labor lost; for, on returning to his home in Virginia, he met with, and loved a young lady, whom he addressed, but was was refused, on account of his physical defects. On becoming aware of the truth, he was plunged into profound grief, from which he was at last aroused, but—insane.

"He has considerable wealth, which is managed by his friends; and, being harmless, he comes and goes as he pleases, and is gratified in all his whims. Wrecked as his mind is, he still commands respect; and his peculiar manners do not attract the attention of his acquaintances, or excite merriment, as one would suppose."

Arctic Explorations.—Interesting particulars are made public of the late course of the United States sloop-of-war Vincennes, under Commodore Rodgers, in the Arctic Ocean. The Vincennes entered Bherings Straits in August last, and anchored in Senivane Bay on the Eastern Coast of Asia where an intercourse was established with a peculiar Indian race, known as the Techucchis. Some valuable information respecting the manners and customs of these people has, in consequence, been given to the world for the first time. A party having been left at Senivane, the Vincennes then proceeded northward on her course, and reached the high latitude of 72° 5′ 29″ in longitude 174° 37′ 15″—making some important geographical discoveries. In 1851, Capt. Kellett (of the English Expedition in search of Franklin) reported land about sixty miles to the Northward of Herald Island, but Commodore Rodgers sailed over this supposed land, and arrived at the conclusion that Capt. Kellett must have fallen into the error, common in those latitudes, of being deceived by low cloud banks. The Vincennes was ultimately stopped by barriers of ice. On returning to Senivance Harbor, the party left there were found in good health and prepared to give accounts of the singular people among whom their lot had been for a short time cast.

New York and Erie Railroad.

ON and after Wednesday, Sept. 19, and until further notice, Passenger Trains will leave the pier foot of Duane st., New York, as follows:

Dunkirk Express at 6.30 A. M. for Dunkirk.

Buffalo Express at 6.30 A. M. for Buffalo.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations. Passengers by this Train will remain over night at Owego, and proceed the next morning.

Rockland Passenger at 3 P. M. (from foot of Chambers-st.) via Piermont, for Sufferns and intermediate stations.

Way Passenger at 4 P. M. for Newburgh and Otisville and intermediate stations.

Night Express at 5½ P. M. for Dunkirk and Buffal.

Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5½ P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c., and with first-class splendid steamers for all ports on Lake Erie.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and *irritating* to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

CHRIST IN THE TEMPEST.

As the shadows of night were stretching across the darkening plains of Palestine, a small band of earnest men might have been seen embarking upon the sea of Galilee. The breezes of heaven fill the swelling sails, the lessening shore recedes, and they are out upon the waters. All is tranquil. No sound disturbs the stillness of the night, save the indistinct splash of the waves against the side of the vessel, as it glides smoothly over the broad expanse. The moon pours her radiance upon the sparkling waters. The stars look down from heaven, and impart their own soft light to enhance the beauty of the scene. Now the ship has reached the channel where Jordan's waves, rolling downward from the south, rush along in a swift, impetuous current. How suddenly the scene is changed! That breathless, awful calm was the precursor of the bursting tempest. Darkness rushes down and settles over the heaving waters. The winds of heaven, concentrated in one blast, come sweeping down the mountains on the south, meet Jordan's current, and the waves roll mountain high. The lightning's vivid glare, revealing Mount Tabor's awful front—the darkness palpable succeeding, and the deafening crash of thunder, make the moment one of unequaled terror. Man's cry of agony is heard. The waves are rolling over the vessel. Must the terror-stricken ones perish? God of heaven, save them! See, revealed by the lightning's glare, they are crowding now around the prostrate form of One whom the fury of the storm has failed to awaken from His sleep of innocence! They awake Him. He sees the lightnings playing round; He hears the thunders crashing over Him; He feels the tempest beating against Him. He arises. Calmly, and with the majesty of a God, He speaks: "Peace—be still!" Instantly the torrents cease; the thunders die away. Horror-struck, the storm demon has left the lake, and with him the winds go moaning up the mountain sides. Again the stars beam on the tranquil wave, and soon in safety is the vessel moored in the quiet haven. That band of men is saved. Those who would soon have filled a watery grave, with the waves of the sea for their winding sheet, and the wild winds their only requiem, are snatched from a yawning tomb, to pursue their labor of love, animated by the spirit of the angel-song, "Good will to man."

Voyager upon life's tempestuous sea, when adverse winds assail you, and the star of hope is growing dim; when all is dark and cold, and waves of sorrow rush over your tempest-driven bark, and you are sinking, oh, then turn with humble trust to Him who can bid the raging tumult cease. Are you a mourner? Is some great sorrow pressing upon your heart, and withering the joy of life, even as the tender flower is blighted by the untimely frost? Then look to Him who can smooth the rugged path of life, disperse the clouds that obstruct your vision into the "blue profound," and show you that the path of sorrow in which you travel ends in heaven. Thou whose fiat lulled the storm to rest, O speak to the storm of passion raging within the soul, ease the wildly throbbing heart, and to its tumult of dwelt and fears say, "Peace—be still." T——.

UNION COLLEGE, Nov., 1855.

CHRISTIANITY.

What are the characteristics and tendencies of that system which we denominate Christianity? A proper answer to this great question must of necessity embrace a train of thought of vital interest to every class in society. We believe most sincerely, that much darkness prevails upon this subject throughout all Christendom. Therefore anything like a full and impartial investigation of it would lead into a very broad field of thought and research, quite too great for us within our present limits. But we will hazard the thought, that the religion of the age in which we live will not compare very favorably with the Christianity instituted by the blessed Saviour of the world. The organization he set up was one mighty and powerful for good, in every possible direction. It exerted a tremendous influence upon the great focal center of the public sentiment of those times of universal corruption and spiritual wickedness in high places. Whoever consented to embrace that holy religion, at once became the object of the severest persecutions, and under such a condition of things, the Christian organization flourished beyond all precedent. The query is, how are we to account for the change that has come over the public sentiment of the church during the last fifty years only, not saying anything about the earlier history of the order of things. The time was when the Christian believer was a highly distinguished and peculiar character in society. But we ask, in the name of our holy standards, is it so in the present age? Has the intrinsic character of our holy religion changed to something radically different from its ancient tone and temper? Has it ceased to be that world-hating, self-denying, and interest-sacrificing religion which the Saviour and his holy apostles declared it to be? How shall we explain this great moral phenomenon upon any other possible ground than this, that religion has seemed to exist as an ideal thing only, with the masses—a strange emanation, floating along the turbid waters of a disturbed conscience, ever liable to be caught up and immortalized as the chief good to fallible man? We often wonder why it is that Christianity has ceased to be felt in any very great degree upon the heart of society. Ought we to think it very strange, when we look dispassionately at the facts in the case, standing out as they do in bold relief upon all sides? Agreeably to this view of the subject, was it singular that enlightened France should have arisen in her might, and thrown off her allegiance to Christianity? Could it have been for the reason that the religion of the Bible was, from the nature and constitution of her government, a great political and social evil to that nation? Certainly not. It was attributable solely to a most profligate state of public opinion, created and shed forth in such a way and manner as to effect the State altogether for the worse, and establish upon the throne of the nation ever erring human reasen deified. We ask, Is it very remarkable, that France should have produced so many infidels? Had the Christian religion exerted a healthful influence upon public sentiment in that country, the French people as a nation would as soon have embraced the gospel, and obeyed its divine precepts, as any other people in all the earth. A pure religious organization must of necessity tell upon the public opinion in this or any other country; and while we are perfectly willing to admit that even under the most weighty and soul-stirring appeals made to the hearts and consciences of the multitudes who came to hear Christ, not unfrequently did they go away with their hearts hardened, not because of the insufficiency of the evidences presented, but for the reason that they would not receive and obey those precepts which were most lucidly and powerfully set forth. Hence the great importance of an enlightened and properly directed public opinion, such as shall tell in every great *moral* enterprise upon the side of virtue and true religion.

S. W. G.

RICHBURG, Oct. 26, 1855.

WHEN IS A MAN RICH?

We are indebted to a friend in Washington city, (says the Knickerbocker Magazine,) for the following very forcible illustration of "*What constitutes Riches.*" The anecdote is entirely authentic.

To be rich, said Mr. Marcy, our worthy Secretary of State, requires only a satisfactory condition of the mind. One man may be rich with a hundred dollars, while another, in the possession of millions, may think himself poor; and as the necessities of life are enjoyed by each, it is evident the man who is best satisfied with his possessions is the richer.

To illustrate this idea, Mr. Marcy related the following anecdote:—

While I was Governor of the State of New York, said he, I was called upon one morning at my office by a rough specimen of a backwoodsman, who stalked in, and commenced conversation by inquiring "if this was Mr. Marcy?"

I replied that that was my name.

"Bill Marcy?" said he. I nodded assent.

"Used to live in Southport, didn't ye?"

I answered in the affirmative, and began to feel a little curious to know who my visitor was, and what he was driving at.

"That's what I told 'em," cried the backwoodsman, bringing his hand down on his thigh with tremendous force; "I told 'em you was the same old Bill Marcy who used to live in Southport, but they wouldn't believe it, and I promised the next time I came to Albany to come and see you, and find out for sartin. Why, you know me, don't you, Bill?"

I didn't exactly like to ignore his acquaintance altogether, but for the life of me I couldn't recollect ever having seen him before; and so I replied, that he had a familiar countenance, but that I was not able to call him by name.

"My name is Jack Smith," answered the backwoodsman, "and we used to go to school together thirty years ago, in the little red schoolhouse in old Southport. Well, times has changed since then, and you have become a great man, and got rich, I suppose?"

I shook my head, and was going to contradict that impression, when he broke in:

"Oh! yes you are; I know you are rich! no use denying it. You was Comptroller for a long time; and the next we heard of you, you were Governor. You must have a heap of money, and I am glad of it, glad to see you getting along so smart. You was always a smart lad at school, and I knew you would come to something."

I thanked him for his good wishes and opinion, but told him that political life did not pay so well as he imagined. "I suppose," said I, "fortune has smiled upon you since you left Southport?"

"Oh! yes," said he; "I hain't got nothing to complain of. I must say I've got along right smart. You see, shortly after you left Southport our whole family moved up into Vermont and put right into the woods, and I reckon our family cut down more trees and cleared more land than any other in the whole State."

"And so you have made a good thing of it? How much do you consider yourself worth?" I asked, feeling a little curious to know what he considered a fortune, as he seemed to be so well satisfied with his.

"Well," he replied, "I don't know exactly how much I am worth; but I think, (straightening himself up,) if all my debts were paid, I should be worth three hundred dollars clean cash!" And he *was* rich; for he was satisfied.

From the Rutland Herald.

WHERE SHALL I LIE?

Ready for me my house is made,
When I am done with earth;
Its corner-stone the builders laid,
And marked it ere my birth.
Narrow its chambers are, and cold;
The roof weighs on my breast,
And noxious damp and loathsome mould
The crumbling walls infest.

No light can pierce its dismal gloom,
For windows it hath none—
And never at its door of doom
Knocks the rejoicing sun.
Neighbors have I—the jostling race
Press on me all around,
But from the thronged unsightly place
Comes neither stir nor sound.

All grim and gaunt, alone they dwell
In stolid, sullen state—
No ranks divide nor pageants tell
The vulgar from the great.
And with these ghastly wretches I
Forever must abide,
And, bound in iron silence, lie
My dearest friends beside.

By foot my threshold never crossed,
Though many thence repair—
Not one of all who loved me most,
To venture in would dare.
For Death my landlord is—he keeps
My title deeds and key,
And will at last, whoever weeps,
Unlock my house for me.

MARY W. ALEXANDER.

West Poultney, Vt.

THE BEAUTIFUL LAND.

There is a land immortal,
The beautiful of lands;
Beside the ancient portal
A sentry grimly stands.
He only can undo it,
And open wide the door,
And mortals who pass through it,
Are mortals never more.

That glorious land is Heaven.
And Death the sentry grim;
The Lord therefore has given
The opening keys to him.
And ransomed spirits, sighing
And sorrowful for sin,
Do pass the gate in dying,
And freely enter in.

Though dark and drear the passage
That leadeth to the gate,
Yet grace comes with the message,
To souls that watch and wait;
And, at the time appointed,
A messenger comes down,
And leads the Lord's anointed
From the Cross to Glory's crown.

Their sighs are lost in singing,
They're blessed in their tears;
Their journey heavenward winging,
They leave to Earth their fears;
Death like an angel seemeth—
"We welcome thee," they cry;
Their face with glory beameth—
'Tis life for them to die.

OPIUM IN CHINA.

A gentleman recently addressed to an American missionary at Ningpo a series of questions in regard to the extent of the opium trade, the effect of using opium, &c., to which he replied as follows.

NINGPO, June 25, 1855.

Your polite note came to hand last evening, and I now take pleasure in answering your inquiries as far as my information may extend:—

1st. Whence do the Chinese get their opium?

Ans. The opium consumed by the Chinese is, with scarcely any exception, either imported from India or native growth.

2d. What amount of opium is sold in Ningpo?

Ans. This question I have not the means of answering accurately, though I doubt not that your acquaintance with the trade of this port will enable you to ascertain at least the amount imported by foreigners.

3d. What is the population of Ningpo and suburbs?

Ans. Perhaps three hundred thousand or more.

4th. What class and number consume it, and what does it cost them?

Ans. From my own observation, I can say, that opium is consumed by all classes of the Chinese, officers and people, rich and poor, and to some extent even by women. While the rich consume the largest quantity for each individual, the vast majority (perhaps nine-tenths) of the smokers are found in the ranks of the poor. As to the number of smokers at Ningpo, I have not the means of forming an estimate, not knowing the quantity of the drug sold at this port. Dr. Medhurst states that "twenty thousand chests at twenty grains per day are sufficient to demoralize three millions of persons." See "State and Prospects of China," chapter 4th, where there is a stirring appeal to merchants on this subject. An opium merchant, in the *Chinese Repository*, estimates two millions of smokers for twenty-one thousand chests imported in 1835. This latter estimate, compared with the import of last year, which was sixty-seven thousand chests, will give over six millions two hundred thousands as an approximation to the number of smokers in the empire who consume the foreign drug. Opium is, however, by the statement of Mr. Vice-Consul Wade, also produced in nine out of the eighteen provinces. Those, therefore, who consume the domestic article must greatly swell the number of smokers. I think the entire sum would not fall short of ten millions—some say fifteen.

As to the cost: The retail price of the drug is, of course, much greater than its wholesale rate, and there is reason to believe that the price becomes greater as you recede from the coast. The average consumption for each individual is about one dollar per month, which, in a western country, would scarcely be felt; but in China, where the wages of the mechanic, farmer, coolie, and even of the schoolmaster, do not in general amount to ten cents per day, this expenditure is sufficient to cause a great deal of misery.

5th. Is the consumption increasing?

Ans. The quantity imported in 1835 was twenty-one thousand chests; that imported in 1854 was, according to the *China Mail*, sixty-seven thousand chests; add to this the known increase in the domestic growth of opium, and we have proof that the consumption, notwithstanding occasional fluctuations, is really advancing at an alarming rate.

6th. Suppose the importation were stopped, what would the Chinese do?

Ans. The Emperor, who, notwithstanding his necessities, has, like his predecessors, refused to replenish his treasury by legalizing a trade injurious to his people, would probably be encouraged to suppress the growth of opium in his own dominions. Though penal enactments against smoking must be nugatory, to suppress the cultivation of the poppy would be easy. Even this, however, will not be attempted as long as the poisonous drug is poured in upon them, by fleets of heavily armed vessels, protected by the English and American flags. These vessels, it may be said, are not armed to resist the regular authorities; but the authorities cannot be brought to believe so, after the experience of the opium war.

7th. What would be the consequences?

Ans. 1st. Sudden death to many inveterate smokers. 2d. Improved health and prolonged life to a still larger number of more moderate smokers. 3d. An improvement in the finances of the empire, by diminishing the export of silver. 4th. An improvement in the condition of the people, by the application to useful industry of the strength now wasted in the distribution and consumption of opium, as well as by procuring the necessaries of life with money now squandered on a vicious indulgence. 5th. The public morals would be improved, as the opium trade, whether vicious *per se* or not, is undoubtedly a fruitful source of vice. By impoverishing the people, it increases thefts and robberies; by deranging the finances, it promotes insurrection, while it demoralizes both people and officers, by accustoming the former to violate the laws, and the latter to connive at their violation.

8th. What is the whole value of the opium imported into China, and how does it compare with the value of drugs abused in our own countries?

Ans. In 1854 the drugs imported from India amounted to:—Patna, forty thousand chests, at three hundred and fifty-five dollars, and Malwa, twenty-seven thousand chests, at four hundred and thirty-five dollars, giving a sum total of *twenty-five millions nine hundred and forty-seven thousand dollars.* This is not to be compared with the drugs abused in western countries, but with the cost of such drugs as are imported. The value of liquors consumed in England and America probably exceeds this sum; but it is not likely that either country pays out so large a sum for foreign wines and brandies. It must be remembered that the Chinese also have wines and brandies; and the use of opium is an additional vice. Moreover, in comparing the cost of such indulgences in China and the west, the true standard is not the dollar, but the price of labor, or the price of food, which bears a proportion to it. The average wages of a mechanic is less than ten cents per day, while his food costs him but three cents per day; in the United States, the price both of food and labor are about ten times as much, so that to the Chinese an outlay of twenty-six million dollars is as heavy as two hundred and sixty million dollars would be to America. Now, if two hundred and sixty million dollars were annually exported from the United States for a single intoxicating drug, it would not be long before our free country would interfere with a legislative interdict, merely to save her finances from destruction. In fact, the finances of China are already in the most deplorable condition, and the importation of opium is assigned by Chinese statesmen as the chief cause.

9th. Why do the Chinese, essentially saving and stingy, spend their money on opium instead of their cheap wines?

Ans. Though opium may have reduced the consumption of wines in some degree, it has not superseded it. The reason of their growing fondness for it, is found chiefly in its superior stimulating qualities. The extensive use of any given stimulus, by no means, however, proves that stimulus to be necessary. Some tribes of savages coming in contact with civilized traders have imbibed such a taste for intoxicating liquors, as greatly to hasten their extinction; before the taste was acquired, the want of such a stimulant was not felt. So it is with the Chinese. Those who have not acquired the habit of smoking opium, feel no need of any stronger stimulus than the tobacco pipe.

10th. What amount of opium has the East India Company under its control?

Ans. The Patna opium (forty thousand chests) is a monopoly of the company. They could easily, therefore, suppress its growth. The Malwa (twenty-seven thousand chests,) though grown in a native principality, passes through the company's dominions, on payment of a transit duty. The Company, therefore, have a right to interdict the transit, and thus stop its export. The whole of the opium grown in India is, therefore, so far under the control of the Company, that they have the right to suppress the growth of the Patna and interdict the exportation of the Malwa.

In conclusion, I am glad, sir, that you are giving your attention to this subject; and I hope that the abundant proof you will find of the ruinous effects of opium, political and social, bodily and mental, will lead you to clear your hands of any share you may have in its sale. W. P. M.

HOW TO RECEIVE YOUR PASTOR.

When your minister calls to make you a friendly visit, receive him without ceremony. His time is precious, and he cannot well afford to wait for you to dress, peform your toilet, and put things to rights. He calls to see you, not your fine clothes. And do not weary him with your apologies. He would much prefer to hear you speak of your moral concernments.

And if you invite him to sit at your table, give him precisely such food as your family would have if he were not visiting you. And improve your time while he is with you, in conversation upon such sujects as tend to increase your knowledge and your happiness. Preachers are men, and they know that people have their affairs to see to; and if your minister is a man of common sense, and finds that you put yourself out on his account, he will not be likely to come again, lest by so doing he should put you to some inconvenience. Be kind enough to see him as you are, when he calls, and he will like you all the better for it.

LORENZO DOW.

A correspondent of the *Christian Guardian* furnishes that paper with some reminiscences of an acquaintance made with Mr. Dow, in the vicinity of Brighton, near Canada, during a camp-meeting held there in the year 1829:

The hair upon his head and face had been left to grow till it was some six or eight inches, while the former was surmounted with a coarse, chip hat. He had on a snuff-colored, cloth vest, striped cotton pants, coarse cowhide shoes, and a long, white flannel surplice over all, without pockets or buttons. It was fastened around him with strings, while his pocket-handkerchief was tied by one corner to a hole in the breast of it, while it was mainly thrust down one of the sleeves of his outer garment for the lack of a pocket. He would not tell the presiding elder when he would preach, but said he would do so whenever it suited himself. His first address was an exhortation after Rev. Robert Corson, who had preached on the parable of the Prodigal Son. His dialect was the broadest "Old Virginia" that could be thought of. He said his brother had remarked that the citizen of the far country was "the devil," who sent him into fields to feed swine. "Now," said he "the devil has got a great many swine-feeders now-a-days. There is one character that may be denominated the devil's swine-feeder. He frequents balls, routes, assemblies, and screaks on an insignificant piece of wood called a fiddle, while the people jump up and down, and turn their backs and faces, and cut up their didoes."

Late in the afternoon of Saturday, it was evident that he had a mind to preach that evening. He sent some young men into the woods to procure a long pole, with which they constructed a rude "altar" for penitents, in front of the stand. In the meantime he had seated himself on the stand, and sang one of his favorite odes, with a sepulchral sort of voice, which made it plaintive enough. Only one verse is remembered—

"One night all pensive as I lay,
Alone upon the ground,
I cried to God, began to pray—
A light shone all around."

Having thus attracted a large crowd around him, he rose and sounded the horn employed in convoking the assembly, which he held in his hand. So soon as the people saw that it was Dow who was going to preach, they came scampering from all directions to the preaching place. The introductory part of the service was very solemn. He gave out the hymn commencing with the lines,—

"How beauteous are thy feet
Who stand on Zion's Hill,
Who bring salvation on their tongues,
And words of peace reveal."

When he kneeled down to pray, the first petition he offered was for two young men whom he said "stood there talking." He prayed that God would "convert them, that they might go home and serve him." His text was Revelations 22: 2—"And in the street of it, and on either side of the river, was there the Tree of Life, which bare twelve manner of fruits, and yielded her fruit every month; and the leaves of the tree were for the healing of the nations." He made some very excellent remarks, in the commencement, on the Revelation as a whole. Then he came to the new Jerusalem itself, the admeasurement of which, he explained, and compared it with several of the largest cities in the world —such as London, Paris, Canton, &c.—with the size and population of which he seems to have had accurate acquaintance. Indeed, he seemed to have a remarkable memory for matters of that kind. The tree, from the feminine pronoun "her" applied to it, he decided to mean the church. The twelve manner of fruits he decided to mean just so many particular graces, which he named, counting them on his fingers, and illustrated in a very able, though it must be confessed, in a very *unusual* manner. I need not say that he had fixed attention; but a spirit of conviction also seemed to run through the assembly; and when he gave an invitation for the penitents to come forward, which he did at the close of his sermon, there was an instantaneous rush for the "altar"—a perfect jam. The writer never saw the like before or since. The preachers poured out of the stand into the prayer-meeting. Dow went down himself, passing from one mourner to another. The battle was truly "set in array," and lasted the most of the night. And "signs and wonders were wrought in the name of the holy child Jesus."

The fame of his eccentricities brought out vast multitudes to hear. Among these were bar-room loafers, gamblers, horse-racers, and infidels, with all of whom he knew how to deal, and for whom he had ammunition prepared. Instances of this we had on two or three occasions. In the forenoon of Sunday there was an immense congregation, and the presiding minister found it impossible to get some of them to seat themselves, and submit to the order of the meeting; observing which, Dow arose and settled them in the following adroit, though odd manner. Said he, "I have traveled a great deal in my lifetime, in England, and I have remarked that every assembly is made up of three descriptions of characters. The first is the gentleman; he behaves well for his honor's sake. The second is the Christian; he behaves well for Christ's sake. The third class I might denominate 'Tag, Rag, and Bobtail;' these will neither behave well for God's nor the devil's safe. Now, if you want to advertise yourself as belonging to this class, begin with your didoes." This was enough; no one seemed disposed to give occasion for his being put down as belonging to that class, and the best order ensued. During the course of the meeting, one Mr. Evans preached on the judgment, from Rev. 20: 12—"And I saw the dead, small and great," etc. At the close of the sermon, Dow rose up and gave an address, and remarked, that while his brother was speaking on the judgment, a thought struck his mind on the subject of *witnesses*, and said it appeared to him that God was to be *witness* as well as *judge*. He then quoted Mal. 35—"And I will come near to you in judgment; and I will be a swift witness against the sorcerers, and against the adulterers, and against false-swearers, and against those that oppress the hireling in his wages, the widow and the fatherless, and that turn aside the stranger from his right, and fear not me, saith the Lord of hosts." From this text he took occasion to dwell upon each description of character here denounced, in a manner as able and searching as it was original.

I remember his telling us, when describing the manner in which "the stranger is turned aside from his right," of an instance that happened to himself; said he, "I rode up to a tavern door one day, and called for a gallon of oats to feed my horse. The landlord called out to the boy, 'Take this horse to the stable, and *mind* and give him some oats.' Now, I didn't like the way he laid the emphasis on the word '*mind*.' So after a while I went to the stable, and found that my horse had no oats. I therefore went to the landlord and ordered another gallon; and went and saw him fed. I then went and put myself where I could see him, and he couldn't see me; and after a little while I saw the tavern-keeper come and take away the oats again. I then called for my bill, took my horse, and started."

He visited several places intermediate between the camp-ground and Kingston. The Carrying Place was the last place at which we heard him preach—"Quench not the Spirit" was his text. I think there was more laughter than conviction produced by *this* sermon. The school-house was crowded with people, who all remained after the sermon, in hopes of having a word with so strange a preacher, or at least the privilege of feasting their eyes with his odd appearance. But after waiting for some time in vain, casting their eyes down the road, they saw him half a mile distant, bundle in hand, making off as fast as he could walk. While they had stood watching the door, he had slipped out of the back window. He hired a canoe, and made his way to Belleville that night.

SEARCH FOR WIVES.

Where do men usually discover the women who afterwards become their wives? is a question we have occasionally heard discussed by young lady readers. Chance has much to do in the affair; but then there are important governing circumstances. It is certain that few men make a selection from ball rooms, or any other place of public gaiety; and nearly as few are influenced by what may be called showing off in the streets, or by any allurements of dress. Our conviction is, that ninety-nine hundredths of all the finery with which women decorate or load their persons goes for nothing as far as husband-catching is concerned. Where and how, then, do men find their wives? In the quiet homes of their parents or guardians—at the fireside, where the domestic graces and feelings are alone demonstrated. These are the charms which most surely attract the high as well as the humble. Against these all the finery and airs of the world sink into insignificance. We shall illustrate this by an anecdote, which, though not new, will not be the worse for being told: In the year 1773, Peter Burrell, Esq., of Beckenham, in Kent, whose health was rapidly declining, was advised by his physicians to go to Spa for the benefit of his health. His daughters feared that those who had motives entirely mercenary might not pay him that attention which he might expect from those who from duty and affection united, would feel the greatest pleasure in ministering to his ease and comfort; they therefore resolved to accompany him. They proved that it was not a spirit of dissipation and gaiety which led them to Spa, for they were not to be seen in any of the gay and fashionable circles—they were never out of their father's company, and never stirred from home except to attend him either to take the air or drink the water—in a word, they lived a most recluse life in the midst of a town then the resort of the most illustrious and fashionable personages of Europe. This exemplary attention to their father procured these three amiable sisters the admiration of all the English at Spa, and was the cause of their elevation to that rank in life to which their merits gave them so just a title. They were all married to noblemen—one to the Earl of Beverly—another to the Duke of Hamilton, and afterwards to the Marquis of Exeter, and a third to the Duke of Northumberland; and it is justice to them to say, that they reflected honor on their rank, rather than derived any from it.

A MADMAN.

A workman at a lunatic asylum in England, left a chisel, more than three feet long, on a recent occasion, in one of the wards. A furious patient seized it, and threatened to kill with it any one who approached him. Every one then in the ward immediately departed from it. At length the attendant opened the door, and, balancing the key of the ward on his hand, walked slowly towards the dangerous madman, looking intently at it.

His attention, said the attendant, was immediately attracted. He came towards me and asked:

"What are you doing with that?"

"I am trying to balance this key on my hand," said I, "and I can do it; but you can not balance that chisel in that way on the back of your hand."

"Yes I can," said he, balancing it carefully, and extending it towards me.

I took it off very quietly, and without making any comment upon it. He seemed a little chagrined at having lost his weapon, but made no attempt to regain it, and in a short time all irritation passed away.

CUSSEWAGO AND HAYFIELD CHURCHES

We had the pleasure of attending the services connected with the dedication of a new house of worship, in Cussewago, Crawford Co., Pa., on the first Sabbath in this month. The church which owns this house, is a small but devoted band, constituted, some two or three years ago, of members who had before been embraced in the communion of the Seventh-day Baptist Church of Hayfield. Their location being remote from the Hayfield meeting-house, and in a community greatly needing the advantages of a church organization, it was judged best, notwithstanding the feebleness of the parent body, to set them in order as a house of the Lord. Under the guidance of our beloved brother Randolph, they have continued to hold meetings regularly on the Sabbath, and to sustain an efficient Sabbath-school, having no better accommodation than a rough, uncomfortable school-house. By the blessing of God, they have now brought to completion a very neat and comfortable church edifice; not large, it is true, but sufficiently so to meet the present wants of the neighborhood. Though poor, and few in number, they have accomplished this without calling upon their brethren abroad to help them; and we believe they will not be in debt, when their accounts come to be settled.

The preaching, on the occasion, was done by the writer of this article, and we had the satisfaction of seeing the house well filled, as long as the services continued—commencing on Friday, and closing on Sunday evening. We may be pardoned for saying, that the occasion was one of deep interest to us, that section of country having been the scene of our labors, years ago, and the people of it endeared to us by those ties which intense "longings after them all in the bowels of Jesus Christ" established. We labored there, when the country was, in comparison with its present improved condition, a wilderness. We enjoyed the sweet satisfaction of knowing that our efforts were appreciated. Our congregations were gathered in school-houses, and whether the season was propitious or inclement, the houses were almost always filled to their utmost capacity. Indeed, we never had occasion to complain of the fewness of the hearers, or of their disrespectful behavior. And if there is any one part of our career in the ministry, upon which we look back with more satisfaction than upon all the rest, it is that part which was taken up with our sojourn in the region we are speaking of.

The Hayfield Church, for whose welfare we toiled some four or five years, and whose house of worship was erected while we were connected with it—the church in whose communion we first found a home, after we had been led into the observance of the Sabbath—has been much afflicted. What is commonly termed Second Adventism has found favor with many of its members, and under the influence of a preacher of that delusion, they have been brought to abjure what they once believed respecting the immortality of the soul, final destiny of the wicked, and several other kindred points, and in their rash fanaticism, have been baptized a second time! We do not know that there is any hope of their recovery. In speaking of this matter, we do not like to even *seem* harsh, for indeed the subject is a most sorrowful one. A once happy church well nigh destroyed; its house of worship weather-beaten, neglected, and even shut up on the Sabbath; families that once lived in peace divided; neighbors jealous of, and alienated from, one another; all growing out of this perversion of the Christian religion—such things fill our heart with grief. May the Lord send deliverance and gladness to that afflicted church. T. B. B.

TRUTH AND ERROR.

Truth is the great embodiment of all realities—both physical and spiritual. Error is its correlative—its opposite. To reduce truth from the abstract to the practical, is one of the great problems of humanity. The mind is continually struggling after this principle; hence new discoveries are continually being made. It is continually being refined from the intermixed dross of error. Each reformatory movement is a great smelting furnace, purifying truth from this dross, after which it is inwrought into the great system of practical truth. Truth is pure, bright, penetrating. It purifies, enlightens, elevates. It is the appropriate food of the intellect. It gives progress. Without new acquisitions of truth, there can never be any progress.

Where there is no desire or capability for this acquisition, there must be immobility. The brute race present examples where both prerequisites are wanting; consequently there can never be any advancement. The birds in the garden of Eden sang as sweetly, and with as much artistic skill, to listening Eve, as they do now-a-days. The beaver built his dam with as much architectural acumen, across the rivers flowing out of the Paradisaical garden, as do modern beavers across modern rivers.

There may be capability without the desire of progress. Savages and barbarians have come up to a certain truth, and there stopped. Parties, and sects, and denominations, and creeds, and platforms, generally, have a certain number of truths to develop, mingled more or less perhaps with error. These systems or creeds are generally stereotyped; and when an individual or class of individuals have embraced the whole, progress with them is at an end. They too are, henceforth, stereotyped. This is the case with the doctrines of Confucius, Zoroaster, Mahomed, Lycurgus, Solon—the case also with the disciples of these systems. This is the case too with many Christian sects and creeds.

Every system of human origin must be based on such principles as to admit of the discovery, addition, and development of new truths, or it will soon come to maturity, and assume the state of immobility or decay. Error is continually corroding, mildewing, polluting the otherwise bright systems of truth. The true must ever be agitating, contending, advancing, in order to ward off the deathful influences of error. There is a bit of an ancient fable revived and told by modern men. It runs something after this manner: Saturn sat alone with no companions, and none beholding him save the great Uranus or Heaven. After long stretches of eternity, he became tired of thus remaining inactive—so he put forth his energies and created, and his creation was an oyster. Rejoicing in his newly-discovered power, he went on creating his race of oysters. Uranus, perceiving this from his lofty throne, cried, "A new work, O Saturn." "I fear," replied Saturn, "if I put forth my hands to make anew, I may unmake what I have made. I shall not do, but undo. Therefore, I do what I have done. I hold what I have got. Thus I resist Night and Chaos." "O Saturn," replied Uranus, "thou canst not hold thine own, but by making new." Saturn was silent, but went on creating oysters for a thousand years—nothing but oysters. But his oysters began to change into barnacles, and pebbles, and sea-foam. Night and Chaos were overcoming him. Then came to his memory, like a ray of light, the words of Uranus. And he determined to make something new. Putting forth all of his energies, he created, and behold Jupiter was the result. Then he feared to put forth his hand again in creation, lest he should destroy his mighty work. Nature froze—the things that were made went backward—and to prevent the universal reign of Chaos, Jupiter up and slew his father, and went on creating.

This fable very aptly illustrates the state and relation of truth and error—also of the truth seeker and the errorist—of the conservative and reformer. The conservative fears and trembles to put forth another effort. The progressive, the radical, tramples on him, slays him, and marches forward. The one says that the past is good enough; let us not seek for better, lest we find something worse. The other replies, that the past might have been good once, but it is no longer good for us. Let us make something better and nobler. Every thing is progressive or retrogressive. *

LETTERS FROM PALESTINE—NO. 21.

JAFFA, Syria, Sept. 20.

In contemplating a mission to this country, we tried not to overlook the importance of the preached word by means of the living preacher. This is of the *first* importance in such a work; indeed, it is *the* element of it. But a very important means *to sustain* the work, was thought to be agriculture, and perhaps mechanical labor. It was not pretended that these aids would render the mission independent of aid from the churches, but rather as an auxiliary, to shield and shelter the inquirer after truth, and to feed the hungry, and to raise a helpless people to a knowledge and practice whereby they might help themselves, and so free themselves from priestly tyranny, now so oppressive to them. The preacher must go from individual to individual, and from house to house; his labors must be of a public and private nature, warning every man; he must give his time to the ministry of the word. The farmer and mechanic, though they may preach less, in the technical sense, preach by example, and often become as effectual by a silent influence in convincing men of their sins and teaching them the true way as the preacher. However, we will not pretend to measure the influence of either. Both are useful, and while the Master has ordained the one and blessed it abundantly, he has also blessed the other.

It was conceded in the beginning of our efforts, that Palestine was a hard field. Subsequent observation and experience prove the correctness of our opinion. The testimony of some long here is the same. The question was asked me, not long before leaving the States: "Well, brother J., what do you expect to do when you get to Palestine?" My reply was: "I will try and preach Christ. Pehaps some Jew, or some Moslem, or Catholic, or sinner of some sort, may believe in Him. At least, I will do my best to hold forth the Word of life."

In regard to agriculture, I am glad that I was not mistaken as to its supposed utility and adaptedness to the circumstances of the people and the country. I find it quite as much so as I expected. Its importance ought not to be overlooked; for a work once well started, as we have contemplated, will be sure to work well for the mission. It will be a sort of anchor, that will steady the ship, around which will cluster much that is good, pure and peaceable. Indeed, if any one department of honest labor, under the light of the gospel, tends to purity of life and peace among men, and to lead also to know and love God, then that department is agriculture. Where in all the world is such an auxiliary needed more than in heathen lands—than in this land?

But is agriculture practicable in Palestine? We believe it is. Land has been purchased by foreigners, and held either in the name of another, of the wife, or as a pledge for the redemption of a certain sum. Further, it is permitted to woman to hold real estate, even though she be a foreigner. Such is the information given by those who ought to know, who are natives, or have been long enough in the country to know what can be done in this respect. It is said that bargains between the citizen and the foreigner are on the part of the government solemnly respected. No instance is cited, that I have heard of, where a foreigner's title to his land has been disputed or molested. In the language of one thirteen years in the country: "The Turks have never broken any treaty made with Christians." With this information, and having no reason to doubt its truth, I have all along considered it safe to purchase land. I am now happy to inform our brethren that two of our people have purchased land in their own names. As stated in a previous letter, sister Miner has bought in her own name. This was last winter. The ground lies well, and is considered cheap at the price she paid. It is a full half hour from the city. Bro. Dickson has recently purchased land in his own name, the title, as was the case with sister M.'s, being made out by the Turkish Divan. As far as we can learn, these titles have been secured without any evasion of the law. The price paid for the latter was also considered reasonable. I think Bro. D. was inclined to wait, at one time, probably that he might inform himself better in regard to the securing of a good title. This being accomplished, he has now moved to his place, which is also beautiful for situation, about half an hour from town, where he is busy fitting up a dwelling previous to the rainy season. On going there a day or two since, I was greeted with: "Welcome to the American farm!" It was a pleasing sound, and made me heartily wish for more similar farms and farmers in Palestine. Who that reads this will be the next to come and join us? I suppose that Sir Moses Montefiore, in buying land here, received a title to it in his own name.

After a residence here of sixteen months, I venture the opinion, without fear of successful contradiction, that the climate of Palestine is delightful. It has neither the severe cold of the north, nor the long extreme heat of the tropics. Were we provided with as comfortable houses here as an home, I think even invalids would be as well off here as there. For the purposes of the laborer, I mean the foreign out-door-laborer, such as the farmer, the heat is by no means so oppressive as to forbid daily labor. It may be the part of prudence, during the summer months, to take what farmers call a nooning, say from ten A. M. till two P. M. In winter there is much delightful weather for out-door labor. In harvest time there is no fear of rain, so that the husbandman may reap at leisure. Two Americans and two Germans—a part of our colony—are constantly at work in the sun, and yet without complaining that their health is thereby affected. One of them, Bro. D., is a man of fifty-five. He worked hard all of last summer, a year ago, without experiencing any ill effects from the sun. He intimates that this year he has renewed his strength. Even American women have wrought some in the garden, &c., without being sun-struck or made sick of fever. I think it a well-established opinion among those here, and already at work, that there is no fear to healthy persons, on account of climate or sun, above what may be ordinarily feared at home during the hot season. What enervating effects the system may experience, suggests or rather hinders the individual from undertaking the extreme of hard labor, and the same amount which he is accustomed to perform in more northern latitudes at home. I may also mention, what is well known by everybody, that persons of weak constitutions and ill health are not unfrequently greatly benefited by a change of climate. This is true with some of us. With others there is often a contrary effect. On the whole, in regard to the possibility of securing a good title to land, and the healthiness of the climate, I am more and more inclined to say to those who would become humble farmer missionaries, Come, dear brethren, and till the land of promise, and the Lord come with you. But how much is necessary? A man of family without means should not come; but with means of his own, or means given him, he ought to have $4,000 or $5,000, including farming implements and family outfit. With this amount he may live comfortably and do good. Some may get along on much less. Can a man get rich here? In the sense the world understand riches, I hope not. If he have a heart in him full of God's love to dying men, he will not be very likely to be eaten up by Mammon. Ours is a work for the salvation of sinners. It is emphatically a benevolent work, performed in the name of the Lord. As such we hope it will ever continue. My sheet is full, or I would say a word in behalf of a seminary of learning, the need of a physician, &c. I close by asking our brethren and sisters to pray for the mission, and to earnestly beseech God to grant us a revival in the conversion of many sinners.

Yours truly, W. M. J.

AMERICAN AND FOREIGN BIBLE SOCIETY.—This Society has entered upon a work of colportage. From a summary of twenty-two reports of the Society's laborers, the last two months, the following items are gathered: In preaching the Gospel from house to house, seven thousand three hundred and eighty-one visits have been made; fifty-six meetings for prayer and religious conversation held; sixty-two sermons preached; two hundred and two children gathered into Sunday-Schools; one hundred and eighty persons induced to attend church; one hundred and thirty-two vessels visited for religious conversation and prayer; twenty-one persons hopefully converted; six baptized; two hundred families found destitute of the Word of God; and four thousand one hundred and sixty-eight copies of Scriptures issued from the Depository, besides the Society's distribution in foreign lands. Ten thousand copies of the New Testament have been recently voted for distribution among the slaves at the South.

THE NEWPORT MEETING-HOUSE.

To the Editors of the Sabbath Recorder:—

It is known to many of your readers, that the Seventh-day Baptist Church of Newport, R. I., about fifteen years ago, leased their meeting-house to the Fourth Baptist Church of that city. Some also of your readers know, that the situation in which the property was placed by the lease given, was not satisfactory to our people, and that they have for some time been trying to get the party to whom the lease was given to agree to some terms of settlement on which the Seventh-day Baptist Church should regain full possession of the property. After a long time and much labor, the Fourth Baptist Church of Newport agreed to take the sum of $250, and give up their claim on the house, if the money should be paid them by the first of the present month. The object of this communication is to inform those interested in the matter, that through the liberality of brethren and sisters in the New York Church and the churches in Connecticut and Rhode Island, the property has been cleared of all incumbrance; and that over and above the $250 paid for that purpose, about $90 has been raised for the purpose of repairs to be put upon the house, if it is found desirable to repair it. The intention of those who have contributed to this object is, to have the Newport Church, (the first Seventh-day Baptist in America,) *sustained*, if it can be done by any reasonable effort. Should that, however, be found impracticable, they purpose to transfer the property to the Seventh-day Baptist Missionary Society. The Newport Church has already passed a vote to that effect, feeling that an assurance of that kind was due from them to the denomination, in view of the aid afforded them and the circumstances of the case all taken together. The property in question is thought to be worth from $1000 to $1500, and real estate in Newport has for several years been rising in value, and in all probability will continue to rise for years to come. But what is most to be desired is, that the *church* may rise and shine, as in former years, when it not only stood as a towering religious light-house on that most beautiful island of the sea, but sent its rays across the wide Atlantic to the mother land, to cheer and direct the voyagers *there*, who were beating heroically against winds and waves of opposition, towards the better land above. L. CRANDALL.

BAPTIST MISSION IN CENTRAL AFRICA.—At a meeting of Baptists in one of the Southern States, lately, Rev. J. B. Taylor, Corresponding Secretary of the Foreign Mission Board of the Southern Baptist Convention, made some statements as to the African Missions, derived from quite recent information, which were very remarkable. The Coast Missions of Africa extend for some four or five hundred miles along the west of that continent; and one of the missionaries, Mr. Day, lately reports his having baptized about one hundred and fifty converts during the last year. But by far the most hopeful of these missions, are those lately undertaken in Central Africa, by Mr. Bowen and his associates. Mr. B. is known to be one of the most remarkable men in the whole missionary field; and his statements are always deemed as of high authority. His station is the kingdom of Yorriba, near the great bend of the river Niger. He describes the city of Illorin, as the largest and most populous he has ever seen, next to the city of London. From this point, communication radiates to all parts of Central Africa. At this place, he has associated with him, Rev. Mr. Clark, of Georgia; and there are now on their way thither, Rev. Mr. Phillips and wife, of Georgia, Rev. Mr. Bomar, of Alabama; Rev. Mr. Trimball was also lately appointed, and two young men of Union University in Tennessee are now offered for acceptance to the same mission.

DR. BEMAN AND DR. BULLARD.—One of the persons who lost his life by the accident on the Pacific Railroad, was Rev. Dr. Bullard of St. Louis. A correspondent of the *Boston Journal* gives an interesting incident from a sermon on the subject preached by Rev. Dr. Beman, of Troy. It seems that the new and elegant church erected by the society of which Dr. Bullard was the pastor, was dedicated the Sunday before the accident. Rev. Dr. Beman was present at the dedication and preached. On the following Monday the great excursion was to take place on the railroad to Jefferson City, so long in progress, which had been finally completed. Invitations were extended to the prominent citizens of St. Louis and to the Rev. Drs. Bullard and Beman. Dr. Beman accepted the invitation, as did Dr. Bullard. But the daughter of Dr. Beman refused to go; she was anxious to return home, and to her urgent solicitation her father yielded, and on the morning of the fatal excursion he and his daughter took the conveyance for the East. At the cars he took leave of Dr. Bullard, who said to Dr. Beman, "Farewell, we shall never meet again in this world." "Oh yes we shall," said Dr. Beman, "I may visit the West again, or you may visit the East." With great solemnity Dr. Bullard replied, "I have a strong presentiment, Bro. Beman, that we shall never meet again—farewell." And so they separated, the one to his home and parish, the other to the awful death awaiting him only a few hours ahead. Death swung his red lantern on the track, and "destruction wasted at noon-day."

DEAD LAWS.—Many statutes for the prevention and cure of heresy remain on the English Statute Books, notwithstanding they long ago ceased to be enforced. Lord Brougham, considering them a disgrace to the country, introduced to Parliament a bill for their abolition *en masse*. The schedule containing the titles of the acts is very long and rather curious. One or two examples will indicate the general character of the laws which it is proposed to have repealed:—

"The first instance that we take is the 32d chapter of the statute of the 9th and 10th years of William the Third. It enacts 'that if any person or persons, having been educated in, or at any time having made profession of, the Christian religion, within this realm, shall by writing, printing, teaching, or advised speaking, *deny any one of the persons in the Holy Trinity to be God, or shall assert or maintain that there are more Gods than one, or shall deny the Christian religion to be true, or the Holy Scriptures of the Old and New Testament to be of divine authority*, he shall be disabled to hold any office, *civil or military*, as well as ecclesiastical; and shall, on a second conviction, be incapacitated to sue in any court, to be guardian of any child, executor or administrator of any person, and *to take any legacy or deed of gift*; and shall also suffer imprisonment for three years without bail."

SLAVERY IN A COLLEGE.—The Portage *Democrat* gives the particulars of a flare-up at the Disciples' College, presided over by Rev. Alex. Campbell, of Bethany, Va. It was produced by a student by the name of Burns, who, in fulfillment of his appointment to preach on Sunday evening in the college pulpit, pursuant to the election of a College Literary Society, to which he belonged, undertook to speak on the subject of Human Rights and in opposition to Slavery, though in very mild terms. His remarks, mild as they were, produced a furious excitement among the Southern students and others, who were known to be armed with deadly weapons. The meeting was greatly disturbed by hisses, yells, cat calls, &c., &c., and threats of violence against the speaker were freely thrown out. The mob spirit finally prevailed, and the Southerners had made their arrangements to lay violent hands upon Burns, and duck him in the river and commit other atrocities upon them. His friends, however, gathered around him, and he was enabled to escape, in the darkness of the night, from those who were lying in wait to seize him. The Southern students met next day and resolved that the subject of Slavery should not be discussed in college. The Faculty censured Burns, one of them remarking, that when among gunpowder they must not carry matches. The Northern students also met, and resolved that inasmuch as the Faculty refused to award to them the rights of American citizens, among which was freedom of speech, they would remain no longer in connection with the Institution. They accordingly determined to leave. All the Northern students, except a very few who remain awaiting orders from home, left, and also some from the South.

AN IMPORTANT DECISION IN CONNECTICUT.—In the case of Blakeslee vs. O'Neil et als., in the Superior Court, Judge Waldo awarded to the plaintiff $150 damages. It was an action against a Roman Catholic priest and others for interfering at the death bed and performing Roman Catholic rites against the wishes of the plaintiff, who belonged to the Protestant Episcopal Church. In the course of the case, the priest being on the witness stand, was inquired of as to the confession of the dying woman. The question was objected to on the ground that it had no relevancy to the case, and on the further ground that it was a privileged communication, and could not be disclosed. Judge Waldo, after argument, in which a recent Virginia case was cited to sustain the objection to the question, took the case into consideration, and decided that confessions to a priest were not by the law of Connecticut privileged, and that the priest might be compelled to disclose them on the witness' stand. He also decided that the answer sought for in this particular case had no relevancy, and was therefore unimportant; but, he said, if he conceived it would have the least bearing on the case, he should compel the priest to disclose it.

EXEMPLARY JUSTICE.—The failure of Messrs. Strahan, Paul & Bates, made a profound sensation in London. Their unfaithfulness to those who had entrusted their funds to the house was shocking. The partners had stood high, not only in the monetary world, but in reputable and religious society. Missionary and other charitable institutions made them their bankers. The disgrace was great, and public opinion was loudly expressed. The judge who passed the sentence spoke in affecting terms of the pain he felt at seeing before him in that character men whom he had met in so different relations. He would that it had pleased God to impose the duty on some other person. But he must do it. He could not conceive that a worse case could arise under the act of parliament, and therefore he must sentence them to the extent of the act—transportation and hard labor for fourteen years.

INEBRIATE ASYLUM.—An institution with this title exists in New York, having a charter, with the power to retain the patient as long as six months, should his reformation require it. Its objects are fully explained in the following paragraph:—

"The object of this institution is to provide an asylum for the poor and destitute inebriate, where his physical and moral condition will be alike the care of the physician and the philanthropist, and where his labor may be rendered productive and of service to his family. With the asylum there will be connected workshops, in which each patient, as soon as his condition will permit, will be regularly employed—thus making the asylum a self-supporting institution."

THE MODERN WHITFIELD.—Some time since there was a notice in the *Recorder* of a young man named Spurgen, of the caste of Whitfield, who was making a great stir in London by his extraordinary preaching talent. He was spoken of as a Methodist. Permit me to say, that he is a Baptist, and pastor of the New Park-street Chapel, London.

GEO. R. WHEELER.

RELIGIOUS INTELLIGENCE.

One hundred students entered Westminster College, Mo., at the opening of the present session; "*full one-third*" of the whole number are members of the Presbyterian Church, and that some fifteen have the ministry in view. A work of grace has recently commenced in the village of Fulton, where the college is located, and thirty-five have been received into the Presbyterian Church, among whom were eight or ten college students.

From Rev. Mr. Rawson, of Burns, N. Y., we have the results of a protracted meeting, in which he was assisted by Rev. C. Parker. He states that between forty and fifty give good evidence of having been born again. A large number are heads of families. Fourteen family altars have been erected. One young man expects soon to commence a course of preparation for the ministry.

The New York *Tribune* says:—"We state with entire confidence, and after extensive inquiry, that *Liquor Prohibition will be upheld by our Legislature just chosen.* Whatever modification shall be made by that body in the present law, will be intended and calculated to obviate the quibbles and cavils of ceratin legal and judicial backers of the liquor traffic, and render the act more effective and practical than it has been."

Rev. Dr. Woods, of Andover, was once giving his class some instructions about *preaching* in different places in such a manner as to gain attention and applause. "Young gentlemen," said he, "it is all contained in a nutshell. When you go to preach in the city, take your best coat; but when you go to preach in the country, take your best sermon."

There has been, says the Mount Pleasant (Iowa) *Observer*, of November 1st, quite an interesting revival going on, for the last two weeks, in the Methodist church in this place. There have been 42 additions by letter and on probation, since the annual Conference. The church now numbers 291 members.

The liquor dealers of Philadelphia have a "Grand League" against the Maine Law, which requires its members to take the following oath:—"You do solemnly swear before Almighty God and these witnesses, with your left hand on the Bible and on the cross, and your right hand on your heart, that you will not subscribe for or advertise in any paper that advocates the prohibitory or Maine Liquor Law."

The subscription in aid of the fund for increasing Methodist Agencies in Ireland, taken up in connection with the appeal made by Rev. Wm. Arthur, in the Mulberry-st. M. E. Church on Sunday, Dec. 2d, exceeded ten thousand dollars.

Congress.

The HOUSE OF REPRESENTATIVES was occupied all last week in an ineffectual attempt to elect a speaker. Thirty-three ballots were taken during the week, and at the close of the week there was as much uncertainty about the result as there was at the beginning.

In the SENATE, very little of general interest was done. Notice was given of several bills to be introduced, among which was one to authorize and facilitate the construction of a railroad and magnetic telegraph to the Pacific.

Of course the President's Message has *not* yet been delivered, and nobody can *guess* when it will be, although the papers of this (Second-day) morning, express some confidence that it will not be delayed many days.

The following is a summary statement of the estimates for the appropriations required by the Secretary of the Treasury:—

For deficiencies of the current fiscal year $1,367,757, of which $1,188,181 is to supply deficiency in Post-Office revenue.

Estimate of permanent and indefinite appropriations which may be required for the last three-quarters of the current fiscal year, under former acts of Congress, $5,965,228.

Estimates for the next fiscal year, including appropriations by former acts of Congress, of permanent and indefinite character, $52,754,675.

Excluding permanent and indefinite, it is $45,114,765; to which add unexpended existing appropriations not required for present fiscal year, $16,695,817.

Total estimates for next fiscal year, $69,450,492.

Penalty of Bribery.

Bribers and swindlers seem to be getting their deserts in Europe. The leading partners in the house of Strahan, Paul & Co., London, which recently failed, have been transported for their fraudulent transactions. A case has since occurred in Berlin, Prussia, where bribery received its reward. It is stated as follows:—

"One of the Jewish merchants there, L. Meyer, was accused of bribing the clerks of the telegraph, for the purpose of obtaining a knowledge of the contents of the most important commercial telegraphic messages, before the persons to whom they were addressed. Two brothers named Richenheim, one of whom is a clerk of Meyer's, were accused of being the persons by whom the alledged fraudulent communications were carried on. Their business was always to be at or near the telegraph station, to convey to their employer the intelligence which was communicated to them by the clerks at the telegraphic office, in the pay of Meyer. Meyer himself is said to have made great sums of money by this infamous traffic. Thus an order was sent to Herr Bleichroder, the agent of Rothschild's house, to buy up 100,000 thalers of shares to the Cologne Railway. This message was known to L. Meyer half an hour, if not an hour, before it was known to the agent of Rothschild. The consequence was, that Meyer bought up as much of this paper as he could, drove up the price, and made a large profit by the transaction. This is only one of many cases. The trial came to a conclusion on Monday, the 13th ult. Janck, the clerk, was condemned to three years' imprisonment, with loss of social rights as a citizen for five years, for having transgressed his official duties; Julius Richenheim, for having bribed an official, to two years imprisonment, with loss of social rights for two years, and Isidor Richenheim to half this term; Meyer, the banker, for being an accomplice in said act of bribery to two and a-half years imprisonment, and three years' social degradation."

General Intelligence.

European News.

One week later news from Europe has been received.

There had been no fresh military operation in the Crimea, the belligerents being busily occupied in preparing their winter quarters. It was intended to bombard the northern forts of Sevastopol, in order to enable the fleet to winter in the harbor. An attack was made by the allies on Marianopol, on the north coast of the Sea of Azoff, on the 31st of October, and after a short bombardment instructions were given to cease the firing, out of respect for the Austrian flag, which had been hoisted over the warehouses of the German residents. There were some apprehensions of an attack by Gen. Wrangel on the allied forces at Yenikale; but they were prepared to give him a warm reception, having about thirty thousand men there. Another secret expedition sailed from Eupatoria on the 14th ult., and proceeded in a westerly direction.

Dispatches received by the English and French governments announce a serious accident to have occurred near Inkermann, by the blowing up of a portion of the French park of artillery, causing the deaths of thirty of the French troops, including two officers, and one hundred wounded, including ten officers. On the part of the English there was killed Deputy Assistant Commissary Yellon, and 137 officers and men wounded. The French dispatch states that three magazines exploded, containing altogether 30,000 kilogrammes of powder, 600,000 cartridges, 300 charged shells and other projectiles.

A telegraphic despatch from Sir E. Lyons announces that on the 5th and 6th inst., a flotilla under the command of Capt. Osborne destroyed an enormous quantity of grain and forage of this year harvest, which was packed in six tiers and extending two miles along the coast, near Gheiskliman, ready to be conveyed to the army in the Crimea and the Caucasus.

A terrific fire broke out in Paris on the evening of the 18th ult., in one of the warehouses of the Manutention, on the Quai de Billy, in which a large quantity of grain and flour for the supply of the French army is constantly kept. The whole of the building was consumed, but the ovens used for baking the army bread and the adjoining storehouses were preserved. The quantity of corn destroyed is estimated at 28,000 quintals, and it is believed an equal quantity of flour and biscuit was consumed.

In Asia, the Turkish army, under Omer Pasha, was, at the last accounts, daily expecting an attack from the Russians.

From the Baltic we learn that at the last accounts the allied fleets were lying in the Bay of Eiel. The French ships were about to return to Cherbourg. A steamer had been sent out to watch an American clipper said to be laden with revolvers for the use of the Russians.

Peace rumors were quite abundant, and amongst others it was asserted that the Czar had given his assent to Prussia informing the Western Powers that he is willing to treat for peace.

Constantinople correspondence describes a bad state of affairs there. Murders and robberies were taking place in the open streets, with a great and increasing fanaticism against the Christians—especially the French

Further disturbances were apprehended in Spain, and the government as a measure of precaution had dispatched fresh troops to Saragosse.

In the manufacturing districts of England things remained in pretty much the same unsettled state. In Manchester alone there were 3,400 operatives out on a strike.

A petition is circulating in Liverpool for the reëstablishment of the Kingdom of Poland.

Henry Labouchere has been sworn as Secretary of State for the Colonies.

Capt. Robert McClure, the Arctic navigator, is knighted.

Gen. Markham is dead. He returned to England in bad health after the fall of Sevastopol.

A Foul Murder.

For two weeks past much interest has been felt in the fate of the captain and mate of a schooner sunk near New York. It is now considered certain, that they were murdered by the cook. The schooner has been raised, and furnishes unmistakable signs of a bloody murder, although the bodies of the victims have not been found. The following are the facts in the case:—

"The schooner Eudora Imogene, of Deep River, Ct., laden with coal, and bound east, came to anchor, Nov. 21, about half a mile from City Island, not far from Hurl Gate, N. Y., in consequence of adverse winds; where she remained until Friday evening, the 23d, without attracting attention, from the fact that it is customary for vessels to anchor in that locality during unfavorable weather. About 7 o'clock on Friday evening the attention of the hotel keeper at City Island, and also that of Capt. Le Varnis, was attracted to a man who was sculling a boat along shore in a very awkward manner. Supposing he was after plunder, they concealed themselves, and while watching his motions the schooner Eudora was observed to heel over. In a few moments she heeled over again and sunk. They immediately seized small boats and started for the spot, calling on the suspicious looking person to go with them to the assistance of the hands on the Eudora, but instead of obeying them, he changed his course and attempted to pull away from the shore in another direction. Capt. Le Varnis and Mr. McClellan, the hotel keeper, hastened to the spot where the schooner had sunk, but finding no traces of captain or crew, they were led to suspect that there had been foul play. They then pulled directly for the boat of the suspicious looking stranger, and soon overhauled him and jumped into his boat. He proved to be the colored cook of the sunken schooner. A large butcher knife, a hatchet, a large sack, a carpet-bag, and various articles of provision, were lying in the bottom of the boat. The sask was found to contain clothing belonging to the captain and mate, a spy-glass, clock, knives and forks, and other articles. On his person was found a silver pencil, and in his boot-leg a wallet containing five ten dollar bills, and smaller ones, amounting in all to $59.

The schooner was commanded by Captain Palmer, of Deep River, a very kind and estimable man, and much respected by the citizens of Deep River. Mr. Pratt, the mate, was a son of Mr. Timothy Pratt, of the same place, and was a young man of much promise. These, with a cabin boy and the negro cook, comprised the crew. The story of the negro is very contradictory, and but very little doubt is entertained that he first murdered the captain, mate and boy, then robbed and scuttled the vessel, and made the best of his way for the shore. He is now in jail.

Trouble in Kansas.

Trouble has commenced in Kansas, and fears are expressed of a civil war there. Governor Shannon has telegraphed to the President of the United States for authority to call into service the U. S. troops at Leavenworth, on the ground that a prisoner had been rescued from the Sheriff, and an armed force of free-state men existed at Lawrence. The President declined to act in the matter until more definite information was received. This delay will probably give time for the belligerents to cool off, and may prevent blood-shed. The following, from a letter to the *N. Y. Times*, dated Lawrence, Nov. 27, is said to be a true version of the recent disturbance:—

Last Wednesday, one Mr. Dow, formerly from Ohio, discovered that his neighbor, a Mr. Coleman, formerly of Pennsylvania, was cutting down trees and preparing to burn a limekiln on the claim belonging to him, when he went to him, requesting him to desist, telling him that he had burnt one kiln on his claim, and that he could not burn another. There was a man helping Mr. Coleman at the time, by the name of Buckley, and a neighbor of Dow's by the name of Branson, went along with him as he went up to order Coleman off. After having some pretty sharp words, Coleman and Buckley left and went away, whereupon Dow and Branson returned home, they both living in one house, Dow being single and living with Branson. Soon after, the same day, Dow had occasion to go by the house of Coleman to a blacksmith's shop on business. Before he went, Branson urged him to take some kind of weapon, as it was suspected that a gang would be at Coleman's, where a low groggery was kept, but Dow refused to take any, and said he was not afraid of any of them. He went up to the shop and there he found Buckley, who commenced abusing him by words and dared him to step out the door and fight him. Buckley, in the meantime, stepped out and cocked his gun, threatening to shoot him. Dow, paid little attention to him, but as soon as he got his business done with the blacksmith, which was getting a piece of iron fixed, he stepped out and started for home.

Some little distance ahead of him he saw Coleman sitting beside the road with a shot-gun in his hand. Dow came up and passed him; when only a few rods distant from him, Coleman raised his gun, and taking deliberate aim at Dow, snapped a cap. On hearing this Dow turned about to see what it was, when Coleman recapped his gun, and raised it to his eye, and shot Dow dead on the spot. Several buckshot entered his breast, killing him at once. This was all done in sight of Coleman's house and the groggery, and happened at 1 o'clock. No one of those gathered about Coleman's house, and there were some eight or ten, went to remove the body or to inform any one of the murder. So the dead body lay by the roadside till 5 o'clock, when Branson somehow or other heard of it, and went and had the body taken care of.

The following night Coleman and Buckley escaped to Missouri. Some say for one purpose, some for another. One rumor is that he has gone to give himself up to the proper authorities. But nothing has up to this date been heard of him.

Yesterday a public meeting was held in the neighborhood, when the testimony of several persons was informally taken, which went to show that Coleman willfully and coolly murdered Dow. without any other cause than having this difficulty with him about burning the limekiln. Resolutions were passed expressive of the sense of the meeting, and a salute fired over the grave of the lamented Dow.

Coleman and all engaged on his side are rabid Pro-Slavery men, and this is not the first time they have outraged public sentiment by their acts. They have driven several Free-State men off from their claims near by, fired upon them, &c. Dow and his friends are for free State. I am personally acquainted with Mr. Dow, and have been for about a year, and have always found him to be a very peaceful and moderate man. This public meeting numbered about eighty men, among whom was a part of a military company, armed with Sharp's rifles, who live between Lawrence and the place of the murder, which was Hickory Point, some ten miles south of us.

On the return of this company in the night, they discovered a party of horsemen at the town of Blanton, coming up in their rear, and, in accosting them, a voice was heard "Branson is here a prisoner," and, upon further inquiry, it was made known that the Deputy-Sheriff, who lives in Missouri, had taken a posse, and in the evening, after the company had left Hickory Point, had arrested Branson on the oaths of three Pro-Slavery men, friends of Coleman, that they were afraid Branson would kill them. Nobody had ever heard of this, and nobody believed it now. It was got up to help Coleman. The company then told Branson to come with them, when the Sheriff threatened to shoot him if he moved, but Branson got off his mule and joined the company, when the Sheriff left, saying he would go down and get 10,000 men and come up and see what he could do. The Sheriff's writ was issued by a Justice of the Peace by the name of Cameron, once a professed Free-State man, but who has now accepted office under the Territorial Laws. The company took the ground that they did not recognize any writ as valid coming from this quarter.
